The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the Federal Register expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form document is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

This amendment to Part 97 is effective on the date of publication and contains separate SIAPs which have compliance dates stated as effective dates based on related changes in the National Airspace System or the application of new or revised criteria. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Approach Procedures (TERPs). In developing these SIAPs, the TERPs criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs is unnecessary, impracticable, or contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Part 97 of the Federal Aviation Regulations (14 CFR Part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 G.m.t. on the dates specified, as follows:

1. By amending §97.23 VOR-VOR/DME SIAPs identified as follows:

. . . Effective November 1, 1979

Indianapolis, IN—Indianapolis Terry, VOR Rwy 36, Amdt. 3

. . . Effective October 18, 1979

Kingman, AZ—Mohave County, VOR Rwy 21, Amdt. 5
Fort Smith, AR—Fort Smith Muni, VOR/DME Rwy 7, Amdt. 6
Jonesboro, AR—Jonesboro Muni, VOR Rwy 23, Amdt. 6
Tracy, CA—Tracy Mupi, VOR-A, Amdt. 2
Groton (New London), CT—Groton-New London, VOR Rwy 5, Amdt. 2
Sioux City, IA—Sioux City Muni, VOR/DME or TACAN Rwy 13, Amdt. 15
Sioux City, IA—Sioux City Muni, VOR Rwy 31 (TAC), Amdt. 23
Maryville, MO—Maryville Memorial, VOR/DME Rwy 36, Original
Montgomery, NY—Orange County, VOR-A, Original
New York, NY—John F. Kennedy International, VOR/DME or TACAN Rwy 22L, Amdt. 2
Quakertown, PA—Quakertown, VOR Rwy 11, Amdt. 3
Houston, TX—Houston Gulf, VOR/DME Rwy 31, Original
Houston, TX—Houston Gulf, VOR Rwy 13, Original
League City, TX—Houston Gulf, VOR Rwy 13, Amdt. 1, cancelled
League City, TX—Houston Gulf, VOR/DME Rwy 31, Amdt. 2, cancelled
New Braunfels, TX—New Braunfels Muni, VOR/DME-A, Amdt. 4
Port Lavaca, TX—Calhoun County, VOR/DME-A, Original
Port Lavaca, TX—Calhoun County, VOR/DME Rwy 23, Amdt. 2, cancelled
Rockport, TX—Arkansas County, VOR/DME-A, Amdt. 3
Weatherford, TX—Parker County, VOR Rwy 35, Original
Weatherford, TX—Parker County, VOR/DME Rwy 35, Original, cancelled
Mosinee, WI—Central Wisconsin, VOR-A, Amdt. 5
Reedsburg, WI—Reedsburg Muni, VOR-A, Amdt. 2

. . . Effective October 4, 1979

Oklahoma City, OK—Will Rogers World, VOR Rwy 12, Amdt. 17
Houston, TX—Clover Field, VOR/DME-A, Original

. . . Effective August 23, 1979

Middleton Island, AK—Middleton Island, VOR Rwy 1, Amdt. 1

2. By amending § 97.25 SDF-LOC-LDA SIAPs identified as follows:

. . . Effective October 18, 1979

Fort Smith, AR—Fort Smith Muni, LOC BC Rwy 7, Amdt. 5
Corpus Christi, TX—Corpus Christi Intl, LOC BC Rwy 31, Amdt. 8
Dallas, TX—Dallas Love Field, LOC (BC) Rwy 13R, Amdt. 10, cancelled
Mosinee, WI—Central Wisconsin, LOC BC Rwy 26, Amdt. 6

. . . Effective October 4, 1979

Oklahoma City, OK—Will Rogers World, LOC BC Rwy 17L, Original
Oklahoma City, OK—Will Rogers World, LOC BC Rwy 35L, Amdt. 4

3. By amending § 97.27 NDB/ADF SIAPs identified as follows:

. . . Effective November 1, 1979

Decorah, IA—Decorah Muni, NDB Rwy 29, Amdt. 5
Omaha, NE—Millard, NDB Rwy 12, Amdt. 5
Marshfield, WI—Marshfield Muni, NDB Rwy 4, Amdt. 9
Marshfield, WI—Marshfield Muni, NDB Rwy 16, Amdt. 5

. . . Effective October 18, 1979

Fort Smith, AR—Fort Smith Muni, NDB Rwy 7, Amdt. 4
Tell City, IN—Perry County Muni, NDB Rwy 31, Amdt. 3
Charlevoix, MI—Charlevoix Muni, NDB Rwy 26, Amdt. 5
Quakertown, PA—Quakertown, NDB Rwy 29, Amdt. 8
Arlington, WA—Arlington, NDB-A, Amdt. 2

. . . Effective October 4, 1979

Raton, NM—Crews Field, NDB Rwy 2, Original
Oklahoma City, OK—Will Rogers World, NDB Rwy 17L, Original
Oklahoma City, OK—Will Rogers World, NDB Rwy 17R, Amdt. 18
Oklahoma City, OK—Will Rogers World, NDB Rwy 35L, Amdt. 7
Oklahoma City, OK—Will Rogers World, NDB Rwy 35R, Original

4. By amending § 97.29 ILS-MLS SIAPs identified as follows:

. . . Effective November 1, 1979

Harrisburg, PA—Capital City, ILS Rwy 8, Amdt. 4

. . . Effective October 18, 1979

Detroit, MI—Detroit City, ILS Rwy 15, Amdt. 1
Mosinee, WI—Central Wisconsin, ILS Rwy 8, Amdt. 6

V 4 4 / 1 7 6 SEP 10 79 UMI

. . . *Effective October 4, 1979*

Oklahoma City, OK—Will Rogers World, ILS Rwy 17R, Amdt. 4
Oklahoma City, OK—Will Rogers World, ILS Rwy 35R, Original
Philadelphia, PA—North Philadelphia, ILS Rwy 24, Amdt. 8

5. By amending § 97.31 RADAR SIAPs identified as follows:

. . . *Effective October 18, 1979*

Fort Smith, AR—Fort Smith Muni, RADAR-1, Amdt. 3
Middletown, PA—Harrisburg Intl Arpt-Olmsted Fld, RADAR-1, Amdt. 4

. . . *Effective October 4, 1979*

Oklahoma City, OK—Will Rogers World, RADAR-1, Amdt. 17

6. By amending § 97.33 RNAV SIAPs identified as follows:

. . . *Effective November 1, 1979*

Indianapolis, IN—Indianapolis Terry, RNAV Rwy 16, Amdt. 1
Omaha, NE—Millard, RNAV Rwy 12, Amdt. 2

. . . *Effective October 18, 1979*

Sioux City, IA—Sioux City Muni, RNAV Rwy 17, Amdt. 1
Sioux City, IA—Sioux City Muni, RNAV Rwy 35, Amdt. 4

[Secs. 307, 313(a), 601, and 1110, Federal Aviation Act of 1958 (49 U.S.C. 1348, 1354(a), 1421, and 1510); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and 14 CFR 11.49(b)(3).]

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Note.—The incorporation by reference in the preceding document was approved by the Director of the **Federal Register** on May 12, 1969.

Issued in Washington, D.C. on August 31, 1979.

John S. Kern,

Acting Chief, Aircraft Programs Division.

[FR Doc. 79-28033 Filed 9-7-79; 8:45 am]

BILLING CODE 4910-13-M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1251

Nondiscrimination on Basis of Handicap

AGENCY: National Aeronautics and Space Administration.

ACTION: Final rule with comments requested.

SUMMARY: NASA establishes policies and regulations to eliminate discrimination on the basis of handicap in any program or activity receiving Federal financial assistance whether by contract, grant or other arrangement. This regulation is required by Section 504 of the Rehabilitation Act of 1973.

EFFECTIVE DATE: September 10, 1979. Comments or suggestions must be submitted in writing no later than October 25, 1979.

ADDRESS: Richard N. Wolf, Office of General Counsel, Code GK-3, National Aeronautics and Space Administration, Washington, D.C. 20546

FOR FURTHER INFORMATION CONTACT: Richard N. Wolf, Office of General Counsel, Telephone (202) 755-3160, National Aeronautics and Space Administration, Washington, D.C. 20546.

SUPPLEMENTARY INFORMATION: Because the public had adequate opportunity to comment on the Dept. of Health, Education, and Welfare regulations upon which these regulations are based, NASA is publishing these regulations as a final rule. Written comments, however, are invited and should be sent to the address listed above on or before October 25, 1979.

This regulation has been reviewed and approved by HEW pursuant to E.O. 11914.

14 CFR Chapter V is amended by adding a new Part 1251, reading as follows:

PART 1251—NONDISCRIMINATION ON BASIS OF HANDICAP

Subpart 1251.1—General Provisions

Sec.
1251.100 Purpose.
1251.101 Application.
1251.102 Definitions.
1251.103 Discrimination prohibited.
1251.104 Assurances required.
1251.105 Remedial action, voluntary action, and self-evaluation.
1251.106 Designation of responsible employee and adoption of grievance procedures.
1251.107 Notice.
1251.108 Administrative requirements for small recipients.
1251.109 Effect of state or local law or other requirements and effect of employment opportunities.

Subpart 1251.2—Employment Practices

1251.200 Discrimination prohibited.
1251.201 Reasonable accommodation.
1251.202 Employment criteria.
1251.203 Preemployment inquiries.
1251.204–209 [Reserved]

Subpart 1251.3—Program accessibility

1251.300 Discrimination prohibited.
1251.301 Existing facilities.
1251.302 New construction.
1251.303–309 [Reserved]

Subpart 1251.4—Procedures

Authority: Sec. 504, Rehabilitation Act of 1973, Pub. L. 93-112, 87 Stat. 374 (29 U.S.C. 794, Executive Order 11914 (41 FR 17871, April 28, 1976)).

Subpart 1251.1—General Provisions

§ 1251.100 Purpose.

This part effectuates section 504 of the Rehabilitation Act of 1973, which is designed to eliminate discrimination on the basis of handicap in any program or activity receiving Federal financial assistance.

§ 1251.101 Application.

This part applies to each recipient of Federal financial assistance from the National Aeronautics and Space Administration and to each program or activity that receives or benefits from such assistance.

§ 1251.102 Definitions.

As used in this part, the term:

(a) "The Act" means the Rehabilitation Act of 1973, Pub. L. 93-112, as amended by the Rehabilitation Act Amendments of 1974, Pub. L. 93-516, 29 U.S.C. 794.

(b) "Section 504" means section 504 of the Act.

(c) "Director" means the Director of the Office of Equal Opportunity for NASA.

(d) "Recipient" means any state or its political subdivision, any instrumentality of a state or its political subdivision, any public or private agency, institution, organization, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance.

(e) "Applicant for assistance" means one who submits an application, request, or plan required to be approved by a NASA official or by a recipient as a condition to becoming a recipient.

(f) "Federal financial assistance" means any grant, loan, contract (other

than a procurement contract or a contract of insurance or guaranty), or any other arrangement by which the Agency provides or otherwise makes available assistance in the form of:

(1) Funds;

(2) Services of Federal personnel; or

(3) Real and personal property or any interest in or use of such property, including:

(i) Transfers or leases of such property for less than fair market value or for reduced consideration; and

(ii) Proceeds from a subsequent transfer or lease of such property if the Federal share of its fair market value is not returned to the Federal Government.

(g) "Facility" means all or any portion of buildings, structures, equipment, roads, walks, parking lots, or other real or personal property or interest in such property.

(h) "Handicapped person." (1) "Handicapped persons" means any person who (i) has a physical or mental impairment which substantially limits one or more major life activities, (ii) has a record of such an impairment, or (iii) is regarded as having such an impairment. (2) As used in paragraph (h)(1) of this section, the phrase "physical or mental impairment" means (A) any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: Neurological; musculoskeletal; special sense organs; respiratory, including speech organs; cardiovascular; reproductive; digestive; genitourinary; hemic and lymphatic; skin; and endocrine; or (B) any mental or psychological disorder, such as mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities. The term "physical or mental impairment" includes, but is not limited to, such diseases and conditions as orthopedic, visual, speech, and hearing impairments, cerebral palsy, epilepsy, muscular dystrophy, multiple sclerosis, cancer, heart disease, diabetes, mental retardation, emotional illness, drug addiction and alcoholism.

(1) "Major life activities" means functions such as caring for one's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.

(2) "Has a record of such an impairment" means has a history of, or has been misclassified as having, a mental or physical impairment that substantially limits one or more major life activities.

(3) "Is regarded as having an impairment" means (i) has a physical or mental impairment that does not substantially limit major life activities but that is treated by a recipient as constituting such a limitation; (ii) has a physical or mental impairment that substantially limits major life activities only as a result of the attitudes of others toward such impairment; or (iii) has none of the impairments defined in this paragraph but is treated by a recipient as having such an impairment.

(i) "Qualified handicapped person" means:

(1) With respect to employment, a handicapped person who, with reasonable accommodation, can perform the essential functions of the job in question;

(2) With respect to other services, a handicapped person who meets the essential eligibility requirements for the receipt of such services.

(j) "Handicap" means any condition or characteristic that renders a person a handicapped person as defined in paragraph (h) of this section.

§ 1251.103 Discrimination prohibited.

(a) *General.* No qualified handicapped person shall, on the basis of handicap, be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any program or activity which receives or benefits from Federal financial assistance.

(b) *Discriminatory actions prohibited.* (1) A recipient, in providing any aid, benefits, or services, may not, directly or through contractual, licensing, or other arrangements, on the basis of handicap:

(i) Deny a qualified handicapped person the opportunity to participate in or benefit from the aid, benefit, or service;

(ii) Afford a qualified handicapped person an opportunity to participate in or benefit from aid, benefit, or service that is not equal to that afforded others;

(iii) Provide a qualified handicapped person with an aid, benefit, or service that is not as effective as that provided to others;

(iv) Provide different or separate aid, benefits, or services to handicapped persons or to any class of handicapped persons unless such action is necessary to provide qualified handicapped persons with aid, benefits, or services that are as effective as those provided to others;

(v) Aid or perpetuate discrimination against a qualified handicapped person by providing significant assistance to an agency, organization, or person that discriminates on the basis of handicap in providing any aid, benefit, or service to beneficiaries of the recipient's program;

(vi) Deny a qualified handicapped person the opportunity to participate as a member of planning or advisory boards; or

(vii) Otherwise limit a qualified handicapped person in the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others receiving an aid, benefit, or service.

(2) For purposes of this part, aids, benefits, and services, to be equally effective, are not required to produce the identical result or level of achievement for handicapped persons and nonhandicapped persons, but must afford handicapped persons equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement, in the most integrated setting appropriate to the person's needs.

(3) Recipients shall take appropriate steps to insure that no handicapped individual is denied the benefits of, excluded from participation in, or otherwise subjected to discrimination in any program receiving or benefiting from Federal financial assistance because of the absence of auxiliary aids for individuals with impaired sensory, manual, or speaking skills.

(4) Despite the existence of separate or different programs or activities provided in accordance with this part, a recipient may not deny a qualified handicapped person the opportunity to participate in such programs or activities that are not separate or different.

(5) A recipient may not, directly or through contractual or other arrangements, utilize criteria or methods of administration (i) that have the effect of subjecting qualified handicapped persons to discrimination on the basis of handicap, (ii) that have the purpose or effect of defeating or substantially impairing accomplishment of the objectives of the recipient's program with respect to handicapped persons, or (iii) that perpetuate the discrimination of another recipient if both recipients are subject to common administrative control or are agencies of the same State.

(6) In determining the site or location of a facility, an applicant for assistance or a recipient may not make selections (i) that have the effect of excluding handicapped persons from, denying them the benefits of, or otherwise subjecting them to discrimination under any program or activity that receives or benefits from Federal financial assistance or (ii) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the program or activity with respect to handicapped persons.

(7) As used in this section, the aid, benefit, or service provided under a

V 4 4 / 1 7 6

program or activity receiving or benefiting from Federal financial assistance includes any aid, benefit, or service provided in or through a facility that has been constructed, expanded, altered, leased or rented, or otherwise acquired, in whole or in part, with Federal financial assistance.

(8) Recipients shall take appropriate steps to ensure that communications with their applicants, employees, and beneficiaries are available to persons with impaired vision and hearing.

(c) Programs limited by Federal law. The exclusion of nonhandicapped persons from the benefits of a program limited by Federal statute or executive order to handicapped persons from a program limited by Federal statute or executive order to a different class of handicapped persons is not prohibited by this part.

§ 1251.104 Assurances required.

(a) *Assurances.* An applicant for Federal financial assistance for a program or activity to which this part applies shall submit an assurance, on a form specified by the Director, that the program will be operated in compliance with this part. An applicant may incorporate these assurances by reference in subsequent applications to NASA.

(b) *Duration of obligation.* (1) In the case of Federal financial assistance extended in the form of real property or to provide real property or structures on the property, the assurance will obligate the recipient or, in the case of a subsequent transfer, the transferee, for the period during which the real property or structures are used for the purpose for which Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits.

(2) In the case of Federal financial assistance extended to provide personal property, the assurance will obligate the recipient for the period during which it retains ownership or possession of the property.

(3) In all other cases, the assurance will obligate the recipient for the period during which Federal financial assistance is extended.

(c) *Covenants.* (1) Where Federal financial assistance is provided in the form of real property or interest in the property from NASA, the instrument effecting or recording this transfer shall contain a covenant running with the land to assure nondiscrimination for the period during which the real property is used for a purpose for which the Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits.

(2) Where no transfer of property is involved but property is purchased or improved with Federal financial assistance, the recipient shall agree to include the covenant described in paragraph (c)(3) of this section in the instrument effecting or recording any subsequent transfer of the property.

(3) Where Federal financial assistance is provided in the form of real property or interest in the property from NASA, the covenant shall also include a condition coupled with a right to be reserved by NASA to revert title to the property in the event of a breach of the covenant. If a transferee of real property proposes to mortgage or otherwise encumber the real property as security for financing construction of new, or improvement of existing facilities on the property for the purposes for which the property was transferred, the Director may, upon request of the transferee and if necessary to accomplish such financing and upon such conditions as he or she deems appropriate, agree to forbear the exercise of such right to revert title for so long as the lien of such mortgage or other encumbrance remains effective.

§ 1251.105 Remedial action, voluntary action, and self-evaluation.

(a) *Remedial action.* (1) If the Director finds that a recipient has discriminated against persons on the basis of handicap in violation of section 504 or this part, the recipient shall take such remedial action as the Director deems necessary to overcome the effects of the discrimination.

(2) Where a recipient is found to have discriminated against persons on the basis of handicap in violation of section 504 of this part and where another recipient exercises control over the recipient that has discriminated, the Director, where appropriate, may require either or both recipient to take remedial action.

(3) The Director may, where necessary to overcome the effects of discrimination in violation of section 504 of this part, require a recipient to take remedial action (i) with respect to handicapped persons who are no longer participants in the recipient's program but who were participants in the program when such discrimination occurred or (ii) with respect to handicapped persons who would have been participants in the program had the discrimination not occurred, or (iii) with respect to handicapped persons presently in the program, but not receiving full benefits or equal and integrated treatment within the program.

(b) *Voluntary action.* A recipient may take steps, in addition to any action that is required by this part, to overcome the effects of conditions that resulted in limited participation in the recipient's program or activity by qualified handicapped persons.

(c) *Self-evaluation.* (1) A recipient shall, within one year of the effective date of this part; or within one year of first becoming a recipient;

(i) Evaluate, with the assistance of interested persons, including handicapped persons or organizations representing handicapped persons, its current policies and practices and the effects thereof that do not or may not meet the requirements of this part;

(ii) Modify, after consultation with interested persons, including handicapped persons or organizations representing handicapped persons, any policies and practices that do not meet the requirements of this part; and

(iii) Take, after consultation with interested persons, including handicapped persons or organizations representing handicapped persons, appropriate remedial steps to eliminate the effects of any discrimination that resulted from adherence to these policies and practices.

(2) A recipient that employs fifteen or more persons shall, for at least three years follow completion of the evaluation required under paragraph (c)(1) of this section, maintain on file, make available for public inspection, and provide to the Director upon request: (i) a list of the interested persons consulted, (ii) a description of areas examined and any problems identified, and (iii) a description of any modifications made and of any remedial steps taken.

§ 1251.106 Designation of responsible employee and adoption of grievance procedures.

(a) *Designation of responsible employee.* A recipient that employs fifteen or more persons shall designate at least one person to coordinate its efforts to comply with this part.

(b) *Adoption of grievance procedures.* A recipient that employs fifteen or more persons shall adopt grievance procedures that incorporate appropriate due process standards and that provide for the prompt and equitable resolution of complaints alleging any action prohibited by this part. Such procedures need not be established with respect to complaints from applicants for employment or from applicants for admission to postsecondary educational institutions.

§ 1251.107 Notice.

(a) A recipient that employs fifteen or more persons shall take appropriate initial and continuing steps to notify participants, beneficiaries, applicants, and employees, including those with impaired vision or hearing, and unions or professional organizations holding collective bargaining or professional agreements with the recipient that it does not discriminate on the basis of handicap in violation of section 504 and this part. The notification shall state, where appropriate, that the recipient does not discriminate in admission or access to, or treatment or employment in, its programs and activities. The notification shall also include an identification of the responsible employee designated pursuant to § 1251.106(a). A recipient shall make the initial notification required by this paragraph within 90 days of the effective date of this part. Methods of initial and continuing notification may include the posting of notices, publication in newspapers and magazines, placement of notices in recipient's publication, and distribution of memoranda or other written communications.

(b) If a recipient publishes or uses recruitment materials or publications containing general information that it makes available to participants, beneficiaries, applicants, or employees, it shall include in those materials or publications a statement of the policy described in paragraph (a) of this section. A recipent may meet the requirement of this section. A recipient may meet the requirement of this paragraph either by including appropriate inserts in existing materials and publications or by revising and reprinting the materials and publications.

§ 1251.108 Administrative requirements for small recipients.

The Director may require any recipient with fewer than fifteen employees, or any class of such recipients, to comply with §§ 1251.106 and 1251.107, in whole or in part, when the Director finds a violation of this part or finds that such compliance will not significantly impair the ability of the recipient or class of recipients to provide benefits or services.

§ 1251.189 Effect of state or local law or other requirements and effect of employment opportunities.

(a) The obligation to comply with this part is not obviated or alleviated by the existence of any state or local law or other requirement that, on the basis of handicap, imposes prohibitions or limits upon the eligibility of qualified handicapped persons to receive services or to practice any occupation or profession.

(b) The obligation to comply with this part is not obviated or alleviated because employment opportunities in any occupation or profession are or may be more limited for handicapped persons than for nonhandicapped persons.

Subpart 1251.2—Employment Practices

§ 1251.200 Discrimination prohibited.

(a) *General.* (1) No qualified handicapped person shall, on the basis of handicap, be subjected to discrimination in employment under any program or activity to which this part applies.

(2) A recipient that receives assistance shall take positive steps to employ and advance in employment qualified handicapped persons in programs assisted under the Act.

(3) A recipient shall make all decisions concerning employment under any program or activity to which this part applies in a manner which ensures that discrimination on the basis of handicap does not occur and may not limit, segregate, or classify applicants or employees in any way that adversely affects their opportunities or status because of handicap.

(4) A recipient may not participate in a contractual or other relationship that has the effect of subjecting qualified handicapped applicants or employees to discrimination prohibited by this subpart. The relationships referred to in this subparagraph include relationships with employment and referral agencies, with labor unions, with organizations providing or administering fringe benefits to employees of the recipient and with organizations providing training and apprenticeship programs.

(b) *Specific activities.* The provisions of this subpart apply to:

(1) Recruitment, advertising, and the processing of applications for employment;

(2) Hiring, upgrading, promotion, award of tenure, demotion, transfer, layoff, termination, right of return from layoff, and rehiring;

(3) Rates of pay or any other form of compensation and changes in compensation;

(4) Job assignments, job classifications, organizational structures, position descriptions, lines of progression, and seniority lists;

(5) Leaves of absence, sick leave, or any other leave;

(6) Fringe benefits available by virtue of employment, whether or not administered by the recipient;

(7) Selection and financial support for training, including apprenticeship, professional meetings, conferences, and other related activities, and selection for leaves of absence to pursue training;

(8) Employer sponsored activities, including social or recreational programs; and

(9) Any other term, condition, or privilege of employment.

(c) A recipient's obligation to comply with this subpart is not affected by any inconsistent term of any collective bargaining agreement to which it is a party.

(d) A recipient may not participate in a contractual or other relationship that has the effect of subjecting qualified handicapped applicants or employees to discrimination prohibited by this subpart. The relationships referred to in this paragraph include relationships with employment and referral agencies, with labor unions, with organizations providing or administering fringe benefits to employees of the recipient, and with organizations providing training and apprenticeship programs.

§ 1251.201 Reasonable accommodation.

(a) A recipient shall make reasonable accommodation to the known physical or mental limitations of an otherwise qualified handicapped applicant or employee unless the recipient can demonstrate that the accommodation would impose an undue hardship on the operation of its program.

(b) Reasonable accommodation may include: (1) Making facilities used by employees readily accessible to and usable by handicapped persons, and (2) job restructuring, part-time or modified work schedules, acquisition or modification of equipment or devices, the provision of readers or interpreters, and other similar actions.

(c) In determining pursuant to paragraph (a) of this section whether an accommodation would impose an undue hardship on the operation of a recipient's program, factors to be considered include:

(1) The overall size of the recipient's program with respect to number of employees, number and type of facilities, and size of budget;

(2) The type of the recipient's operation, including the composition and structure of the recipient's workforce; and

(3) The nature and cost of the accommodation needed.

(d) A recipient may not deny any employment opportunity to a qualified handicapped employee or applicant if the basis for the denial is the need to make reasonable accommodation to the physical or mental limitations of the employee or applicant.

V 4 4 / 1 7 6

§ 1251.202 Employment criteria.

(a) A recipient may not make use of any employment test or other selection criterion that screens out or tends to screen out handicapped persons or any class of handicapped persons unless: (1) The test score or other selection criterion, as used by the recipient, is shown to be job-related for the position in question, and (2) alternative job-related tests or criteria that do not screen out or tend to screen out as many handicapped persons are not shown by the Director to be available.

(b) A recipient shall select and administer tests concerning employment so as best to ensure that, when administered to an applicant or employee who has a handicap that impairs sensory, manual, or speaking skills, the test results accurately reflect the applicant's or employee's job skills, aptitude, or whatever other factor the test purports, to measure, rather than reflecting the applicant's or employee's impaired sensory, manual, or speaking skills (except where those skills are the factors that the test purports to measure).

§ 1251.203 Preemployment inquiries.

(a) Except as provided in paragraphs (b) and (c) of this section, a recipient may not conduct a preemployment medical examination or may not make preemployment inquiry of an applicant as to whether the applicant is a handicapped person or as to the nature or severity of a handicap. A recipient may, however, make preemployment inquiry into an applicant's ability to perform job-related functions.

(b) When a recipient is taking remedial action to correct the effects of past discrimination pursuant to § 1251.105(a), when a recipient is taking voluntary action to overcome the effects of conditions that resulted in limited participation in its federally assisted program or activity pursuant to § 1251.105(b), or when a recipient is taking affirmative action pursuant to section 503 of the Act, the recipient may invite applicants for employment to indicate whether and to what extent they are handicapped, provided, that:

(1) The recipient states clearly on any written questionnaire used for this purpose or makes clear orally if no written questionnaire is used that the information requested is intended for use solely in connection with its remedial action obligations or its voluntary or affirmative action efforts; and

(2) The recipient states clearly that the information is being requested on a voluntary basis, that it will be kept confidential as provided in paragraph (d) of this section, that refusal to provide it will not subject the applicant or employee to any adverse treatment, and that it will be used only in accordance with this part.

(c) Nothing in this section shall prohibit a recipient from conditioning an offer of employment on the results of a medical examination conducted prior to the employee's entrance on duty, provided, that: (1) All entering employees are subjected to such an examination regardless of handicap, and (2) the results of such an examination are used only in accordance with the requirements of this part.

(d) Information obtained in accordance with this section as to the medical condition or history of the applicant shall be collected and maintained on separate forms that shall be accorded confidentiality as medical records, except that:

(1) Supervisors and managers may be informed regarding restrictions on the work or duties of handicapped persons and regarding necessary accommodations;

(2) First aid and safety personnel may be informed, where appropriate, if the condition might require emergency treatment; and

(3) Government officials investigating compliance with the Act shall be provided relevant information upon request.

§ 1251.204–209 [Reserved]

Subpart 1251.3—Program Accessibility

§ 1251.300 Discrimination prohibited.

No qualified handicapped person shall, because a recipient's facilities are inaccessible to or unusable by handicapped persons, be denied the benefits of, be excluded from participation in, or otherwise be subjected to discrimination under any program or activity to which this part applies.

§ 1251.301 Existing facilities.

(a) *Program accessibility.* A recipient shall operate each program or activity to which this part applies so that the program or activity, when viewed in its entirety, is readily accessible to handicapped persons. This paragraph does not require a recipient to make each of its existing facilities or every part of a facility accessible to and usable by handicapped persons.

(b) *Methods.* A recipient may comply with the requirement of paragraph (a) of this section through such means as redesign of equipment; reassignment of classes or other services to accessible buildings; assignment of aides to beneficiaries; home visits; delivery of health, welfare, or other social services at alternate accessible sites; alteration of existing facilities and construction of new facilities in conformance with the requirements of § 1251.302; or any other methods that result in making its program or activity accessible to handicapped persons. A recipient is not required to make structural changes in existing facilities where other methods are effective in achieving compliance with paragraph (a) of this section. In choosing among available methods for meeting the requirement of paragraph (a) of this section, a recipient shall give priority to those methods that offer programs and activities to handicapped persons in the most integrated setting appropriate.

(c) *Time period.* A recipient shall comply with the requirement of paragraph (a) of this section within sixty days of the effective date of this part except that where structural changes in facilities are necessary, such changes shall be made within three years of the effective date of this part, but in any event as expeditiously as possible.

(d) *Transition plan.* In the event that structural changes to facilities are necessary to meet the requirement of paragraph (a) of this section, a recipient shall develop, within six months of the effective date of this part, a transition plan setting forth the steps necessary to complete such changes. The plan shall be developed with the assistance of interested persons, including handicapped persons or organizations representing handicapped persons. A copy of the transition plan shall be made available for public inspection. The plan shall, at a minimum:

(1) Identify physical obstacles in the recipient's facilities that limit the accessibility of its program or activity to handicapped persons;

(2) Describe in detail the methods that will be used to make the facilities accessible;

(3) Specify the schedule for taking the steps necessary to achieve full program accessibility and, if the time period of the transition plan is longer than one year, identify steps that will be taken during each year of the transition period; and

(4) Indicate the person responsible for implementation of the plan.

(e) *Notice.* The recipient shall adopt and implement procedures to ensure that interested persons, including persons with impaired vision or hearing, can obtain information as to the existence and location of services, activities, and facilities that are accessible to and usable by handicapped persons.

§ 1251.302 New construction.

(a) *Design and construction.* Each facility or part of a facility constructed by, on behalf of, or for the use of a recipient shall be designed and constructed in such manner that the facility or part of the facility is readily accessible to and usable by handicapped persons, if the construction (ground breaking) was commenced after the effective date of this part.

(b) *Alteration.* Each facility or part of a facility which is altered by, on behalf of, or for the use of a recipient after the effective date of this part in a manner that affects or could affect the usability of the facility or part of the facility shall, to the maximum extent feasible, be altered in such manner that the altered portion of the facility is readily accessible to and usable by handicapped persons.

(c) *American National Standards Institute accessibility standards.* Design, construction, or alteration of facilities in conformance with the "American National Standard Specifications for Making Buildings and Facilities Accessible to, and Usable by, the Physically Handicapped," published by the American National Standards Institute, Inc., (ANSIA117.1–1961 (R1971)),[1] which is incorporated by reference in this part, shall constitute compliance with paragraphs (a) and (b) of this section. Departures from particular requirements of those standards by the use of other methods shall be permitted when it is clearly evident that equivalent access to the facility or part of the facility is thereby provided.

§§ 1251.303–309 [Reserved]

Subpart 1251.4—Procedures

The procedural provisions applicable to title VI of the Civil Rights Act of 1964 apply to this part. These procedures are found in §§ 1250.106, 1250.108 and 1250.110 of this chapter.

Robert A. Frosch,

Administrator.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 401

[FRL 1260–5]

Identification of Conventional Pollutants; Correction

AGENCY: Environmental Protection Agency.

ACTION: Final rule; correction.

SUMMARY: In **Federal Register** document 79–23646, Monday, July 30, 1979, at 44 FR 44501, EPA published a final rule on the identification of conventional pollutants. On page 44503, Sec. 401.16, item 1 lists "biological oxygen demand (BOD)" as a conventional pollutant. That is an error. The correct listing on item 1 should read "*Biochemical* oxygen demand (BOD)," as was specified in the Agency's action of July 28, 1978 (43 FR 32857), and in the text of the July 30, 1979, notice.

DATE: This correction is effective retroactively to July 30, 1979.

FOR FURTHER INFORMATION CONTACT: Kenneth M. Mackenthun, Director, Criteria and Standards Division (WH–585), Office of Water Planning and Standards, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460, Telephone 202/755–0100.

Dated: August 30, 1979.

Swep T. Davis,

Assistant Administrator for Office of Water and Waste Management.

BILLING CODE 6560–01–M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Public Land Order 5682

[NM–30563]

New Mexico; Partial Revocation of Executive Order No. 6276

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This order will restore 200 acres of land to operation of the public land laws and to location for nonmetalliferous minerals.

EFFECTIVE DATE: October 5, 1979.

FOR FURTHER INFORMATION CONTACT: Louis B. Bellesi, 202–343–8731.

By virtue of the authority contained in section 204 of the Act of October 21, 1976, 90 Stat. 2751, 43 U.S.C. 1714, it is ordered as follows:

1. Executive Order No. 6276 of September 8, 1933, which withdrew public lands in New Mexico to aid the State in making exchange selections as provided by the Act of June 15, 1926, 44 Stat. 746–748, is hereby revoked so far as it affects the following described lands:

New Mexico Principal Meridian

T. 23 S., R. 7 W.,
Sec. 25, SW¼NE¼ and S½NW¼;
Sec. 26, N½NW¼.

The area described contains 200 acres in Luna County.

2. At 10 a.m., on October 5, 1979, the lands shall be open to operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, and the requirements of applicable law. All valid applications received at or prior to 10 a.m., on October 5, 1979, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

3. The lands have been and continue to be open to applications and offers under the mineral leasing laws and to location under the United States mining laws for metalliferous minerals. They will be open to location for nonmetalliferous minerals at 10 a.m., on October 5, 1979.

Inquiries concerning the lands should be addressed to the Chief, Division of

Technical Services, Bureau of Land Management, P.O. Box 1449, Santa Fe, New Mexico 87501.
Guy R. Martin,
Assistant Secretary of the Interior.
August 30, 1979.

BILLING CODE 4310-84-M

43 CFR Public Land Order 5680

[I-13259]

Idaho; Partial Revocation of Phosphate Reserve Nos. 2, 13, 19 and 31

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This order partially revokes four Executive Orders which withdrew approximately 262,686 acres of land from all forms of disposition, except metalliferous minerals. This action will restore 2,971 acres of public land to operation of the public land laws, including location for nonmetalliferous minerals under the mining laws. 20,738 acres of privately owned lands in which phosphate was reserved to the United States will also be open to location for nonmetalliferous minerals under the mining laws. 238,977 acres of Forest Service lands will be open to such forms of disposition as may by law be made of national forest lands.

EFFECTIVE DATE: October 5, 1979.

2. At 10 a.m. on October 5, 1979, the public lands shall be open to operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, and the requirements of applicable law. All valid applications received at or prior to 10 a.m. on October 5, 1979, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

3. The public lands will be open to location for nonmetalliferous minerals at 10 a.m. on October 5, 1979. They have been open to applications and offers under the mineral leasing laws, and to location under the United States mining laws for metalliferous minerals.

4. The privately owned lands in which the United States owns the phosphate will be open to location for nonmetalliferous minerals at 10 a.m. on October 5, 1979. They have been open to location under the U.S. mining laws for metalliferous minerals.

5. At 10 a.m. on October 5, 1979, the national forest lands shall be open to such forms of disposition as may by law be made of national forest lands.

Inquiries concerning the public lands shall be addressed to the Chief, Branch of Lands and Minerals Operations, Bureau of Land Management, Federal Building, 550 W. Fort Street, Boise, Idaho 83724.

Guy R. Martin,

Assistant Secretary of the Interior.

August 30, 1979.

BILLING CODE 1505-01-M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 32

Hunting; National Wildlife Refuges in Indiana and Michigan

AGENCY: Fish and Wildlife Service.

ACTION: Special Regulations.

SUMMARY: The Director has determined that the opening to public hunting of certain National Wildlife Refuges is compatible with the objectives for which the areas were established, will utilize a renewable natural resource, and will provide additional recreational opportunity to the public. These special regulations describe the conditions under which hunting will be permitted on portions of certain National Wildlife Refuges in Indiana and Michigan.

DATES: Effective on September 10, 1979 for duration of seasons noted below for individual refuge areas.

FOR FURTHER INFORMATION CONTACT:

The Area Manager or appropriate Refuge Manager at the address or telephone number listed below.

John Popowski, Area Manager, U.S. Fish and Wildlife Service, 1405 S. Harrison Rd., Room 202, East Lansing, Mich. 48823. Telephone (517) 372-1910 ex. 206.

Charles E. Scheffe, Refuge Manager, Muscatatuck National Wildlife Refuge, P.O. Box 631, Seymour, Indiana 47274. Telephone (812) 522-4352.

John R. Frye, Refuge Manager, Seney National Wildlife Refuge, Seney, MI 49883. Telephone (906) 586-9851.

Robert G. Johnson, Refuge Manager, Shiawassee National Wildlife Refuge, 6975 Mower Road, Route 1, Saginaw, Mich. 48601. Telephone (517) 777-5930.

SUPPLEMENTARY INFORMATION: Hunting on portions of the following refuges shall be in accordance with all applicable State and Federal regulations, subject to additional special regulations and conditions as indicated. Portions of refuges which are open to hunting are designated by signs and/or delineated on maps. Special conditions applying to individual refuges and maps are available at refuge headquarters or from the Office of the Area Manager (addresses listed above).

The Refuge Recreation Act of 1962 (16 U.S.C. 460k) authorizes the Secretary of the Interior to administer such areas for public recreation as an appropriate incidental or secondary use only to the extent that it is practicable and not inconsistent with the primary objectives for which the area was established. In addition, the Refuge Recreation Act requires (1) that any recreational use permitted will not interfere with the primary purpose for which the area was established and (2) that funds are available for the development, operation, and maintenance of the permitted forms of recreation.

The recreational use authorized by these regulations will not interfere with the primary purposes for which these National Wildlife Refuges were established. This determination is based upon consideration of, among other things, the Service's Final Environmental Statement on the Operation of the National Wildlife Refuge System published in November 1976. Funds are available for the administration of the recreational activities permitted by these regulations.

§ 32.22 Special regulations, upland game; for individual wildlife refuge areas.

Indiana

Muscatatuck National Wildlife Refuge

Muscatatuck National Wildlife Refuge will be open to hunting of two upland game species—rabbit and quail. Dates are: rabbit, November 9, 1979–January 31, 1980. Quail: November 9–December 25, 1979. Area of hunting is on the Muscatatuck National Wildlife Refuge, Indiana, only on refuge lands lying south of Myer Road, designated by signs as open to hunting. The area comprises 1,320 acres.

Michigan

Seney National Wildlife Refuge

Seney National Wildlife Refuge will be open to hunting of upland game species in accordance with all applicable State regulations subject to the following conditions: 1. Ruffed Grouse and Snowshoe Hare hunting is permitted only on 33,525 acres of the refuge designated as Area B from September 15 through November 12, 1979. 2. Snowshoe Hare may be taken from December 1, 1979 through February 29, 1980 on 85,200 acres designated as Area A and Area B. 3. All motorized conveyances are prohibited from traveling on dikes or off established roads and trails. Motorized bikes, all-terrain vehicles and snowmobiles are not permitted on the refuge.

§ 32.32 Special regulations; big game; for individual refuge areas.

Michigan

Seney National Wildlife Refuge

Seney National Wildlife Refuge will be open to hunting of big game species in accordance with all applicable State regulations subject to the following conditions: 1. Bow and arrow hunting is permitted only on 33,525 acres of the refuge designated as Area B, from October 1 through November 12, 1979 and on the 85,200 acres of refuge designated as Area A and Area B, from December 1 through December 15, 1979. 2. Bear may be taken by archers only from October 1 through November 12, 1979 and by gun hunters only from November 15 through November 30, 1979. Bear may not be taken with the aid of dogs. 3. Camping is permitted only west of the Driggs River except in designated wilderness area during the gun season. A Camp Registration Permit, obtainable at refuge headquarters, is required. 4. All motorized conveyances are prohibited from traveling on dikes or off established roads and trails. Motorized bikes, all-terrain vehicles and snowmobiles are not permitted on the refuge.

Shiawassee National Wildlife Refuge

Hunting of deer with bow and arrow is permitted on the entire refuge area from 6 a.m. to 7 p.m. EST each day from December 1, 1979 through December 31, 1979; with the exception of 1,500 acres known as the Johnson Tract, which will be closed to archery hunting from December 7, 1979 through December 16, 1979, only. Muzzle-loading firearm hunting for deer is permitted on the 1,500 acres known as the Johnson Tract from 6 a.m. to 7 p.m. each day from December 7, 1979 through December 16, 1979, only. Hunting shall be in accordance with all State regulations covering the hunting of deer, subject to the following conditions:

1. All bow and arrow hunters, and muzzle-loading firearm hunters, must possess a valid Federal permit. These permits must be carried by the hunter whenever on refuge lands.

2. Applications for Federal permits must be received at the refuge office on or before October 31, 1979.

3. All hunters must exhibit their hunting license, Federal permit, deer tag, game, and vehicle contents to Federal and State officers upon request.

4. Bow and arrow hunters, and muzzle-loading firearm hunters, are prohibited from constructing or using any permanent blind, platform or scaffold.

Dated: August 27, 1979.

Richard O. Winters,

Acting Area Manager.

Proposed Rules

Federal Register
Vol. 44, No. 176
Monday, September 10, 1979

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[7 CFR Part 948]

Irish Potatoes Grown in Colorado—Area No. 2; Notice of Proposed Handling Regulation

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed regulation would require fresh market shipments of potatoes grown in Colorado—Area No. 2 to be inspected and meet minimum grade, size and maturity requirements. The regulation should promote orderly marketing of such potatoes and keep less desirable qualities and sizes from being shipped to consumers.

DATE: Comment due October 10, 1979.

ADDRESSES: Comments should be sent to: Hearing Clerk, Room 1077–S, U.S. Department of Agriculture, Washington, D.C. 20250. Two copies of all written comments shall be submitted, and they will be made available for public inspection at the office of the Hearing Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Peter G. Chapogas, (202) 447–5432.

SUPPLEMENTARY INFORMATION: Marketing Agreement No. 97 and Order No. 948, both as amended, regulate the handling of potatoes grown in designated counties of Colorado Area No. 2. It is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674). The Colorado Area No. 2 Potato Committee, established under the order, is responsible for its local administration.

This notice is based upon recommendations made by the committee at its public meeting in Monte Vista, Colorado, on August 16, 1979.

The grade, size, maturity, and inspection requirements recommended herein are similar to those issued during past seasons. They are necessary to prevent potatoes of low quality or undesirable sizes from being distributed in fresh market channels. They would also provide consumers with good quality potatoes consistent with the overall quality of the crop and standardize the quality of the potatoes shipped from the production area in order to provide the consumer with a more acceptable product.

Because heavier than normal rains have slowed potato development, the committee recommended that size requirements for round varieties be reduced from 2⅛ inches to 2 inches minimum diameter. Minimum size requirements for potatoes of the Russet Burbank variety remain unchanged at 1⅞ inches. Other long varieties must be a minimum of 1⅞ inches in diameter if U.S. No. 2 grade, and at least 2 inches in diameter or 4 ounces in weight if U.S. Commercial or better grade. However, all varieties for export would only be required to be at least 1½ inches in diameter. Size B may be handled if U.S. No. 1 grade. Maturity requirements during the months of September and October would be for U.S. No. 2 grade potatoes, "moderately skinned" and for all other grades "slightly skinned."

Exceptions would be provided to certain of these requirements to recognize special situations in which such requirements would be inappropriate or unreasonable.

Shipments would be permitted to certain special purpose outlets without regard to the grade, size, maturity, and inspection requirements provided that safeguards are met to prevent such potatoes from reaching unauthorized outlets. Certified seed would be exempt because requirements for this outlet differ greatly from those for fresh market. Shipments for use as livestock feed would likewise be exempt since no purpose would be served by regulating such potatoes. Shipments for charity purposes also would be exempt. Also, potatoes for most processing uses are exempt under the legislative authority for this part.

Requirements for export shipments differ from those for domestic markets. While standard quality requirements are desired in foreign markets, smaller sizes are often more acceptable. Therefore, different requirements for export shipments are proposed.

To maximize the benefits of orderly marketing the proposed regulation should become effective on November 1, 1979, when the current regulations expire. Interested persons were given an opportunity to comment on the proposal at an open public meeting held August 16 where it was recommended by the committee. This proposal is similar to regulations in effect for the past season. It is therefore determined that the period allowed for comments will be sufficient under the circumstances and will tend to effectuate the declared purpose of the act.

7 CFR Part 948 would be amended by adding a new § 948.382 as follows:

§ 948.382 Handling regulation.

During the period November 1, 1979, through October 31, 1980, no person shall handle any lot of potatoes grown in Area No. 2 unless such potatoes meet the requirements of paragraphs (a), (b), and (c) of this section, or unless such potatoes are handled in accordance with paragraphs (d) and (e), or (f) of this section.

(a) *Minimum grade and size requirements*—(1) *Round varieties.* U.S. No. 2, or better grade, 2 inches minimum diameter.

(2) *Russet Burbank.* U.S. No. 2, or better grade, 1⅞ inches minimum diameter.

(3) *All other long varieties except Russet Burbank.* U.S. Commercial, or better grade, 2 inches minimum diameter or 4 ounces minimum weight, or U.S. No. 2 grade 1⅞ inches minimum diameter.

(4) *All varieties.* Size B, if U.S. No. 1.

(5) *All varieties for export.* 1½ inches minimum diameter.

(b) *Maturity (skinning) requirements.* During September and October minimum maturity requirements shall be:

(1) *For U.S. No. 2 grade* not more than "moderately skinned."

(2) *All other grades.* Not more than "slightly skinned."

(c) *Inspection.* (1) No handler shall handle any potatoes for which inspection is required unless an appropriate inspection certificate has been issued with respect thereto and the certificate is valid at the time of shipment. For purposes of operation under this part it is hereby determined pursuant to § 948.40(d) that each inspection certificate shall be valid for a period not to exceed five days following the date of inspection as shown on the inspection certificate.

(2) No handler may transport or cause the transportation by motor vehicle of any shipment of potatoes for which an inspection certificate is required unless each shipment is accompanied by a copy of the inspection certificate applicable thereto and the copy is made available for examination at any time upon request.

(d) *Special purpose shipments.* (1) The grade, size, maturity and inspection requirements of paragraphs (a), (b) and (c) of this section and the assessment requirements of this part shall not be applicable to shipments of potatoes for:

(i) Livestock feed;

(ii) Relief or charity; or

(iii) Canning, freezing, and "other processing" as hereinafter defined.

(2) The grade, size, maturity and inspection requirements of paragraphs (a), (b) and (c) of this section shall not be applicable to shipments of seed pursuant to § 948.6 but such shipments shall be subject to assessments.

(e) *Safeguards.* Each handler of potatoes which do not meet the grade, size, and maturity requirements of paragraphs (a) and (b) of this section and which are handled pursuant to paragraph (d) for any of the special purposes set forth therein shall:

(1) Prior to handling, apply for and obtain a Certificate of Privilege from the committee;

(2) Furnish the committee such reports and documents as requested, including certification by the buyer or receiver as to the use of such potatoes; and

(3) Bill each shipment directly to the applicable processor or receiver.

(f) *Minimum quantity.* For purposes of regulation under this part, each person may handle up to but not to exceed 1,000 pounds of potatoes without regard to the requirements of paragraphs (a), (b) and (c) of this section, but this exception shall not apply to any shipment which exceeds 1,000 pounds of potatoes.

(g) *Definitions.* The terms "U.S. No. 1," "U.S. Commerical," "U.S. No. 2," "Size B," "sligthly skinned," and "moderately skinned" shall have the same meaning as when used in the U.S. Standards for Potatoes (7 CFR 2851.1540–2851.1566), including the tolerances set forth therein. The term "other processing" has the same meaning as the term appearing in the act and includes, but is not restricted to, potatoes for dehydration, chips, shoestrings, starch, and flour. It includes only that preparation of potatoes for market which involves the application of heat or cold to such an extent that the natural form or stability of the commodity undergoes a substantial change. The act of peeling, cooling, slicing, dicing, or applying material to prevent oxidation does not constitute "other processing." Other terms used in this section shall have the same meaning as when used in Marketing Agreement No. 97, as amended, and this part.

(h) *Applicability to imports.* Pursuant to section 8e of the act and § 980.1, *Import regulations* (7 CFR 980.1), Irish potatoes of the red skinned round type, except certified seed potatoes, imported into the United States during the periods November 1, 1979, through June 30, 1980, and September 1, 1980 through October 31, 1980 shall meet the minimum grade, size, quality and maturity requirements specified in paragraphs (a) and (b) of this section.

This proposal has been reviewed under the USDA criteria implementing Executive Order 12044. A determination has been made that this action should not be classified "significant." An Impact Analysis is available from Peter G. Chapogas (202) 447–5432.

Dated: September 5, 1979.

D. S. Kuryloski,

Deputy Director, Fruit and Vegetable Division, Agricultural Marketing Service.

BILLING CODE 3410–02–M

FEDERAL DEPOSIT INSURANCE CORPORATION

[12 CFR Parts 301, 305, 306, 325, 330]

Payment of Insured Deposits; Reciverships and Liquidations; Clarification and Definition of Deposit Insurance Coverage; Proposed Deletion of Regulations

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Proposed deletion of regulations.

SUMMARY: The FDIC proposes to eliminate four regulations—Part 301 (introductory), Part 305 (Payment of Insured Deposits), Part 306 (Receiverships and Liquidations), and Part 325 (Introductory). These regulations are basically informational in nature and contain little or no operative language. Their removal is being proposed merely as a "housecleaning" measure, in accordance with the FDIC's stated policy of simplifying its regulations and eliminating any unnecessary regulations. The FDIC also proposes to delete certain out-of-date provisions of its rules governing deposit insurance coverage (§§ 330.13 and 330.14).

DATE: Comments must be received by November 9, 1979.

ADDRESS: Interested persons may submit written data, views, or arguments regarding this proposal to the Office of the Executive Secretary, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, D.C. 20429.

FOR FURTHER INFORMATION CONTACT: Jerry L. Langley, Senior Attorney, FDIC, (202) 389–4237.

SUPPLEMENTARY INFORMATION: As part of its program to eliminate unnecessary regulations, the FDIC proposes to delete four regulations that do little more than serve as a narrative description of certain FDIC procedures. The proposed action would not change these procedures, but would merely remove them from the body of FDIC regulations. The FDIC also proposes to delete two sections of its rules governing deposit insurance coverage that are out-of-date. The regulations proposed to be deleted are:

Part 301 (Introductory)

This reglation is merely a "roadmap" provision describing the general content of the FDIC's rules of procedure and practice. Basically it tracks some language in the Administrative Procedure Act, but has no operative language of its own.

Part 305 (Payment of Insured Deposits)

This regulation describes what the FDIC does when an insured bank closes and how insured deposits are paid. Much of the information contained in the regulation can also be found in the underlying statute (sections 11 and 12 of the Federal Deposit Insurance Act).

Part 306 (Receiverships and Liquidations)

Like Part 305, Part 306 contains little, if any, operative language and is basically informational. It describes in general terms the procedures followed by FDIC liquidators in liquidating assets acquired through loans, purchase and assumption transactions, and closed bank receiverships.

Information regarding FDIC receivership and liquidation procedures and operations and payment of insured deposits is contained in the FDIC Liquidators' Manual of Instructions. This manual is a public document.

Part 325 (Introductory)

Like Part 301, Part 325 is simply a "roadmap" provision describing the general scope of the FDIC's substantive regulations. It serves no particular purpose related to the FDIC's functions or operations.

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

Sections 330.13 and 330.14 (Clarification and Definition of Deposit Insurance Coverage—Continuation of prior coverage; Notification of depositors)

When new Part 330 relating to deposit insurance coverage was adopted in 1967 §§ 330.13 and 330.14 were added to permit a transition period between the old and new rules (§ 330.13) and to ensure that all depositors were notified of the new rules (§ 330.14). These provisions have been out-of-date for some time now.

In consideration of the foregoing, the FDIC Board of Directors does hereby propose to delete Parts 301, 305, 306, and 325 and §§ 330.13 and 330.14 of Title 12 of the Code of Federal Regulations.

By order of the Board of Directors, September 4, 1979.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Executive Secretary.

[FR Doc. 79-28051 Filed 9-7-79; 8:45 am]

BILLING CODE 6714-01-M

[12 CFR Parts 307, 327]

Termination of Insured Status; Proposed Revision

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Proposed amendments to regulations.

SUMMARY: The FDIC proposes to revise and simplify Part 307 of its regulations, which prescribes procedures to be followed by a bank whose insured status has terminated other than by action of the FDIC Board of Directors. Several provisions which have not been used since 1969 would be eliminated and certain provisions relating to assessments would be transferred to Part 327, which deals specifically with assessments. The remainder of Part 307 would be revised and simplified to reduce the reporting burden on insured banks whose deposits are assumed by other insured banks and to make the procedures more understandable. The simplified rules include a revised, easier-to-understand form of notice to be sent to depositors when an insured bank's deposits are assumed by another insured bank. As proposed, revised Part 307 would also provide for notice to depositors when an FDIC-insured mutual savings bank converts to a Federal charter.

DATE: Comments must be received by November 9, 1979.

ADDRESS: Interested persons are invited to submit written data, views, or arguments regarding this proposal to the Office of the Executive Secretary, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, D.C. 20429.

FOR FURTHER INFORMATION CONTACT: Jerry L. Langley, Senior Attorney, FDIC, (202) 389-4237.

SUPPLEMENTARY INFORMATION: Part 307 of the FDIC's regulations (12 CFR Part 307) prescribes certain steps that must be taken and records that must be furnished to the FDIC by an insured nonmember bank that voluntarily terminates its insured status and goes into liquidation (§ 307.1), by a member bank of the Federal Reserve System that ceases to be a member bank, thereby terminating its insured status (§ 307.2), and by an insured bank whose deposits are assumed by another insured bank (§ 307.3).

Part 307 was originally adopted in 1950. However, between 1962 and 1969 there were only 7 banks that voluntarily liquidated and whose deposits were not assumed by another insured bank, and since 1969 there have been no instances in which §§ 307.1 or 307.2 have been used. Therefore, in accordance with the FDIC's stated policy of eliminating any unnecessary regulations, the FDIC proposes to delete §§ 307.1 and 307.2 from its regulations.

In addition, the FDIC proposes to simplify and update Part 307 by restructuring it according to whether or not the terminating bank's deposits are assumed by another insured bank. In nearly all cases, there is an assumption. Thus, the revised regulation, as proposed, would spell out the procedures to be followed in these cases. In all other cases (*i.e.*, when deposits are not assumed), the regulation would provide only that the appropriate FDIC Regional Director will approve, on an "as needed" basis, the procedures to be followed, including the notice to be given depositors.

The revised regulation would prescribe the form of notice that must be given to depositors when an insured bank's deposits are assumed by another insured bank. The notice has been redrafted from the form contained in present Part 307 to make it easier for depositors to understand and to provide more information about the status of their insured deposits. In addition, the proposal would simplify and consolidate the requirements regarding information that must be furnished to the FDIC when an insured bank's deposits are assumed by another insured bank. The number of separate submissions of information would be reduced from three to one. Finally, the revised regulation would make clear that notice to depositors need not be given for a "phantom" bank merger or for a purchase and assumption transaction involving only a portion of the bank's deposits where the bank continues in operation as an insured bank.

In addition, certain provisions of Part 307 relating to assessments paid by insured banks on their insured deposits would be transferred to Part 327 dealing specifically with that subject.

Finally, revised Part 307 would require notice to depositors when an FDIC-insured mutual savings bank converts, merges, or consolidates into an institution insured by the Federal Savings and Loan Insurance Corporation. This type of conversion is authorized by the Financial Institutions Regulatory and Interest Rate Control Act of 1978.

Accordingly, the FDIC Board of Directors does hereby propose to amend Part 307 and Part 327 of Title 12 of the Code of Federal Regulations as set forth below.

By order of the Board of Directors, September 4, 1979.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Executive Secretary.

1. Revise 12 CFR Part 307 to read:

PART 307—TERMINATION OF INSURED STATUS

Sec.

307.1 Purpose, scope, and authority.
307.2 When deposit liabilities are assumed by another insured bank.
307.3 When deposit liabilities are not assumed by another insured bank or when a State-chartered FDIC-insured mutual savings bank becomes an institution insured by the FSLIC.
Appendix A—Notice to depositors of assumption of deposit liabilities by another insured bank.

§ 307.1 Purpose, scope, and authority.

(a) This Part describes the procedures to be followed by a bank whose insured status under the Federal Deposit Insurance Act has terminated other than by action of the FDIC Board of Directors.

(b) This Part is issued under the authority of sections 8 and 9 of the Federal Deposit Insurance Act. Section 8(a) governs voluntary termination of insured status by an insured nonmember bank. Section 8(o) governs termination of the insured status of a member bank that ceases to be a member of the Federal Reserve System. Section 8(q) governs termination of the insured status of an insured bank whose deposit liabilities are assumed by another insured bank.

(c) Termination of a bank's insured status by action of the FDIC Board of Directors is not covered by this Part, but is covered in Part 308 and in sections 8(a) and 8(p) of the Federal Deposit Insurance Act.

§ 307.2 When deposit liabilities are assumed by another insured bank.

(a) Whenever the deposit liabilities of an insured bank are assumed by another insured bank (whether by merger, consolidation, or other statutory assumption, or by contract), the assuming or resulting bank shall give notice of the assumption to each of the depositors of the bank whose deposits are assumed. The notice shall be given within 30 days after the assumption takes effect and shall be substantially in the form provided in Appendix A. The assuming or resulting bank shall mail the notice to each depositor at the depositor's last address of record as shown on the books of the bank whose deposits are assumed and shall publish the notice in at least two issues of a local newspaper of general circulation. However, no notice need be given for a "phantom" bank merger (*i.e.*, a merger or other transaction involving a newly chartered bank or corporation, the purpose of which is merely to effect a change in organizational structure and which, in and of itself, has no effect on competition) or for a purchase and assumption transaction involving only a portion of a bank's deposits where the bank continues in operation as an insured bank.

(b) Within 30 days after the assumption takes effect, the assuming or resulting bank shall certify to the FDIC (1) that it has agreed to assume the deposit liabilities of the bank whose deposits were assumed and (2) that notice was given as required in paragraph (a). The certification shall state the date the assumption took effect, the dates the notice was mailed and published, and the name of the newspaper in which it was published, and shall include a copy of the notice as mailed. This certification shall be considered satisfactory evidence of the assumption.

§ 307.3 When deposit liabilities are not assumed by another insured bank or when a State-chartered FDIC-insured mutual savings bank becomes an institution insured by the FSLIC.

Any insured bank whose insured status terminates, but whose deposit liabilities are not assumed by another insured bank, or any State-chartered insured mutual savings bank that converts, merges, or consolidates into an institution insured by the Federal Savings and Loan Insurance Corporation, shall give notice to each of its depositors of the date of termination of its insured status under the Federal Deposit Insurance Act. The notice to depositors shall be given in a form, in a manner, and at a time approved by the appropriate FDIC Regional Director. The FDIC may require the bank to take other steps that it considers necessary for the protection of depositors.

Appendix A (Notice to depositors of assumption of deposit liabilities by another insured bank)

(Date)

Notice to Depositors of the ———— (Name of bank):

Please be advised that the deposit liabilities shown on the books of the (Name of bank)————(City and town)————(State)————as of the close of business on ————, 19—— have been assumed by the undersigned bank, and insured bank under the Federal Deposit Insurance Act. Although the insured status of (Name of bank)———— will end on ————, 19—— in accordance with section 8(q) of the Federal Deposit Insurance Act, your insured deposits in that bank at the time of assumption will continue to be insured separately from any insured deposits you may have in the undersigned bank for an additional six months after the date of assumption stated above or, in the case of a time deposit, until the earliest maturity date after that six-month period. At that time, your deposits will be combined with any deposits you may have in the undersigned bank for purposes of determining deposit insurance coverage.[1]

(Name of assuming bank)————

(Address)————

---

2. Amend 12 CFR Part 327 by revising § 327.3 to read:

§ 327.3 Payment of assessments by banks whose insured status has terminated.

(a) *Assumed deposits of terminating bank become deposits of assuming bank.* When the deposit liabilities of an insured bank are assumed by another insured bank the assumed deposits, for assessment purposes, shall be deposit liabilities of the assuming bank and shall cease to be deposit liabilities of the bank whose deposits are assumed from and after the effective date of the assumption.

(b) *Payment of assessments by bank whose deposits are assumed.* When the deposit liabilities of an insured bank are assumed by another insured bank, the insured bank whose deposits are assumed shall file a final certified statement, as provided for in § 304.3(u) and (v), and shall pay to the Corporation the normal assessment thereon. If the deposits of the terminating bank are assumed by a newly insured bank, the terminating bank is not required to file certified statements or pay any assessment upon the deposits so assumed after the semiannual period in which the assumption takes effect.

(c) *Payment of assessment by assuming bank on assumed deposits of terminating bank.* When the deposit liabilities of an insured bank are assumed by another insured bank and the assuming bank agrees to file the certified statement which the terminating bank is required to file, the filing of such certified statement and the payment of the assessment thereon by the assuming bank shall be deemed the acts of the terminating bank: *Provided,* That the requisite notice of assumption, as provided in Part 307 of this chapter, be given to the depositors of the terminating bank, and *Provided further,* That such certified statements shall be filed separately from that required to be filed by the assuming bank.

(d) *Resumption of insured status before insurance of deposits ceases.* If a bank whose insured status has been terminated under section 8(a) of the Federal Deposit Insurance Act makes application to the Corporation before the insurance of its deposits shall have ceased, to be permitted to continue or to resume its status as an insured bank, and if the Board of Directors grants the application, the bank will be deemed, for assessment purposes, to continue as an insured bank and must thereafter furnish certified statements and pay assessments as though its insured status had not been terminated. For the procedure to be followed in making such application, see § 303.7 of this chapter.

(e) *Payment of assessments by bank deposits are not assumed.* (1) When the deposit liabilities of an insured bank are not assumed by another insured bank, the terminating bank shall continue to file certified statements and pay assessments thereon for the period its deposits are insured, as provided by the Federal Deposit Insurance Act: *Provided,* That after the bank shall have paid in full its deposit liabilities and the assessment to the Corporation required to be paid for the semiannual period in which its deposit liabilities are paid in full, and after it shall, under applicable law, have ceased to have authority to transact a banking business and to have

[1] The bank may include in this notice any additional information it desires.

V 4 4 / 1 7 6

existence, except for the purpose of, and to the extent permitted by law for, winding up its affairs, it shall not be required to file further certified statements nor to pay further assessments.

(2) When the deposit liabilities of the bank have been paid in full, the bank shall certify to the Corporation that the deposit liabilities have been paid in full and give the date of the final payment thereof. Where the bank has unclaimed deposits, the certification shall further state the amount of such unclaimed deposits and the disposition made of the funds to be held to meet such claims. For assessment purposes, the following will be considered as payment of such unclaimed deposits:

(i) The transfer of cash funds in an amount sufficient to pay such unclaimed and unpaid deposits to the public official authorized under the law to receive the same; or

(ii) If no provision is made by law for the transfer of funds to a public official, the transfer of cash funds or compensatory assets to an insured bank in an amount sufficient to pay the unclaimed and unpaid deposits in consideration of such insured bank assuming the payment therof: *Provided*, That, prior to such transfer, the terminating bank shall have given notice, as provided in this subparagraph, to the owners of the unclaimed deposits of the intended transfer and a reasonable time shall have elapsed after the giving of such notice to enable the depositors to obtain their deposits. Such notice shall be mailed to each depositor and shall be published in a local newspaper of general circulation. The notice shall advise such depositors of the liquidation of the bank, shall request them to call for and accept payment of their deposits, and shall state the disposition to be made of their deposits upon their failure to promptly claim the same.

(iii) If such unclaimed and unpaid deposits are disposed of as provided in paragraph (e)(2)(i) of this section, a certified copy of the public official's receipt issued for such funds shall be furnished to the Corporation. If such unclaimed and unpaid deposits are disposed of as provided in subdivision (ii) of this subparagraph, an affidavit of the publication and of the mailing of the notice to depositors, together with a copy of such notice, and a certified copy of the contract of assumption shall be furnished to the Corporation.

(3) The terminating bank shall advise the Corporation of the date on which the authority or right of the bank to do a banking business shall have terminated and the method or means whereby such termination shall have been effected, that is, whether such termination has been effected by the surrender of its charter, by the cancellation of its authority or license to do a banking business by the supervisory authority, or otherwise.

Informal Airspace Meeting; Notice of Change in Meeting Place

AGENCY: Department of Transportation/FAA.

ACTION: Notice of change in meeting place, informal airspace meeting.

SUMMARY: The location of the informal airspace meeting in San Juan, Puerto Rico, for the purpose of discussing a plan by the FAA to establish a Group II Terminal Control Area (TCA) for the Puerto Rico International Airport has been changed from the Puerto Rico ports authority meeting area on pier no. 1 to:

DATE: October 9, 1979, 7 p.m. local time.

ADDRESS: Puerto Rico Ports International Airport Terminal Building Passenger Lounge, Gate 6 (next to Prinair ticket counter).

SUPPLEMENTARY INFORMATION: For further information, call: Mr. Clifford C. Monteau, FAA Southern Region, telephone: (A/C 404) 763-7866, or Mr. Jose L. Rodriguez, San Juan CERAP, telephone: (A/C 809) 791-4830.

Issued in Atlanta, Georgia, on August 29, 1979.

Richard M. Robinson,

Acting Chief, Air Traffic Division, Southern Region.

[FR Doc. 79-28036 Filed 9-7-79; 8:45 am]
BILLING CODE 4910-13-M

[14 CFR Part 71]

[Airspace Docket No. 79-SO-54]

Proposed Designation of Transition Area; Hopkinsville, Ky.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: This proposed rule will designate the Hopinsville, Kentucky, transition area and will lower the base of controlled airspace in the vicinity of the Hopkinsville-Christian County Airport from 1,200 to 700 feet AGL. Public use standard instrument approach procedures have been developed to the airport and additional controlled airspace is required to proctect aircraft conducting Instrument Flight Rule (IFR) operations.

DATES: Comments must be received on or before: October 16, 1979.

ADDRESS: Send comments on the proposal to: Federal Aviation Administration, Chief, Air Traffic Division, P.O. Box 20636, Atlanta, Georgia 30320.

FOR FURTHER INFORMATION CONTACT: John W. Schassar, Airspace and Procedures Branch, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone: 404-763-7646.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons may participate in the proposed rulemaking by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number and be submitted in triplicate to the Director, Southern Region, Federal Aviation Administration, Attention: Chief, Air Traffic Division, P.O. Box 20636, Atlanta, Georgia 30320. All communications received on or before October 16, 1979, will be considered before action is taken on the proposed amendment. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each public contact with FAA personnel concerned with this rulemaking will be filed in the public, regulatory docket.

Availability of NPRM

Any person may obtain a copy of this notice of proposed rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Information Center, APA-430, 800 Independence Avenue, SW., Washington, D.C. 20591, or by calling (202) 426-8058. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRMs should also request a copy of Advisory Circular No. 11-2 which describes the application procedures.

The Proposal

The FAA is considering an amendment to Subpart G of Part 71 of the Federal Aviation Regulations (14 CFR 71) to alter the Hopkinsville, Kentucky, 700-foot Transition Area. This action will provide controlled airspace for protection for IFR operations at the Hopkinsville-Christian County Airport. Standard instrument approach procedures, NDB RWY 26 and SDF RWY 26 to the airport are proposed in conjunction with the designation of the Transition Area. If the proposed designation is acceptable, the airport operating status will be changed from VFR to IFR.

The Proposed Amendment

Accordingly, the Federal Aviation Administration proposes to amend Subpart G, § 71.181 (44 FR 442), of Part 71 of the Federal Aviation Regulations (14 CFR 71) by adding the following:

Hopkinsville, Kentucky

. . . within an 8-mile radius of the Hopkinsville-Christian County Airport (latitude 36°51'25"N, longitude 87°27'25"W).

(Sec. 307(a) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1348(a)) and Sec. 6(c) of the Department of Transportation Act (49 U.S.C. 1655(c)).)

Note.—The Federal Aviation Administration has determined that this document involves a proposed regulation which is not significant under Executive Order 12044, as implementated by DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in East Point, Georgia, on August 29, 1979.

George R. LaCaille,

Acting Director, Southern Region.

[FR Doc. 79-28040 Filed 9-7-79; 8:45 am]
BILLING CODE 4910-13-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

[24 CFR Part 51]

[Docket No. R-79-709]

Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature

AGENCY: Department of Housing and Urban Development.

ACTION: Advance Notice of Proposed Rulemaking.

SUMMARY: HUD proposes to add a new Subpart C to Part 51, Title 24 of the CFR, establishing Departmental standards, requirements and guidelines for locating HUD projects at acceptable distances from stationary hazardous operations which handle conventional fuels or chemicals of an explosive or flammable nature.

COMMENTS DUE: November 9, 1979. Interested persons may submit written data, opinions or comments to the Department. Comments received on or before November 9, 1979 will be considered prior to the publication of the proposed rule. Each submittal should include name and address of the commentator and the regulatory docket number.

ADDRESS: Statements should be submitted to the Rules Docket Clerk, Office of the Secretary, Room 5218, Department of Housing and Urban Development, 451 7th Street, SW., Washington, D.C. 20410.

FURTHER INFORMATION: For further information contact James L. Christopulos or Michael McGee, Office of Environmental Quality, Department of Housing and Urban Development, 451 7th Street, SW., Washington, D.C. 20410, telephone number 202-755-8910.

SUPPLEMENTARY INFORMATION: The Department of Housing and Urban Development has for some time been deeply concerned about proposals to locate HUD-supported projects in the vincinity of operations that handle large quantities of explosive or flammable materials. This was first brought to the attention of the Department in 1975, during the environmental review process, when one of the local Housing Authorities proposed construction of 1,250 units of public housing within 120 feet of a public utility facility containing forty 60,000 gallon tanks of liquid propane. An engineering analysis determined that an explosion of just one of the tanks would emit an explosive force capable of "wiping-out" 60 percent of the project. As a result the project was modified to take into account the potential hazard. An extensive research project then developed criteria for acceptable siting to be used by planners, designers and public officials. During the past 2 years Departmental staff and local officials have been using interim guidelines contained in the HUD publication dated December, 1975, PD&R-161 entitled "Safety Considerations in Siting Housing Projects" to identify potentially hazardous operations and to determine acceptable separation distances (ASD) for all HUD-supported projects, defined as any project application that requests or requires Department subsidy, grant assistance or mortgage insurance in the vicinity of such operations.

The only change between the guidelines in PD&R-161 and the proposed policy is that the protective standard for people in exposed areas from thermal radiation has been revised with the latest findings of research to identify potentially hazardous operations and to determine acceptable separation distances (ASD) for HUD-supported projects in the vicinity of such operations.

The proposed regulation will establish explosion and thermal radiation standards, which will be applied as a basis for determining the ASD if a HUD supported project is to be located near a potential hazard of an explosion or fire prone nature. This will assure that such a project is located outside the danger zone.

A Technical Handbook will provide the actual procedures to implement the regulation. The supplement will contain formulas, monographs, tables and other data which, in conjunction with the environmental standards, will be used to determine acceptable separation distances from such hazards.

Operations to be covered by the proposed regulation and the technical supplement include the manufacture, processing and storage of chemicals of an explosion prone or flammable nature and ordinary flammable fuels, e.g., kerosene, gasoline and naptha; liquid petroleum gases (LPG), e.g. liquid propane and liquid butane; and liquefied natural gas (LNG).

It has been determined that the proposed regulation may significantly affect the quality of the human environment. Therefore, an Environmental Impact Statement (EIS) will be prepared for agency and public comment in accordance with the Council on Environmental Quality regulations and HUD's environmental policies. An economic analysis, however, is not considered necessary.

The regulation will establish explosion and fire (thermal radiation) standard for both buildings and people as follows.

1. *Environmental standard for explosion:* The proposed standards for explosion is 0.5 pounds per square inch (PSI) overpressure. It has been determined that 0.5 PSI is the acceptable level of blast overpressure for both buildings and occupants, because a frame structure building can withstand that level of external exertion with no structural damage, and human beings would suffer only minor superficial injury.

SEP 10 79
UMI

V 4 4 / 1 7 6 SE 10 79 UMI

2. *Environmental standards for thermal radiation:* There will be two standards for thermal radiation.

Wooden buildings generally withstand a thermal radiation flux level of about 10,000 Btu/hr. ft.^{2} for a relatively long period of time (15–20 minutes) before igniting. Since the national average response time for fire fighting units in urbanized and suburban areas is approximately 5 to 8 minutes, 10,000 Btu/hr. ft.^{2} is considered an acceptable level of thermal radiation for buildings. Therefore, this is the proposed standard for calculating the acceptable separation distance for a proposed HUD building project from the site of a potential thermal radiation (fire) hazard.

It is generally accepted that the average person will respond and take shelter within a 15-second time period. However, since children and elderly or handicapped individuals could be affected, the Department is proposing a longer reaction time. People who are in an outdoor area and are exposed to a thermal radiation level of about 450 Btu/hr. ft.^{2} will suffer pain after about 2 minutes and get a burn comparable to a bad sunburn. Longer than 2 minutes of exposure to a radiation level of 450 Btu/hr. ft.^{2} causes blistering. Since it is assumed that an individual will take refuge or be assisted by other people to a safe area within the 2-minute time period, before skin blistering occurs, 450 Btu/hr. ft.^{2} is the thermal radiation level proposed as the standard for determining the acceptable separation distance for people in unsheltered locations. Therefore, exposed recreation areas such as playgrounds, parks, outside swimming pools, etc. must be placed at such a distance from a potential fire hazard so that the radiation flux level does not exceed 450 Btu/hr. ft.^{2} This includes open space ancillary to residential structures, such as yard areas and vehicle parking areas, unless such space is protected (shielded) from the potential source of thermal radiation by the structure being served or by other means.

These then are the proposed explosion and thermal radiation standards, which are to be used in determining the acceptable separation distance ASD for a HUD-supported project when it is to be located near a facility handling or storing materials which are of an explosion or fire prone nature.

It is realized that many conventional fuels and chemicals may also present a toxic vapor hazard in addition to the explosion and thermal radiation hazards. However, no attempt has been made to develop a protective standard for vapor hazards at this time, because of the many statistical parameters involved, including wind direction and velocity and their variability over any given time period.

Other hazards are of concern to the Department of Housing and Urban Development that are not addressed in this proposed regulation. The Department is currently assembling information on ways to effectively address the issues of suitable siting of HUD-supported projects near various sources of potential hazards. HUD will solicit public comments before promulgating any regulations on any additional hazards.

Authority: 42 U.S.C. 3535d.

Issued at Washington, D.C., August 29, 1979.

Jay Janis,

Secretary, Department of Housing and Urban Development.

BILLING CODE 4210-01-M

Office of Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection

[24 CFR Part 3280]

[R-79-672]

Revision of Mobile Home Construction and Safety Standards

AGENCY: Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection

ACTION: Notice—Extension of Comment Period

SUMMARY: This Notice extends the comment period for the Advance Notice of Proposed Rulemaking issued in the **Federal Register** (44 FR 32711) on June 7, 1979. The Advance Notice requested comment on areas of the Federal Mobile Home Construction and Safety Standards which are being considered for revision prior to publication of the proposed amendments to those standards. This extension of the comment period is being made in response to requests for additional time to review research documents and other data prior to submitting comments on this Notice. This extension will provide the public more time in which to consider their comments to the Department, assure fuller public participation, and provide the Department with more substantial commentary on which to base the proposed amendments to the Standards.

DATES: The comment period for the Advance Notice of Proposed Rulemaking issued by the Department at 44 FR 32711 on June 7, 1979, has been extended from August 6, 1979, November 6, 1979. Comments received after the extended date will be considered if time permits.

ADDRESSES: Comments should be sent to: Rules Docket Clerk, Office of the Secretary, Room 5218, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, D. C. 20410.

FOR FURTHER INFORMATION CONTACT: Richard A. Mendlen, Director, Standards Division, Office of Mobile Home Standards, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, D. C. 20410 (202) 426–1872. This Notice is being issued pursuant to the provisions of section 604(d) of the National Mobile Home Safety Standards Act of 1974. (Secs. 604, 625 of the National Mobile Home Construction and Safety Standards Act of 1974 (42 U.S.C. 5403 and 5424)).

Issued at Washington, D.C. September 4, 1979.

Richard C. D. Fleming,

General Deputy Assistant Secretary for Neighborhoods, Voluntary Associations and Consumer Protection.

BILLING CODE 4210-01-M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

[26 CFR Part 20]

[LR-203-76, Part IV]

Definition of Gross Cash Rentals for Valuation of Certain Farm Real Property According to Actual Use

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations defining "gross cash rental" for purposes of electing to value certain farm real property according to its actual use under section 2032A(e)(7). Changes to the applicable tax law were made by the Tax Reform Act of 1976. The regulations affect all estates for which elections are made to value certain farm real property according to its actual use.

DATES: Written comments and requests for a public hearing must be delivered or mailed by November 9, 1979. The regulations are proposed to be effective for estates of decedents dying after December 31, 1976.

ADDRESS: Send comments and requests for a public hearing to: Commissioner of Internal Revenue, Attention: CC:LR:T (LT–203–76, Part IV), Washington, D.C. 20224.

FOR FURTHER INFORMATION CONTACT: H. B. Hartley of the Legislation and Regulations Division, Office of Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224, 202–566–3287, not a toll-free call.

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed amendments to the Estate Tax Regulations (26 CFR Part 20) under section 2032A. The amendments are proposed to conform the regulations to section 2003(a) of the Tax Reform Act of 1976 (90 Stat. 1856). They are issued under the authority contained in section 7805 of the Internal Revenue Code of 1954 (68A Stat. 917; 26 U.S.C. 7805).

The proposed regulations replace an earlier proposed amendment to the regulations which was published in the **Federal Register** for July 19, 1978 (43 FR 31036). A notice withdrawing the July 19, 1978, proposed regulation appears in the Proposed Rules section of this edition of the **Federal Register** (FR Doc. 79–28119).

Statutory Provisions

Section 2032A(e)(7) provides a special method for valuing real property used as a farm for farming purposes. This method requires the executor to locate actual tracts of comparable real property which are rented. The gross cash rental from the comparable real property, minus State and local real estate taxes, is then divided by the average annual effective interest rate charged by Federal land banks on new agricultural loans to farmers and ranchers. The estate tax value is the average of the resulting amount for the five most recent calendar years ending before the decedent's death. These proposed regulations provide a definition of gross cash rentals for use in valuing property under this method.

The proposed regulations define gross cash rentals as the return on property rented solely for cash. This definition replaces an earlier proposed definition of gross cash rentals contained in the July 19, 1978, proposed regulations. That definition permitted treatment of crop share rentals as cash rentals if no actual cash rentals of comparable real property in the locality exist. The new proposed regulations follow the language of the statute more closely and do not permit crop share rentals to be converted to cash rentals.

Comments and Requests for a Public Hearing

Before adopting these proposed regulations, consideration will be given to any written comments that are submitted (preferably six copies) to the Commissioner of Internal Revenue. All comments will be available for public inspection and copying. A public hearing will be held upon written request to the Commissioner by any person who has submitted written comments. If a public hearing is held, notice of the time and place will be published in the **Federal Register.**

Drafting Information

The principal author of these proposed regulations is H. B. Hartley of the Legislation and Regulations Division of the Office of Chief Counsel, Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in developing the regulations, both on matters of substance and style.

Proposed Amendments to the Regulations

A new paragraph (b) to read as set forth below is added to the proposed § 20.2032A–4 published in the **Federal Register** on July 19, 1978 (43 FR 31039).

§ 20.2032A–4 Method of valuing farm real property.

* * * * *

(b) *Gross cash rental*—(1) *Generally.* Gross cash rental is the total amount of cash received for the use of actual tracts of comparable farm real property in the same locality as the property being specially valued during the period of 1 calendar year. This amount is not diminished by the amount of any expenses or liabilities associated with the farm operation or the lease. See, § 20.2032A–4(d) for a definition of comparable property and rules for property containing buildings or other improvements and farms including mutliple property types. Only rentals from tracts of comparable farm property which are rented solely for cash are acceptable for use in valuing real property under section 2032A(e)(7). The rentals considered must result from an arms'-length transaction as defined in this section. Additionally, rentals received under leases which provide for payment solely in cash are not acceptable as accurate measures of cash rental value if involvement by the lessor (or a member of the lessor's family who is other than a lessee) in the management or operation of the farm to an extent which amounts to material participation under the rules of section 2032A is contemplated or actually occurs. In general, therefore, rentals for any property which qualifies for special use valuation cannot be used to compute gross cash rentals under this section because the total amount received by the lessor does not reflect the true cash rental value of the real property.

(2) *Special rules*—(i) *Documentation required of executor.* The executor must identify to the Internal Revenue Service the actual comparable property and cash rentals from that property if the decedent's real property is valued under section 2032A(e)(7). If the executor cannot identify such property and rentals, the real property must be valued under the rules of section 2032A(e)(8) if special use valuation has been elected. See, however, § 20.2032A–8(d) for a special rule for estates electing section 2032A treatment on or before [the date which is 30 days after publication in the **Federal Register** of § 20.2032A–8 as a Treasury decision].

(ii) *Arms'-length transaction required.* Only those cash rentals which result from a lease entered into in an arms'-length transaction are acceptable under section 2032A(e)(7). For these purposes, lands leased from the Federal government, or any State or local government, which are leased for less than the amount that would be demanded by a private individual leasing for profit are not leased in an arms'-length transaction. Additionally, leases between family members (as defined in section 2032A(e)(2)) which do not provide a return on the property commensurate with that received under leases between unrelated parties in the locality are not acceptable under this section.

(iii) *In kind rents, statements of appraised rental value, and area averages.* Rents which are paid wholly or partly in kind (*e.g.*, crop shares) may not be used to determine the value of real property under section 2032A(e)(7). Likewise, appraisals or other statements regarding rental value as well as areawide averages of rentals (*e.g.*, those compiled by the U.S. Department of Agriculture) may not be used under section 2032A(e)(7) because they are not true measures of the actual cash rental value of comparable property in the same locality as the specially valued property.

(iv) *Period for which comparable real property must have been rented solely for cash.* Comparable real property rented solely for cash must be identified for each of the five calendar years preceding the year of the decedent's

V 4 4 / 1 7 6

death if section 2032A(e)(7) is used to value the decedent's real property. The same tract of comparable property need not be used for each of these 5 years, however, provided an actual tract of property meeting the requirements of this section is identified for each year.

(v) *Leases under which rental of personal property is included.* No adjustment to the rents actually received by the lessor is made for the use of any farm equipment or other personal property the use of which is included under a lease for comparable real property unless the lease specifies the amount of the total rental attributable to the personal property.

BILLING CODE 4830-01-M

[26 CFR Part 20]

[LR-203-76]

Material Participation Requirements for Valuation of Certain Farm and Closely Held Business Real Property and Method of Valuing Farm Real Property According to Actual Use; Withdrawal of Notice of Proposed Rulemaking

AGENCY: Internal Revenue Service, Treasury.

ACTION: Withdrawal of notice of proposed rulemaking.

SUMMARY: This document withdraws a portion of the notice of proposed rulemaking relating to material participation requirements for valuation of certain farm and closely held business real property and method of valuing farm real property according to actual use that appeared in the Federal Register on July 19, 1978 (43 FR 31039). The portion being withdrawn, proposed regulation § 20.2032A-4 (b), relates to the definition of "gross cash rental" for valuing farm real property according to its actual use under section 2032A (e)(7). This portion of the notice is being withdrawn for further consideration of whether land leased for in kind rentals (e.g. crop share rentals) can be used to value farm real property under the method provided by section 2032A (e)(7).

FOR FURTHER INFORMATION CONTACT: H. B. Hartley of the Legislation and Regulations Division, Office of the Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224 (Attention: CC: LR:T) (202-566-3287, not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document withdraws a portion, proposed regulation § 20.2032A-4 (b), of the notice of proposed rulemaking that appeared in the **Federal Register** on July 19, 1978 (43 FR 31039). That notice proposed amendments to the regulations under section 2032A of the Internal Revenue Code of 1954. The proposed amendments being withdrawn would, in some cases, have permitted crop share rentals to be used for valuing farm real property according to its actual use under section 2032A (e)(7). The Service anticipates issuing a new notice of proposed rulemaking to reflect changes resulting from further consideration of the treatment of crop share rentals as cash rentals under section 2032A(e)(7).

Drafting Information

The principal author of this document is H. B. Hartley of the Legislation and Regulations Division, Office of Chief Counsel, Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in developing this document, both on matters of substance and style.

Proposed regulation § 20.2032A-4 (b) relating to the method of valuing farm real property according to actual use that was published in the **Federal Register** (43 FR 31039) on July 19, 1978, is hereby withdrawn.

Jerome Kurtz,

Commissioner of Internal Revenue.

Approved: August 23, 1979.

Emil M. Sunley,

Acting Assistant Secretary of the Treasury.

BILLING CODE 4830-01-M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

[30 CFR 872]

Abandoned Mine Reclamation Funds

AGENCY: Office of Surface Mining, Reclamation and Enforcement, U.S. Department of the Interior.

ACTION: Proposed amendment of final rules.

SUMMARY: The Office of Surface Mining Reclamation and Enforcement (OSM) proposes to amend portions of its final Abandoned Mine Lands Reclamation rules (43 FR 49932-49952, October 25, 1978), relating to Abandoned Mine Reclamation Funds, to allow the States and Indian tribes to enter into a cooperative agreement to prepare and submit first annual work plans for implementation of specific reclamation projects.

DATES: Comments must be received at the address below on or before October 8, 1979, by no later than 5 p.m.

ADDRESS: Written comments must be mailed or hand delivered to: Office of Surface Mining, Administrative Record—Room 135, U.S. Department of the Interior, South Building, 1951 Constitution Avenue, NW., Washington, D.C. 20245.

FOR FURTHER INFORMATION CONTACT: Charles L. Crawford, P.E., Chief, Division of State & Indian Reclamation Programs, Office of Surface Mining Reclamation and Enforcement, U.S. Department of the Interior, South Building, 1951 Constitution Avenue, NW., Washington, D.C. 20245, Telephone (202) 343-4061.

SUPPLEMENTARY INFORMATION: On October 25, 1978, the Secretary of the Interior promulgated Final Rules for the Abandoned Mine Land Reclamation Program under the Surface Mining Control and Reclamation Act of 1977, 30 U.S.C. 1201 *et seq.* (the Act).

Under section 405(a) of the Act, the Secretary was required to promulgate and publish in the **Federal Register**, procedures and requirements for preparation, submission and approval of State abandoned mine reclamation programs, consisting of a reclamation plan and an annual request for funding specific reclamation projects. The rules as promulgated provided that a State is eligible to submit a State reclamation plan if it has eligible lands and water as defined in 30 CFR 874.12, and the State is eligible for a State reclamation plan to be approved if it has an approved State regulatory program under section 503 of the Act.

Under the present rule, OSM has provided for advance funds to be available for preparation of State and Indian tribe plans (30 CFR 872.11(b)(5)(vi)). Funds are not presently available however, for developing a State's first annual work plan for implementation of specific reclamation projects. As a result, development of a State's first work plan cannot begin until after a State plan is approved. Since this provision will cause a delay in implementing a State's reclamation program, the amendment now being proposed will provide for the collection of data and budgetary information to assure prompt implementation. In the event the State fails to obtain approval of their permanent regulatory program, and a Federal Reclamation Program must be instituted, this proposed amendment also provides a means to implement Federal Reclamation Programs immediately.

A public hearing will not be held as the proposed change is minor. It will affect only those States and tribes participating in the AML program and would serve no benefit at this time. All projects developed must go through the public participation procedures established by 30 CFR 884.13(e) and the individual State reclamation plan prior to being funded.

The alternatives considered by OSM are:

1. Leave the Final Rules unchanged, which would delay implementation of the State's Reclamation Program until approval of each State reclamation plan; and

2. Amend the Final Rules, which will expedite the States' full participation in AML program and provide to OSM the necessary information for instituting a Federal reclamation program, should the State fail to fulfill requirements for State plan approval.

OSM has selected alternative two because it conforms with Congress' directive to expedite implementing the State and Indian Reclamation Program. The Department of the Interior has determined that this action will not have a significant effect on the human environment.

The Department of the Interior has determined that this document is not a significant rule and does not require a Regulatory Analysis under Executive Order 12044 and 43 CFR Part 14, 43 FR 58292, *et seq.* (December 3, 1978).

Amendment

PART 872—ABANDONED MINE RECLAMATION FUNDS

It is proposed to amend 30 CFR 872.11(b)(5)(vi) to read as follows:

§ 872.11 Abandoned Mine Reclamation Fund.

(b) * * *

(5) * * *

(vi) Cooperative projects to compile information required for preparation of State and Indian reclamation plans, as specified in § 884.13(f) of this part and the first annual work plan for implementation of specific reclamation projects as specified in § 886.14. This work shall be done only with those moneys allocated or available for allocation to a State or Indian tribe and at the request of the Governor of a State or the Indian tribe.

Dated: August 23, 1979.

Walter N. Heine,

Director.

Dated: August 28, 1979.

Joan M. Davenport,

Assistant Secretary—Energy & Minerals.

[FR Doc. 79-28002 Filed 9-7-79; 8:45 am]

BILLING CODE 4310-05-M

Bureau of Reclamation

[43 CFR Part 429]

Procedure To Process and Recover; Value of Rights-of-Way and Administrative Costs

AGENCY: Bureau of Reclamation, Interior.

ACTION: Proposed rules.

SUMMARY: The Bureau of Reclamation has prepared proposed rules to provide a uniform policy for processing requests and recovering costs for the use of lands under Reclamation control.

DATES: Comments must be received by October 10, 1979.

ADDRESS: Comments should be submitted to the Commissioner, Bureau of Reclamation, Department of the Interior, 18th and C Streets, NW., Washington, DC 20240, attention, code 400.

FOR FURTHER INFORMATION CONTACT: Mr. L. David Williamson, Senior Staff Assistant, Land Resources Management, Bureau of Reclamation, Department of the Interior, Washington, DC 20240, (202) 343-5204.

SUPPLEMENTAL INFORMATION: Audits by OMB and Department of the Interior internal auditors which pointed up inconsistencies in the Bureau of Reclamation's procedures for issuing land use documents and in the collecting of fees and recovering the values of the rights granted, instigated the issuing of these proposed rules.

These proposed rules will standardize the issuing of land used documents and the granting of rights-of-way across Bureau lands. They should also ensure that the administrative costs incurred by the Bureau in issuing or granting these documents and rights will be borne by the applicant. These regulations will also ensure that the Bureau will recover a fair market value of the rights in Bureau lands granted to non-Bureau users.

Primary authors of this document are Mr. Terence G. Cooper, Natural Resource Specialist, Washington, DC (202) 343-5204 and Mr. Jerry D. Alendal, Supervisory Realty Specialist, Sacramento, California (916) 484-4610.

An assessment of environmental and economic impacts prepared by and on file with the Bureau of Reclamation has determined that this document does not contain a major proposal requiring the preparation of an economic or environmental impact statement under Executive Order 12044, OMB Circular A-107, and Public Law 91-190.

Dated: September 4, 1979.

Daniel P. Beard,

Acting Assistant Secretary of the Interior.

It is proposed to amend Title 43 of the Code of Federal Regulations by adding a new Part 429 to read as follows:

PART 429—PROCEDURE TO PROCESS AND RECOVER THE VALUE OF RIGHTS-OF-WAY AND ADMINISTRATIVE COSTS

Sec.

429.1 Purpose.
429.2 Definitions.
429.3 Establishment of the value of rights-of-way.
429.4 Request by other governmental agencies for rights-of-way.
429.5 Request by other agencies for assistance.
429.6 Request by private parties for rights-of-way.
429.7 Conditions of and for rights-of-way
429.8 Reclamation land use stipulation.
429.9 Hold harmless clause.
429.10 Decisions and appeals.
429.11 Addresses.

Authority: 53 Stat. 119, Title 43 U.S.C. 387, and 65 Stat. 290, Subsection 31 U.S.C. 483.

§ 429.1 Purpose.

The purpose of this part is to set forth the procedures for the recovery of the value of rights-of-way and administrative costs of rights-of-way issued by the Commissioner of Reclamation. This subsection refers to costs incurred in aiding and assisting other agencies and parties in rights-of-way matters.

These regulations apply to interests on land granted by the Commissioner of Reclamation except those issued for replacement or relocation under section 14 of the Reclamation Project Act of August 4, 1939, 43 U.S.C. Subsection 389.

§ 429.2 Definitions.

As used in this part:

(a) "Commissioner" means the Commissioner of Reclamation or his designated representative.

(b) "Bureau" means the Bureau of Reclamation.

(c) "Regional Director" means any one of the seven representatives of the Commissioner designated to act for the Commissioner in specified rights-of-way actions. The Regional Directors may have further designated certain of their

S E 1 0 7 9

UMI

V 4 4 / 176

authorities for granting rights-of-way to the supervising heads of certain field offices.

(d) "Rights-of-way" means only those leases, licenses, permits, easements, or agreements issued or granted by the Regional Director under the authority granted to him. The term "rights-of-way" does not include the leasing of land in the custody or under the control of the Bureau for grazing, agriculture, recreation, or any other purpose where a greater return will be realized by the United States through a competitive bidding process.

(e) "Other agencies" means all Federal, State, and local governmental agencies not connected in any way with the Bureau of Reclamation, that request rights-of-way from the Bureau.

(f) "Rights-of-way assistance" means any assistance given upon request to another party. Such assistance includes but is not limited to work in the processing of environmental requirements, preparing, checking, and inspecting engineering data and standards.

(g) "Value of rights-of-way" means the value of the rights, privileges, and estates granted by the Bureau for the use of land under its custody and control.

(h) "Administrative costs" means all direct or indirect costs incurred by the Bureau in reviewing, issuing, and processing rights-of-way requests or assisting others in their right-of-way matters.

(i) "Grantor" means the agency controlling the Federal land and granting use of a portion, in this case the Bureau of Reclamation.

(j) "Grantee" means the agency, firm or individual to whom is granted the right to use Federal lands for rights-of-way or other purposes.

§ 429.3 Establishment of the value of rights-of-way.

The value of a right-of-way shall be determined by the Bureau. Where practical, the value of a right-of-way shall be established by a Bureau staff appraiser. The appraiser shall base the appraisal on the fair market value for the requested right or privilege. The value of a right-of-way shall not include any unauthorized use of the land under the custody and control of the Bureau by the applicant prior to his request for a right-of-way.

§ 429.4 Request by other governmental agencies for rights-of-way.

Rights-of-way requested by other agencies may be provided with no charge being made for the value of these rights-of-way when it is determined that the use of these rights-of-way will not interfere with present or future use of the land by the Bureau. Other agencies will be required to reimburse the Bureau for all administrative costs.

§ 429.5 Request by other governmental agencies for assistance.

The requesting agency shall be required to reimburse the Bureau for all administrative costs to the Bureau (§ 429.2(h)).

§ 429.6 Request by private parties for rights-of-way.

The applicant for a right-of-way over land or estate in land in the custody and control of the Bureau must make application to the Regional Director of the region in which the land is located or to the affected field office. The addresses for the seven Regional Directors are located in § 429.11. No right-of-way will be granted when it is determined that the proposed right-of-way will interfere with the purposes of Reclamation or Reclamation's ability to maintain its facilities.

(a) The application does not have to be in any particular form but must be in writing. The application must contain at least the following items:

(1) A detailed description of the proposed use of the Bureau land.

(2) A description of the Bureau lands on which the proposed use is desired.

(b) An initial fee of $100, as a filing fee, must accompany the initial application. No refund will be made for any deposit or cost after the right-of-way application has been received by the appropriate regional office of the Bureau.

(c) The applicant also must furnish, or agree to furnish, the following before the Bureau grants a right-of-way:

(1) A legal land description and/or a plat of the requested right-of-way. The description and plat should relate to the Bureau's land boundaries.

(2) Detailed construction details, construction specifications, engineering drawings, power flow diagrams, one-line diagram, and any other plans and specification which may be applicable.

(3) Statements, reports, or other documents prepared by the applicant which will be used by the Bureau of Reclamation to satisfy the requirements of the National Environmental Policy Act (42 U.S.C. 4321–4347).

(4) Proof of compliance with cultural resource policies prescribed in Executive Order 11593 and applicable historic preservation laws.

(d) The applicant shall agree to pay to the Bureau all additional administrative costs it incurs above the initial fee of $100 deposit required by § 429.6(a)(2). These charges must be paid prior to the issuance of the right-of-way.

§ 429.7 Conditions of and for the right-of-way.

(a) The right-of-way-granting document shall contain such special conditions or requirements as may be necessary to protect the interest of the United States.

(b) Rights-of-way shall be granted only to firms or individuals licensed to do business in the United States, corporations, governmental, quasi-governmental entities, or individuals.

(c) No right-of-way shall be granted any person or corporation while any debt is known to be due the United States.

(d) Any grant of a right-of-way for a term of 25 years or longer must have the consent of any involved water user organization.

(e) The Reclamation land-use stipulation appearing in § 429.8 shall be included in all permanent rights-of-way granted, excepting grants to other Federal agencies.

(f) Temporary right-of-way grants shall contain a termination clause in the event the applicant use becomes or may become an interference with the Bureau use of the land.

(g) Except for grants of right-of-way to Federal agencies, the grant shall contain a hold harmless clause found in § 429.9.

§ 429.8 Reclamation land use stipulation

The following shall be a part of every land use document issued by the Bureau of Reclamation:

There is reserved from the rights herein granted, the prior rights of the United States acting through the Bureau of Reclamation, Department of the Interior, to construct, operate, and maintain public works now or hereafter authorized by the Congress without liability for severance or other damage to Grantee's work; provided, however, that if such reserved rights are not exercised for works authorized by the Congress before the date of this grant, they will not be exercised unless Grantee or Grantee's successor in interest is compensated for resultant damage to works placed on said lands pursuant to the rights herein granted. Compensation shall be in the amount of the cost of reconstruction of Grantee's works to accommodate the exercise of the Government's reserved rights. As an alternative to such compensation, the United States at its option and at its own expense may reconstruct Grantee's works to effect such accommodations.

§ 429.9 Hold harmless clause.

The following clause shall be a part of every land use document issued by the Bureau of Reclamation:

The Grantee hereby agrees to indemnify and hold harmless the United States, its employees, agents, and assigns from any loss or damage and from any liability on account of personal injury, property damage, or claims for personal injury or death arising out of the Grantee's activities under this agreement.

§ 429.10 Decisions and appeals.

(a) The Regional Director, acting as designee of the Secretary, shall make the determinations required under these rules and regulations. A party directly affected by such determination may appeal in writing to the Commissioner of the Bureau of Reclamation within 30 days of receipt of the Regional Director's determination. The affected party shall have an additional 30 days thereafter within which to submit a supporting brief or memorandum to the Commissioner. The Regional Director's determination will be held in abeyance until the Commissioner has reviewed the matter and rendered a decision.

(b) Any party to a case adversely affected by a final decision of the Commissioner of the Bureau of Reclamation under this part shall have a right of appeal to the Director, Office of Hearings and Appeals, Office of the Secretary, in accordance with the procedures provided in Title 43, CFR Part 4, Subpart G.

BILLING CODE 4310–09–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[18 CFR Parts 271, 274, and 275]

[RM79–44, RM79–66, RM79–76]

High-Cost Natural Gas, Public Hearings on Proposals

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of Public Hearings.

SUMMARY: The Federal Energy Regulatory Commission will convene several public hearings to enable the public to present views on three rulemakings: (1) Docket No. RM79–44, which defines the types of high-cost natural gas listed in sections 107(c)(2) through (5) of the Natural Gas Policy Act of 1978 (NGPA); (2) Docket No. RM79–76, which implements sections 107(b) and (c)(5) of the NGPA insofar as they relate to high-cost natural gas produced from tight formations; and (3) Docket No. RM79–66, which allows for the withdrawal of notices of determination filed by jurisdictional agencies pursuant to the NGPA.

DATES: RM79–44—September 25, 1979. RM79–66—September 25, 1979. RM79–76—September 24, 1979 (FERC Office) September 28, 1979 (Denver)

ADDRESSES: The public hearings for Docket Nos. RM79–44 and RM79–66 will be held in Hearing Room A, Federal Energy Regulatory Commission, 825 N. Capitol Street, Washington, D.C. The public hearing for Docket No. RM79–76 will be held at the above address as well as at the offices of the United States Geological Survey, Building 25, Room 1204, Denver Federal Center, Denver, Colorado.

FOR FURTHER INFORMATION CONTACT: Philip Yates, Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, (202) 357–8078.

Issued September 5, 1979.

The Federal Energy Regulatory Commission (Commission) will convene several public hearings to enable the public to present views on three rulemakings: (1) Docket No. RM79–44,[1] which defines the types of high-cost natural gas listed in sections 107(c)(2) through (5) of the Natural Gas Policy Act of 1978 (NGPA), 15 U.S.C. 3301 *et seq.*; (2) Docket No. RM79–76,[2] which implements sections 107(b) and (c)(5) of the NGPA insofar as they ralate to high-cost natural gas produced from tight formations; and (3) Docket No. RM79–66,[3] which allows for the withdrawal of notices of determination filed by jurisdictional agencies pursuant to the NGPA.

There will be two public hearings held for the tight formation rulemaking, Docket No. RM79–76. They will be held on September 24, 1979, in Hearing Room A, at 10:00 A.M., at the Federal Energy Regulatory Commission, 825 North Capitol Street, Washington, D.C., and at 10:00 A.M. September 27, 1979, at the offices of the United States Geological Survey, Building 25, Room 1204, Denver Federal Center, Denver, Colorado.

There will be one public hearing in Washington, D.C. on the other two rulemakings. This public hearing will be held on September 25, 1979, at 10:00 A.M. at the Washington address set forth above; oral comments on Docket No. RM79–66 will be heard first, with the remainder of the day reserved for oral comments on Docket No. RM79–44.

Requests to participate in any of the hearings should be directed to the Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, no later than seven days prior to the hearing. Requests should indicate in which hearing the person wishes to participate, the amount of time required for the oral presentation, and the telephone number at which the person making the presentation can be reached. Persons participating in the public hearing should, if possible, bring 50 copies of their testimony to the hearing. A list of the participants in each hearing will be available in the Commission's Office of Public Information three days before the hearing and will be available at the site of the hearing on the morning it is convened.

[1] See Notice of Proposed Rulemaking, Docket No. RM79–44, issued June 13, 1979 (44 FR 34989; June 18, 1979).

[2] See Notice of Proposed Rulemaking, Docket No. RM79–76, issued August 29, 1979. (44 FR 52253; September 7, 1979).

[3] See Notice of Proposed Rulemaking, Docket No. RM79–66, issued August 13, 1979 (44 FR 48262; August 17, 1979).

SEP 10 79 UMI

The hearings will not be of a judicial or evidentiary type. There will be no cross-examination of persons presenting statements. However, the panel may question such persons and any interested person may submit questions to the presiding officer to be asked of persons making statements. The presiding officer will determine whether the question is relevant and whether the time limitations permit it to be presented. Any further procedural rules will be announced by the presiding officer at the hearings. Transcripts of the hearings will be available in the public files of the Commission's Office of Public Information.

Kenneth F. Plumb,

Secretary.

ACTION

VISTA Guidance Papers

AGENCY: Action.

ACTION: Notice of VISTA Guidance Papers.

SUMMARY: The following notice sets out the VISTA Guidance Papers which provide information to VISTA sponsors and include the VISTA Philosophy of Project Selection and Explanation of the Philosophy, Criteria for Selecting VISTA Sponsors, and Additional Project Selection Factors. Changes in the Guidance Papers are also described.

In accordance with the requirements of Executive Order 12044, Improving Government Regulations, a working group met on July 16, 1979, and determined that the changes made in the VISTA Guidance Papers are not significant and do not necessitate the issuance of any regulations. Therefore, in accordance with Section 420 of the Domestic Volunteer Service Act of 1973, as amended (42 U.S.C. 4951 *et seq.*), the VISTA Guidance Papers will be effective thirty (30) days from this date.

FOR FURTHER INFORMATION CONTACT: Angelo Traficanti, VISTA, 806 Connecticut Avenue, N.W., Washington, D.C. 20525, 202-254-5195.

SUPPLEMENTARY INFORMATION:

The following textual changes are being made in the *VISTA Guidance Papers* in order to:

(1) State more clearly the VISTA mission, and

(2) Give more precise programmatic guidance to ACTION field staff, VISTA Volunteers and sponsors, and the general public at large.

The changes are as follows:

(1) Page 11, paragraph 1 presently reads:

"VISTA Volunteers can serve a unique role in the effort against poverty by working to empower groups of low-income citizens so they can influence the decisions that affect their lives."

This sentence will be changed to read:

"VISTA Volunteers can serve a unique role in the effort against poverty by working to assist groups of low-income citizens develop the confidence and skills necessary to influence the decisions that affect their lives."

(2) Page 13, paragraph 2 presently reads:

"The Volunteers' roles should be ones of support. Under no circumstances should the Volunteers be providing a direct service unless it can be demonstrated that the service roles are an integral part of an overall organizing strategy which will lead to the empowerment of low-income people."

This will be changed to read:

"The Volunteers' roles should be ones of support. Under no circumstances should the Volunteers be providing a direct service unless it can be demonstrated that the service roles are an integral part of an overall organizing strategy which will lead to a more self-reliant low-income community."

(3) 14, paragraph 2, last sentence presently reads:

"It is also based on the belief that the problems of poverty will be ameliorated when, and only when, the poor develop the capacity to help themselves."

This sentence will be changed to read:

"Also, it is based on the belief that the problems of proverty will be ameliorated when, and only when, the poor develop the capacity to help themselves."

(4) Page 20, paragraph 2 under *"Must Priority Preference Be Given to Citizen Participation and Advocacy Organizations?"* delete the last sentence that reads "Public agencies should be considered sponsors of the last resort." Presently the full paragraph reads as follows:

"Because VISTA is attempting to accomplish its legislative mandate through the support of citizen participation and advocacy organizations, priority preference must be given to projects in compliance with VISTA criteria which are sponsored by such organizations. The second priority should be given to service or public interest organizations that submit projects which support citizen participation organization building efforts. Public agencies should be considered sponsors of the last resort."

Reason for deletion: VISTA does not want to create the erroneous impression that public agencies are precluded from requesting resources of the VISTA program.

(5) Page 21, second paragraph add:

What Are Prohibited Activities For Volunteers And Sponsors?

(A) VISTA Volunteers are prohibited by law from participating in:

(1) partisan and non-partisan political activities, including voter registration activities;

(2) lobbying;

(3) labor and anti-labor related activities.

(B) VISTA sponsors are prohibited by law from:

(1) carrying out projects resulting in the identification of such projects with partisan and non-partisan political activities, including voter registration activities and providing voters with transportation to the polls.

(2) assigning Volunteers to activities which would result in the displacement of employed workers.

(6) Page 29, the paragraph titled *Resource Allocation* will be deleted. Presently the paragraph reads:

"The Resource Allocation plan to be implemented for FY 79 will be formulated at the point that the VISTA FY 79 budget is established."

Reason for deletion: the time has already passed for the formulation of the FY 79 budget.

(7) Page 34, second paragraph, the section titled *Implementation of New Criteria for Existing Sponsors* will be deleted. This text presently reads as follows:

(1) Notice.

(a) All existing sponsors will be notified of the new criteria as soon as they are published in the **Federal Register.** Sponsors will be told that their application for renewal will be reviewed in light of these new criteria, so that they may design their applications accordingly.

(b) All State Offices will review existing VISTA projects to determine whether they would be in compliance with new criteria if those criteria were applied to the project as currently constituted. Those that do not appear to comply will be notified of this fact with the reasons for non-complicance explained. Sponsors will be reminded that any new application for renewal must comply with the new criteria.

(2) Review of Continuation Applications.

(a) Sponsoring organizations whose Memoranda of Agreement are renewable after June 30, 1978, will be reviewed in light of new program criteria. If the application does not comply with the new criteria, the sponsor will be notified that ACTION intends to deny the application for renewal, and the sponsor will be given an opportunity to show cause why the application should not be denied in accordance with ACTION procedures. See 40 Fed. Reg. 23311, May 29, 1975.

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

(b) Sponsoring organizations whose Memoranda of Agreement are renewable between April 1, 1978, and June 30, 1978.

(1) may be extended by State Directors for a reasonable amount of time (e.g., 3 months) to allow revision of the renewal proposal to conform with the new criteria, or

(2) may be renewed non-competitively if the State Program Director so desires, if the Regional Director concurs and if their proposal conforms to the new criteria, or

(3) may be extended or renewed for one year under the old criteria to allow orderly transition if:

(a) the State Program Director is satisfied with the program performance in the past year, and s/he believes the proposal conforms to the old criteria and the Regional Director concurs, and

(b) the extension or renewal is necessary to insure that the organization has the opportunity for orderly transition to continuance without VISTA Volunteers or to completion of the project, and

(c) the sponsoring organization is clearly informed in writing that under no circumstances can the VISTA project continue after that period without submission of a new proposal conforming to the new criteria that is chosen under the competitive procedures that have been outlined. Those applications submitted by sponsors under the extension referred to in (a) above will be reviewed according to the new criteria. If the application does not comply with the new criteria, the sponsor will be notified that ACTION intends to deny the application for renewal, and the sponsor will be given an opportunity to show cause why the application should not be denied in accordance with ACTION procedures. See 40 FR 23311, May 29, 1975.

(c) Technical assistance will be given by National, Regional and ACTION State staffs to sponsors who are denied renewal but have been granted an extension to enable the sponsors to make an orderly transition to a system of providing services which is not dependent on the use of VISTA Volunteers.

(d) By July 1, 1979, all VISTA projects will be in compliance with these criteria.

Reason for deletion: the time frames have elapsed for implementation of specific action stated in the text.

VISTA Guidance Papers

1. VISTA Philosophy of Project Selection
2. Explanation of VISTA Philosophy of Project Selection
3. Criteria for Selecting VISTA Sponsors
4. Additional Project Selection Factors
5. VISTA Program Implementation Procedures

VISTA Philosophy of Project Selection

VISTA Volunteers can serve a unique role in the effort against poverty by working to assist groups of low-income citizens develop the confidence and skills necessary to influence the decisions that affect their lives.

Low-income people should participate in making the decisions that determine the kinds of services offered in their neighborhoods; for example, the education received by their children, the location and kinds of health care facilities, the location of highways and other public improvement, the amount and form of assistance offered, the kind and location of housing developed as well as many other decisions that are too often made for the poor by the rest of us.

Successful citizen-participation organization will result in the increased access of low-income people to decision making through cooperative efforts with established public and private institutions, or through the creation of new mechanisms for the participation of low-income people in the decision making processes which affect their lives. The net result will be improved conditions for the poor through the more effective deployment of public and private resources designed to relieve poverty.

Technique to be Utilized

The best way to accomplish the central purpose of the VISTA program is to assure that VISTA projects have as their method of attacking poverty the organization of low-income people to bring long term benefits to themselves and their communities through their own collective efforts.

People must be organized into effective groups so they may increase the strength of their voice as they advocate for their interests.

Basic Test of Project Selection

The test, then, for selecting a project for placement of VISTA Volunteers, is whether that placement will lead to an increased voice for low-income people in the decision-making processes which affect their lives.

How projects do this will differ from project to project and from community to community as will the exact nature of the Volunteers' activities; however, with rare exceptions, the following elements should be present.

(1) The sponsoring agency should be grassroots (i.e., controlled and operated by those to be served). If it is not, the project should lead to the building or strengthening of a grassroots organization or advocacy system.

(2) The Volunteers' roles should be ones of support. Under no circumstances should the Volunteers be providing a direct service unless it can be demonstrated that the service roles are an integral part of an overall organizing strategy which will lead to a more self-reliant low-income community.

Other Elements in Project

Some additional elements that will enhance the probability of success of the VISTA program should be borne in mind:

(1) Low-income people can increase their impact by combining their efforts with others who have a common interest in specific objectives toward which a resultant coalition can strive.

(2) Projects which would benefit the poor only insofar as they are members of the general population or whose objectives would benefit low-income people only through a trickle down effect should not be approved.

(3) VISTA Volunteers' work should be so arranged that they have some direct and personal contact with members of the low-income population their project is designed to serve.

Explanation of VISTA Philosophy of Project Selection

The new direction of VISTA has as its purpose assisting the poor to break the bonds of dependency. It reflects a firm belief in the democratic principles upon which our system of government is based and the willingness of people to help each other and themselves. Also, it is based on the belief that the problems of poverty will be ameliorated when, and only when, the poor develop the capacity to help themselves.

The new direction of VISTA is simply a reaffirmation of the VISTA mission and the principles which led to its creation. The Handbook for VISTA Sponsors states that, "It is central to VISTA's mission that projects of Sponsoring Organizations utilizing VISTA Volunteers contribute to the creation of more self-reliant communities by developing in and among the poor the capability for leadership, problem-solving and active participation in the decision-making processes which affect their lives."

How VISTA Resources Will be Used

In determining how VISTA resources should be used, the following was taken into consideration:

(1) VISTA will always be limited by the availability of funds. The program is not designed to eradicate poverty but to strenghten and supplement on-going community efforts to do so.

(2) Most communities have access to resources (both human and financial) which could be applied towards alleviating the conditions of poverty.

(3) One of the Major problems faced by the poor is their lack of access to and information about available benefits, their rights and the mechanisms available to them through the democratic process to exercise their rights.

(4) Volunteers have the ability to develop and transfer information and skills to community leadership and residents in a manner which multiplies volunteer efforts through organization and, over time, obviates the need for a VISTA presence.

(5) In every community their exist people with leadership potential willing and able to work towards solutions to the problems which they and their neighbors are faced.

(6) Those in need of assistance must be involved in the decisions which determine the nature of the assistance which will be most effective.

Vista Will Support Citizen Participation Building Efforts and the Creation/Expansion of Advocacy Systems.

It has been decided that VISTA can achieve maximum impact by concentrating its resources in support of citizen participation organization building efforts and the creation/expansion of advocacy systems. In doing so, VISTA will be:

(1) supporting the efforts of those in need of assistance to involve themselves in the decision making processes which affect their lives by

(2) transferring information and skills to community residents in a manner which develops their leadership potential and

(3) multiplying their efforts to work through the democratic process to gain access to resources (both human and financial) available to their communities to meet their basic human needs and alleviate the conditions of poverty.

What is Citizen Participation Organization?

Citizen participation organization takes many forms. Included in our definition of the term is any group which has banded together in order to find and implement solutions to the problems with which its members are faced. Therefore, a group of farmers who have formed an agricultural cooperative is a citizen participation organization as is a community or neighborhood organization, an advocacy group of the consumers for whom advocacy is needed, a Parent Teachers Association, etc.

A citizen participation organization does not have to be comprised solely of the recipients of the benefits to accrue as a result of the organization having been formed. However, people who benefit directly must be prominently involved in the decision making processes which determine the organization's priorities and day to day activities.

What Does Support Citizen Participation Organization Building Efforts Mean?

Any project which directly contributes to the building or strengthening of a citizen participation organization supports that effort. Citizen participation organizations need many things in order to grow. They need members. They need money to support their operations. They need management skills. They need information about the resources available to accomplish their goals and objectives. They need legal assistance. Many need to be able to provide a direct service to their members. What an organization needs changes as the organization changes and as its leadership and membership grow and increase their skills.

The Role of the Volunteer

VISTA is and will become what Volunteers make it through their commitment and by their accomplishments. Under the new VISTA direction, it is expected that Volunteers will function as fundraisers, lawyers, neighborhood organizers, researchers, accountants * * * The list goes on forever.

It is the diversity of the VISTA resource—the Volunteer—that makes VISTA and other volunteer programs unique and valuable. Poor communities have always needed a myriad of skills to supplement their efforts. This has not changed nor is it likely to change. What has changed is that in deciding whether or not to approve a project, the ACTION staff must ask themselves whether or not it will lead to a greater voice for the poor in the decision making processes which affect their lives.

If, in the judgment of the appropriate ACTION personnel, activity does support such an effort and the project is among the best being considered, the project should be approved. If the project does not, it should be disapproved.

Sponsor Selection

May a Service or Public Interest Organization Sponsor a VISTA Project?

If a project sponsored by a service or public interest organization supports a citizen participation organization effort, it can and should be approved.

For example, the Legal Services Corporation is essentially a service organization; however, it is capable of providing a service to organizations as well as to individuals on a one-to-one basis. A legal services project requesting a VISTA lawyer to handle a caseload would not be in compliance with the new VISTA criteria. However, a legal services project requesting a VISTA lawyer to assist low-income groups to incorporate, to research a class action which would support the activities of a low-income organization, etc., would be in compliance.

May a Public Agency Sponsor a VISTA Project?

A public agency may sponsor a VISTA project assuming that the project is in compliance with VISTA criteria (i.e., leads to the increased voice of the poor in the decision making processes which affect their lives). However, under no circumstances can VISTA resources be used to perform a task which could be considered staff work. In other words, a VISTA Volunteer cannot be a librarian; however, a VISTA Volunteer could be used to mobilized resources to be used to create a library if the creation of that library would lead to greater community self-sufficiency.

Must Priority Preference be Given to Citizen Participation and Advocacy Organizations?

Because VISTA is attempting to accomplish its legislative mandate through the support of citizen participation and advocacy organizations, priority preference must be given to projects in compliance with VISTA criteria which are sponsored by such organization. The second priority should be given to service or public interest organizations that submit projects which support citizen participation organization building efforts.

Under no circumstances should a weak project with little chance of success be given preference because of the nature of the sponsoring organization. By the same token, no project should be rejected because it is risky if it has a reasonable chance of success. ACTION staff has the expertise necessary to assist grassroots sponsors develop quality projects. It can be said that priority preference has been given only when, to the extent possible, ACTION has attempted to assist grassroots organizations develop projects which we can reasonably expect to approve.

What are Prohibited Activities for Volunteers and Sponsors?

(A) VISTA Volunteers are prohibited by law from participating in:

(1) partisan and non-partisan political activities, including voter registration activities;

V 4 4 / 1 7 6 SEP 10 79 UMI

(2) lobbying;
(3) labor and anti-labor related activities.

(b) VISTA sponsors are prohibited by law from:

(1) carrying out projects resulting in the indentification of such projects with partisan and non-partisan political activities, including voter registration activities and providing voters with transportation to the polls.

May Volunteers Perform a Direct Service?

A VISTA Volunteer can perform a direct service if the provision of that service is part of an overall organizing strategy *and* if it is clearly demonstrated that the service, once established, can be supported without VISTA resources or will not need to continue. Under no circumstances, however, can a Volunteer perform a direct service for the sake of service (i.e., the end goal is to provide a service).

For example, VISTA Headquarters approved a project which stated that the sponsoring organization wanted to organize a group of low-income women so that they could find solutions to the problems with which they were faced. They went on to state that the women were frightened and that the only way to bring them together was by providing a service. The service they wanted to provide—helping the women earn their high school equivalency diploma. The organization wanted Volunteers to tutor the women.

The materials to be used in the equivalency program would provide the women with information which directly affected their lives. The discussions would be geared around the problems with which the women were faced and how those problems could be solved. At the end of the year, the women tutored will be ready to take the high school equivalency examination *and* will have formed an organization in order to deal with neighborhood issues.

VISTA Headquarters disapproved a second project which requested Volunteers to tutor in a high school equivalency program. The sponsor stated that it needed to provide a service to the low-income residents of their community. The Board of Education had refused their request for a teacher; therefore, they turned to VISTA. Although the Volunteer tasks were similar—almost identical—to those to be performed for the first sponsor, this sponsor's goal—the reason the Volunteers were to perform the tasks—was radically different.

In the first project, the goal was to create an organization. The project's success or failure will be determined by whether or not an organization has been formed and the women tutored were working to identify and find solutions to neighborhood problems. If the project is successful, VISTA has helped to impact on a problem—a group of women who were frightened are organized to deal with neighborhood problems. If the organization is successful, VISTA has helped the women's community, albeit indirectly—neighborhood problems will be identified and solved.

In the second project, the goal was to decrease the number of people who did not have high school diplomas (i.e., to provide a service). There was no information to indicate that the number of high school dropouts was static; therefore, it must be assumed that each year more students dropped out of high school. There was no plan articulated to impact on the problem—decrease the high school dropout rate—nor was there any plan articulated to institutionalize the service to be provided either through the Board of Education or the community center thereby making it possible to deal with the condition (i.e., poor people without high school diplomas) over time without VISTA resources.

The success or failure of the second project, therefore, would be determined by whether or not a number of high school dropouts were tutored by VISTA Volunteers. There is every reason to believe that there will be an equal number of people in need of the service the following and subsequent years. There is every reason to expect that VISTA Volunteers will be needed to perform the service again and again and again.

VISTA through its presence has not helped to impact on the problem (the high school dropout rate) nor has it helped the community develop a permanent method for dealing with the condition (the number of poor people without high school diplomas) resulting from the problem.

Direct Service Makes an Important Contribution

VISTA believes that the provision of direct one-on-one service is important and vital. Poor people need help NOW and will suffer if that help is not provided. However, the provision of a direct service rarely leads to change and, in many instances, increases feelings of dependency and powerlessness.

If VISTA resources are used to increase a citizen participation organization's capability to find solutions to the problems of its membership, service will be provided and the poor people involved will develop a sense of their worth and their ability to find their own solutions. Their dependency will decrease, our resources can be withdrawn eventually without noticeable effects and our limited work years can be used to help more and more communities reach self-sufficiency.

Criteria For Selecting VISTA Sponsors

The criteria listed below are to be used by ACTION staff in the selection of VISTA sponsors. All of the elements stated must be found in the applicant sponsor's proposed project.

A VISTA sponsor will manage a project which is poverty oriented in scope and mission. Such a project must:

(1) Have as a method of attacking poverty and poverty related problems:

(a) the organization of low-income community residents to bring long term benefits to the community through their own collective efforts or the establishment of a grassroots advocacy system; or

(b) supporting the efforts of a low-income citizen participation or grassroots advocacy organization(s).

(2) Have as a long term effect:

(a) increasing access of poor people to decision making through cooperative efforts with existing public or private institutions; or

(b) the creation of new mechanisms, where none currently exist, for participation of poor people in the decision making processes which affect their lives.

(3) Show that the goals, objectives and Volunteer tasks are attainable within the time-frame during which the Volunteers will be working on the project and will produce a measurable result.

(4) Make reasonable efforts to recruit and involve low-income community residents in the sponsoring organization and develop their leadership skills.

(5) Provided frequent and effective supervision of the Volunteers and have the management capability to carry out the project.

(6) Identify resources needed and make them available for Volunteers to perform their tasks.

(7) Comply with ACTION legislation, policies and procedures established for the management of the VISTA program.

Additional Factors To Consider in Selecting Sponsors

These additional factors may be used in choosing between applicant sponsors who equally meet all the required sponsor selection criteria.

(1) How important is the proposed project to the target community? Who will benefit from the project?

(2) Does the project show evidence of skillful and careful planning to attain project goals?

(3) Did the sponsor answer preliminary inquiry questions with specificity or somewhat vaguely?

(4) Has the sponsor's leadership been tested in the community?

(5) What are the *strengths* of the people who *want* the project and of those who *oppose* the project?

(6) What are the *weaknesses* of the people who *want* the project and of those who *oppose* the project?

(7) Does the sponsor have good administrative systems?

(8) Sponsor's staff:

(a) Do they have experience in building an organization?

(b) Are they enthusiastic about the proposed VISTA project?

(c) What are the procedures for on-the-job training of the staff?

(d) What kind of supervision do staff members get?

(e) What are the procedures for staff accountability?

(9) Does the sponsor have the *ability* and a *plan* to develop leadership among members of the target community?

(10) Are a large number of people willing to get *involved* in the project? Are they willing to give money to support the project?

(11) Is an organization being built with the proposed project?

(12) How successful has the sponsor been in the past in winning and/or securing major changes or benefits for the target community?

(13) What is the future of the organization? Where does it want to be, for example, two years from now?

(14) How many Volunteers are being requested? Is proposal for one VISTA of such great worth to make development worthwhile?

VISTA Program Implementation Procedures

Project Approval Process

In order to assure all potential sponsors equal consideration, the VISTA project approval process for new projects will be changed. The procedures listed below are to be followed regardless of where project approval rests.

Until such time as new VISTA application forms are designed and approved by OMB, the Preliminary Inquiry form referred to below is ACTION Form (A–563) and Judgment Document is the ACTION Project Narrative (A–566).

As of this date:

(1) When a potential sponsor contacts an ACTION State Office to apply for VISTA resources:

(a) The State Office will send the sponsor a preliminary inquiry form and instruction booklet (to be developed).

(b) Those projects which appear to the State Director to be in compliance with VISTA guidelines on the basis of the preliminary inquiry should be sent a Judgment Document.

(c) Those projects which appear to the State Director to be out of compliance should be notified in writing that their project does not appear to be in compliance with VISTA guidelines and the specific guidelines with which the project does not comply should be identified.

(2) Returned judgment documents should be reviewed by the State Director as they are received and should be perfected by the potential sponsoring organization with the advice/assistance of the State Program Staff.

(a) Potential projects which appear to the State Director to be out of compliance with VISTA criteria should be disapproved and the sponsoring agency/organization should be notified as per #1(c) above.

(b) Potential projects that have been found to meet minimum VISTA criteria requirements should be scheduled for a second review to be held quarterly on the same day (to the extent practical) for all projects to be considered for placement of VISTAs in the coming quarter. This second review must be completed by the first day of the last month of the calendar quarter (i.e., June 1, September 1, December 1, March 1).

(3) Quarterly Programming Review—Decision Day. The decision as to which projects will be developed for placement of VISTAs in the coming quarter will be made at the second review of the "judgment documents" to be held by each state/district quarterly.

(a) Participating on Decision Day will be:

(1) The State Director and whoever s/he deems necessary from his/her staff.

(2) The Regional Director or his/her designee.

(b) The State Director will rank the judgment documents under consideration. Rank will be determined on the basis of how projects compare to each other as they are judged against both the VISTA criteria and the State programming strategy (e.g., rural/urban, human need sector, etc.).

(c) The State Director will decide which projects will be developed according to their rank and the number of training entries which can be placed during the coming quarter.

(d) If the Regional Director disagrees with the State Director's decision that a project is in compliance with VISTA policy, the Regional Director will attempt to resolve the issue with the State Director.

(e) If the disagreement cannot be resolved, the Regional Director will send a copy of the judgment document and his/her reasons for disagreeing with the State Director's decision to VISTA headquarters. Based upon the document, the Regional Director's written comments and discussions with the Regional and State Directors, the Director of VISTA will decide if the project is in compliance with VISTA criteria.

(f) If the Regional Director fails to notify the Director of VISTA of the disagreement within 15 working days of judgment day, the decision of the State Director will stand.

(4) List of all Projects Reviewed During Quarter. A list must be compiled by the State Office of all judgment documents reviewed during the quarter indicating whether the project was approved or disapproved. Specific reasons are to be given for the decisions made. A copy of this list is to be sent to VISTA headquarters no later than three weeks after project approval decisions have been made. A form to facilitate this process will be developed.

(5) A copy of each approved judgment document and all necessary additional documents (e.g., Memorandum of Understanding) are to be forwarded to the Regional Director to be reviewed for technical compliance (i.e., all necessary documentation is present and in good order, legal sufficiency).

(6) The Regional Office will forward the documents to VISTA headquarters at the point that the project documentation is complete and correct in the opinion of the Regional Director.

Change in Quarterly Review Schedule

If, in the opinion of the State and Regional Directors, work load considerations in a State or Region necessitate a project approval schedule other than that cited above, they may change it by submitting, in writing, an alternative schedule.

Project Criteria Waiver

A State Director may request a waiver of specific VISTA guidelines from the Director of VISTA through the Regional Director when, in his-her judgment, the special needs of a particular community or group (e.g., Indians, migrants, isolated rural communities) necessitate such a waiver. The request must be submitted in writing prior to the approval of any project. The request must include a description of the community or group, the special circumstances which make the waiver necessary, the guidelines which will be used in judging

V 4 4 / 1 7 6 SEP 10 79 UMI

preliminaries submitted and the Regional Director's recommendation to the Director of VISTA. The Director of VISTA will respond to such requests to the State Director through the Regional Director within ten (10) working days of receipt. If the Director does not respond to such requests within ten (10) working days, the requests may be assumed to be approved.

Approval of Continuation Application

(1) When a project which was approved on the basis of the criteria is submitted for renewal for a second and third year, a State Director may approve the renewal application non-competitively (i.e., New Project Approval procedures 3(a) through 3(c) above need not be followed) if the State Program Director is satisfied with the project's performance during the past year and the Regional Director concurs.

(2) If the Regional Director disagrees with the State Director's decision to renew a project, the Regional Director will attempt to resolve the issue with the State Director.

(3) Repeat Project Approval Process 3(e).

(4) Repeat Project Approval Process 3(f).

(5) When a project is submitted for renewal for a fourth year, it must be judged competitively (i.e., see Project Approval Process for New Projects).

Dated: August 31, 1979.

DEPARTMENT OF AGRICULTURE

Forest Service

National Forest System Advisory Committee; Meeting

The National Forest System Advisory Committee will meet at Charles Lathrop Pack Forest of the College of Forest Resources, University of Washington, Eatonville, Washington, at 8:00 a.m., October 9–11, 1979.

This Committee, comprised of 12 members from a broad spectrum of geographic and interest areas, advises the Secretary of Agriculture and the Forest Service on the planning and management of the National Forests. The portion of the meeting scheduled for October 9 will be devoted to a field trip on the Gifford Pinchot National Forest. On October 10 and 11, the Committee will discuss and develop Committee positions on harvest scheduling, energy production potential, and environmental impacts of energy development. Dr. M. Rupert Cutler, Assistant Secretary for Natural Resources and Environment, will chair the meeting.

The meeting will be open to the public. Persons who wish to attend should notify Thomas C. Nelson, Deputy Chief, National Forest System, USDA-Forest Service, P.O. Box 2417, Room 3021–S, Washington, D.C. 20013, telephone (202) 447–6341. Written statements may be filed with the Committee before or after the meeting.

Jerome A. Miles,

Deputy Chief.

BILLING CODE 3410-11-M

Southwest Region Land and Resource Management Plan; Intent To Prepare an Environmental Statement

Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, the Forest Service, Department of Agriculture, will prepare an Environmental Statement for the Southwestern Region Land and Resource Management Plan.

The Southwestern Region Land and Resource Management Plan will evaluate alternative allocations of output targets, funding levels, and management standards for the National Forests in Arizona, New Mexico, and some of the National Grasslands in Western Oklahoma, and Texas in accordance with Secretary's Regulations for Land and Resource Management Planning. Allocations will be based on the Southwestern Region's assigned portion of the selected National RPA Program, local issues and concerns, and the capability and efficiency of individual National Forests.

A series of scoping meetings and public meetings will be held to identify issues, management concerns, and development opportunities which will be addressed in the Plan and to discuss the criteria which will be used to choose an alternative plan.

Scoping meetings will be held with Federal, State, and local governmental agencies as follows:

Date, Place, and Purpose

September 18, 1979, Sweeney Conv. Center, Santa Fe, New Mexico, 1:30–3:30 p.m. Introduction to process and purpose.
September 19, 1979, State Offices, Santa Fe, N.M. (Federal Agencies) (State Agencies).
September 20, 1979, Desert Hills Motel, Phoenix, Arizona, 1:30–3:30 p.m. Introduction to process and purpose.
October 9, 1979, Sweeney Conv. Center, Santa Fe, New Mexico, 1:30–3:30 p.m. Identify issues, concerns, opportunities, critera.
October 11, 1979, Civic Plaza, Phoenix, Arizona, 1:30—3:30 p.m. Identify issues, concerns, opportunities, critera.

Public workshops will be held as follows:

Date, Place, and Purpose

October 16, 1979, Sheraton Old Town, Albuquerque, New Mexico, 7:00–9:00 p.m. Identify issues, concerns, opportunities, critera.
October 17, 1979, Howard Johnson Motel, Las Cruces, New Mexico, 7:00–9:00 p.m. Identify issues, concerns, opportunities, critera.
October 23, 1979, Desert Hills Motel, Phoenix, Arizona, 7:00–9:00 p.m. Identify issues, concerns, opportunities, critera.
October 24, 1979, Little America Mtr. Lodge, Flagstaff, Arizona, 7:00–9:00 p.m. Identify issues, concerns, opportunities, critera.
October 25, 1979, Marriott Hotel, Tucson, Arizona, 7:00–9:00 p.m. Identify issues, concerns, opportunities, critera.

The following time schedule will guide the planning process:

Time Period and Activity

Summer 1979: Identify preliminary issues, concerns, opportunities, and criteria.
Autumn 1979: Public input on issues, concerns, opportunities, and criteria. Analysis of present management situation.
Winter 1979–Spring 1980: Prepare Draft Environmental Statement—File June 1980.
Summer 1980: Public input on Draft Environmental Statement
Autumn 1980: Prepare Final Environmental Statement—File December 1980.

R. Max Peterson, Chief, Forest Service, is the responsible official for approval of the Plan. M. Jean Hassell, Regional Forester, Southwestern Region, is the responsible official for preparation of the Plan. James R. Crawford will be the team leader for the planning process and may be contacted for information and comments at 505–766–3630.

Written comments on issues, concerns, opportunities, and criteria must be received by December 14, 1979. The deadline for comments on the Draft Environmental Statement will be published when the Draft is filed. Comments should be sent to: M. Jean Hassell, Regional Forester, USDA—Forest Service, 517 Gold Avenue, SW., Albuquerque, New Mexico 87102.

Dated: September 4, 1979.

Philip L. Thornton,

Deputy Chief.

CIVIL AERONAUTICS BOARD

Application for an All-Cargo Air Service Certificate

August 31, 1979.

In accordance with Part 291 (14 CFR 291) of the Board's Economic Regulations (effective November 6, 1978), notice is hereby given that the Civil Aeronautics Board has received an application, Docket 33985, from U.S. Airways, Inc., P.O. Box 812, Willow Run Airport, Ypsilanti, Michigan 48197 for an all-cargo air service certificate to provide domestic cargo transportation.

Under the provisions of § 291.12(c) of Part 291, interested persons may file an answer in opposition to this application on or before October 1, 1979. An executed original and six copies of such answer shall be addressed to the Docket Section, Civil Aeronautics Board, Washington, D.C. 20428. It shall set forth in detail the reasons for the position taken and must relate to the fitness, willingness, or ability of the applicant to provide all-cargo air service or to comply with the Act or the Board's orders and regulations. The answer shall be served upon the applicant and state the date of such service.

Phyllis T. Kaylor,

Secretary.

Applications for Certificates of Public Convenience and Necessity and Foreign Air Carrier Permits

Notice is hereby given that, during the week ended August 31, 1979 CAB has received the applications listed below, which request the issuance, amendment, or renewal of certificates of public convenience and necessity or foreign air carrier permits under Subpart Q of 14 CFR 302.

Answers to foreign permit applications are due 28 days after the application is filed. Answers to certificate applications requesting restriction removal are due within 14 days of the filing of the application. Answers to conforming applications in a restriction removal proceeding are due 28 days after the filing of the original application. Answers to certificate applications (other than restriction removals) are due 28 days after the filing of the application. Answers to conforming applications or those filed in conjunction with a motion to modify scope are due within 42 days after the original application was filed. If you are in doubt as to the type of application which has been filed, contact the applicant, the Bureau of Pricing and Domestic Aviation (in interstate and overseas cases) or the Bureau of International Aviation (in foreign air transportation cases).

Subpart Q Applications

Date filed	Docket No.	Description
Aug. 29, 1979	36470	Sea Airmotive, Inc., c/o Thomas R. Howell, Verner, Liipfert, Bernhard and McPherson, Suite 1100, 1660 L Street NW., Washington, D.C. 20036. Application of Sea Airmotive, Inc. pursuant to Section 401 of the Act requesting certification over those routes which now serves as an taxi and intrastate carrier, that is, authority to engage in scheduled air transportation of persons, property, and mail on a permissive basis as follows: A. Between Deadhorse, Nuiqsut and Barrow; B. Between Akiachak, Akiak, Bethel, Kwethluk, Napakiak or Napaskiak; C. Between the terminal points of Bethel and kwethluk with Akiachak, Akiak, Kwethluk, Napakiak, Napaskiak and Tuluksak authorized to be served as intermediate points; D. Between the terminal points of Bethel and Kasigluk, with Akolmiut, Kasigluk, Napakiak, Napaskiak and Nunapitchuk authorized to be served as intermediate points; E. Between the terminal points of Bethel and Tuntutuliak, with Eek, Napakiak, Napaskiak and Tuntutuliak authorized to be served as intermediate points; F. Between the terminal points of Bethel and Hooper Bay, with Akolmiut, Cape Ramanzof, Chevak, Hooper Bay, Kasigluk, Newtok, Nunapitchuk and Scammon Bay authorized to be served as intermediate points; G. Between the terminal points of Bethel and Toksook Bay, with Mekoryuk, Newtok, Toksook Bay and Tununak authorized to be served as intermediate points; H. Between the terminal points of Bethel and Kipnuk, with Chefornak, Kipnuk, Napaskiak and Tuntutuliak authorized to be served as intermediate points; I. Between the terminal points of Bethel and Kipnuk, with Kipnuk, Kongiganak, Kwigillingok, Napakiak, Napaskiak and Tuntutuliak authorized to be served as intermediate points; J. Between the terminal points of Bethel and Quinhagak, with Cape Newenham, Eek, Goodnews Bay, Napaskiak, Platinum and Quinhagak authorized to be served as intermediate points; K. Between Anchorage and Bethel; L. Between Anchorage and Bethel via the intermediate point Aniak; M. Between Anchorage, St. Mary's and Aniak; and N. Between Bethel, Kalskag, Aniak, Arwik, Grayling, Holy Cross and Shageluk. Conforming applications and answers are due September 25, 1979.
August 29, 1979	36485	Air Pacific Limited, c/o Thomas J. Whalen, 1001 Connecticut Avenue NW., Washington, D.C. 20036. Application of Air Pacific Limited pursuant to section 402 of the Act requesting renewal and reissuance of its Foreign Air Carrier Permit which currently authorizes it to engage in the foreign air transportation of persons, property and mail as follows: Between a point or points in the Dominion of Fiji, the intermediate points Funafuti, the Ellice Islands, and Tarawa, the Gilbert Islands; and the terminal point Majuro, the Marshall Islands, United States Trust Territory; Between a point or points in the Dominion of Fiji and the terminal point Pago Pago, American Samoa. Applicant requests in addition that its permit be amended to authorize it to engage in the foreign air transportation of persons, property and mail as follows: 1. Between a point or points in Fiji, the intermediate points Funafuti, Tuvalu, and Tarawa, Kribati, and the terminal point Majuro, the Marshall Islands, United States Trust Territory; 2. Between a point or points in Fiji; to Honolulu and beyond to Portland, Oregon; Seattle, Washington; Oakland, California; and Denver, Colorado and beyond to a point or points in Canada; 3. Between a point or points in Fiji; via intermediate points in South Pacific Commission to Guam and beyond to a point or points in Japan; 4. Between a point or points in Fiji; via intermediate points in South Pacific Commission and a point or points in Western Samoa, to Pago, Pago, American Samoa; and beyond via intermediate points in South Pacific Commission and a point or points in Western Samoa, to Tahiti. Points on any of the above routes may be omitted. Answers shall be filed September 26, 1979.
August 31, 1979	36507	Allegheny Airlines, Inc., Washington National Airport, Washington, D.C. 20001. Application of Allegheny Airlines, Inc. pursuant to section 401 of the Act and Part 201 of the Economic Regulations of the Board requesting amendment of its certificate of public convenience and necessity for Route 97–F so as to authorize it to engage in scheduled nonstop air transportation of persons, property and mail between Pittsburgh, Pennsylvania, and Toronto, Canada, by amending its certificate for Route 97–F to include a new segment as follows: "Between the terminal point Pittsburgh, Pennsylvania, and the terminal point Toronto, Canada." Answers may be filed by September 14, 1979.

BILLING CODE 6320-01-M

V 44 / 176

[Order 79-8-184; Docket 31290]

Establishment of the Interim Standard Industry Fare Level; Order

Adopted by the Civil Aeronautics Board at its office in Washington, D.C. on the 31st day of August, 1979.

By Order 79-8-96, the Board established its interim Standard Industry Fare Level (SIFL) reflecting the Airline Deregulation Act of 1978 (ADA), Public Law 95-504. In summary, the ADA set deadlines and policies for deregulation of the economic aspects of interstate air transportaion, culminating, among other things, with the dissolution of the Board's discretion to prescribe fares in domestic and overseas markets. The Board must compute a "standard industry fare level" based upon the fare level in effect on July 1, 1977, and periodically update the SIFL by increasing or decreasing it by the percentage change in operating costs per available seat mile (ASM) for interstate once overseas transportation combined. Once computed, the SIFL becomes the benchmark for measuring the statutory zone of reasonableness. Effective July 1, the Board established its SIFL about 6.6 percent above the then current fare level.

It became clear thereafter that the 51 cents per gallon fuel cost projected for August 15, 1979 was understated. However, we rebuffed several attempts to increase the SIFL for a number of reasons. First, we believe, and continue to do so, that the SIFL is a short run projection which should not be subject to rolling changes because one or more of the input estimates is off the market. That is the nature of estimates; they will sometimes be too high and sometimes too low but, over the long run, tend to balance out. Second, the SIFL is a price leader which facilitates intra-industry price coordination and frequent changes should be avoided. Finally, we have believed that misestimates in the SIFL (in any direction) could be accommodated by carriers through the ample fare flexibility provided by the Deregulation Act and PS-80. We have not, therefore, wished to diverge from our announced intention of revising the SIFL as of October 1, for a two month period, based on the latest 4 months of reported fuel data. (Order 79-7-190).

However, July fuel costs are now available and indicate the largest increase in average price of fuel per gallon so far this year—up 6.51 cents per gallon over June to 59 cents. We can no longer assume that carrier fare flexibility can accommodate the under projection of fuel costs in the current SIFL (51 cents as of August 15). To the contrary, any further increase in fuel prices—and data reported to us suggests that there will be some—will make this a practical impossibility. Consequently, we believe a revised SIFL to reflect the rapid escalation of fuel prices is warranted immediately.[1] We take some comfort from the fact that the unheralded nature of this change in position will tend to discourage industry price coordination, and should avoid the necessity of an even larger increase in the SIFL which would otherwise occur on October 1.

Applying our methodology to calendar year 1978 financial data and July fuel costs, with fuel projected to October 1, 1979 at the rate of 4.36 cents per gallon increase each month, raises the SIFL about 9.5 percent over the level effective July 1, 1979. (See Appendix [2])

Accordingly, pursuant to the Federal Aviation Act of 1958, and particularly section 1002;

We set the Standard Industry Fare Level effective on September 1, 1979 as follows:

Terminal charge: $2173: Plus 0.1189/mile (0-500 miles); plus .0906/mile (501-1,500 miles); plus .0871/mile (over 1,500 miles.)

This order will be published in the **Federal Register.**

By the Civil Aeronautics Board.

Phyllis T. Kaylor,

Secretary.

All Members concurred except Member O'Melia who filed the attached concurring and dissenting statement.

[1] Trunk and local service carrier scheduled service fuel price.

	Price (cents)	Change from previous month (cents)
Month:		
April	46.19	4.65
May	49.70	3.51
June	52.49	2.77
July	59.00	6.51

Our latest methodology projects the average change in price over the last four months to the chosen future date, then adds the projected change to the current fuel price. In this case we projected an average increase of 4.36 cents per month for two and one-half months (to October 1), then added this 10.9 cent increase to the July price—projecting a 69.90 cent per gallon cost on October 1.

[2] Appendix filed as part of the original document.

O'Melia, Member, Concurring and Dissenting:

I agree with the Board's decision to adjust the standard industry fare level to reflect current industry fuel prices. However, as I have said before in my dissenting statements in Orders 79-8-20 and 79-7-190, I do not agree with the majority's recent reliance on the upward fare flexibility zone, provided by Congress in the Airline Deregulation Act, to cover industry cost increases that exceed the levels implicit in the current standard industry fare level. The recent amendments of the Act provide that the standard industry fare level shall be based on carrier costs, *without adjustment.* The Board's failure to take action in the face of experienced industry fuel costs far higher than the level forecast in the current standard industry fare level has clearly violated that provision of the new Act. As a result the carriers have been denied fare increases to which they are entitled under the specific terms of the Act

Richard J. O'Melia.

BILLING CODE 6320-01-M

Frontier Arilines, et al.; Profit-Sharing Refunds

AGENCY: Civil Aeronautics Board

ACTION: Summary of Order 79-8-188 redetermining certain refunds for three carriers pursuant to the provisions of Class Rate III.

SUMMARY: The Board has adopted an order redetermining downward the profit-sharing refunds due from Frontier Airlines, Lake Central Airlines, and Mohawk Airlines for calendar years 1964 and 1965 pursuant to the provisions of Class Rate III, which was in effect at that time for the local service carriers. This redeterminination was necessitated by statutory provisions contained in the Airline Deregulation Act of 1978, which amended the Federal Aviation Act of 1958 in several significant areas, requiring the Board to ignore tax loss carrybacks from subsequent years in determining the profit-sharing refunds of carriers for 1964 and 1965. Since the profit-sharing refunds due from the three carriers were originally paid many years ago, the practical effect of this order is to return $1,154,149 to USAir (formerly Allegheny Airlines), as the successor to both Lake Central and Mohawk, and $873,266 to Frontier.

FOR FURTHER INFORMATION CONTACT: John R. Hokanson or James M. Craun, Jr., Bureau of Domestic Aviation, Civil Aeronatutics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428, 202-673-5368.

The complete text of Order 79-8-188 is available from our Distribution Section, Room 516, 1825 Connecticut Avenue, N.W., Washington, D.C. Persons out side the metropolitan area may send a postcard request for Order 79-8-188 to the Distribution Section, Civil Aeronautics Board, Washington, D.C. 20428.

By the Civil Aeronautics Board: August 31, 1979.

COMMUNITY SERVICES ADMINISTRATION

Notice of Decision to Fund Seven Conduit Farmworker Community Food and Nutrition Programs (CFNP) Operating in Every State Except Hawaii and Alaska

AGENCY: Community Services Administration.

ACTION: Notice to all Board of Directors of CAA(s) and SEOO(s).

SUMMARY: The Community Services Administration is notifying all Boards of Directors of Community Action Agencies (CAAs) and State Economic Opportunity Offices (SEOOS), in accordance with section 222(a) of the Economic Opportunity Act of 1964, as amended, that a decision by the Director has been made to fund seven conduit farmworker Community Food and Nutrition Programs (CFNP) operating in every state except Hawaii and Alaska.

Grants are being awarded to the following organizations for operation in the following states: the Idaho Migrant Council (serving: Idaho, Oregon, Washington, Utah, Colorado, Montana and Wyoming); Minnesota Migrant Council (serving: Illinois, Indiana, Missouri, Michigan, Nebraska, Minnesota, Ohio, North Dakota, South Dakota, Wisconsin, Iowa and Kansas); Rural New York (serving: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont, New Jersey, New York, Delaware and Pennsylvania); Campesinos Unidos (serving: California, Nevada and Arizona); Colonias Del Valle (serving: New Mexico, Oklahoma, Arkansas and Texas); Florida Farmworkers Council (serving: Florida); and, Migrant Seasonal Farmworkers Association, Inc. (serving: Alabama, Mississippi, Georgia, Louisiana, West Virginia, Tennessee, South Carolina, Maryland, Virginia and North Carolina). These organizations will engage in the following CFNP program categories: access, self-help projects, nutrition and consumer education, and crisis relief.

EFFECTIVE DATE: This notice becomes effective September 10, 1979.

Merchant Marine and Fisheries Capital Construction Funds; Applicable Rates of Interest on Nonqualified Withdrawals

Under the authority in section 607(h)(4) of the Merchant Marine Act, 1936, (46 U.S.C. 1101), as amended by section 21 of the Merchant Marine Act of 1970 (84 Stat. 1031), we hereby determine and announce that the applicable rate of interest on the amount of additional tax attributable to any non-qualified withdrawals from a capital construction fund established under section 607 of the Act shall be 9.03 percent, with respect to nonqualified withdrawals made in the taxable year beginning in 1979.

The determination of the applicable rate of interest with respect to non-qualified withdrawals was computed according to the joint regulations issued under the Act (46 CFR Part 391, § 391.7(e)(2)(ii)) by multiplying 8 percent by the ratio which (a) the average yield on 5-year Treasury securities for the calendar year immediately preceding the beginning of such taxable year, bears to (b) the average yield on 5-year Treasury securities for the calendar year 1970. The applicable rate so determined was computed to the nearest one-hundredth of 1 percent.

Dated: August 31, 1979.

Samuel B. Nemirow,

Assistant Secretary for Maritime Affairs.

Richard A. Frank,

Administrator, National Oceanic and Atmospheric Administration.

BILLING CODE 3510-08-M

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Increasing the Import Restraint Level for Certain Cotton Apparel Products from Malaysia

September 4, 1979.

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Increasing the level of restraint for men's and boys' woven cotton shirts in Category 340, produced or manufactured in Malaysia and exported to the United States during the agreement year which began on January 1, 1979. (A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the **Federal Register** on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 3421), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773), September 5, 1978 (43 FR 39408), January 2, 1979 (44 FR 94), March 22, 1979 (44 FR 17545), and April 12, 1979 (44 FR 21843)).

SUMMARY: Paragraph 7 of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of May 17 and June 8, 1978, as amended, between the Governments of the United States and Malaysia provides for designated percentage increases for certain categories (swing) during the agreement year which began on January 1, 1979. Paragraph 8(A)(I) provides for the carryover of shortfalls in certain categories from the previous agreement year (carryover). At the request of the Government of Malaysia, the level for Category 340 is being increased for swing and carryover from 228,317 dozen to 269,414 dozen during the twelve-month period which began on January 1, 1979 and extends through December 31, 1979.

EFFECTIVE DATE: September 4, 1979.

FOR FURTHER INFORMATION CONTACT: Norman Duckworth, International Trade Specialist, Office of Textiles, U.S. Department of Commerce, Washington, D.C. 20230 (202/377-5423).

SUPPLEMENTARY INFORMATION: On January 3, 1979, a letter dated December 27, 1978 from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs was published in the **Federal Register** (44 FR 930), which established the levels of restraint applicable to certain specific categories of cotton, wool and man-made fiber textile products, produced or manufactured in Malaysia and exported to the United States during the twelve-month period which began on January 1, 1979 and extends through December 31, 1979. In the letter published below the Chairman of the Committee for the Implementation of Textile Agreements directs the Commissioner of Customs to prohibit entry for consumption or withdrawal from warehouse for consumption of cotton textile products in Category 340 in excess of the amended twelve-month level of restraint.

Paul T. O'Day,

Acting Chairman, Committee for the Implementation of Textile Agreements.

September 4, 1979.

Committee for the Implementation of Textile Agreements

Commissioner of Customs,
Department of the Treasury,
Washington, D.C. 20229.

Dear Mr. Commissioner: On December 17, 1978, the Chairman, Committee for the Implementation of Textile Agreements, directed you to prohibit entry of cotton, wool and man-made fiber textile products in certain specified categories, produced or manufactured in Malaysia and exported to the United States during the agreement year which began on January 1, 1978, in excess of designated levels of restraint. The Chairman further advised you that the levels of restraint are subject to adjustment.[1]

Under the terms of the Arrangement Regarding International Trade in Textiles done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of May 17 and June 8, 1978, as amended, between the Governments of the United States and Malaysia; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed to increase, effective on September 4, 1979, the level of restraint established for Category 340 in the directive of December 27, 1978 to 269,414 dozen.[2]

The action taken with respect to the Government of Malaysia and with respect to imports of cotton textile products from Malaysia has been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of customs, which are necessary for the implementation of such actions, fall within the foreign affairs exception to the rule-making provisions of 5 U.S.C. 553. This letter will be published in the **Federal Register.**

Sincerely,

Paul T. O'Day,

Acting chairman, Committee for the Implementation of Textile Agreements.

[FR Doc. 79-28102 Filed 9-7-79; 8:45 am]

BILLING CODE 3510-25-M

[1] The term "adjustment" refers to those provisions of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of May 17 and June 8, 1978, as amended, between the Governments of the United States and Malaysia which provide, in part, that: (1) within the aggregate and group limits, specific levels of restraint, including their sublimits, may be exceeded by designated percentages; (2) specific levels may be increased for carryover and carryforward up to 11 percent of the applicable category limit; and (3) administrative arrangements or adjustments may be made to resolve minor problems arising in the implementation of the agreement.

Announcing Additional Import Controls on Certain Cotton Textile Products From Thailand

September 4, 1979.

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Controlling cotton dresses in Category 336 at 22,075 dozen and women's, girls' and infants' woven cotton blouses in Category 341 at 98,848 dozen, produced or manufactured in Thailand and exported during the twelve-month period which began on January 1, 1979. (A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the **Federal Register** on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 3421), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773), September 5, 1978 (43 FR 39408), January 2, 1979 (44 FR 94), March 22, 1979 (44 FR 17545), and April 12, 1979 (44 FR 21843)).

SUMMARY: Under the terms of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of October 4, 1978, as amended, between the Governments of the United States and Thailand, the United States Government has decided to control imports of cotton textile products in Categories 336 and 341, produced or manufactured in Thailand and exported to the United States during the twelve-month period which began on January 1, 1979, in addition to those categories previously designated (See 44 FR 932). The level of restraint for Category 341 includes 4,325 dozen in carryover from the previous agreement year and 5,330 dozen in carryforward.

EFFECTIVE DATE: September 10, 1979.

FOR FURTHER INFORMATION CONTACT: Norman Duckworth, International Trade Specialist, Office of Textiles, U.S. Department of Commerce, Washington, D.C. 20230 (202/377-5423).

SUPPLEMENTARY INFORMATION: On January 3, 1979, there was published in the **Federal Register** (44 FR 932) a letter dated December 27, 1978, from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs, which established levels of restraint for certain specified categories of cotton, wool and man-made fiber textile products, produced or manufactured in Thailand, which may be entered into the United States for consumption, or withdrawn from warehouse for consumption, during the twelve-month period which began on January 1, 1979 and extends through December 31, 1979. In accordance with the terms of the bilateral agreement, as amended, the United States Government has decided also to control imports of cotton textile products in Categories 336 and 341 during that same period.

Accordingly, in the letter published below the Chairman of the Committee for the Implementation of Textile Agreements directs the Commissioner of Customs to prohibit entry into the United States for consumption, or withdrawal from warehouse for consumption, of cotton textile products in Categories 336 and 341 in excess of the designated levels of restraint.

The levels of restraint for Categories 336 and 341 have not been adjusted to account for any imports after December 31, 1978. Imports of 15,173 dozen in Category 336 and 57,582 dozen in Category 341 during the period which began on January 1, 1979 and extended through June 30, 1979 are being charged. As the data become available, further charges will be made for Categories 336 and 341 to account for imports during the period which began on July 1, 1979 and extends through the effective date of this directive.

Paul T. O'Day,

Acting Chairman, Committee for the Implementation of Textile Agreements.

September 4, 1979.

Committee for the Implementation of Textile Agreements

Commissioner of Customs,
Department of the Treasury,
Washington, D.C. 20229.

Dear Mr. Commissioner: This directive amends, but does not cancel, the directive issued to you on December 27, 1978 by the Chairman, Committee for the Implementation of Textile Agreements, concerning imports into the United States of certain cotton, wool and man-made fiber textile products, produced or manufactured in Thailand.

Under the terms of the Arrangement Regarding International Trade in Textile done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of October 4, 1978, as amended, between the Governments of the United States and Thailand; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed to prohibit, effective on September 10, 1979 and for the twelve-month period beginning on January 1, 1979 and extending through December 31, 1979, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton textile products in Categories 336 and 341, produced or manufactured in Thailand, in excess of the following levels of restraint:

Category	12-month level of restraint [1]
336	22,075 doz.
341	98,848 doz.

[1] The levels of restraint for Categories 336 and 341 have not been adjusted to reflect any imports after December 31, 1978. Imports during the period which began on January 1, 1979 and extended through June 30, 1979 were 15,173 dozen in Category 336 and 57,582 dozen in Category 341.

Cotton textile products in Categories 336 and 341 which have been exported to the United States prior to January 1, 1979 shall not be subject to this directive.

Cotton textile products in Categories 336 and 341 which have been released from the custody of the U.S. Customs Service under the provisions of 19 U.S.C. 1448(b) or 1484 (a)(1)(A) prior to the effective date of this directive shall not be denied entry under this directive.

A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the **Federal Register** on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 3421), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773), September 5, 1978 (43 FR 39408), January 2, 1979 (44 FR 94), March 22, 1979 (44 FR 17545), and April 12, 1979 (44 FR 21843).

In carrying out the above directions entry into the United States for consumption shall be construed to include entry for consumption into the Commonwealth of Puerto Rico.

The action taken with respect to the Government of Thailand and with respect to imports of cotton textile products from Thailand has been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of Customs, which are necessary for the implementation of such actions, fall within the foreign affairs exception to the rule-making provisions of 5

[2] The level of restraint has not been adjusted to reflect any imports after December 31, 1978.

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

U.S.C. 553. This letter will be published in the **Federal Register.**

Sincerely,

Paul T. O'Day,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510-25-M

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Advisory Committee on Women in the Services (DACOWITS); Meeting

Pursuant to Pub. L. 92-463 notice is hereby given that a meeting of the Defense Advisory Committee on Women in the Services (DACOWITS) will be held 21-25 October 1979 at the Carolina Town House, Columbia, South Carolina, and Ft. Jackson, South Carolina.

The purpose of the DACOWITS Committee is to assist and advise the Secretary of Defense on matters relating to women in the services. The committee meets semiannually.

Sessions will be conducted daily as indicated and will be open to the public. The agenda will include the following meetings and discussions:

SUNDAY, 21 OCTOBER 1979, CAROLINA TOWN HOUSE
- 10:00 a.m.-4:00 p.m.—Registration
- To be determined—Executive Committee Meeting
- 6:00 p.m.—Cocktail/Buffet—"No Host"

MONDAY, 22 OCTOBER 1979, CAROLINA TOWN HOUSE
- 8:00 a.m.-12:00 noon—Registration
- 9:00 a.m.-10:00 a.m.—Official Opening
- 10:30 a.m.-11:30 a.m.—OSD Briefing
- 12:00 noon-1:30 p.m.—Luncheon (By invitation only)
- 1:30 p.m.-3:30 p.m.—OSD/Department of Justice Briefings
- 4:00 p.m.-5:30 p.m.—Subcommittee Meetings
- 7:00 p.m.-10:30 p.m.—Official Department of Defense Formal Reception and Dinner (By invitation only)

TUESDAY, 23 OCTOBER 1979, CAROLINA TOWN HOUSE
- 9:00 a.m.-12:00 noon—OSD/Service Briefings
- 12:00 noon-1:30 p.m.—Luncheon—"No Host"
- 1:30 p.m.-6:00 p.m.—Subcommittee Meetings

WEDNESDAY, 24 OCTOBER 1979, FORT JACKSON, SOUTH CAROLINA
- 5:15 a.m.-5:30 p.m.—One day field trip to the integrated training facilities at Ft. Jackson, hosted by the U.S. Army

THURSDAY, 25 OCTOBER 1979, CAROLINA TOWN HOUSE
- 8:00 a.m.-9:30 a.m.—Executive Committee and Military Representatives to DACOWITS Meeting.
- 10:00 a.m.-12:00 noon—Briefing/General Business Session. Presentations by members of the public.
- 12.00 noon—Adjourn.

Members of the public will not be permitted to go on the field trip or attend the social functions.

The following rules and regulations will govern the participation by members of the public at this meeting:

(1) All business sessions, to include Executive committee sessions, will be open to the public.

(2) Interested persons may submit a written statement and/or make an oral presentation for consideration by the committee during the meeting.

(3) Persons desiring to make an oral presentation or submit a written statement to the committee must notify Captain Mary J. Mayer, USAF, DACOWITS, Executive Secretary, OASD (Manpower, Reserve Affairs and Logistics), Room 3D322, the Pentagon, Washington, D.C. 20301, (202) 697-5655/5656 by 10 October 1979.

(4) Length and number of oral presentations to be made will depend on the number of requests received from the members of the public.

(5) Oral presentations by members of the public will be permitted only from 10:45 a.m. to 11:15 a.m. on Thursday, 25 October 1979 before the full committee.

(6) Each person desiring to make an oral presentation or submit a written statement must provide the DACOWITS Secretariat with 40 copies of the presentation/statement by 10 October 1979.

(7) Persons submitting a written statement only for inclusion in the minutes of the meeting must submit one (1) copy either before or during the meeting or within five (5) days after the close of the meeting.

(8) Members of the public will not be permitted to enter into the oral discussion conducted by the committee members at any of the sessions; however, they will be permitted to reply to questions directed to them by members of the committee.

(9) Members of the public will be permitted to orally question the scheduled speakers if time allows after the official participants have asked questions and/or made comments.

(10) Questions from the public will not be accepted during the subcommittee sessions, the Executive committee sessions, or the final general session on Thursday, 25 October 1979.

Additional information regarding the committee and/or this meeting may be obtained by contacting the DACOWITS Executive Secretary, OASD (MRA&L), the Pentagon, Washington, D.C. 20301.

H. E. Lofdahl,

Director, Correspondence and Directives, Washington Headquarters, Department of Defense.

BILLING CODE 3810-70-M

Privacy Act of 1974; Amendment to System of Records

AGENCY: Office of the Secretary of Defense (OSD).

ACTION: System of records amendment.

SUMMARY: The Office of the Secretary of Defense, Department of Defense proposes to amend a system of records in its inventory of records subject to the Privacy Act of 1974. The Act requires that any changes to records systems must be published as a public notice for public comment.

DATES: This system shall be amended as proposed on October 10, 1979, without further notice unless comments are received on or before October 10, 1979, which would result in a contrary determination and require republication for further comments.

ADDRESS: Privacy Act Officer, Office of the Secretary of Defense, Room 5C-315, Pentagon, Washington, DC 20301.

FOR FURTHER INFORMATION CONTACT: Mr. James S. Nash, telephone 202-695-0970.

SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense (OSD) Systems of Records Notices as prescribed by the Privacy Act of 1974 (5 U.S.C. 552a) have been published in the **Federal Register** as follows:

FR Doc. 77-28255 (42 FR 50731) September 28, 1977.
FR Doc. 78-25819 (43 FR 42374) September 20, 1978.
FR Doc. 78-34821 (43 FR 58405) December 14, 1978.
FR Doc. 78-35943 (43 FR 60331) December 27, 1978.
FR Doc. 79-8786 (44 FR 17780) March 23, 1979.
FR Doc. 79-11351 (44 FR 22143) April 13, 1979.
FR Doc. 79-15267 (44 FR 28706) May 16, 1979.
FR Doc. 79-17755 (44 FR 32724) June 7, 1979.
FR Doc. 79-20389 (44 FR 38967) July 3, 1979.
FR Doc. 79-22906 (44 FR 43505) July 25, 1979.

The proposed changes are not within the purview of the provisions of the Office of Management and Budget (OMB) Circular A-108, Transmittal Memoranda No. 1 and No. 3, dated September 30, 1975, and May 17, 1976, respectively, which provide supplemental guidance to Federal agencies regarding the preparation and submission of reports of their intention

to establish or alter systems of personal records as required by the Privacy Act. This OMB guidance was set forth in the **Federal Register** (40 FR 45877) on October 3, 1975. Following the identification code of the OSD record system and the specific changes made therein, the complete revised record system, as amended, is published in its entirety.

H. E. Lofdahl,

Director, Correspondence and Directives, Washington Headquarters Services, Department of Defense.

August 31, 1979.

DEPARTMENT OF ENERGY

United States and Thailand; Proposed Subsequent Arrangements

Pursuant to section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160), notice is hereby given of proposed "subsequent arrangements" under the Agreement for Cooperation Between the Government of the United States of America and the Government of Thailand, and as authorized by the Taiwan Relations Act of 1979 (Pub. L. 96-8).

The subsequent arrangements to be carried out under the above mentioned

V 4 4 / 1 7 6

agreement involves approval of contractural arrangements under which DOE will consent to the assignment of portions of an uranium enrichment services contract held by Thailand involving approximately 165,000 separate work units, of which approximately 45,000 separative work units will be assigned to Kuosheng Unit 2 on Taiwan and approximately 120,000 separative work units will be assigned to a U.S. utility.

In accordance with section 131 of the Atomic Energy Act of 1954, as amended, it has been determined that entering into these subsequent arrangements will not be inimical to the common defense and security.

These subsequent arrangements will take effect no sooner than fifteen days after the date of publication of this notice.

For the Department of Energy.

Dated: September 5, 1979.

Harold D. Bengelsdorf,

Director for Nuclear Affairs, International Nuclear and Technical Programs.

BILLING CODE 6450-01-M

Economic Regulatory Administration

Cincinnati Gas & Electric Co.; Petitions for Temporary Public Interest Exemptions

Decision and Order Granting Exemptions Pursuant To Section 311 of the Powerplant And Industrial Fuel Use Act of 1978; ERA Docket Nos. 50556-2831-21-41, 50556-2831-22-41, 50556-2831-23-41, 50556-2831-24-41, 50556-2831-25-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a)(2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to the Cincinnati Gas and Electric Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on March 27, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the May 11, 1979, **Federal Register** (44 FR 27668) with a request for public comments relating to the petitions and the proposed order. No comments were received specifically addressing the Cincinnati Gas and Electric Company proposed order.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a)(2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Identification	Middle distillate fuel oil (barrels)	Percent sulfur content
Dicks Creek (Monroe, Ohio)	CT 1	103,900	0.3
	CT 2	15,600	0.3
	CT 3	15,600	0.3
	CT 4	19,100	0.3
	CT 5	19,100	0.3

These powerplants will burn an estimated 944,050 MCF of natural gas annually which will result in an estimated displacement of 475 barrels of middle distillate fuel oil per day (173,300 barrels annually).

Statement of Reasons

Because petroleum products in general, and middle distillates in particular are in short supply, there is an ugent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a)(2) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6 these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a systemwide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C., on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion.

BILLING CODE 6450-01-M

[ERA Docket No. 50653-2500-03-41]

Consolidated Edison Co. of New York, Inc.; Petition for Temporary Public Interest Exemption

Decision and Order Granting An Exemption Pursuant To Section 311 of the Powerplant And Industrial Fuel Use Act of 1978.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting a temporary public interest exemption from the prohibitions of Section 301(a)(2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to the Consolidated Edison Company of New York, Inc. (petitioner).

The petitioner filed for this temporary public interest exemption pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on April 24, 1979. Notice of the petition and a proposed order granting this temporary exemption was published in the May 11, 1979 **Federal Register** (44 FR 27674) with a request for public comments relating to the petition and the proposed order. Upon review of the public comments and the purposes of FUA, ERA has determined to grant the requested temporary public interest exemption.

Based on the information provided by the petitioner, the powerplant listed in the table below is either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or is prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. This temporary exemption will allow this unit to burn natural gas, notwithstanding the prohibitions of Section 301(a)(2) and (3) of FUA, to displace consumption of low sulfur residual fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Low sulfur residual fuel oil (barrels)	Percent sulfur content
Ravenswood (New York, N.Y.)	#3	1,832,000	0.3

This powerplant will burn an estimated 10,810,000 MCF of natural gas annually which will result in an estimated displacement of 5,019 barrels of low sulfur residual fuel oil per day (1,832,000 barrels annually).

Statement of Reasons

Because petroleum products are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum. The use of natural gas in this powerplant will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that this powerplant, for which it is requesting a temporary exemption, is an existing unit that is either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a) (2) or (3) of FUA, will displace consumption of low sulfur residual fuel oil, and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplant for which this temporary exemption is issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting this temporary exemption.

Duration of Temporary Exemption

ERA grants this temporary public interest exemption for an initial period from the effective date of this Decision and Order until December 31, 1980. This exemption will be automatically extended for an additional three year period upon the written acceptance by ERA of a conservation plan pursuant to the third term and condition set forth below in this Decision and Order. The

S E 1 0 7 9

UMI

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

temporary exemption is subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by this exempted powerplant between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, the temporary exemption granted under this Decision and Order is conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplant, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a system-wide fuel conservation plan to include the initial period covered by this temporary exemption, including the means by which the petitioner will measure progress in implementing this plan, or

(3) If the petitioner seeks to have the exemption automatically extended, the fuel conservation plan must cover both the initial period covered by this temporary exemption and the additional three year period, including the means by which the petitioner will measure progress in implementing this plan.

(4) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the pertinent fuel conservation plan.

Issued in Washington, D.C., on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Consumers Power Co.; Petitions for Temporary Public Interest Exemptions

Decision and Order Granting Exemptions Pursuant to Section 311 of the Powerplant and Industrial Fuel Use Act of 1978; ERA Docket Nos. 50658-1706-21-41; 50658-1706-22-41; 50658-1706-23-41; 50658-1706-24-41; 50658-1706-25-41; 50658-1719-05-41; 50658-1719-06-41; 50658-1719-07-41; 50658-1719-08-41; and 50658-1719-09-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a) (2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to the Consumers Power Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on May 7, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the June 1, 1979, **Federal Register** (44 FR 31677) with a request for public comments relating to the petitions and the proposed order. No comments were received specifically addressing the Consumers Power Company proposed order.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithtstanding the prohibitions of Section 301(a) (2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel oil (barrels)	Percent sulfur content
Gaylord Peaking Station (Gaylord, Mich.)	Unit 1	1,260	0.4
	Unit 2	1,260	0.4
	Unit 3	1,260	0.4
	Unit 4	1,260	0.4
	Unit 5	1,260	0.4
Thetford Comb. turbine plant (Mt. Morris, Mich.)	Unit 5	45,600	0.4
	Unit 6	45,600	0.4
	Unit 7	45,600	0.4
	Unit 8	45,600	0.4
	Unit 9	45,600	0.4

These powerplants will burn an estimated 1,366,000 MCF of natural gas annually which will result in an estimated displacement of 642 barrels of middle distillate fuel oil per day (234,300 barrels annually).

Statement of Reasons

Because petroleum products, in general, and middle distillates, in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-tern oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a system-wide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

[FR Doc. 79-28020 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

Dayton Power & Light Co.; Petitions for Temporary Public Interest Exemptions

Decision and Order Granting Exemptions Pursuant To Section 311 of the Powerplant And Industrial Fuel Use Act of 1978; ERA Docket Nos. 50752-2854-21-41; 50752-2854-22-41; 50752-2854-23-41; 50752-2854-24-41; 50752-2854-25-41; 50752-2854-26-41; and 50752-2854-27-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a)(2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to the Dayton Power and Light Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on April 27, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the June 1, 1979, **Federal Register** (44 FR 31677) with a request for public comments relating to the petitions and the proposed order. ERA has considered all comments received pursuant to the **Federal Register** notice concerning the petitions. Upon review of the public comments and the purposes of FUA, ERA has determined to grant the requested temporary public interest exemptions.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a)(2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel oil (barrels)	Percent sulfur content
Yankee Street (Dayton, Ohio)	CT 1	52,193	0.3
	CT 2	49,469	0.3
	CT 3	55,587	0.3
	CT 4	64,050	0.3
	CT 5	61,700	0.3
	CT 6	59,354	0.3
	CT 7	57,073	0.3

These powerplants will burn an estimated 2,237,020 MCF of natural gas annually which will result in an estimated displacement of 1,094 barrels of middle distillate fuel oil per day (399,466 barrels annually).

Statement of Reasons

Because petroleum products in general, and middle distillates in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is

V 4 4 / 1 7 6 SEP 10 79 UMI

preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a)(2) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions of a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions.

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a systemwide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

[FR Doc. 79-28018 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

Duke Power Co.; Petitions for Temporary Public Interest Exemptions

Decision and Order Granting Exemptions Pursuant To Section 311 of the Powerplant And Industrial Fuel Use Act of 1978; ERA Docket Nos. 50816-3254-26-41; 50816-3254-27-41; 50816-3254-28-41; 50816-3254-29-41; 50816-3254-30-41; 50816-3254-31-41; 50816-3254-32-41; 50816-3254-33-41; 50816-3254-34-41; 50816-3254-35-41; 50816-2732-28-41; 50816-2732-29-41; 50816-2732-30-41; 50816-2732-31-41; 50816-2723-24-41; 50816-2723-25-41; 50816-2723-26-41; 50816-6278-23-41; 50816-2720-27-41; 50816-2720-28-41; 50816-2720-29-41; 50816-3264-24-41; 50816-3264-25-41; and 50816-3264-26-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a)(2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508, to the Duke Power Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on May 4, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the June 1, 1979, **Federal Register** (44 FR 31683) with a request for public comments relating to the petitions and the proposed order. ERA has considered all comments received pursuant to the **Federal Register** notice concerning the petitions. All but one of the public comments were in support of the petitions. Upon review of the public comments and the purposes of FUA, ERA has determined to grant the requested temporary public interest exemptions.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a)(2) and (3) of the FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel displaced/ volume (bbls.)	Sulfur percent
Buzzard Roost (Chappells, S.C.)	CT 6	48,900	0.3
	CT 7	48,900	0.3
	CT 8	48,900	0.3
	CT 9	48,900	0.3
	CT 10	48,900	0.3
	CT 11	48,900	0.3
	CT 12	48,900	0.3
	CT 13	48,900	0.3
	CT 14	48,900	0.3
	CT 15	48,900	0.3
Riverbend (Mt. Holy, N.C.)	CT 8	97,900	0.3
	CT 9	97,900	0.3
	CT 10	97,900	0.3
	CT 11	97,900	0.3
Dan River (Eden, N.C.)	CT 4	29,200	0.3
	CT 5	29,200	0.3
	CT 6	29,200	0.3
Urquhart (North Augusta, S.C.)	CT 3	1,700	0.3
Buck (Spencer, N.C.)	CT 7	110,300	0.3
	CT 8	110,300	0.3
	CT 9	110,300	0.3
Lee (Pelzer, S.C.)	CT 4	98,500	0.3
	CT 5	98,500	0.3
	CT 6	98,500	0.3

These powerplants will burn an estimated 9,284,900 MCF of natural gas annually which will result in an estimated displacement of 4,373 barrels of middle distillate fuel oil per day (1,596,300 barrels annually).

Statement of Reasons

Because petroleum products, in general, and middle distillates, in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a)(2) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a system-wide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion Economic Regulatory Administration.

[FR Doc. 79-28019 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

Florida Power & Light Co.; Petitions for Temporary Public Interest Exemptions

Decision and order granting exemptions pursuant to section 311 of the Powerplant and Industrial Fuel Use Act of 1978; ERA Docket Nos. 51006-0613-21; 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44-41; 51006-0617-21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a) (2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR

V 4 4 / 1 7 6

508 to the Florida Power and Light Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on April 24, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the June 1, 1979, **Federal Register** (44 FR 27674) with a request for public comments relating to the petitions and the proposed order. ERA has considered all comments received pursuant to the **Federal Register** notice concerning the petitions. All but one of the public comments were in support of the petitions. Upon review of the public comments and the purposes of FUA, ERA has determined to grant the requested temporary public interest exemptions.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a) (2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel displaced volume (barrels)	Percent sulfur content
Lauderdale (Fort Lauderdale, Fla	CT 1	7,000	0.3
	CT 2	7,000	0.3
	CT 3	7,000	0.3
	CT 4	7,000	0.3
	CT 5	7,000	0.3
	CT 6	7,000	0.3
	CT 7	7,000	0.3
	CT 8	7,000	0.3
	CT 9	7,000	0.3
	CT 10	7,000	0.3
	CT 11	7,000	0.3
	CT 12	7,000	0.3
	CT 13	7,000	0.3
	CT 14	7,000	0.3
	CT 15	7,000	0.3
	CT 16	7,000	0.3
	CT 17	7,000	0.3
	CT 18	7,000	0.3
	CT 19	7,000	0.3
	CT 20	7,000	0.3
	CT 21	7,000	0.3
	CT 22	7,000	0.3
	CT 23	7,000	0.3
	CT 24	7,000	0.3
Port Everglades (Port Everglades, Fla.)	CT 1	8,000	0.3
	CT 2	8,000	0.3
	CT 3	8,000	0.3
	CT 4	8,000	0.3
	CT 5	8,000	0.3
	CT 6	8,000	0.3
	CT 7	8,000	0.3
	CT 8	8,000	0.3
	CT 9	8,000	0.3
	CT 10	8,000	0.3
	CT 11	8,000	0.3
	CT 12	8,000	0.3

These powerplants will burn an estimated 1,740,000 MCF of natural gas annually which will result in an estimated displacement of 723 barrels of middle distillate fuel oil per day (264,000 barrels annually).

Statement of Reasons

Because petroleum products in general, and middle distillates in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a systemwide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

[FR Doc. 79-28017 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

Iowa Power & Light Co.; Petitions for Temporary Public Interest Exemptions

Decision and order granting exemptions pursuant to section 311 of the Powerplant and Industrial Fuel Use Act of 1978; ERA Docket Nos. 51407-8029-21-41, 51407-8029-22-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 301(a) (2) and (3) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to the Iowa Power and Light Company (petitioner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on May 4, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the June 1, 1979, **Federal Register** (44 FR 31677) with a request for public comments relating to the petitions and the proposed order. No comments were received specifically addressing the Iowa Power and Light Company proposed order.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a) (2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel oil (barrels)	Percent sulfur content
Sycamore (Johnston, Iowa)	CT 1	20,238	0.5
	CT 2	20,238	0.5

These powerplants will burn an estimated 230,000 MCF of natural gas annually which will result in an estimated displacement of 111 barrels of middle distillate fuel oil per day (40,476 barrels annually).

Statement of Reasons

Because petroleum products in general, and middle distillates in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a) (2) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplants for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a systemwide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conservation.

[FR Doc. 79-28014 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

Kansas Power & Light Co.; Petitions for Temporary Public Interest Exemptions

Decision and order granting exemptions pursuant to section 311 of the Powerplant and Industrial Fuel Use Act of 1978; ERA Docket Nos. 51479-1252-21-41; 51479-1252-22-41; 51479-1248-21-41; 51479-1248-22-41; and 51479-1246-23-41.

The Economic Regulatory Administration (ERA) of the Department of Energy hereby issues this Decision and Order granting temporary public interest exemptions from the prohibitions of Section 310(a) (2) and (3) of the Powerplant and Industrial Fuel Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq. This Decision and Order is issued pursuant to Section 311(e) of FUA, 10 CFR 501.68 and 10 CFR 508 to The Kansas Power and Light Company (petitoner).

The petitioner filed for these temporary public interest exemptions pursuant to 10 CFR 508 (Exemption for Use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230, hereafter referred to as the Special Rule) with ERA on April 25, 1979. Notice of the petitions and a proposed order granting these temporary exemptions was published in the May 11, 1979, **Federal Register** (44 FR 27668) with a request for public comments relating to the petitions and the proposed order. No comments were received specifically addressing the Kansas Power and Light Company proposed order.

Based on the information provided by the petitioner, the powerplants listed in the table below are either prohibited by Section 301(a)(2) of FUA from using natural gas as a primary energy source or are prohibited from using natural gas as a primary energy source in excess of the average base year proportion allowed in Section 301(a)(3) of the Act. These temporary exemptions will allow these units to burn natural gas, notwithstanding the prohibitions of Section 301(a) (2) and (3) of FUA, to displace consumption of middle distillate fuel oil. The estimated amount and sulfur content of fuel oil to be displaced on an annual basis are as follows:

Generating station	Powerplant identification	Middle distillate fuel oil (barrels)	Percent sulfur content
Tecumseh Energy Center (Tecumseh, Kans.)	CT 1	52,381	0.3
	CT 2	52,381	0.3
Hutchinson (Hutchinson, Kans.)	CT 1	28,571	0.3
	CT 2	28,571	0.3
	CT 3	23,571	0.3

These powerplants will burn an estimated 1,100,000 MCF of natural gas annually which will result in an estimated displacement of 522 barrels of middle distillate fuel oil per day (190,475 barrels annually).

Statement of Reasons

Because petroleum products in general, and middle distillates in particular, are in short supply, there is an urgent need to use these natural resources wisely.

To the extent that the near-term choice of fuels for certain existing powerplants is limited to petroleum or natural gas, the use of natural gas is preferred over petroleum, especially middle distillate petroleum. The use of natural gas in these powerplants will be a significant step toward reducing our short-term oil consumption and will help the United States reduce its dependence on imported petroleum. This increased use of natural gas will also protect the Nation from the effects of any oil shortages, and will cushion the impact of increasing world oil prices, which have a detrimental effect on the Nation's balance of payments and domestic inflation rate.

To the extent that increased use of natural gas will accomplish these goals, it will reduce the importation of petroleum and further the goal of national energy self-sufficiency.

The petitioner has demonstrated that these powerplants, for which it is requesting temporary exemptions, are existing units that are either prohibited from using natural gas as a primary energy source by Section 301(a)(2) of FUA, or prohibited from using natural gas in excess of the average base year proportion allowed in Section 301(a)(3) of FUA. The petitioner has also shown that the proposed use of natural gas as a primary energy source, to the extent that such use would be prohibited by Section 301(a) (2) or (3) of FUA, will displace consumption of middle distillate fuel oil and will not displace the use of coal or any other alternate fuel in any facility of the petitioner's utility system, including the powerplant for which these temporary exemptions are issued.

By establishing these facts the petitioner has met the eligibility criteria set out in Section 508.2 of the Special Rule. Since the increased use of natural gas is in keeping with the purposes of FUA and is in the public interest, and since the petitioner has demonstrated that it has met the eligibility criteria, ERA is granting these temporary exemptions.

Duration of Temporary Exemptions

ERA grants these temporary public interest exemptions for a period of five years. The temporary exemptions are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Effective Date of Decision and Order

This Decision and Order shall become effective on the sixtieth calendar day following publication in the **Federal Register** in accordance with Section 702(a) of FUA, however, in accordance with the policy set forth in the notice implementing this Special Rule (44 FR 21230) ERA will take no action with respect to any natural gas used by these exempted powerplants between May 8, 1979, the effective date of FUA, and the date this Decision and Order becomes effective.

Terms and Conditions

Pursuant to Section 314 of FUA and 10 CFR 508.6, these temporary exemptions granted under this Decision and Order are conditioned upon, and shall remain in effect so long as the petitioner, its successors and assigns, complies with the following terms and conditions:

(1) Petitioner will report to ERA for the period from May 8, 1979, through December 31, 1979, and for each subsequent six-month period thereafter the actual monthly volumes of natural gas consumed in the exempted powerplants, and an estimate of the number of barrels of each type of fuel oil displaced.

(2) Petitioner will submit to ERA, within one year after the date this Decision and Order is issued, a system-wide fuel conservation plan to include the five-year period covered by these temporary exemptions, including the means by which the petitioner will measure progress in implementing this plan.

(3) Petitioner will submit annually to ERA, commencing with the calendar year ending December 31, 1980, a report on progress achieved in implementing the five-year system-wide fuel conservation plan.

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Powerplant and Industrial Fuel Use Act; Issuance of an Order Granting a Temporary Public Interest Exemption

The Economic Regulatory Administration (ERA) of the Department of Energy hereby gives notice that on August 31, it issued an order granting a temporary public interest exemption, pursuant to the authorities granted it by Section 311(e) of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), 42 U.S.C. 8301 et seq., and 10 CFR 501.68 and 10 CFR 508, from the prohibitions of section 301(a) (2) and (3) of the Act to the following powerplant:

Docket No.	Owner	Location	Powerplant ident.	Annual low sulfur residual (barrels)
50653-2500-03-41	Consolidated Edison Co. of New York, Inc.	Ravenswood (New York, N.Y.)	No. 3	1,832,000

A petition was received and filed with ERA, pursuant to 10 CFR 508 (Exemption for use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230), for a temporary public interest exemption for the use of natural gas as a primary energy source.

Notice of the petition and the proposed order granting this temporary exemption was published in the **Federal Register** on May 11, 1979 (44 FR 27668). Written comments were requested on the proposed order. All comments were considered by ERA.

A general comment from Allied Chemical Corporation expressed concern that the chemical industry has experienced production curtailments and plant shutdowns due to inadequate gas supplies for nonsubstitutable feedstock and process needs at the same time that DOE has concluded that excess supplies of natural gas are available. The Allied Chemical Corporation comment did not refer to any specific region nor did it specify impacts resulting from any particular petition or proposed order. All other comments received were in support of the petition. The State of New York Department of Environmental Conservation wrote, "We are in favor of the use of natural gas wherever possible, since the environmental benefits are obvious . . ."

This temporary exemption will allow the above-named unit to burn an estimated total of 10,810,000 MCF of natural gas annually, notwithstanding the prohibitions of Section 301(a) (2) and (3) of FUA, displacing an estimated 5,019 barrels of low sulfur residual fuel oil per day (1,832,000 barrels annually).

The order granting this temporary exemption shall become effective sixty days following publication in the **Federal Register** in accordance with Section 702(a) of FUA. The above named powerplant has received the Decision and Order granting this temporary exemption by certified mail. The order is set forth following this notice. This temporary exemption shall be in effect for an initial period ending December 31, 1980, and is subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest. The temporary exemption may be extended for an additional period of three years upon written acceptance by ERA of a system wide fuel conservation plan. Copies of all comments received during the public comment period will be available for public inspection and copying in the Public Information Office located in Room B-110, 2000 M Street, N.W., Washington, D.C. 20461.

Any questions regarding this temporary exemption should be directed to Mr. James W. Workman, Acting Director, Existing Facilities Conversion Division, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, Room 3128, 2000 M Street, N.W., Washington, D.C. 20461 (202) 254-8250.

V 4 4 / 1 7 6 SE 10 79 UMI

Issued in Washington, D.C. on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

Petitions were received and filed pursuant to 10 CFR 508 (Exemption for use of Natural Gas by Existing Powerplants Under the Powerplant and Industrial Fuel Use Act of 1978, April 9, 1979, 44 FR 21230) with ERA for temporary public interest exemptions for the use of natural gas as a primary energy source. Notices of the petitions and the proposed orders granting these temporary exemptions were published in the **Federal Register** on May 11 and June 1, 1979, (44 FR 27668 and 44 FR 31677). Written comments were requested on the proposed orders. All comments were considered by ERA.

A general comment from Allied Chemical Corporation expressed concern that the chemical industry has experienced production curtailments and plant shutdowns due to inadequate gas supplies for nonsubstitutable feedstock and process needs at the same time that DOE has concluded that excess supplies of natural gas are available. The Allied Chemical Corporation comment did not refer to any specific region nor did it specify impacts resulting from any particular petition or proposed order.

It is the position of the Department of Environmental Regulation of the State of Florida that "the implementation of this order will conserve valuable oil supplies and maintain the excellent air quality in these areas."

All comments that referred to specific petitions was supportive of them. However, not all the petitions listed received specific comments. Comments which identified significant issues relating to individual petitions have been evaluated and are addressed in the individual orders granting those petitions.

These temporary exemptions will allow the above-named units to burn an estimated total of 16,265,970 MCF of natural gas annually, notwithstanding the prohibitions of Section 301(a) (2) and (3) of FUA, displacing an estimated 7,941 barrels per day (2,898,317 barrels annually) of middle distillate fuel oil.

The orders granting these temporary exemptions shall become effective sixty days following publication in the **Federal Register** in accordance with Section 702(a) of FUA. All of the above-named powerplants have received Decisions and Orders granting these temporary exemptions by certified mail. The individual orders are set forth following the notice. These temporary exemptions shall be in effect for a period of five years and are subject to termination by ERA, upon six months written notice, if ERA determines such termination to be in the public interest.

Copies of all comments received during the public comment period will be available for public inspection and copying in the Public Information Office located in Room B-110, 2000 M Street, N.W., Washington, D.C. 20461.

Any questions regarding these temporary exemptions should be directed to Mr. James W. Workman, Acting Director, Existing Facilities Conversion Division, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, Room 3128, 2000 M Street, N.W., Washington, D.C. 20461, (202) 254-7450.

Issued in WAshington, D.C., on August 31, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. RP72-110]

Algonquin Gas Transmission Co.; Rate Change Pursuant To Purchased Gas Cost Adjustment Provision

August 30, 1979.

Take notice that Algonquin Gas Transmission Company ("Algonquin Gas") on August 27, 1979, tendered for filing Substitute 49th Revised Sheet No. 10 to its FERC Gas Tariff, First Revised Volume No. 1.

Algonquin Gas states that this sheet is being filed pursuant to Algonquin Gas' Purchased Gas Cost Adjustment Provision set forth in Section 17 of the General Terms and Conditions of its FERC Gas Tariff, First Revised Volume No. 1. Such rates reflect a change in the cost of purchased gas from its supplier, Texas Eastern Transmission Corporation, proposed to be effective August 1, 1979, and an adjustment to amortize the June 30, 1979 balance in Algonquin Gas' Unrecovered Purchased Gas Cost Account (Account 191).

Algonquin Gas also states that the proposed effective date of the substitute revised tariff sheet as prescribed by Section 17 is September 1, 1979.

Algonquin Gas notes that a copy of this filing is being served upon each affected party and interested state commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules

of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 14, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. CP79-416

ANR Storage Company; Notice of Application

August 20, 1979.

Take notice that on July 24, 1979, ANR Storage Company (Applicant), One Woodward Avenue, Detroit, Michigan 48226, filed in Docket No. CP79-416 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the rendition of gas storage service for Southern Natural Gas Company (Southern), the development and operation of certain gas storage fields and appurtenant facilities, the drilling and operation of certain wells, and the construction and operation of certain facilities, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant and Southern have entered into gas storage agreement whereby Southern would deliver or cause to be delivered to Applicant during the 1981 and ensuing Summer Periods (April 1 through October 31) for storage up to 11,503,000 Mcf of natural gas. Applicant proposes during the 1981–82 and ensuing Winter periods (November 1 through March 31), to make equivalent volumes of gas available for redelivery to Southern. The terms of the gas storage agreements are 20 years commencing on April 1, 1981, it is stated. Applicant states that Southern would supply injection compressor fuel equal to 1.3 percent of the volumes delivered for storage and that Applicant would deduct from the volumes withdrawn from storage for redelivery to Southern withdrawal compressor fuel equal to 0.2 percent of such volumes. By the terms of the gas storage agreements, Southern may elect to defer redelivery from one contract year to the next of all or any part of the volumes stored.

In order to render the proposed gas storage service, Applicant proposes to develop and operate the Excelsior 6 Gas Storage Field in Excelsior Township, Kalkaska County, Michigan, and the Cold Springs 31 Gas Storage Field in Cold Spring Township, Kalkaska County, which storage fields are at present gas producing fields which are substantially depleted; and Applicant is acquiring all the necessary oil and gas leases, storage and mineral rights and the gas producing properties in these fields. In order to develop and operate the two storage fields, Applicant proposes, at the Cold Springs 31 Field, to rehabilitate one existing well, to drill and complete three new gas wells, and construct a gathering system and appurtenances. At the Excelsior 6 Field, Applicant proposes to rehabilitate one existing well, drill and complete six new gas wells, and to construct a gathering system and appurtenances. Applicant also proposes to install a 7500 horsepower compressor station and a field meter station which would serve both storage fields, and to construct and operate a storage field office and warehouse, field automation, a 1.0-mile, 12-inch storage field pipeline and a 2.3-mile, 20-inch pipeline connecting the proposed storage field pipeline with pipeline facilities of Applicant, to be completed prior to commencement of the storage service proposed herein, which would connect to the existing facilities of Great Lakes Gas Transmission Company (Great Lakes), at MP 753 in Frederic Township, Crawford County, Michigan. The estimated cost of development of the storage field and the construction of the proposed facilities is $26,638,570. It is indicated that initial financing would be by short-term borrowings, sale of common stock and internally generated funds.

Applicant states that when developed, the Excelsior 6 and Cold Springs 31 Gas Storage Fields would have a total working capacity of 12,840,000 Mcf, which working storage capacity is based on a heating value of injection gas of 975 Btu's per cubic foot, the anticipated heat content of the gas to be injected into the fields and stored.

Applicant indicates that it would charge Southern the following rates for the proposed storage service:

Type of service	Average rate
50 Day Service	63.99 cents per Mcf
100 Day Service	45.77 cents per Mcf

It is indicated that Southern has arranged with Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), and Michigan Wisconsin has in turn arranged with Great Lakes, to transport Southern's gas to and from the interconnection of Applicant's proposed pipeline facilities with the facilities of Great Lakes at MP 753 in Frederic Township, Crawford County, Michigan. Applicant states that it would transport the gas from this point of interconnection.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 12, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Section 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28064 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. ER79-601]

Central Vermont Public Service Corporation; Proposed Tariff Change

August 31, 1979.

The filing Company submits the following:

Take notice that Central Vermont Public Service Corporation (Company) on August 20, 1979, tendered for filing a proposed change in its FPC Electric Service Rate No. 92. The proposed change would not change revenues from jurisdictional sales for the 12 month period ending October 31, 1979. No transactions have occurred under the Contract during the preceding 12 months, and none are contemplated during the succeeding 12 months.

The change is proposed in accordance with Article V of the Company's agreement with the Lyndonville Electric Department, which provides that charges under the agreement will be updated annually to incorporate the Company's purchased power cost experience for the preceding 12 months ending April and the Company's capacity cost associated with company-owned generating facilities for the preceding calendar year.

Copies of the filing were served upon the Lyndonville Electric Department and the Vermont Public Service Board.

Any person desiring to be heard or to protest said application shall file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with § 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-602]

Central Vermont Public Service Corporation; Proposed Tariff Change

August 31, 1979.

The filing Company submits the following:

Take notice that Central Vermont Public Service Corporation (Company) on August 20, 1979, tendered for filing proposed changes in its FPC Electric Service Rate No. 93. The proposed changes would increase revenues from jurisdictional sales and service by $1,942 for the 12 month period ending October 31, 1979.

The change is proposed in accordance with the provisions of Article VIII, and amendments thereto, of the Company's transmission service agreement with the Lyndonville Electric Department, which provides that charges will be updated annually to incorporate the Company's cost experience for the preceding calendar year.

Copies of the filing were served upon the Lyndonville Electric Department and the Vermont Public Service Board.

Any person desiring to be heard or to protest said application shall file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

[Docket No. ER79-604]

Central Vermont Public Service Corporation; Proposed Tariff Change

August 31, 1979.

The filing Company submits the following:

Take notice that Central Vermont Public Service Corporation (Company) on August 20, 1979, tendered for filing proposed changes in its FPC Electric Service Rate No. 97. The proposed changes would increase revenues from jurisdictional sales and service by $4,683 for the 12-month period ending October 31, 1979.

The change is proposed in accordance with the provisions of Article III of the Company's transmission service agreement with the Village of Ludlow Electric Light Department, which provides that charges will be updated annually to incorporate the Company's cost experience for the preceding calendar year.

Copies of the filing were served upon the Village of Ludlow Electric Light Department and the Vermont Public Service Board.

Any person desiring to be heard or to protest said application shall file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. August 30, 1979.

Take notice that on August 15, 1979, Columbia Gas Transmission Corporation (Petitioner), P.O. Box 1273, Charleston, West Virginia 25323, filed in Docket No. CP79-17 a petition to amend the Commission's order of March 1, 1979, issued in the instant docket pursuant to Section 7(c) of the Natural Gas Act and Section 157.7(b) of the Regulations thereunder so as to authorize an increase in the total and single project cost limitations for gas-purchase facilities authorized to be constructed hereunder, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

Pursuant to the Commission's order of March 1, 1979, in the instant docket, Petitioner was authorized to construct and operate budget-type gas-purchase facilities for a 12-month period commencing March 1, 1979. It is further indicated that the total authorized cost of facilities constructed under the budget-type authorization is limited $6,000,000 with no single project to exceed $1,500,000.

Petitioner indicates that at the present time it has 13 projects scheduled which could be constructed under its budget-type gas-purchase authorization, which project cost would result in a total cost in excess of $11,000,000. Petitioner further indicates that it has two single projects which it plans to construct under the instant budget-type authorization which costs would result in costs in excess of $1,500,000, and two additional single projects which would cost an estimated $1,400,000. Therefore, Petitioner is requesting waiver of Section 157.7(b)(1) (i) and (ii) of the Commission's Regulations so as to provide for an increase in its current total and single budget-type limitations to $12,000,000 and $2,500,000, respectively.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. CP79-436]

Columbia Gas Transmission Corp.; Notice of Application

August 30, 1979.

Take notice that on August 9, 1979, Columbia Gas Transmission Corporation (Applicant), P.O. Box 1273, Charleston, West Virginia 25325, filed in Docket No. CP79-436 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of interconnecting tap facilities to provide additional points of delivery to existing wholesale customers, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant requests authorization to construct 305 interconnecting tap facilities to provide additional points of delivery to Columbia Gas of Kentucky, Inc. (53 taps), Columbia Gas of Maryland, Inc. (7 taps), Columbia Gas of Ohio, Inc. (97 taps), Columbia Gas of Pennsylvania, Inc. (19 taps), Columbia Gas of Virginia, Inc. (20 taps), and Columbia Gas of West Virginia, Inc. (109 taps), at specified points in Kentucky, Maryland, Ohio, Pennsylvania, Virginia and West Virginia, respectively. Applicant asserts that the additional points of delivery to the wholesale customers are required for the 1979-80 winter heating season.

The estimated total cost of the proposed points of interconnections is estimated to be $91,728, which cost would be financed with internally generated funds.

Applicant does not propose to increase its currently authorized level of sales.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. ER79-603]

Connecticut Light & Power Co.; Notice of Transmission Agreement

August 31, 1979.

The filing Company submits the following: Take notice than on August 20, 1979, The Connecticut Light and Power Company ("CL&P") tendered for filing under Part 35 of the Commission's regulations a rate schedule entitled "Amendment to the Derby Junction Transmission Agreement between the Connecticut Light and Power Company and the United Illuminating Company" ("UI") dated as of June 1, 1978 (the "Amendment").

CL&P states that the Amendment provides for certain changes in the transmission services provided by CL&P to UI over two of CL&P's 115 kV lines between the Devon Generating Station in Milford, Connecticut and Frost Bridge Substation in Watertown, Connecticut at the Derby Junction tap and new services at an additional tap at the Trap Falls Substation.

CL&P states that although service to the Derby Junction tap point commenced under the Amendment on June 1, 1978, the parties did not reach final agreement on the details of the rate schedule filed until recently. CL&P further states that the new transmission service at the Trap Falls Substation has been provided since December 1, 1969. Delays in development of the detailed language of the rate schedule and the new transmission service to be included thereunder prevented the filing of the Amendment until this date. CL&P therefore has requested that the Commission, pursuant to Section 35.11 of its regulations, waive the customary notice period to permit the Amendment, pertaining to transmission service rendered to the Derby Junction tap, to take effect as of June 1, 1978, and to permit athe Amendment, pertaining to the new transmission service rendered to UI's Trap Falls Substation tap, to take effect as of December 1, 1969.

CL&P states that the charges provided for in the rate schedule were arrived at through negotiations. CL&P states that a copy of this rate schedule has been mailed or delivered to UI at its principal office in New Haven, Connecticut.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedures (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01

[Docket Nos. RP79-73 and RP72-157]

Consolidated Gas Supply Corp.; Notice of Proposed Changes in FERC Gas Tariff

August 30, 1979.

Take notice that Consolidated Gas Supply Corporation (Consolidated) on August 27, 1979, tendered for filing proposed changes in its FERC Gas Tariff, Third Revised Volume No. 1 to be effective September 1, 1979.

Consolidated states that the revised tariff sheet reflects rate changes to incorporate in its rates the increased cost of LNG as proposed in Docket No. RP79-73 and a decrease to the semiannual PGA filing made August 2, 1979, for effectiveness September 1, 1979, in Docket No. RP72-157.

Consolidated requests a waiver of any of the Commission's Rules and Regulations that may be deemed necessary in order to permit the rates

shown in Substitute Fifteenth Revised Sheet No. 16 to become effective as proposed.

Copies of this filing were served upon Consolidated's jurisdictional customers as well as interested State Commissions.

Any persons desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, DC, 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 C.F.R. 1.8, 1.10). All such petitions of protests should be filed on or before September 14, 1979. Protests will be considered by the Commission in determining the appropriate actions to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. ER79-609]

Edison Sault Electric Co.; Proposed Supplement to Electric Service Contract

August 31, 1979.

The filing Company submits the following: Take notice that Edison Sault Electric Company (Edison), on August 20, 1979, tendered for filing a Supplemental Agreement No. 6 between Edison and Cloverland Electric Cooperative, Inc. (Cloverland), dated November 1, 1976, which agreement will supplement an existing Contract for Electric Service, dated January 2, 1952, between the same two parties. The contract between the parties, dated January 2, 1952, has been designated Rate Schedule FPC No. 2 (Docket No. E-7870). The proposed supplemental agreement provides for a change in the rate schedule as provided in the contract, dated January 2, 1952, supplemented, under "Article V, Rates."

Copies of the filing were served upon Cloverland Electric Cooperative, Inc. and the Michigan Public Service Commission.

Any person desiring to be heard or to protest such agreement should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this agreement are on file with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-452 and Docket No. ER78-19, et al.]

Florida Power & Light Co.; Order Accepting Rate Schedules for Filing, Providing for Suspension and Hearing, Waiving Regulations and Consolidating Proceedings

Issued August 20, 1979.

On June 22, 1979, the Florida Power & Light Company (FP&L) tendered for filing, pursuant to 18 C.F.R. § 35.13, an executed transmission agreement providing for specified transmission service to the Jacksonville Electric Authority (JEA). [1] Under the agreement, FP&L will provide the transmission service necessary to implement JEA's interchange agreements with Orlando Utilities Commission, Lake Worth Utilities Authority, Fort Pierce Utilities Authority and the City of Lakeland, Florida. According th FP&L, cost support data for this service is identical to that which previously has been submitted as Volume X in *Florida Power & Light Company*, Docket No. ER78-19, on June 16, 1978. Thus, FP&L seeks to incorporate by reference the cost support data furnished in Docket No. ER78-19, *et al.*, into the instant proceeding, pursuant to 18 C.F.R. § 35.19. FP&L also seeks waiver of the Commission's Regulations to the extent necessary to permit this agreement to be effective as of June 21, 1979, the date FP&L began transmission service to JEA. JEA supports this request.

Public notice of FP&L's filing was issued on June 28, 1979, with petitions to intervene or protests to be filed on or before July 20, 1979. No petitions to intervene or protests have been received.

FP&L's submittal has not been shown to be just and reasonable and may be unjust, unreasonable, unduly discriminatory, preferential or otherwise unlawful. The Commission shall suspend the proposed transmission service agreement for one day to become effective June 21, 1979, subject to refund, pending the outcome of a hearing and decision thereon.

FP&L has made previous filings for specified transmission service and the cost support for this filing is identical to those filed in the previous submittals. The prior filings were suspended for one day and consolidated with the ongoing proceeding in Docket Nos. ER78-19, *et al.* [2] The Commission finds that common questions of law and fact exist and it is appropriate to consolidate Docket No ER79-452 with the ongoing proceeding in Docket Nos. ER78-19, *et al.*, for the purpose of hearing and decision.

The Commission Orders

(A) Pursuant to the authority contained in andy subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by section 402(a) of the Department of Energy Act and by the Federal Power Act, particularly sections 205, 206, 301, 308 and 309 thereof, and pursuant to the Rules of Practice and Procedure and the Regulations under the Federal Power Act (18 CFR Chapter I), a public hearing shall be held concerning the justness and reasonableness of the rate schedules proposed by FP&L in the instant docket.

(B) The Commission hereby waives the notice requirements pursuant to § 35.11 of our Regulations.

(C) Pending a hearing and decision thereon, FP&L's proposed filing is hereby accepted for filing and suspended for one day, to become effective June 21, 1979, the rates thereunder to be subject to refund.

(D) The proceeding in Docket No. ER79-452 is hereby consolidated with Docket Nos. ER78-19, *et al.*, for the purpose of hearing and decision.

(E) The Commission hereby waives the cost support requirement of § 35.13 of its Regulations.

(F) The Secretary shall promptly publish this Order in the **Federal Register.**

By the Commission.

Lois D. Cashell,

Acting Secretary.

Attachment A—*Florida Power & Light Company*, Docket No. ER79-452

Filed: June 22, 1979.

[1] See Attachment A for designations.

[2] The prior specified transmission agreements are filed in the following dockets, all of which have been consolidated with Docket No. ER78-19, for the purpose of hearing and decision: Docket Nos. ER78-325, ER78-326, ER78-376, ER78-478, ER78-508, ER78-527, ER78-566, ER78-567, ER79-44, ER79-162, ER79-171, ER79-172, ER79-352, and ER79-416.

Effective: June 21, 1979, subject to refund.

Designation and description

(1) Rate Schedule FERC No. 34—Transmission agreement with Jacksonville Electric Authority.
(2) Exhibit A to (1) above—Interchange service between Jacksonville and and Orlando.
(3) Exhibit B to (1) above—Interchange service between Jacksonville and Lake Worth.
(4) Exhibit C to (1) above—Interchange service between Jacksonville and the City of Lakeland.
(5) Exhibit D to (1) above—Interchange service between Jacksonville and Ft. Pierce.

BILLING CODE 6450-01-M

[Docket No. CP79-440]

Gas Transport, Inc.; Notice of Application

August 30, 1979.

Take notice that on August 14, 1979, Gas Transport, Inc. (Applicant), 109 North Broad Street, Lancaster, Ohio 43130, filed in Docket No. CP79-440 an application pursuant to Section 7(c) of the Natural Gas Act and Section 157.7(b) of the Regulations thereunder (18 CFR 157.7(b)) for a certificate of public convenience and necessity authorizing the construction, during the 12-month period commencing with the date of any Commission's order issued herein, and operation of facilities to enable Applicant to take into its certificated main pipeline system natural gas which would be purchased from producers or other similar sellers thereof, all as more fully set forth in the application on file with the Commission and open to public inspection.

The stated purpose of this budget-type application is to augment Applicant's ability to act with reasonable dispatch in connecting to its pipeline system supplies of natural gas which may become available from various producing areas generally coextensive with its pipeline system or the systems of other pipeline companies which may be authorized to transport gas for the account of or exchange gas with Applicant.

Applicant states that the total cost of the proposed facilities would not exceed $150,000, which cost Applicant would finance through internally-generated funds or short-term financing.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Aplicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28077 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01

[Docket No. ER79-614]

Iowa Power & Light Co.; Notice of Rate Schedule Filing

August 31, 1979.

The filing Company submits the following:

Take notice that Iowa Power and Light Company ("Iowa Power"), on August 23, 1979, tendered for filing proposed changes in its FERC Rate Schedule No. 46, which sets forth rates for wholesale electric service to Harlan Municipal Utilities (City).

Proposed Supplement No. 11 to Rate Schedule No. 46 provides for an increased capacity charge for base load power. Proposed Supplement No. 12 provides for an increased capacity charge for equalization power. These changes are needed to conform to increased costs of added capacity and changes in the Mid-Continent Area Power Pool rates.

Iowa Power requests that the Commission waives its prior notice requirements and accept Proposed Supplement Nos. 11 and 12 for filing with a retroactive effective date of June 1, 1979. Iowa Power states that copies of the filing have been served upon the City and the Iowa State Commerce Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 20, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. CP79-431]

Kentucky West Virginia Gas Co.; Application

August 30, 1979.

Take notice that on August 7, 1979, Kentucky West Virginia Gas Company (Applicant), P.O. Box 1388, Ashland, Kentucky, 41101, filed in Docket No. CP79-431 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the deliveries of natural gas to its corporate parent, Equitable Gas Company (Equitable), for resale to certain right-of-way grantors in Kentucky, and for the installation and operation of certain minor facilities necessary to make such deliveries, all as more fully set forth in the application on file with the Commission and open to public inspection.

As consideration or part consideration for certain rights-of-way and leases granted in its operating area in eastern Kentucky, Applicant proposes to provide natural gas service for the following landowners for high priority domestic uses in rural dwellings:

V 4 4 / 1 7 6 SE 10 79

1. Albert Spence and Jeanette Spence, his wife, Tomahawk, Kentucky 41416

29. Billy Eugene Reffett and Susan Reffett, his wife, Pyramid, Kentucky 41656
30. Carmel Conn and Betty Conn, his wife, David, Kentucky 41616
31. Allen and Flora Robinson, his wife, 561 Spring Drive, Virginia Beach, Virginia 23458
32. Lillian Coleman, South College, Pikeville, Kentucky 41501
33. Allen and Flora Robinson, his wife, 561 Spring Drive, Virginia Beach, Virginia 23458
34. Lucy Pearl Coleman, widow, Raccon, Kentucky 41557
35. Will and Erma D. Phillips, his wife, 100 Scott Avenue, Pikeville, Kentucky 41501
36. Jettie Thacker, a widow, Ashcamp, Kentucky 41512
37. Elbert Slone and Merkie Slone, his wife, Pippa Passes, Kentucky 41844
38. Cleveland Dobson and Opal Dobson, his wife, Talcum, Kentucky 41765
39. John Bud Ritchie and Betty Ritchie, his wife, Talcum, Kentucky 41765
40. Odis Ritchie and Retha Ritchie, his wife, Talcum, Kentucky 41765
41. Paul Combs and Ethel Combs, his wife, Talcum, Kentucky 41765
42. James Patrick and Olga Patrick, his wife, Fisty, Kentucky 41743

Applicant indicates that all of the grantors have relied upon such service as part of the agreement. Applicant also proposes to install and operate minor facilities necessary to provide such natural gas service. The estimated domestic usage by each of these right-of-way grantors would be approximately 250 Mcf of natural gas per year on the average, it is said.

The estimated cost of constructing minor tap and related facilities for each right-of-way grantor would be $171, which cost Applicant would finance from cash on hand.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission or its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28079 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. SA79-13]

Lo-Vaca Gathering Co.; Notice of Application

August 30, 1979.

Take notice that on July 31, 1979, Lo-Vaca Gathering Company (Applicant), 5 Greenway Plaza East, Houston, Texas 77046, filed in Docket No. SA79-13 an application pursuant to § 1.41(d)(1)(v) of the Commission's Rules of Practice and Procedure (18 CFR 1.41(d)(1)(v)) for an adjustment and for approval of the rates for the sales of natural gas by Applicant to interstate pipelines or local distribution companies pursuant to section 311(b) of the Natural Gas Policy Act of 1978 (NGPA), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant requests approval of (i) the method or basis for calculating its rates for sales of natural gas in interstate commerce pursuant to section 311(b) of the NGPA and Part 284 of the Regulations thereunder, (ii) the method of billing and estimating the rates and (iii) the rates for such sales as being in accordance with and not exceeding the provisions of section 311(b) of the NGPA.

Applicant asserts that it is an intrastate pipeline as defined in section 2(16) of the NGPA and is located wholly within the State of Texas. Applicant states that it has entered into four contracts to sell natural gas on an interruptible basis in interstate commerce to Transwestern Pipeline Company, Texas Eastern Transmission Corporation, El Paso Natural Gas Company, and Pacific Gas and Electric Company. It is indicated that each of the contracts specifically provides that the sale of natural gas is in accordance with the provisions of section 311(b) of the NGPA.

Applicant seeks relief from §§ 284.143, 284.144, and 284.145(d) of the Regulations under the NGPA and approval that its rates for sales pursuant to section 311(b) of the NGPA do not exceed the guidelines specified in section 311(b) and in § 284.144 of the regulations. Applicant states that it and the purchasers have agreed upon a rate which is based on the volumes of gas (expressed in Mcf with a minimum Btu requirement), plus an amount per Mcf which is designed to allow Applicant to recover the costs of gathering, treating, processing, transporting, and delivering natural gas, including an opportunity to earn a reasonable profit thereon.

Because the regulations issued by the Commission under section 311(b) of the NGPA provide that the sales price is to be calculated on the basis of an average price per million Btu's rather than per Mcf, Applicant seeks relief from §§ 284.143 and 284.144 of the regulations to allow the price to be expressed in terms of dollars and cents per Mcf.

Applicant also seeks relief from §§ 284.143, 284.144, and 284.145 to permit the billing of the rate for its sales pursuant to section 311(b) on the basis of estimates of the weighted average acquisition cost of gas which are the same as those utilized in billing Applicant's intrastate customers. The purchasers would be notified of the estimated rate on or about the 20th day of the month in which deliveries occur and would be billed at such estimated rate in the month following the deliveries. There would be an adjustment in the second succeeding month to bring the rate to the actual weighted average acquisition cost of gas. As the regulations specify a different procedure for billing, Applicant requests that the Commission issue an order permitting the use of the agreed upon billing procedure.

Applicant further requests that the Commission issue an order approving the rates for the sales pursuant to section 311(b) of the NGPA as "fair and equitable" under section 311(b) and § 284.144 of the regulations, or, in the alternative, that such rates are in accordance with and do not exceed that specified in section 311(b) of § 284.144.

Any person desiring to participate in this adjustment proceeding shall file a petition to intervene in accordance with the provisions of § 1.41. All petitions to intervene must be filed on or before September 25, 1979.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28080 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-434]

Montana Power Co.; Notice of Application

August 30, 1979.

Take notice that on August 8, 1979, The Montana Power Company (Applicant), 40 East Broadway, Butte, Montana 59701, filed in Docket No. CP79-434 an application pursuant to Section 7(c) of the Natural Gas Act and Section 2.70 of the Commission's General Policy and Interpretations (18 CFR 2.70) for a certificate of public convenience and necessity authorizing the sale of natural gas to Montana-Dakota Utilities Company (MDU), all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant requests authorization to sell up to 11,000 Mcf of natural gas per day to MDU for a period of two years pursuant to the terms of a gas purchase contract dated February 2, 1979, between the two companies. Applicant is able to sell the gas to MDU due to sufficient volumes of gas imported by Applicant from Canada. Applicant indicates that it would sell the gas to MDU at a price of $2.51441 per million Btu, which price would be subject to increase only to the extent that the border price of Canadian gas and cost of service based upon the border price increase to Applicant during the two-year period of the gas purchase contract.

MDU would use the gas on its system to help maintain levels of deliveries to its existing customers and to avoid deeper curtailments, it is stated.

Applicant asserts that since it is an intrastate gas company, and that inasmuch as its gas supply basically is obtained from Canada by import and from producers whose sales are not subject to the jurisdiction of the Commission, Applicant requests that the facilities, transportation, and sales by suppliers of gas to it, including but not limited to any producers, and all of the existing facilities of, transportation of gas, and sales by Applicant with the exception of the instant sale to MDU and the related interconnecting facilities would remain exempt from the Commission's jurisdiction and their non-jurisdictional status shall not be affected by any certificate which may be issued in this proceeding. Applicant also requests that the Commission waive its accounting and reporting requirements with respect to this application for the term of the requested certificated authorization, provided that Applicant would report the volumes of gas sold and the price paid for the gas.

Applicant requests that it be allowed to abandon the sale, transportation and facilities referred to herein at the end of the proposed two-year period without further Commission action in this proceeding.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. EL79-27]

Municipal Wholesale Power Group v. Wisconsin Power & Light Co.; Notice of Complaint

August 31, 1979.

Take notice that the Municipal Wholesale Power Group (MWPG) on August 13, 1979 tendered for filing a complaint against the Wisconsin Power & Light Company (WP&L) alleging that WP&L has violated section 205(d) of the Federal Power Act by including charges in its fuel adjustment clause which are prohibited by § 35.14 of the Commission's Rules and Regulations and by WP&L's fuel adjustment clause contained in its W-3 rate schedule currently on file with the Commission in Docket No. ER77-347.

MWPG indicates that it is an informal association of 27 municipal wholesale customers of WP&L.

V 4 4 / 1 7 6

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before September 28, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28082 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP77-537]

Natural Gas Pipeline Company of America; Notice of Amendment to Application

August 20, 1979.

Take notice that on July 27, 1979, Natural Gas Pipeline Company of America (Applicant), 122 South Michigan Avenue, Chicago, Illinois 60603, filed in Docket No. CP77-537 an amendment to its application filed in the instant docket pursuant to section 7(c) of the Natural Gas Act so as to provide for certain changes in the construction of certain proposed facilities, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant now proposes to construct and operate approximately 27 miles of 8-inch pipeline, and appurtenant facilities, from Madill Processing Plant to Applicant's existing 10-inch pipeline in Love County, Oklahoma, and to construct and operate 400 horsepower of compression. The total estimated cost of these facilities is $2,705,000, which cost would be met from funds on hand.

Applicant indicates that the construction and operation of these facilities is necessary in order to receive into its system quantities of natural gas to be produced from reserves located in Bryan and Marshall Counties, Oklahoma.

Any person desiring to be heard or to make any protest with reference to said amendment should on or before September 10, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding.

Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules. All persons who have heretofore filed need not file again.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28083 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-204]

Natural Gas Pipeline Co. of America; Notice of Amendment

August 30, 1979.

Take notice that on August 6, 1979, Natural Gas Pipeline Company of America (Natural), 122 South Michigan Avenue, Chicago, Illinois 60603, filed in Docket No. CP-79-204 and amendment to its application filed in said docket pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to provide for a gas-for-gas exchange arrangement on a monthly basis for gas delivered by Natural to Interstate Gas Company (CIG) and by CIG to Natual on the latter's Amarillo System, all as more fully set forth in the amendment which is on file with the Commission and open to public inspection.

Natural, in its application requested authority to transport gas for CIG pursuant to conditions established in a twenty year gas transportation and exchange agreement between the parties. Natural would transport up to an aggregate volume of 80,000 Mcf per day of gas received for the account of CIG at various points on Natural's pipeline system now existing or as may be added in the future. The agreement also provides that CIG would transport for Natural such volumes available to Natural in the vicinity of CIG's system. CIG has filed an application in Docket No CP-79-205 for authority to perform such service for Natural. Natural proposed to charge CIG its jurisdictional cost of service allocated to onshore transmission operations, a rate currently calculated to be 41.57 cents per Mcf. The volumes of gas redelivered would also be adjusted for fuel used and lost and unaccounted for gas.

Natural and CIG have amended the agreement to permit the exchange on a gas-for-gas basis, of gas delivered to Natural on its Amarillo System by CIG and gas delivered by Natural to CIG. Volumes of gas received in excess of such exchange volumes would be considered "Net Delivery Volumes" by the receiving party and would be subject to the appropriate transportation charge as previously established. Any gas delivered by CIG to Natural on Natural's Gulf Coast Line would not be considered exchange gas and would, therefore, be subject to the applicable average system transportation charges irrespective of any "Net Delivery Volumes" between Natural and CIG in Natural's Amarillo System-CIG System part of the arrangement.

Any person desiring to be heard or make any protest with reference to said amendment should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules. All persons who have heretofore filed need not file again.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28084 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-432]

Northern Natural Gas Co.; Notice of Application

August 22, 1979.

Take notice that on August 7, 1979, Northern Natural Gas Company (Northern), 2223 Dodge Street, Omaha, Nebraska 68102, filed in Docket No. CP79-432 an application pursuant to section 7 of the Natural Gas Act for permission and approval to abandon and remove two 1,080 horsepower compressor units from its Redfield, Iowa, Storage Field and further, for a certificate of public convenience and necessity authorizing the construction and operation of certain interconnecting and compression facilities located in Calcasieu Parish, Louisiana, and Pecos County, Texas, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

Northern requests authorization to construct and operate a pipeline interconnection and compressor station between the facilities of Transcontinental Gas Pipe Line Corporation (Transco) and Texas Eastern Transmission Corporation (Texas Eastern) to be located near Starks, Calcasieu Parish, Louisiana, and to construct and operate a pipeline interconnection and compressor station between the facilities of Oasis Pipe Line Company (Oasis) and Northern near Fort Stockton, Pecos County, Texas.

Northern states that it has obtained a commitment of reserves from twelve producers having interest in 7 blocks in the High Island area, offshore Texas, and the West Cameron area, offshore Louisiana.

In July 1979, the application indicates, an estimated 85,000 Mcf per day would be available to Northern from certain of the blocks and it is anticipated that in November 1979 the deliverability from the gas reserves attributable to Northern's interest in the blocks would be 130,000 Mcf per day. Such gas would be transported from various points in the High Island and West Cameron areas to a point in West Cameron Block 167, offshore Louisiana, by High Island Offshore System (HIOS), pursuant to a transportation agreement dated February 15, 1978 as amended, between HIOS and Northern. At the northern terminus of the HIOS system in West Cameron Block 167, U-T Offshore System (U-TOS) would take delivery of Northern's gas and would transport such gas to a point of interconnection onshore with the existing facilities of Transco near Johnson's Bayou, Cameron Parish, Louisiana, pursuant to a transportation agreement dated May 1, 1978, as amended, between U-TOS and Northern.

Pursuant to a gas transportation agreement between Transco and Northern dated June 14, 1979, Transco would transport up to 150,000 Mcf per day of Northern's offshore gas received at the terminus of the U-TOS system north through its pipeline system to the point of interconnection, near Starks. The gas would then be compressed and delivered into an existing 30-inch pipeline owned by Texas Eastern. The transportation of gas by Transco for Northern's account would be on a best efforts basis until certain facilities are installed on Transco's Southwest Louisiana Gathering System and the facilities proposed are installed and operating. The agreement also provides for the transportation and delivery on a best efforts basis, of up to 150,000 Mcf per day for Northern's account to an existing interconnection between the pipeline facilities of Transco and Texas Eastern near Ragley, Louisiana.

By agreement dated June 7, 1979, between Texas Eastern and Northern, Texas Eastern would transport up to 100,000 Mcf per day on a firm basis and 50,000 Mcf per day on a best efforts basis of Northern's offshore gas received at the Starks Interconnection and deliver such to Houston Pipe Line Company (Houston) and the Mont Belvieu Interconnection between Texas Eastern and Houston located in Chambers County, Texas and/or at an interconnection located near Mauriceville, Orange County, Texas. Pending completion of Transco's facilities and the Starks Interconnection, Texas Eastern would take delivery of gas from Transco, for Northern's account at the Ragley Interconnection for further transportation and delivery to Houston.

Northern proposed to construct and operate the following facilities:

(1) An interconnection and compressor station between the pipeline facilities of Transco and Texas Eastern near Starks, Calcasieu Parish, Louisiana. The facilities would consist of three 3,100 horsepower turbine driven compressor units (Starks Compressor Station), approximately 0.8 mile of 16-inch pipeline extending from the discharge of the proposed compressor station to Texas Eastern's existing 30-inch pipeline and measurement facilities (Starks Interconnection). One of the units installed at the proposed Starks Compressor Station would serve as a standby unit. Texas Eastern would operate the proposed pipeline and measurement facilities, as agent for Northern.

(2) Minor facilities to reconnect an existing emergency interconnection between the facilities of Oasis and Northern located in Pecos County, Texas (Oasis Delivery Point).

(3) Two 1,080 horsepower turbine drive compressor units (Gomez No. 2 Compressor Station) at the Oasis Delivery Point located in Pecos County, Texas.

The compressor facilities which Northern requests authorization to construct and operate are necessary to effectuate the delivery of gas to Texas Eastern at the Starks Interconnection and the receipt of such gas volumes from Oasis in Pecos County, Texas, it is asserted.

The estimated cost of the proposed facilities is $10,633,500, and would be financed from cash on hand.

Northern presently has six compressor units with a total of 9,160 compressor horsepower installed at its Redfield, Iowa, Storage Field. It has been determined that as a result of operating changes at Redfield, two 1,080 horsepower turbine drive compressor units are no longer required at the Redfield Storage Field.

Northern can maintain the desired injection and withdrawal volumes with less horsepower than is presently installed. Under present and proposed operating conditions, Northern has 2,160 horsepower in excess of the 7,000 horsepower required to compress the volumes to be injected into and withdrawn from the Redfield Storage Field.

Northern plans to utilize the surplus Redfield Storage Field units at the proposed Gomez #2 Compressor Station. The estimated cost of removing the Redfield units is $60,000 which would be financed from cash on hand.

Therefore, Northern requests permission and approval to abandon and remove two 1,080 horsepower turbine driven compressor units from its Redfield, Iowa, Storage Field.

The proposed facilities would materially assist Northern in meeting its customer's requirements during the 1979-80 heating season by enabling it to deliver new gas supplies to Texas Eastern and to ultimately receive back such volumes on a reliable basis from Oasis.

Northern plans to commence construction of the proposed Starks Interconnection in September 1979 with a projected completion date of December 15, 1979, it is asserted.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 17, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to

S E 1 0 7 9

UMI

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that permission and approval for the proposed abandonment and a grant of the certificate are required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Northern to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28085 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. TC79-50]

Northern Natural Gas Co.; Order Granting Petition for Extraordinary Relief and Granting Petitions To Intervene

August 20, 1979.

On March 22, 1979, Northern Natural Gas Company (Petitioner) filed in Docket No. TC79-50 a petition for extraordinary relief pursuant to Section 1.7 of the Commission's Rules of Practice and Procedure (18 CFR 1.7) seeking authorization to provide natural gas service to its existing utility customers in accordance with its presently effective Agricultural Crop Drying Service Rate Schedule ACDS-1. Petitioner seeks authorization to make available, on a best efforts basis, volumes of gas for the drying of seed, grain, and other agricultural crops during a 12-month period commencing with the expiration of the current period of authorized service granted in Docket No. TC78-3. Petitioner's proposals are more fully set forth in said petition.

During a four-year period beginning in 1973, Petitioner was granted extraordinary relief to provide natural gas service to its existing utility customers for seed grain and crop drying under Rate Schedule ACDS-1 on a best efforts basis in volumes up to 750,000 Mcf. The last authorization was granted by order issued August 23, 1978, in Docket No. TC78-3 for a one-year period. For the period 1973-78, the volumes sold during the authorized periods ranged from a low of 78,300 Mcf to a high of 150,402 Mcf. The volumes of gas sold during the latest period is estimated to be approximately 136,573 Mcf.

Petitioner again estimates that it will have available for sale under Rate Schedule ACDS-1 a total of 750,000 Mcf of gas for a one-year period which would commence at the expiration of the authorization granted in TC78-3. Normally, such gas has only been required for the period September 15 through March 15, but should unusual operating conditions, abnormal weather or changes in gas supply occur, Petitioner would have a basis upon which to make such gas available during the other months of the 12-month period. Pursuant to Rate Schedule ACDS-1, the volumes will be made available daily, on a best-efforts basis, under advance operating arrangements. If the volumes nominated exceed the volumes available, seed grain drying will be accorded top priority. No new facilities or change in rates are proposed.

Rate Schedule ACDS-1 is designed to provide special relief for Petitioner's utility customers during the seed and crop drying season. Preservation of feed grain and especially seed grain is universally recognized as an important link in the food chain. In order to be properly preserved, the moisture content of grains must be reduced below 12 percent, otherwise the grain germ will be destroyed and irrecoverable loss will occur.

In view of the Natural Gas Policy Act of 1978 (NGPA), Petitioner is advised that prior to filing a request for such service in future years, it should evaluate the need for the subject service. It may well be that after a year of operation under Section 401 of the Natural Gas Policy Act of 1978, and particularly Part 281 of the Regulations implementing Section 401, Petitioner may not need to offer the subject service.

After due notice by publication in the **Federal Register** on April 26, 1979 (44 FR 24630), timely petitions to intervene were filed by DeKalb Agresearch, Inc., North Central Public Service Co., Division of Donovan Companies, Inc., and Iowa Electric Light and Power Company. Iowa Public Service Company (Iowa Public) and Iowa Southern Utilities Company (Iowa Southern) filed late petitions to intervene. Iowa Public and Iowa Southern are customers of Petitioner and render natural gas service in the agribusiness community. Permitting the filing of their late petitions to intervene will not delay the instant proceeding. A timely notice of intervention was filed by the Iowa State Commerce Commission. None of the petitioners to intervene nor the Iowa Commission requests a formal hearing in this proceeding. No further petition to intervene, further notice of intervention, or protest to the granting of the requested relief has been filed.

The Commission finds. (1) Irreparable injury to the preservation of feed and seed grains and crops would result if Petitioner is not permitted to provide natural gas service to its existing utility customers under its presently effective Agricultural Crop Drying Service Rate Schedule ACDS-1.

(2) Good cause has been shown to permit the filing of the late petitions to intervene and participation by all petitioners to intervene in this proceeding may be in the public interest.

The Commission orders. (A) Northern Natural Gas Company is granted extraordinary relief to provide natural gas service to its existing utility customers up to 750,000 Mcf of gas for a period of 12 months from the termination of the authorization granted in Docket No. TC78-3 (August 22, 1979) under its presently effective Agricultural Crop Drying Service Rate Schedule ACDS-1 of Petitioner's FERC Gas Tariff, Third Revised Volume No. 1.

(B) The petitioners to intervene are permitted to intervene subject to the rules and regulations of the Commission; *Provided, however,* that participation of such interveners shall be limited to matters affecting asserted rights and interests as specifically set forth in their respective petitions to intervene; and, *Provided, further,* that the admission of such interveners shall not be construed as recognition by the Commission that they might be aggrieved because of any order of the Commission entered in this proceeding.

(C) Petitioner shall file with the Commission, within 15 days after the termination of the extraiordinary relief service herin granted, a report detailing the volumes of gas sold on a monthly basis to each of its customers, including Peoples Division of Petitioner, under Rate Schedule ACDS-1.

By the Commission.

Lois D. Cashell,

Acting Secretary.

[FR Doc. 79-28086 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. ER79-616]

Northern States Power Co. (Minnesota), Northern States Power Co. (Wisconsin); Notice of Amendment to Coordinating Agreement Regarding Writeoff of Cancelled Project

August 31, 1979.

The filing Company submits the following:

Take notice that Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin), on August 24, 1979, tendered for filing a proposed amendment to the Coordinating Agreement of October 12, 1970 between the Companies. The Coordinating Agreement is designated FERC Rate Schedule No. 374 for Northern States Power Company (Minnesota) and FERC Rate Schedule No. 53 for Northern States Power Company (Wisconsin).

Northern States Power Company (Wisconsin) is a wholly owned subsidiary of Northern States Power Company (Minnesota). The Companies operate a single integrated power supply system, and share the cost of the system under the Coordinating Agreement. Northern States Power Company (Wisconsin) owns a 67.6% interest in the Tyrone Energy Park project in Dunn County, Wisconsin, which was cancelled following the denial by the Wisconsin Public Service Commission of authority to construct the plant. Northern States Power Company (Wisconsin)'s expenditures on the project to date of cancellation and its expenses in terminating contracts are estimated to total $80 million. In filing the proposed amendment to the Coordinating Agreement, the Companies seek authorization to write off the losses over five years and confirmation that the write-off amounts are to be shared between the Companies under the Coordinating Agreement. The companies seek to include the capital costs of unamortized balances of the write-off amounts in the payments made under the Coordinating Agreement in order to obtain ratable sharing of those costs between the Companies, but commit themselves not to pass through such capital costs to their customers in retail or wholesale ratemaking. Northern States Power Company (Wisconsin) also seeks approval of accounting procedures for the write-off.

Copies of the filing were served upon the wholesale customers of each of the Companies and upon the regulatory commissions of Minnesota, North Dakota, South Dakota and Wisconsin.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979.

Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28087 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. ER79-615]

Ohio Edison Company; Notice of Filing

August 31, 1979.

The filing Company submitted the following:

Take notice that Ohio Edison Company on August 24, 1979, tendered for filing a proposed change in its FERC electric service tariff FERC No. 66, an Amendment No. 3 to the Interconnection Agreement between The Dayton Power and Light Company and Ohio Edison Company. The amendment provides for an increase in the demand charge for Short Term Power service from $0.60 to $0.70 per KW week and for paying the cost to the supplying party of Short Term Power obtained from a third party (plus 10% of the energy charge).

The Dayton Power and Light Company has concurred with the filing.

Any person desiring to be heard or to protest said application should file a petition to intervene with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions and protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28088 Filed 9-7-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket Nos. ER79-478 and ER79-479]

Public Service Company of New Mexico; Order Accepting Rate Increases for Filing, Suspending Rate Increases, Establishing 205 and 206 Proceedings, Granting Motions, Granting Interventions, Granting Partial Summary Judgement, Establishing Price Squeeze Procedures, and Establishing Additional Procedures

Issued August 28, 1979.

On June 28, 1979, Public Service Company of New Mexico (PNM) tendered for filing four rate increase proposals. One filing, assigned Docket No. ER79-479, was tendered pursuant to Section 205 of the Federal Power Act and contained two separate rate proposals applicable to wholesale customers. [1] One rate proposal included all CWIP in rate base (full-CWIP), and the other proposal submitted as an alternate, included only pollution-control CWIP in rate base (limited CWIP). [2] PNM requests a September 1, 1979, effective date for this filing. A second filing, designated as Docket No. EP79-478, was tendered under Section 206 of the Act, and it contained a full-CWIP rate increase proposal and an alternate limited-CWIP rate increase proposal applicable to the City of Gallup, New Mexico (Gallup). [3]

Notices of the proposed changes in rates for Docket Nos. ER79-478 and ER79-479 were issued on July 3 and July 11, 1979, respectively, with all protests and petitions to intervene due on or before July 24, 1979.

PNM previously applied for the inclusion of all CWIP in rate base in its most recent rate increase proposals in Docket No. ER78-337 and ER78-338 for

[1] The rates would apply to the four following customers: Community Public Service Company; Plains Electric Generation and Transmission Cooperative, Inc.; Department of Energy-Los Alamos; and the City of Farmington, New Mexico.

[2] The governing regulation is Order No. 555, Docket No. RM75-13, issued November 6, 1975, 18 CFR 2.16(b) (1978).

[3] The proposed change in rates for Gallup are filed pursuant to Section 206 in accord with two orders issued by the former FPC in Docket No. E-9454 on July 31 and September 28, 1975. Therein, the FPC found the existing PNM-Gallup contract did not permit unilateral rate increase filings under Section 205, but that the contract permitted a change in rate after the completion of a Section 206 proceeding.

V 4 4 / 1 7 6

all the wholesale customers. On June 30, 1978, the Commission ordered that the Company's request for CWIP under the financial hardship exception of Order No. 555 be considered on an expedited basis in Phase I of the two dockets. [4]

In the instant filing, PNM does not provide the financial information necessary to support a request for CWIP under the financial hardship criteria as set forth in Order 555. [5] In its transmittal letter of June 27, 1979, however, the Company asks that the Commission's decision in Phase I of Docket Nos. ER78–337 and ER78–338 control the disposition of the instant full-CWIP filings and that the latter become effective on the date of a final and favorable Commission order in the ER78–337 and ER78–338 dockets.

Petitions To Intervene

Petitions to intervene in Docket No. ER79–479 were filed by: The General Services Administration (CSA) [6]; Community Public Service Company (CPS) [7]; City of Farmington, New Mexico (Farmington) [8]; Plains Electric Generation and Transmission Cooperative, Inc. (Plains) [9]; and Gallup [10]. All petitioners claim that they have a substantial interest in the respective proceedings which cannot be adequately represented by other parties and that their participation would be in the public interest.

Farmington, Plains, Gallup, and CPS object to PNM's requests that the Commission's final order in Docket Nos. ER79–337 and ER79–338 control the present application for full-CWIP. They claim that PNM's present application for full-CWIP fails to make a showing of financial distress as required by Order No. 555. Farmington and Gallup move to summarily reject PNM's applications for full-CWIP. Additionally, petitioners argue that the Commission should not as a matter of policy permit the "pancaking" of requests for emergency CWIP relief. Plains, Farmington, CPS, and Gallup each move for summary judgment against PNM's proposal to include ADITC in the common equity portion of its capital structure, and they maintain that the Company should be required to file revised rates reflecting this adjustment. Farmington and Gallup allege that the proposed filings may create a price squeeze, and they request the ordering of a price squeeze investigation. CPS moves to consolidate Docket Nos. ER79–478 and ER79–479 on the ground the these proceedings involve common issues of law and fact. Gallup points out that its contract with PNM bars a unilateral rate increase under the *Mobile-Sierra* doctrine [11], and it contends that PNM must satisfy the *Mobile-Sierra* burden of proof [12] in Docket No. ER78–478.

Discussion

In its requests for full-CWIP rates, the Company has not complied with the requirements of our regulations implementing Order No. 555. [13] This request presents a novel question as to the kind of showing required when there is an ongoing CWIP proceeding in the prior docket. One type of showing would be a *de novo* showing of financial distress. The second type would build from the showing and Commission determination in a prior case. PNM has not attempted to make a *de novo* showing, nor is there a prior Commission opinion allowing CWIP on which it could build. We therefore reject PNM's CWIP filing, without prejudice to an appropriate submittal.

We have consistently held that the return on ADITC must be measured by the overall rate of return, rather than by the higher common equity return. [14] Therefore, we shall grant petitioners' motions to summarily dispose of this issue and direct PNM to refile its capital structure and rates to reflect treatment of ADITC consistent with our Opinion No. 19, *supra*.

In prior dockets involving the PNM-Gallup contract, the Commission determined that PNM is not required to meet the heavy burden of proof associated with the *Sierra-Mobile* decisions in order to effect a change in rates to Gallup. [15] Gallup's request for such a finding shall be denied.

Allegations of price squeeze have been raised. Pursuant to the policy set forth in Order No. 563 and in our implementing regulation, [16] we find that price squeeze procedures should be initiated in this case.

In a recent *Arkansas Power & Light Company* case, [17] we decided that newly docketed rate proceedings in which price squeeze issues are raised should be phased so that a decision first may be reached on cost of service, capitalization, and rate of return issues. If the price squeeze persists, in the view of the alleging party, a second phase of the proceeding generally is to follow. However, in *Arkansas*, we stated that there may be situations in which price squeeze issues should not be deferred and that we would leave it to the nonreviewable discretion of the presiding judge to accelerate the price squeeze proceeding in whole of in part (e.g., begin price squeeze discovery in the first phase but conduct the hearing on it in the second).

The Section 206 portion of this consolidated proceeding may be a situation in which the price squeeze issue should not be deferred since the Company's rate relief can be prospective only. Therefore, we shall not phase the price squeeze proceeding in Docket No. ER78–478. However, the presiding judge may exercise discretion to phase this issue if PNM, the party which could presumably be harmed by such phasing, does not object.

Because of the similarity of parties and issues in the price squeeze portions of both dockets, we shall also decline to phase the price squeeze issue in Docket No. ER78–479 at this time. The presiding judge shall have complete discretion to phase the issue in this Section 205 proceeding and to conduct the discovery and hearing on price squeeze in the two dockets either concurrently or separately.

The Commission finds that participation in this proceeding by Farmington, Gallup, Plains, CPS and GSA may be in the public interest.

Our review indicates that the proposed partial-CWIP rates have not been shown to be just and reasonable and may be unjust, unreasonable, unduly discriminatory, preferential or otherwise unlawful. Therefore, we shall accept PNM's partial CWIP rates in Docket No. ER78–479 for filing and suspend the proposed rates for five months to become effective February 1, 1980, subject to refund. The partial-CWIP rates for Gallup in Docket No. ER78–478 shall be accepted for filing, to be made effective, if at all, pending completion of the Section 206 proceeding.

The Commission orders: (1) Pursuant to motions by Farmington and Gallup, PNM's tendered full-CWIP rates in Docket Nos. ER78–478 and ER78–479 hereby are rejected, without prejudice.

(2) The partial-CWIP rates proposed by PNM in Docket No. ER78–479 are hereby accepted for filing and suspended for five months, to become effective February 1, 1980, subject to refund.

(3) The partial-CWIP rates proposed by PNM in Docket No. ER78–478 are hereby accepted for filing to become effective, if at all, only after completion of section 206 proceedings.

(4) Pursuant to CPS's Motion to Consolidate, Docket Nos. ER79–478 and ER79–479 hereby are consolidated for purposes of hearing.

(5) CPS, Plains, Gallup, and Farmington are hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission: *provided, however,* that participation by such intervenors shall be limited to the matters set forth in their petitions to intervene; and *provided, further,* that the admission of such intervenors shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders of the Commission entered in this processing.

(6) Summary disposition with respect to the treatment of ADITC is hereby ordered in accordance with the discussion of this matter above. PNM shall file within 60 days a revised cost of service and rates to reflect the change in this item.

(7) Pursuant to § 2.17 of the Commission's regulations, we hereby order immediate initiation of consolidated price squeeze procedures in Docket Nos. ER79–478 and ER79–479. The Presiding Judge shall convene a price squeeze prehearing conference within 15 days of the date of this order. The Presiding Judge shall have discretion to alter this schedule subject to PNM's consent regarding the section 206 proceeding.

(8) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by section 402(a) of the DOE Act and by the Federal Power Act, particularly sections 205 and 206(a), and pursuant to the Commission's Rules of Practice and Procedure and the Regulations under the Federal Power Act (18 CFR, Chapter I), a public hearing shall be held concerning the justness and reasonableness of the rates proposed by PNM.

(9) Staff serve top sheets in this proceeding on or before November 21, 1979.

(10) A Presiding Administrative Law Judge to be designated by the Chief Administrative Law Judge shall convene a conference in this proceeding to be held within ten (10) days of the serving of top sheets in a hearing room of the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426. The designated law judge is authorized to establish procedural dates and to rule upon all motions (except motions to consolidate or sever and motions to dismiss), as provided for in the Commission's Rules of Practice and Procedure.

(11) The Secretary shall cause prompt publication of this order to be made in the **Federal Register**.

By the Commission.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450–01–M

[Docket No. ER79–608]

Union Electric Co.; Notice of Filing of Interconnection and Facility Use Appendices

August 31, 1979.

The filing Company submits the following:

Take notice that on August 20, 1979, Union Electric Co. tendered for filing under Appendix C of the Interconnection Agreement between Central Illinois Public Service Company, Illinois Power Company, and Union Electric Company a new connection point, revision to an existing connection point and termination of an existing connecting point. Also included in the filing is a new Appendix "P" and cancellation of Appendix "L" and Appendix "N" to the Facility Use Agreement between Union Electric Company and Illinois Power Company.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are available for public inspection at the Federal Energy Regulatory Commission.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450–01–M

Office of Assistant Secretary for International Affairs

Proposed Subsequent Arrangement Under Agreement for Cooperation Between United States and Japan

Pursuant to Section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160), notice is hereby given of a proposed "subsequent arrangement" under the Agreement for Cooperation between the United States and Japan (Atomic Energy, Cooperation for Civil Uses).

The subsequent arrangement to be carried out under the above mentioned agreement involves the extension from September 12, 1979 to April 30, 1980, of an agreement executed between the United States and Japan for the reprocessing of up to 99 tonnes of U.S.-supplied fuel at the Tokai reprocessing facility. The original agreement which was signed on September 12, 1977, was to cover a two-year period and to terminate at approximately the same time as the completion of the International Nuclear Fuel Cycle Evaluation (INFCE). Since then, however, the completion of INFCE has been extended to February 1980. The proposed subsequent arrangement would extend the agreement to April 30, 1980, two months following the February 1980, date now set for completion of INFCE.

In accordance with Section 131 of the Atomic Energy Act of 1954, as amended, it has been determined that this subsequent arrangement will not be inimical to the common defense and security.

This subsequent arrangement will take effect no sooner than fifteen days after the date of publication of this notice.

For the Department of Energy.

---

ENVIRONMENTAL PROTECTION AGENCY

[FRL 1315-1]

Agency Comments on Environmental Impact Statements and Other Actions Impacting the Environment

Pursuant to the requirements of the section 102(2) (C) of the National Environmental Policy Act of 1969, and section 309 of the Clean Air Act, as amended, the Environmental Protection Agency (EPA) has reviewed and commented in writing on Federal agency actions impacting the environment contained in the following appendices during the period of September 1, 1978 and September 30, 1978.

Appendix I contains a listing of draft environmental impact statements reviewed and commented upon in writing during this review period. The list includes the Federal agency responsible for the statement, the number and title of the statement, the classification of the nature of EPA's comments as defined in Appendix II, and the EPA source for copies of the comments as set forth in Appendix VI.

Appendix II contains the definitions of the classifications of EPA's comments on the draft environmental impact statements as set forth in Appendix I.

Appendix III contains a listing of final environmental impact statements reviewed and commented upon in writing during this review period. The listing includes the Federal agency responsible for the statement, the number and title of the EPA source for copies of the comments as set forth in Appendix VI.

Appendix IV contains a listing of final environmental impact statements reviewed but not commented upon by EPA during this review period. The listing includes the Federal agency responsible for the statement, the number and title of the statement, a summary of the nature of EPA's comments, and the EPA source for copies of the comments as set forth in Appendix VI.

Appendix V contains a listing of proposed Federal agency regulations, legislation proposed by Federal agencies, and any other proposed actions reviewed and commented upon in writing pursuant to section 309(a) of the Clean Air Act, as amended, during the referenced reviewing period. This listing includes the Federal agency responsible for the proposed action, the title of the action, a summary of the nature of EPA's comments, and the source for copies of the comments as set forth in the Appendix VI.

Appendix VI contains a listing of the names and addresses of the sources of EPA reviews and comments listing in Appendices I, III, IV, and V.

Note that this is a 1978 report; the backlog of reports should be eliminated over the next three months.

Copies of the EPA manual setting forth the policies and procedures for EPA's review of agency actions may be obtained by writing the Public Information Reference Unit, Environmental Protection Agency, Room 2922, Waterside mall SW, Washington, D.C. 20460, telephone 202/755-2808. Copies of the draft and final environmental impact statements referenced herein are available from the originating Federal department or agency.

Dated: August 13, 1979.

William D. Dickerson,

Acting Director, Office of Environmental Review.

Appendix II—Definitions of Codes for the General Nature of EPA Comments

Environmental Impact of the Action

LO—Lack of Objection

EPA has no objections to the proposed action as described in the draft impact statement; or suggests only minor changes in the proposed action.

ER—Environmental Reservations

EPA has reservations concerning the environmental effects of certain aspects of the proposed action. EPA believes that further study of suggested alternatives or modifications is required and has asked the originating Federal agency to reassess these impacts.

EU—Environmentally Unsatisfactory

EPA believes that the proposed action is unsatisfactory because of its potentially harmful effect on the environment. Furthermore, the Agency believes that the potential safeguards which might be utilized may not adequately protect the environment from hazards arising from this action. The Agency recommends that alternatives to the action be analyzed further (including the possibility of no action at all).

Adequacy of the Impact Statement

Category 1—Adequate

The draft impact statement adequately sets forth the environmental impact of the proposed project or action as well as alternatives reasonably available to the project or action.

Category 2—Insufficient Information

EPA believes that the draft impact statement does not contain sufficient information to assess fully the environmental impact of the proposed project or action. However, from the information submitted, the Agency is able to make a preliminary determination of the impact on the environment. EPA has requested that the originator provide the information that was not included in the draft statement.

Category 3—Inadequate

EPA believes that the draft impact statement does not adequately assess the environmental impact of the proposed project or action, or that the statement inadequately analyzes reasonable available alternatives. The Agency has requested more information and analysis concerning the potential environmental hazards and has asked that substantial revision be made to the impact statement.

	CORPS OF ENGINEERS		
F-COE-J39005-00	Missouri River Erosion, Proposed Report of Chief of Engineers, South Dakota, North Dakota, Nebraska, and Montana.	EPA's concerns were adequately addressed in the final EIS. However, EPA recommended that stream-bank control measures in these free-flowing reaches be designed with possible recreation designation in mind.	I
	DEPARTMENT OF COMMERCE		
F-NOA-C90002-PR	Puerto Rico Coastal Zone Management Program (CZM).	Generally, EPA's concerns were adequately addresses in the final EIS. However, EPA encourages the Department of Commerce to condition approval on the development of a realistic schedule for program implementation and on the reconsideration of actual environmental conditions in Puerto Rico's Coastal Zone.	C
F-NOA-C90003-NJ	State of New Jersey Coastal Management Program, (CZM) Bay and Ocean Shore Segment, New Jersey.	EPA's concerns were adequately addressed in the final EIS. However, EPA recommends certain revisions to better protect the quality of the ambient air and water in New Jersey.	C
F-NOA-D86000-MD	Maryland Coastal Zone Management Program	Generally, EPA's concerns were adequately addressed in the final EIS. However, EPA recommends that an annual program evaluation process be integrated into the MCZMP so that Maryland's progress in implementing the MCZMP could be properly monitored.	D
F-NOA-K86003-HI	State of Hawaii Coastal Zone Management Program (CZM), Hawaii.	EPA's concerns were adequately addressed in the final EIS	J
	DEPARTMENT OF TRANSPORTATION		
F-CGD-G50002-LA	Greater New Orleans Mississippi River Bridge No. 2, Jefferson and Orleans Parishes, Louisiana.	EPA has found the final EIS inadequate because it fails to recognize the current air quality in Louisiana. In addition, EPA finds the document unresponsive to comments previously submitted to assure air quality impacts were adequately analyzed.	G
F-FHW-F40097-IN	In-18, Marion, Grant County, Indiana	EPA's concerns were adequately addressed in the final EIS	F
F-FRA-D53045-00	Northeast Corridor Improvement Project	EPA's concerns were adequately addressed in the final EIS	A
	DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT		
F-HUD-C85018-PR	Venus Gardens Development, Rio Piedras, Puerto Rico.	EPA's concerns were adequately addressed in the final EIS	C
F-HUD-C89004-NY	Rochester Circulation Plan for the Central Business District, Monroe County, New York.	EPA's concerns were adequately addressed in the final EIS	C
F-HUD-D89021-PA	Eastern North Philadelphia Plan, Philadelphia County, Pennsylvania.	EPA's concerns were adequately addressed in the final EIS. EPA has requested to review the truck study when completed.	D
F-HUD-D89022-VA	Church Street and Huntersville II Redevelopment Projects, Norfolk, Chesapeake County, Virginia.	EPA's concerns were adequately addressed in the final EIS	D
F-HUD-E85040-TN	Kirby Meadows Subdivision, Memphis, Shelby County, Tennessee (HUD-R04-EIS-77-15F).	EPA has environmental reservations on the project as proposed. EPA was not afforded the opportunity to review the draft statement and feel it is appropriate to raise issues for resolution prior to any approval action by HUD. The dangers of siltation and turbidity of Nonconnah Creek are likely as a result of the proposed clearing and subsequent development in the project area. Additionally, any project in a carbon monoxide non-attainment area which will increase ADT requires a microscale analysis to assure attainment/maintenance of the standard.	E
F-HUD-E85033-MI	Proposed Oakland Park Towers, Troy, Oakland County, Michigan.	EPA's concerns were adequately addressed in the final EIS	F
F-HUD-J85015-CO	Concept 80 West, Lake Borough Village Planning Development District, Jefferson County, Colorado.	EPA's concerns were adequately addressed in the final EIS. However, EPA recommended that HUD withhold its mortgage guarantee until the entire Concept 80 West Development Plans are modified to reflect the noise attenuation measures.	I
F-HUD-J85017-CO	The Highlands, a Planned Unit Development, Colorado.	Generally, EPA's concerns were adequately addresses in the final EIS. However, EPA has serious environmental reservations concerning air quality impacts from the cumulative VMT increases fostered by the Highlands development and other similar housing developments in the Denver-Metro area.	I

Agency Comments on Environmental Impact Statements and Other Actions Impacting the Environment

Pursuant to the requirements of the section 102(2)(C) of the National Environmental Policy Act of 1969, and section 309 of the Clean Air Act, as amended, the Environmental Protection Agency (EPA) has reviewed and commented in writing on Federal agency actions impacting the environment contained in the following appendices during the period of August 1, 1978 and August 31, 1978.

Appendix I contains a listing of draft environmental impact statements reviewed and commented upon in writing during this review period. The list includes the Federal agency responsible for the statement, the number and title of the statement, the classification of the nature of EPA's comments as defined in Appendix II, and the EPA source for copies of the comments as set forth in Appendix VI.

Appendix II contains the definitions of the classifications of EPA's comments on the draft environmental impact statements as set forth in Appendix I.

Appendix III contains a listing of final environmental impact statements reviewed and commented upon in writing during this review period. The listing includes the Federal agency responsible for the statement, the number and title of the EPA source for copies of the comments as set forth in Appendix VI.

Appendix IV contains a listing of final environmental impact statements reviewed but not commented upon by EPA during this review period. The listing includes the Federal agency responsible for the statement, the number and title of the statement, a summary of the nature of EPA's comments, and the EPA source for copies of the comments as set forth in Appendix VI.

Appendix V contains a listing of proposed Federal agency regulations, legislation proposed by Federal agencies, and any other proposed actions reviewed and commented upon in writing pursuant to section 309(a) of the Clean Air Act, as amended, during the referenced reviewing period. This listing includes the Federal agency responsible for the proposed action, the title of the action, a summary of the nature of EPA's comments, and the source for copies of the comments as set forth in the Appendix VI.

Appendix VI contains a listing of the names and addresses of the sources of EPA reviews and comments listing in Appendices I, III, IV, and V.

Note that this is a 1978 report; the backlog of reports should be eliminated over the next three months.

Copies of the EPA Manual setting forth the policies and procedures for EPA's review of agency actions may be obtained by writing the Public Information Reference Unit, Environmental Protection Agency, Room 2922, Waterside Mall SW, Washington, D.C. 20460, telephone 202/755-2808. Copies of the draft and final environmental impact statements referencd herein are available from the originating Federal department or agency.

Dated: August 13, 1979.

William D. Dickerson,

Acting Director, Office of Environmental Review.

Appendix II—Definitions of Codes for the General Nature of EPA Comments

Environmental Impact of the Action

LO—Lack of Objection

EPA has no objections to the proposed action as described in the draft impact statement; or suggests only minor changes in the proposed action.

ER—Environmental Reservations

EPA has reservations concerning the environmental effects of certain aspects of the proposed action. EPA believes that further study of suggested alternatives or modifications is required and has asked the originating Federal agency to reassess these impacts.

EU—Environmentally Unsatisfactory

EPA believes that the proposed action is unsatisfactory because of its potentially harmful effect on the environment. Furthermore, the Agency believes that the potential safeguards which might be utilized may not adequately protect the environment from hazards arising from this action. The Agency recommends that alternatives to the action be analyzed further (including the possibility of no action at all).

Adequacy of the Impact Statement

Category 1—Adequate

The draft impact statement adequately set forth the environmental impact of the proposed project or action as well as alternatives reasonably available to the project or action.

Category 2—Insufficient Information

EPA believes that the draft impact statement does not contain sufficient information to assess fully the environmental impact of the proposed project or action. However, from the information submitted, the Agency is able to make a preliminary determination of the impact on the environment. EPA has requested that the originator provide the information that was not included in the draft statement.

Category 3—Inadequate

EPA believes that the draft impact statement does not adequately assess the environmental impact of the proposed project or action, or that the statement inadequately analyzes reasonable available alternatives. The Agency has requested more information and analysis concerning the potential environmental hazards and has asked that substantial revision be made to the impact statement.

Appendix III.—*Final Environmental Impact Statements for Which Comments Were Issued Between Aug. 1 and Aug. 31, 1978*

Identifying No.	Title	General nature of comments	Source for copies of comments
	CIVIL AERONAUTICS BOARD		
F-CAB-F51015-IL	Chicago Midway Low-Fare Route Proceeding, Illinois (Docket 30277).	EPA's concerns were adequately addressed in the final EIS. However, EPA continues to be concerned about noise impacts and the lack of adequate noise control measures.	F
	CORPS OF ENGINEERS		
F-COE-K32014-AS	Auasi Harbor for Light-Draft Vessels, Auasi, Tutuila Island, American Samoa.	EPA's concerns were adequately addressed in the final EIS.	J
	DEPARTMENT OF AGRICULTURE		
F-AFS-K65020-CA	Timber Management Plan, Eldorado National Forest, California.	EPA's concerns were adequately addressed in the final EIS.	J
F-SCS-F36048-OH	Little Auglaize Watershed, Mercer, Putnam, Paulding and Van Wert Counties, Ohio.	EPA's concerns were adequately addressed in the final EIS. However, EPA continues to express concern regarding long-term water quality impacts.	F
	DEPARTMENT OF INTERIOR		
F-BLM-A02123-00	Proposed 1978 Outer Continental Shelf (OCS) Oil and Gas Lease Sale #65, Offshore Eastern Gulf of Mexico, Florida, Alabama, Mississippi.	EPA finds the final EIS unresponsive to concerns raised on the draft EIS regarding deepwater development technology and the environmental effects of drilling mud discharges. EPA urges that no deepwater tracts be offered in general lease sales until deepwater operating orders are promulgated.	A
F-BLM-A02125-00	Outer Continental Shelf (OCS) Oil and Gas Sale #51, Offshore Western and Central Gulf of Mexico, Texas, Louisiana and Mississippi.	EPA finds the final EIS unresponsive to concerns raised on the draft EIS regarding the environmental effects of drilling mud discharges, the description and regulation of subsea completion and production technology, and validation of the proposed protective stipulations for coral reef and hard bank tracts.	A
	DEPARTMENT OF TRANSPORTATION		
FS-FHW-A42425-KS	I-435 Extension, Johnson and Wyandotte Counties, Kansas (FHWA-KANS-EIS-72-04-FS-3).	EPA finds the final supplemental statement unresponsive to EPA's comments on the draft supplemental statement. Secondary impacts of the proposed interchange were not assessed nor were alternatives properly evaluated which would maintain existing access to and from Kansas State Highway 10 and a major local arterial. EPA is also concerned with topics not covered in the final supplemental statement. Specifically, a comment response section, which includes unresolved environmental issues and a discussion of issues raised at the most recent public hearing on the project were not included. EPA recommended the need to conduct additional analysis which should be publicly reviewed if the project continues to be proposed.	H
F-FHW-C40022-NY	Potsdam Relief Route, US 11 and NY-56, St. Lawrence County, New York.	EPA's concerns were adequately addressed in the final EIS. However, EPA recommended that further consideration be given to the use of barriers to mitigate potential noise impacts.	C
F-FHW-F40028-WI	Lang Drive, WI-35, La Crosse County, Wisconsin	EPA's concerns were adequately addressed in the final EIS.	F
F-FHW-H40065-NB	US 275 and US 81, Norfolk, Madison County, Nebraska.	EPA continues to have significant environmental reservations with the high noise levels and the adverse effects on commercial and residential receptors located adjacent to the proposed highway improvement. The final statement combined with information obtained during an onsite inspection of the project, further defined the extent of the noise impacts and the inherent difficulties in attenuating the adverse levels on the public. The additional information, however, does not alleviate the environmental reservations with the anticipated adverse noise levels which will continue to exceed the noise standards of the Federal Highway Administration as defined in the document, "Federal-Aid Highway Program Manual 7-7-3".	H
F-FHW-K40012-CA	Proposed Freeway, CA-101, Santa Clara County, California.	EPA's concerns were adequately addressed in the final EIS.	J

Appendix III.—*Final Environmental Impact Statements for Which Comments Were Issued Between Aug. 1 and Aug. 31, 1978*—Continued

Identifying No.	Title	General nature of comments	Source for copies of comments
	DEPARTMENT OF TRANSPORTATION—Continued		
F-FHW-K40025-HI	Hilo Bayfront Highway, HI-19, Hawaii	EPA's concerns were adequately addressed in the final EIS.	J
	GENERAL SERVICES ADMINISTRATION		
F-GSA-K81006-CA	Central Los Angeles Parking Facility, Los Angeles County, California.	EPA's concerns were adequately addressed in the final EIS.	J
	DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT		
F-HUD-C85019-PR	Residential Covadonga Development, Project No. 63-004-2, Toa Baja, Puerto Rico	EPA's concerns were adequately addressed in the final EIS.	C
F-HUD-E85022-SC	Forestbrook Subdivision, Horry County, South Carolina.	EPA's review has found the initial comments on the facility still remains unanswered. Additional data provided on water quality, land use and wetlands within the Atlantic Coastal Plain were insufficient. EPA has recommended denial of the required COE permit regarding dredging in Socaster Creek, as planned in the initial development.	E
F-HUD-E85031-TN	Lakemeer Subdivision, Shelby County, Tennessee	EPA's concerns were adequately addressed in the final EIS.	E
F-HUD-F85026-IL	Rohlwing Grove Apartments, Elk Grove Village, Cook County, Illinois.	EPA's concerns were adequately addressed in the final EIS. However, EPA noticed that the final EIS shows potential violations of the 8-hour carbon monoxide standards in the vicinity of the project.	F
F-HUD-K85013-AZ	Proposed Foothills Planned Unit Development, Tucson, Arizona.	EPA's concerns were adequately addressed in the final EIS.	J
	INTERSTATE COMMERCE COMMISSION		
F-ICC-F53008-WI	Rail Abandonment in Southwestern Wisconsin, Lafayette and Iowa Counties, Wisconsin	EPA's concerns were adequately addressed in the final EIS. However, EPA is concerned about alternatives to the proposed abandonment. EPA feels that alternatives must be discussed fully, in order to make a sound decision.	F
	NUCLEAR REGULATORY COMMISSION		
FS-NRC-A00115-00	Floating Nuclear Power Plants, Part II (FS)	In general, EPA's concerns were adequately addressed in the final EIS. However, EPA does not believe that estuarine and barrier island sites can be reasonably assured.	A
F-NRC-G06003-TX	Blue Hills Station, Units 1 and 2, Newton County, Texas.	Generally, EPA's concerns were adequately addressed in the final EIS. However, EPA continues to express environmental reservations with regard to construction of such facilities which could have potential adverse effects on the environment.	G

Administrator's Toxic Substances Advisory Committee; Meeting

AGENCY: Environmental Protection Agency.

ACTION: Notice of Open Meeting.

SUMMARY: There will be a meeting of the Administrator's Toxic Substances Advisory Committee from 9:30 a.m. to 5:00 p.m. on Tuesday, September 25, 1979. The meeting will be held in Room 3908, Waterside Mall, EPA, 401 M Street, S.W., Washington, D.C. and will be open to the public.

FOR FURTHER INFORMATION CONTACT: Ms. Marsha Ramsay, Executive Secretary, Administrator's Toxic Substances Advisory Committee, Office of Toxic Substances (TS-793), Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460. Telephone: (202) 755-4854.

SUPPLEMENTAL INFORMATION: The purpose of this meeting is to discuss matters related to EPA's implementation of the Toxic Substances Control Act (Pub. L. 94-469). The agenda includes:

1. A status report on the EPA Asbestos program, including asbestos-containing material in schools and commercial and industrial use of asbestos fibers.
2. A full report on Premanufacturing Notification.
3. An update on other matters concerning the implementation of the Toxic Substances Control Act.
4. Reports from appropriate Administrator's Toxic Substances Advisory Committee subcommittee chairpersons.

The meeting will be open to the public and time will be set aside for public comments. Any member of the public wishing to present an oral or written statement should contact Ms. Marsha Ramsay at the address or phone number listed above.

Dated: September 6, 1979.

Steven D. Jellinek,
Assistant Administrator for Toxic Substances.

[FRL 1306-5]

Safe Drinking Water; Fresno County, Calif.; Determination

Notice is hereby given that pursuant to section 1424(e) of the Safe Drinking Water Act (Pub. L. 93-523) the Administrator of the Environmental Protection Agency (EPA) has determined that a portion of the aquifer serving Fresno County is the sole source of drinking water for people of Fresno County, California, and that if the aquifer were contaminated, it would create a significant hazard to public health.

Background

Section 1424(e) of the Safe Drinking Water Act, provides the following: If the Administrator determines, on his own initiative or upon petition, that an area has an aquifer which is the sole or principal drinking water source for the area and which, if contaminated, would create a significant hazard to public health, he shall publish notice of that determination in the **Federal Register**. After the publication of any such notice, no commitment for Federal financial assistance (through a grant, contract, loan guarantee, or otherwise) may be entered into for any project which the Administrator determines may contaminate such aquifer through a recharge zone so as to create a significant hazard to public health, but a commitment for Federal financial assistance may, if authorized under another provision of law, be entered into to plan or design the project to assure that it will not so contaminate the aquifer.

On August 9, 1976, Mr. Gerald Lysdahl of Fresno County, California, requested the Administrator of EPA to determine that Fresno County, California is an area which has an aquifer which is the sole or principal source of drinking water for the area and which, if contaminated, would create a significant hazard to public health. A notice of this petition with a request for comments was published in the **Federal Register** on December 6, 1976. A public workshop was held on May 24, 1977. A report on the ground water in Fresno County was prepared by the U.S. Geological Survey to provide needed information to make a determination. Such a report was submitted to EPA in July, 1977.

Written comments were received in response to the notice, the public workshop and the USGS report. EPA completed its evaluation of these and other materials and issued a draft evaluation report for comment on March 14, 1978. A public meeting on the report was held on April 25, 1978.

On the basis of the information provided in the U.S. Geological Survey Report, the Administrator has made the following findings, which are the basis for the determination above:

1. The Fresno County aquifer is the principal source of water for about 500,000 people, approximately twenty-two (22) cities and towns, with pumpage of approximately 140,000 acre feet for domestic use in 1976.
2. The aquifer is vulnerable to contamination through its recharge zone, particularly from septic tanks, impoundments, agricultural recharge and, to a lesser extent, from leaching of discharges to streams, rivers and canals in the recharge and streamflow source zones. Since groundwater contamination can be difficult or impossible to reverse, and because this aquifer is relied upon for drinking purposes by many people, contamination of the aquifer would pose a significant hazard to public health.

The portion of the aquifer serving Fresno County under discussion is that portion of the water-bearing formation which includes consolidated and unconsolidated formations bounded by the Fresno County boundary on the south, the middle of the San Joaquin River on the north, the Friant-Kern Canal on the east, and the Fresno Slough Bypass on the west. Because of the geology and hydrology of the area, the area designated as the aquifer is the recharge zone. Although the recharge zone extends to the Foothills of the Sierra Nevada Mountains, the applicant did not request the recharge zone east of the Friant-Kern Canal to be included in the designation of the aquifer.

The streamflow source zone boundaries include upstream and headwaters areas of the Kings and San Joaquin River basins and areas eastward to the crest of the Sierra Nevada Mountains.

EPA published proposed regulations for the review of Federally assisted projects in areas designated pursuant to Section 1424(e) (42 FR 51574, September 29, 1977). These projects are those which have received financial assistance directly as aid by a department, agency or instrumentality of the Federal government. EPA will use these proposed regulations as guidance for review of projects until final regulations are promulgated.

The data upon which these findings are based are available to the public and may be inspected during business hours at the Office of the Environmental Protection Agency, Region IX, 215 Fremont Street, San Francisco, California 94105. The background information includes:

1. A detailed map outlining the designated portion of the aquifer serving Fresno County, the recharge zones and the streamflow source zones;
2. A copy of the public comments submitted on the sole source designation petition, the Fresno County ground water report prepared by U.S. Geological Survey and the EPA evaluation report;
3. A technical support document for designation of a portion of the aquifer serving the Fresno County under 1424(e) of the Safe Drinking Water Act.

A copy of the above documentation is also available at the U.S. Environmental Protection Agency WH-550, Office of Drinking Water, 401 M Street, SW, Washington, D.C. 20460.

Dated August 30, 1979.

Douglas Costle,
Administrator.

Water Quality Criteria: Corrections

AGENCY: United States Environmental Protection Agency.

ACTION: Correction notice.

In FR Doc. 79-22804, Wednesday, July 25, 1979, at 44 FR 43660, EPA published and invited comment on Water Quality Criteria. In that document a number of

errors appeared which need correction. The corrections are listed below.

1. 3,3'-Dichlorobenzidene. Page 43667, right hand column: line 16, change "toxaphene" to "dichlorobenzidine".

2. 3,3'-Dichlorobenzidine. Page 43667, right hand column: lines 24-25 should read: "with corresponding criteria of 1.69×10^{-2} µg/l, 1.69×10^{-3} µg/l, and 1.69×10^{-4} µg/l, respectively".

3. 3,3'-Dichlorobenzidine. Page 43667, right hand column: 5th line from bottom should read: "cancer risk below $10^{-5}$is 1.69×10^{-2}µg/l.

4. 3,3'-Dichlorobenzidine. Page 43668, left and middle columns: in table under "Risk levels and corresponding criteria" numbers should read:

0	10^{-7}	10^{-6}	10^{-5}
0	1.69 x 10^{-4} ug/l	1.69 x 10^{-3} ug/l	1.69 x 10^{-2} ug/l
0	1.85 x 10^{-4} ug/l	1.85 x 10^{-3} ug/l	1.85 x 10^{-2} ug/l

5. 3,3'-Dichlorobenzidine. Page 43668, middle column: 23rd line from bottom should read R=1150.

6. 3,3'-Dichlorobenzidine. Page 43668, middle column: change 12th line from bottom to read lifetime cancer risk below 10^{-5}, is 1.69×10^{-2} micrograms per liter.

7. Nickel. Page 43684, middle column: line 28 should read: Human Health: For the protection of human health based on the toxic properties of nickel ingested through water and through contaminated aquatic organisms, the ambient water criterion is determined to be 133 µg/l day.

8. Nickel. Page 43684, middle column: line 7 from bottom should read: Final Chronic Value = e (1.01 × ln (hardness) − 1.02).

$$\frac{5(mg/l)\ x\ 25\ ml/day\ rat}{.3\ (kg/av.rat)} = \frac{125}{.3}$$

$$= 416.67\ ug$$

$$\div 20$$

$$dose/day/av.rat$$

$$\frac{420}{100} = 4.2\ ug\ (ADI)$$

$$4.2\ x\ 70 = 294\ ug\ (ADI\ for\ 70\ kg/man)$$

$$2(X) = (Av.\ fish\ intake)(BCF)(X) = Daily\ Intake$$

$$2(X) + (0.0187)\ (11)\ (X) = 294\ ug$$

$$2.205\ X = 294\ ug$$

$$X = 133\ ug/l\ (criterion)$$

$$2 = amount\ of\ water\ ingested,\ liters/day$$

$$X = Ni\ concentration,\ mg/l$$

$$0.0187 = amount\ of\ fish/shellfish\ products$$

$$products\ consumed,\ kg/day$$

$$F = 11\ (BCF),\ \frac{mg\ Ni/kg\ fish}{mg\ Ni/l\ of\ water}$$

9. Nickel. Page 43684, right hand column: insert the following after line 9:

Final Fish Chronic Value = not available

Final Invertebrate Chronic Value = not available

Final Plant Value = 1.000 µg/l

Residue Limited Toxicant Concentration = not available

Final Chronic Value = 1,000 µg/l

0.44 × Final Acute Value = 220 µg/l

10. Nickel. Page 43685, left hand column: delete 3rd paragraph and insert the following:

If the 5.0 mg/l level were used in the standard water quality criteria, the criterion can be determined to be 133 µg/l.

Drinking water contributes 91 percent of the assumed exposure while eating contaminated fish products accounts for 9 percent. The criterion level for nickel can alternatively be expressed as 1.4 µg/l, if exposure is assumed to be from the consumption of fish and shellfish products alone.

$X\times0.0187\times11=294$ (µg/l)

$X\times0.2057=294$

$X=1.429$ mg

$X=1.4$ (mg/l)

11. Phenol. Page 43688, right hand column: add the following at end of line 3: For the prevention of adverse effects due to the organoleptic properties of chlorinated phenols inadvertently formed during water purification processes, the phenol concentration in water should not exceed 1.0 µg/l.

12. Phenol. Page 43688, right hand column: line 8, change 2.4 to 24.

13. Phenols. Page 43689, middle column: add the following preceding Phthalate Esters:

In summary, based on the use of chronic toxicologid test data for rats and an uncertainty factor of 500, the criterion for phenol corresponding to the calculated acceptable daily intake of 0.1 mg/kg/day is 3.4 mg/l. Drinking water contributes 98 percent of the assumed exposure while eating contaminated fish products accounts for 2 percent. The criterion level could alternatively be expressed as 163 mg/l if exposure is assumed to be from the consumption of fish and shellfish products alone. Based on the potential chlorination of phenol in water, the criterion for phenol is 1.0 µg/l in those instances where such inadvertent chlorination may take place.

14. Phthalate esters. Page 43691, left hand column: add the following paragraph preceding Ploychlorinated Biphenyls:

In summary, based on the use of chronic toxicologic data and uncertainty factors of 100, the criteria levels for phthalate esters have been established. The percent contribution of drinking water and of ingesting contaminated fish is given in the following table. Also given are the criteria levels recommended if exposure is assumed to be from fish and shellfish products alone.

Esters	Criteria level mg/l	Percent contribution of drinking water	Percent contribution of fish products	Criteria if exposure is from fish alone
Dimethyl	160	45	55	268
Diethyl	60	29	71	87
Dibutyl	5	81	19	26
D-2-ethylhexyl	10	53	47	24

15. Polychlorinated biphenyls. Page 43691, middle column: in lines 4 and 8 change the word chloroform to PCB's.

16. Polychlorinated biphenyls. Page 43691, middle column: lines 16 and 17, change the criteria to 0.26 ng/l, 0.026 ng/l, and 0.0026 ng/l.

17. Polychlorinated biphenyls. Page 43692, left and middle columns: change figures in table as follows:

0.0026 ng/l	0.026 ng/l	0.26 ng/l
0.0026 ng/l	0.026 ng/l	0.26 ng/l

18. Polychlorinated biphenyls. Page 43692, middle column: line 27, change 0.24 to 0.26.

19. Toluene. Page 43692, middle column: line 11 from bottom, change 17.4 to 12.4.

20. Toluene. Page 43694, right column: change 1st equation to read:

$$\frac{590\ mg/kg\ x\ 70\ kg\ x\ 5/7\ day}{1,000} = 29.5\ mg/day$$

21. Toluene. Page 43694, right hand column: line 22 from bottom, change 17.4 to 12.4

22. Toluene. Page 43694, right hand column: change 2nd equation to read:

$$\frac{29.5\ mg/day}{2\ liters + (20\ x\ 0.0187)\ x\ 1.0} = 12.4\ mg/l$$

23. Toxaphene. Page 43695, left hand column: lines 11 and 12, change criteria to $4.7\ x\ 10^{-4}$ µg/l, $4.7\ x\ 10^{-5}$µg/l, $4.7\ x\ 10^{-6}$ µg/l

24. Toxaphene. Page 43696, right hand column: make the following corrections in 1st paragraph of text under table: 2nd line, change B_n to B_H 5th line, change 4.f to 4.7.

Dated: September 4, 1979.

Swep T. Davis,

Assistant Administrator for Water and Waste Management.

BILLING CODE 6560-01-M

FEDERAL MARITIME COMMISSION

[Docket No. 79-86]

Japan/Korea-Atlantic and Gulf Freight Conference Rules Pertaining to Chassis Availability and Demurrage Charges That Result When Chassis Are Not Made Available; Order To Show Cause

The Japan/Korea-Atlantic and Gulf Freight Conference (J/KAG), operating under Agreement No. 3103, as amended, is a conference of common carriers providing liner service from ports in Japan and Korea to United States Atlantic and Gulf ports.

Historically J/KAG member lines and other common carriers by water have tendered cargo containers mounted on chassis to facilitate the rapid removal of cargo from the pier to the ultimate consignee. This long established practice change in 1978 at the Port of Baltimore when certain J/KAG member lines were unable to supply chassis for removal of inbound containers within the five day free time period.

Although operational problems of this nature have occurred in previous years at Baltimore and elsewhere, the situation was aggravated in 1978 by the combined effects of the dock strike and harsh winter weather. The intensity of the chassis shortage was reduced as weather conditions improved, but shortages still occur on a regular basis. As a result, it was the practice of some conference member lines not to assess demurrage charges when they were unable to provide adequate equipment. According to the complainants, this policy was abruptly changed and the carriers invoiced demurrage after the expiration of five days without exception. Unforeseen circumstances, not the fault of the shipper, preventing the removal of cargo from the container yard were no longer valid reasons for foregoing these extra charges.

The Japan/Korea-Atlantic and Gulf Freight Conference in its Tariff FMC-7 currently has in effect tariff rules which have the following effects or results:

1. Consignee or his agent may be charged container demurrage when through no fault of their own a chassis is not made available during the five day free time period for removal of containers from the port area.

2. Shippers have no assurance at the time of booking that a chassis will be available upon discharge of the cargo or within the five day free time period following unloading of the vessel.

Consequently, the tariff is unclear as to who will receive chassis and under what conditions they will be provided during periods of equipment shortages.

These circumstances allow for the possibility of discrimination between those who desire the use of the conference services and denies tariff users the ability to determine the exact service afforded and the precise cost thereof prior to shipment. The current tariff rules appear permissive in nature and indefinite in their application contrary to section 18(b), Shipping Act, 1916 (46 U.S.C. 817(b)), and allows for the continuation of possible unjust practice in violation of section 17, Shipping Act, 1916, (46 U.S.C. 816).

It appears that a proceeding is necessary to permit J/KAG to show cause why its tariff rule relating to the availability of chassis equipment and the assessment of demurrage prescribed by its tariff rule herein at issue should not be amended as being in violation of the aforementioned statutes.

Therefore, it is ordered. That pursuant to sections 17, 18(b) and 22, Shipping Act, 1916 (46 U.S.C. 816, 817(b) and 821), the Japan/Korea-Atlantic and Gulf Conference and its member lines as listed in Appendix "A" be named respondents in this proceeding and that such respondents be ordered to show cause why the Commission should not find the provisions of its tariff rule relating to the availability of chassis equipment and the assessment of demurrage to result in the assessment of varying rates and charges which are unjustly discriminatory and constitute an unreasonable practice or regulation in violation of section 17; and to be permissive in nature and indefinite in application in violation of section 18(b); and, accordingly, why J/KAG Conference should not be ordered to modify its tariff rules so as to provide for the equal treatment of all shippers/consignees who require the employment of carrier owned or controlled chassis for the removal of their containerized cargo from destination port container yard.

It is further ordered, That this proceeding be limited to submission of affidavits of fact and memoranda of law and replies thereto. Should any party

feel that an evidentiary hearing is required, the party must accompany any request for such hearing with a statement setting forth in detail the facts to be proven, their relevance to the issues in this proceeding, a description of the evidence which would be adduced to prove these facts, and why such proof cannot be submitted through affidavit. Requests for hearing shall be filed on or before November 9, 1979. Affidavits of fact and memoranda of law shall be filed by respondents and served upon all parties no later than the close of business October 12, 1979. Reply affidavits and memoranda shall be filed by the Commission's Bureau of Hearing Counsel and intervenors, if any, no later than close of business November 2, 1979.

It is further ordered, That a notice of this order be published in the Federal Register and that a copy thereof be served upon the respondents.

It is further ordered, That persons other than those already party to this proceeding who desire to be parties and participate herein shall file a petition to intervene pursuant to Rule 72 of the Commission's Rules of Practice and Procedure (46 CFR 502.72) no later than close of business September 21, 1979.

It is further ordered, That all documents submitted by a party of record in this proceeding shall be directed to the Secretary, Federal Maritime Commission, 1100 L Street, NW., Washington, D.C., 20573, in an original and fifteen (15) copies, as well as being mailed directly to all parties of record.

By the Commission.

Francis C. Hurney,

Secretary.

BILLING CODE 6730-01-M

[Docket No. 79-50]

Notice of Inquiry Regarding the United Nations Convention on Code of Conduct for Liner Conferences

AGENCY: Federal Maritime Commission.

ACTION: Further enlargement of time to comment.

SUMMARY: Notice of Inquiry in subject proceeding was published in the Federal Register of May 16, 1979 (44 FR 28724). Responses are presently due on August 31, 1979. The Washington Representative of CENSA has requested an extension of time until September 17, 1979 within which to respond. The fact that a study group has been assigned to this matter and is nearing completion of a draft report which must be distributed to member associations scattered throughout the world is cited as the reason for the request. We are anxious to obtain the views of CENSA on this matter and therefore are in favor of granting the extension. This delay will not be critical because it is not contemplated that a rule will issue from this proceeding.

DATES: Comments on or before September 17, 1979.

ADDRESSES: Comments (original and fifteen copies) to: Secretary, Federal Maritime Commission, Washington, D.C. 20573.

FOR FURTHER INFORMATION CONTACT: Secretary, Federal Maritime Commission, 1100 L Street, NW., Room 11101, Washington, D.C. 20573.

By the Commission.

Francis C. Hurney,

Secretary.

BILLING CODE 6730-01-M

[Dockets Nos. 79-2 and 79-3; Agreements Nos. 10293 and 10295]

Notice of Intent To Prepare an Environmental Assessment

The above-referenced proceedings are investigations to determine whether Agreement No. 10293 and Agreement No. 10295 should be approved, disapproved or modified pursuant to section 15 of the Shipping Act, 1916.

The Commission believes that its final resolution of the issues in these proceedings may constitute a major Federal action significantly affecting the quality of the human environment.

Therefore, Notice is hereby given that the Federal Maritime Commission intends to prepare an environmental assessment to determine whether its final decision in these proceedings will constitute a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969. Written comments regarding possible environmental effects are invited. Such comments should be submitted within thirty days of the date of this Order to the Secretary, Federal Maritime Commission, 1100 L Street, NW., Washington, D.C. 20573.

Copies of discovery materials and all future correspondence, pleadings and exhibits exchanged or filed in these proceedings will be served on Chief, Office of Environmental Analysis, Federal Maritime Commission, 1100 L Street, N.W., Washington, D.C. 20573.

Francis C. Hurney,

Secretary.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Alcohol, Drug Abuse, and Mental Health Administration

Rape Prevention and Control Advisory Committees; Meeting

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. Appendix I), announcement is made of the following National advisory body scheduled to assemble during the month of September, 1979.

Rape Prevention and Control Advisory Committee

September 24–25, 1979, 9:00 a.m. Open meeting. Conference Room I, Parklawn Building, Rockville, Maryland 20857.
Contact: Ms. Elizabeth S. Kutzke, Room 13A-44, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, 301/443-1910.
Purpose: The Rape Prevention and Control Advisory Committee advises the Secretary, Department of Health, Education, and Welfare, the Administrator, Alcohol, Drug Abuse, and Mental Health Administration, and the Director, National Institute of Mental Health, through the National Center for the Prevention and Control of Rape, on matters regarding the needs and concerns associated with rape in the United States and makes recommendations pertaining to activities to be undertaken by the Department to address the problems of rape.
Agenda: The entire meeting will be open to the public. The two-day meeting of the Advisory Committee will be devoted to providing input on the National Center's fiscal year 1980 program activities.
Attendance by the public will be limited to space available. Substantive information may be obtained from the contact person listed above.

The NIMH Information Officer who will furnish summaries of the meeting and a roster of Advisory Committee members is Mr. Paul Sirovatka, Chief, Public Information Branch, Division of Scientific and Public Information, 5600 Fishers Lane, Rockville, Maryland 20857, 301/443-3600.

Dated: September 5, 1979.

Elizabeth A. Connolly,

Committee Management Officer, Alcohol, Drug Abuse, and Mental Health Administration.

Health Resources Administration

Application Announcement for Financial Distress Grants

The Bureau of Health Manpower, Health Resources Administration, announces that applications for fiscal year 1980 Grants for Financial Distress are now being accepted under the authority of section 788(b) of the Public Health Service Act, as amended by the Health Professions Educational Assistance Act of 1976 (Pub. L. 94-484).

Section 788(b) authorizes the award of grants to public or nonprofit private schools of medicine, osteopathy, dentistry, veterinary medicine, optometry, pharmacy, podiatry, and public health to:

1. Meet the costs of operation of an eligible school which is in serious financial distress;

2. Meet accreditation requirements if the school has a special need for financial assistance in meeting such requirements; and

3. Carry out appropriate operational, managerial, and financial reforms on the basis of information obtained in a comprehensive cost analysis study or on the basis of other relevant information.

It is intended that approved applications in categories (1) and (2) be funded prior to approved applications in category (3).

Approximately $5 million is expected to be available in fiscal year 1980 for competitive awards.

Requests for application materials and questions regarding the administration of grants should be directed to: Grants Management Officer (D-14), Bureau of Health Manpower, Health Resources Administration, Center Building, Room 4-27, 3700 East-West Highway, Hyattsville, MD 20782.

To be considered for fiscal year 1980 funding, applications must be received by the Grants Management Officer, Bureau of Health Manpower, Health Resources Administration, at the above address no later than October 9, 1979.

Dated: August 24, 1979.

Henry A. Foley,

Administrator, Health Resources Administration.

[FR Doc. 79-28111 Filed 9-7-79; 8:45 am]

BILLING CODE 4110-83-M

Application Announcement for Grants for Physician Assistant Training Programs

The Bureau of Health Manpower, Health Resources Administration, announces that applications for fiscal year 1980 Grants for Physician Assistant Training Programs are now being accepted under the authority of section 783(a)(1) of the Public Health Service Act, as amended by the Health Professions Educational Assistance Act of 1976 (P.L. 94-484).

Section 783 authorizes the award of grants to schools of medicine or osteopathy or other public or nonprofit private entities to assist in meeting the cost of planning, developing, and operating or maintaining programs for the training of physician assistants. To receive support, programs must meet the requirements of section 701(7) and 783(a)(1) of the Public Health Service Act and the Final Regulations, implementing these sections published in the Federal Register on June 21, 1979, Vol. 44, No. 121.

Funding preference will be accorded approved applications with projects in which:

1. A program is conducted for training physician assistants to provide primary care patient services under the supervision of a doctor of medicine or osteopathy;

2. Substantial training experience is provided in a Health Manpower Shortage Area(s), as defined in Section 332 of the PHS Act, or in an Area Health Education Center funded, at least in part, under section 781 of the Act;

3. A program is established in a state which does not have such a program; and/or

4. A program is conducted in conjunction with primary care physician education in a manner which shares educational resources, and encourages the utilization of physician assistants by physicians.

Approximately $7.4 million is expected to be available in fiscal year 1980 for competitive awards for Grants for Physician Assistant Training Programs under section 783(a)(1) of the Public Health Service Act.

Requests for application materials and questions regarding grants policy should be directed to: Grants Management Officer (D-21), Bureau of Health Manpower, Health Resources Administration, Center Building, Room 4-27, 3700 East-West Highway, Hyattsville, Maryland 20782. Phone: (301) 436-6098.

To be considered for fiscal year 1980 funding, applications must be received by the Grants Management Officer, Bureau of Health Manpower, Health Resources Administration, at the above address no later than November 5, 1979.

Should additional programmatic information be requested, please contact: Primary Care Education Branch, Division of Medicine, Bureau of Health Manpower, Health Resources Administration, Center Building, Room 4-50, 3700 East-West Highway, Hyattsville, Maryland 20782. Phone: (301) 436-7350.

Dated: August 24, 1979.

Henry A. Foley,

Administrator, Health Resources Administration.

BILLING CODE 4110-83-M

Office of the Secretary

Social Security Administration; Statement of Organization, Functions, and Delegations of Authority

Part S of the Statement of Organization, Functions, and Delegations of Authority for the Department of Health, Education, and Welfare contains the Statement of Organization, Functions, and Delegations of Authority for the Social Security Administration (SSA). On March 21, 1979, an amendment to Part S was published in the Federal Register (44 FR 17218-233) to reflect a reorganization of SSA. Sections SD.00, SD.10, and SD.20 of the SSA Statement, as contained on pages 17221-222 of the amended material published on March 21, 1979, describe the mission.

organization and functions for SSA's Office of the Regional Commissioner (ORC). Section SD.00 is restated and sections SD.10 and SD.20 are modified to reflect the completed reorganization of ORC. The revised material for ORC reads as follows:

Sec. SD.00 *The Office of the Regional Commissioner*—(Mission): The Office of the Regional Commissioner (ORC) serves as the principal SSA component at the regional level and assures effective SSA interaction with HEW regional offices (HEWRO's); other Federal agencies in the regions; State Welfare Agencies; State Disability Determination Services; and other regional and local organizations. The Office provides regional program leadership and technical direction for the retirement, survivors, and disability insurance programs; the black lung benefits program; the supplemental security income program; the aid to families with dependent children (AFDC) program; the program for aid to the aged, blind, and disabled in Guam (Region IX), Puerto Rico, and the Virgin Islands (Region II); the refugee programs; and the U.S. repatriation program. It issues regional operating policy and procedures for these programs and evaluates program effectiveness. It implements national operational and management plans for providing SSA service to the public and directs a regionwide network of district offices, branch offices, and teleservice centers. The Office manages and coordinates SSA regional operations and provides administrative support to SSA regional components. It establishes regional priorities and issues policy directives consistent with national program objectives, operational requirements, and systems; and implements a regional SSA public affairs program. The Office maintains a broad overview of administrative operations of the regional offices of SSA's Office of Hearing and Appeals and Office of Assessment, program service centers, and data operations centers, to assure effective coordination of SSA activities at the regional level.

Sec. SD.10 *The Office of the Regional Commissioner*—(Organization):

The Office of the Regional Commissioner, under the leadership of the Regional Commissioner, includes:

A. The Regional Commissioner (SD1–SDX).

B. The Deputy Regional Commissioner (SD1–SDX).

C. The Immediate Office of the Regional Commissioner (SD1–SDX).

D. The Office of the Assistant Regional Commissioner for Programs (SD1B–SDXB).

E. The Office of the Assistant Regional Commissioner for Family Assistance (SD1A–SDXA).

F. The Office of the Assistant Regional Commissioner for Field Operations (SD14–SDX4).

G. The Office of the Assistant Regional Commissioner for Management and Budget (SD17–SDX7).

Sec. SD.20 *The Office of the Regional Commissioner*—(Functions):

A. *The Regional Commissioner* (SD1–SDX) is directly responsible to the Commissioner for carrying out ORC's mission and provides general supervision to major ORC components.

B. *The Deputy Regional Commissioner* (SD1–SDX) assists the Regional Commissioner in carrying out his/her responsibilities and performs other duties as the Regional Commissioner may prescribe.

C. *The Immediate Office of the Regional Commissioner* (SD1–SDX) provides the Regional Commissioner with high level staff assistance on the full range of his/her responsibilities. It also furnishes staff support for the civil rights, equal opportunity, and external affairs functions.

D. *The Office of the Assistant Regional Commissioner for Programs* (SD1B–SDXB):

1. Provides program leadership and technical direction for the Retirement, Survivors, and Disability Insurance (RSDI), Supplemental Security Income (SSI), and Black Lung Benefits programs in the region. Issues regional operating policies and procedures necessary to insure implementation of national policies for these programs. Establishes and maintains a field visit program covering district and branch offices, Disability Determination Services (DDS's), and teleservice centers to determine the effectiveness of RSDI, SSI, and Black Lung Benefits program policies and procedures, and to provide technical assistance in the resolution of operational problems relating to these programs. Evaluates RSDI, SSI, and the Black Lung Benefits program effectiveness in the region.

2. Assists State DDS agencies in developing their operating budgets, reviews these budgets with the Assistant Regional Commissioner for Management and Budget, and submits recommendations on the acceptability of DDS budgets to the Regional Commissioner. Manages a comprehensive review and analysis program covering State DDS agency operations.

3. Plans, directs, and coordinates regional activities concerning social security coverage agreements between SSA and State or interstate entities; carries out negotiations with State or interstate authorities on the content of these agreements; makes recommendations to final approving officials regarding the execution of new coverage agreements, modifications in existing agreements, or the termination of agreements; and processes requests for further extensions, or extensions for more than one year, of time limits for assessments, credits, or refunds of amounts due.

4. Negotiates and maintains agreements with States covering the administration of optional State SSI supplementation, mandatory minimum State SSI supplementation, and Medicaid eligibility determinations. Evaluates and monitors State budgets necessary to carry out these agreements and maintains ongoing dialogues with States on SSI program issues in such areas as adjustment levels, hold harmless provisions, operational aspects of the Food Stamp Program, social service referral practices, etc. Directs the preparation of field instructional material necessary to implement agreements negotiated with the States.

5. Overseas SSA regional automated data processing (ADP) systems and automated processing operations, assures their effectiveness, and carries out an ongoing regional systems planning program to assure effective integration of regional operating and management systems. Coordinates and monitors regional implementation of major changes to national systems and conducts various ADP systems validation and piloting operations on behalf of SSA's Central Office components dealing with systems activities.

6. Conducts operational analyses and provides support to regional office, field office, and DDS management in the resolution of operational, procedural, and systems problems. Consolidates, reviews, and arranges for the distribution of regional program instructions and systems instructional material developed at the regional level. Coordinates with HEW's Rehabilitation Services Administration and other agencies to attain disability insurance, black lung benefits, and SSI program goals. Maintains relationships with professional medical organizations, interacts with outside groups representing program interests or concerns, and consults with representatives of community and private organizations on operational matters.

E. *The Office of the Assistant Regional Commissioner for Family Assistance* (SD1A–SDXA):

1. Provides program leadership and technical direction for family assistance program activities in the region. Issues regional operating policies and procedures necessary to insure implementation of national family assistance program policies.

2. Conducts visits to and ongoing liaison with State agencies to determine the effectiveness of family assistance policies and procedures and to provide technical assistance in the resolution of operational problems. Evaluates family assistance program effectiveness regionwide. Plans, directs, and coordinates regional activities with State and local entities. Negotiates with State and local authorities on State plans, plan amendments and recommendations, and recommends approval or disapproval to the appropriate SSA official.

3. Directs and coordinates a program of financial management, including the review and evalution of grant award requests from States. Recommends approval or disapproval of these requests. Reviews State expenditure estimates and reports, and recommends approval or disapproval. Provides overview and assistance to State agencies in implementing major initiatives required by family assistance policies on financial management.

F. *The Office of the Assistant Regional Commissioner for Field Operations* (SD14–SDX4):

1. Provides leadership, guidance, and direction to district and branch offices and teleservice centers, through Area Directors.

2. Insures the consistency of field operations in the region with national and regional policies and procedures, and is accountable to the Regional Commissioner for the effectiveness of these operations.

G. *The Office of the Assistant Regional Commissioner for Management and Budget* (SD17–SDX7):

1. Furnishes leadership and support to SSA regional and field components in the areas of financial, manpower, and organization management, and other areas of management concern.

2. Develops regional management policies, procedures, and guidelines consistent with prevailing Federal, HEW, and SSA requirements and objectives. Guides and controls regional administrative management operations and administrative practices.

Evaluates component performance and needs in these areas to assure effective and economical use of available resources, and takes appropriate action on behalf of the Regional Commissioner to remedy or correct any inefficiencies or undesirable practices uncovered in administrative management operations.

3. Furnishes financial management staff expertise and professional judgments required to compile and recommend effective regional/State operating budgets.

4. Coordinates regional SSA administrative management issues and concerns with the HEWRO, SSA headquarters, and other Federal-regional authorities.

5. Carries out the SSA regional security program.

Dated: August 29, 1979.

Wilford J. Forbush,

Acting, Assistant Secretary for Management and Budget.

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Chinook Indian Tribe, Inc.; Receipt of Petition for Federal Acknowledgment of Existence as an Indian Tribe

August 31, 1979.

This notice is published in the exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 DM 8.

Pursuant to 25 CFR 54.8(a) notice is hereby given that the Chinook Indian Tribe, Inc. (Post Office Box 228, Chinook, Washington 98614) has filed a petition for acknowledgment by the Secretary of the Interior that the group exists as an Indian tribe. The petition was received by the Bureau of Indian Affairs on July 23, 1979. The petition was forwarded and signed by Mr. Donald E. Mechals.

This is a notice of receipt of petition and does not constitute notice that the petition is under active consideration. Notice of active consideration will be by mail to the petitioner and other interested parties at the appropriate time.

Under § 54.8(d) of the Federal regulations, interested parties may submit factual or legal arguments in support of or in opposition to the group's petition. Any information submitted will be made available on the same basis as other information in the Bureau of Indian Affairs files.

The petition may be examined by appointment in the Division of Tribal Government Services, Bureau of Indian Affairs, Department of the Interior, 18th and C Streets, N.W., Washington, D.C. 20242.

Forrest J. Gerard,

Assistant Secretary—Indian Affairs.

Bureau of Land Management

Craig District Grazing Advisory Board; Meeting

August 29, 1979.

Notice is hereby given in accordance with Public Law 92-463 that a meeting of the Craig District Grazing Advisory Board will be held on October 4, 1979.

The meeting will begin at 9:00 a.m. in the Conference Room of the Bureau of Land Management Office at 455 Emerson Street, Craig, Colorado.

The agenda for the meeting will include (1) expenditures of range betterment funds, (2) the expenditure of county range improvement funds, (3) current status of the White River Environmental Statement, (4) Advisory Board Re-election Procedures, (5) discussion of old business.

The meeting is open to the public. Interested persons may make oral statements or file written statements for the board's consideration. Anyone wishing to make an oral statement must notify the District Manager, Bureau of Land Management, 455 Emerson Street, Craig, Colorado. Depending on the number of persons wishing to make oral statements, a per person time limit may be established by the District Manager.

Persons wishing further information may contact the District Manager, Bureau of Land Management, 455 Emerson Street, Craig, Colorado at (303) 824-3417.

Minutes of the meeting will be available at the Craig District Office for public inspection thirty days after the meeting.

Marvin W. Pearson,

District Manager.

Bureau of Reclamation

Temporary Water Service Contract With the Westlands Water District; Availability of the Proposed Contract for Public Review and Comment

The Department of the Interior, through the Bureau of Reclamation, has

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

submitted to Congress for its review and oversight, a proposed temporary water service contract with the Westlands Water District. The major purpose of the contract is to provide for an agricultural and municipal, industrial, and domestic (M&I) water supply from the San Luis and Coalinga Canals and the Mendota Pool, Central Valley Project (CVP), California.

The district is located west of the city of Fresno in Fresno and Kings Counties, California, and encompasses an area of approximately 600,000 acres.

The proposed contract would provide for 1,100,000 acre-feet of water from San Luis Unit facilities and 50,000 acre-feet of water from the Mendota Pool. The term of the proposed contract is for 1 year commencing January 1, 1980, and expiring December 31, 1980. The water rates in the proposed contract are: $8.00 per acre-foot for 900,000 acre-feet of agricultural water furnished from the San Luis Unit facilities; $8.10 per acre-foot for 50,000 acre-feet of agricultural water furnished from the Mendota Pool; $11.80 per acre-foot for 200,000 acre-feet of agricultural water furnished from the San Luis Unit facilities; $11.80 per acre-foot for any interim agricultural water furnished; and $21.80 per acre-foot for any water within the 1,150,000 acre-feet that is used for M&I purposes.

For further information and copies of the proposed contract, please contact Mr. John Budd, Division of Water and Power Resources Management, Bureau of Reclamation, 2800 Cottage Way, Sacramento, California 95825, telephone No. (916) 484–4380.

Comments on the proposed contract will be received up to 30 days from the date of this notice. Any comments received on the proposed temporary water service contract will be considered in future negotiations with the district for a long-term water service contract. All written correspondence concerning the proposed contract is available to the general public pursuant to the terms and procedures of the Freedom of Information Act (80 Stat. 383) as amended.

Dated: September 4, 1979.

R. Keith Higginson,

Commissioner of Reclamation.

Grazing Management Program for the Missouri Breaks of Montana; Availability of Final Environmental Statement

Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, the Department of the Interior has prepared a final environmental statement for the Missouri Breaks area of Montana. The proposal includes implementing an improved grazing management program on portions of the public lands within the Lewistown and Miles City Districts in central Montana. Implementation of 266 new grazing plans or Allotment Management Plans (AMPs), revision of 10 AMPs, and continued operation of 42 AMPs is proposed. The plans include provisions for construction of additional fences, livestock watering facilities, and vegetation treatments. Overall a reduction of 1 percent in livestock use is suggested; however, on an individual allotment basis, the changes range from +158 percent to a −58 percent. The proposal is scheduled to be implemented over a 4-year period.

A limited number of copies are available upon request to the State Director, Bureau of Land Management, 222 North 32nd Street, P.O. Box 30157, Billings, Montana 59107.

Public reading copies will be available for review at the following locations:

Office of Public Affairs, Bureau of Land Management, Interior Building, 18th and C Streets, NW., Washington, D.C. 20240, telephone: (202) 343–5717.

Montana State Office, Bureau of Land Management, 222 North 32nd Street, Billings, Montana 59101.

Lewistown District Office, Bureau of Land Management, Drawer 1100, Airport Road, Lewistown, Montana 59457.

Miles City District Office, Bureau of Land Management, P.O. Box 940, Miles City, Montana 59301.

Dated: September 5, 1979.

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–361A and 50–362A]

Southern California Edison Company, et al.; Receipt of Additional Antitrust Information: Time for Submission of Views on Antitrust Matters

Southern California Edison Company, pursuant to Section 103 of the Atomic Energy Act of 1954, as amended, has filed information requested by the Attorney General for Antitrust Review as required by 10 CFR Part 50, Appendix L. This information concerns two proposed additional ownership participants, the City of Riverside and the City of Anaheim, for the San Onofre Nuclear Generating Station, Units 2 and 3. The current holders of the construction permits are Southern California Edison Conpany and San Diego Gas and Electric Company.

The information was filed in connection with the application by Southern California Edison Company and San Diego Gas and Electric Company for construction permits and operating licenses for two pressurized water reactors. Construction was authorized on October 18, 1973 at the San Onofre site located in San Diego County, California.

The original application was dated May 28, 1970, and the Notice of Receipt of Application for Construction Permits and Facility Licenses and Availability of Applicant's Environmental Report; Time for Submission of Views on Antitrust Matters was published in the **Federal Register** on February 20, 1971 (36 FR 3278). The Notice of Receipt of Application for Facility Operating Licenses; Notice of Availability of Environmental Report; and the Notice of Consideration of Issuance of Facility Operating Licenses and Notice of Opportunity for hearing was published in the **Federal Register** on April 7, 1977 (42 FR 18460). Subsequently, the Notice of Hearing was published in the **Federal Register** on October 26, 1977 (42 FR 57575).

A copy of the above documents are available for public examination and copying for a fee at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. 20555 and at the Mission Viejo Branch Library, 24851 Chrisanta Drive, Mission Viejo, California.

Any person who wishes to have his views on the antitrust matters with respect to the City of Riverside and the City of Anaheim presented to the Attorney General for consideration or who desires additional information regarding the matters covered by this notice, should submit such views or requests for additional information to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Chief, Antitrust and Indemnity Group, Office of Nuclear Reactor Regulation, on or before October 26, 1979.

Dated at Bethesda, Maryland, this 13th day of August, 1979.

For the Nuclear Regulatory Commission,

Robert L. Baer,

Chief, Light Water Reactors Branch No. 2 Division of Project management.

Background

September 5, 1979.

When executive departments and agencies propose public use forms, reporting, or recordkeeping requirements, the Office of Management and Budget (OMB) reviews and acts on those requirements under the Federal Reports Act (44 USC, Chapter 35). Departments and agencies use a number of techniques including public hearings to consult with the public on significant reporting requirements before seeking OME approval. OME in carrying out its responsibility under the Act also considers comments on the forms and recordkeeping requirements that will affect the public.

List of Forms Under Review

Every Monday and Thursday OMB publishes a list of the agency forms received for review since the last list was published. The list has all the entries for one agency together and grouped into new forms, revisions, extensions, or reinstatements. Each entry contains the following information:

The name and telephone number of the agency clearance officer;

The office of the agency issuing this form;

The title of the form;

The agency form number, if applicable;

How often the form must be filled out;

Who will be required or asked to report;

An estimate of the number of forms that will be filled out;

An estimate of the total number of hours needed to fill out the form; and

The name and telephone number of the person or office responsible for OMB review.

Reporting or recordkeeping requirements that appear to raise no significant issues are approved promptly. In addition, most repetitive reporting requirements or forms that require one half hour or less to complete and a total of 20,000 hours or less annually will be approved ten business days after this notice is published unless specific issues are raised; such forms are identified in the list by an asterisk(*).

Comments and Questions

Copies of the proposed forms and supporting documents may be obtained from the agency clearance officer whose name and telephone number appear under the agency name. Comments and questions about the items on this list should be directed to the OMB reviewer or office listed at the end of each entry.

If you anticipate commenting on a form but find that time to prepare will prevent you from submitting comments promptly, you should advise the reviewer of your intent as early as possible.

The timing and format of this notice have been changed to make the publication of the notice predictable and to give a clearer explanation of this process to the public. If you have comments and suggestions for further improvements to this notice, please send them to Stanley E. Morris, Deputy Associate Director for Regulatory Policy and Reports Management, Office of Management and Budget, 726 Jackson Place, Northwest, Washington, D.C. 20503

DEPARTMENT OF AGRICULTURE

Agency Clearance Officer—Richard J. Schrimper—447–6201

Revisions

SECURITIES AND EXCHANGE COMMISSION

[70–6343; Release No. 21200]

Columbia Gas System, Inc.; Proposed Issuance and Sale of Debentures at Competitive Bidding and Redemption of Preferred Stock

August 27, 1979.

Notice is hereby given that The Columbia Gas System, Inc. ("Columbia"), 20 Montchanin Road, Wilmington, Delaware 19807, a registered holding company, has filed a declaration with this Commission pursuant to the Public Utility Holding Company Act of 1935 ("Act"), designating sections 6(a), 7, and 12(c) of the Act and Rules 42 and 50 promulgated thereunder as applicable to the following proposed transactions. All interested persons are referred to the declaration, which is summarized below, for a complete statement of the proposed transactions.

Columbia proposes to issue and sell, subject to the competitive bidding requirements of Rule 50 under the Act, $100,000,000 principal amount of ——— % Debentures, Series Due October 1999. The interest rate of the debentures (which shall be a multiple of ⅛th of 1%) and the price, exclusive of accrued interest, to be paid to Columbia (which shall be not less than 98½% nor more than 101½% of the principal amount therof), will be determined by the competitive bidding. The debentures will be issued under an Indenture between Columbia and Morgan Guaranty Trust Company of New York, Trustee, dated as of June 1, 1961, as heretofore supplemented by various supplemental indentures and as to be further supplemented by a Twenty-seventh Supplemental Indenture to be dated as of October 1, 1979.

The supplemental indenture will prohibit redemption of any of the debentures prior to October 1, 1984, directly or indirectly, with borrowed funds, or in anticipation of funds to be borrowed, having an effective annual interest cost to Columbia of less than the effective annual interest cost of the debentures to Columbia. The proposed debentures will be subject to a sinking fund providing for the retirement of $93,750,000 (94%) thereof prior to maturity through annual payments of $6,250,000 commencing in 1984. Columbia will also have the noncumulative option to redeem on any sinking fund day, at the then current sinking fund redemption price, up to an additional $9,375,000 principal amount of the debentures.

Columbia intends to use the net proceeds from the sale of the new debentures to refund the entire 1,000,000 shares of its 11¼% Cumulative Preferred Stock, Series A ($50 par value) as well as for general corporate purposes, including the 1979 capital expenditure program of Columbia's subsidiaries.

Columbia proposes to redeem such preferred stock on November 1, 1979, at the current redemption price of $54.21 per share plus accrued dividends from September 1, 1979. The purpose of redeeming the preferred stock is to obtain a reduction in capital costs. Columbia states that, at an assumed interest rate of 10% for the new debentures, savings in capital costs, net of income taxes, over the remaining life of the Series A Preferred Stock are estimated to be $15.1 million, before deduction of premium costs asnd redemption expenses of approximately $4.2 million. For each ⅛ of 1% change in the assumed interest rate, the savings in capital costs would change approximately $175,000.

It is stated that the 1979 capital expenditure program of Columbia's subsidiaries is presently estimated to involve expenditures of $360,000,000.

It is further stated that no state commission and no federal commission, other than this Commission, has jurisdiction over the proposed transactions. A statement of the fees, commissions, and expenses related to the proposed transactions is to be filed by amendment.

Notice is further given that any interested person may not later than September 24, 1979, request in writing that a hearing be held on such matter, stating the nature of his interest, the reasons for such request, and the issues of fact or law raised by the filing which he desires to controvert; or he may request that he be notified if the Commission should order a hearing theron. Any such request should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request should be served personally or by mail upon the declarant at the above-stated address, and proof of service (by affidavit or, in case of an attorney at law, by certificate) should be filed with the request. At any time after said date, the declaration, as filed or as it may be amended, may be granted as provided in Rule 23 of the General Rules and Regulations promulgated under the Act, or the Commission may grant exemption from such rules as provided in Rules 20(a) and 100 thereof or take such other action as it may deem appropriate. Persons who request a hearing or advice as to whether a hearing is ordered will receive any notices or orders issued in this matter, including the date of the hearing (if ordered) and any postponements therof.

For the Commission, by the Division of Corporate Regulation, pursuant to delegated authority.

George A. Fitzsimmons,
Secretary.

BILLING CODE 8010–01–M

[811–1614; Rel. No. 10847]

Financial Trends Mutual Fund, Inc.; Proposal To Terminate Registration Pursuant to Section 8(f) of the Act

August 27, 1979.

Notice is hereby given that the Commission proposes, pursuant to Section 8(f) of the Investment Company Act of 1940 ("Act"), to declare by order upon its own motion that Financial Trends Mutual Fund, Inc. ("Fund"), 3100 Wilshire Blvd., Suite 1702, Los Angeles, California 90010, registered under the Act as an open-end, diversified management investment company, has ceased to be an investment company as defined in the Act.

The Fund was organized as a California corporation under the name World Trends Mutual Fund, Inc., on February 8, 1968, and filed both a Notice of Registration on Form N–8A and a Registration Statement on Form N–8B–1 on Ferbuary 28, 1968.

The Commission's records indicate that the Fund was adjudicated a bankrupt by the United States District Court for the Central District of California in 1972 in proceedings bearing case number BK–72–7554 (RO). Pursuant to a plan of liquidation ordered by the District Court, all of the Fund's assets were sold and the net proceeds were distributed to its creditors, with the exception of $5,304.85 of final distribution checks returned to the Trustee and deposited with the Court by him pursuant to 11 U.S.C. Section 106(a). The District Court approved a final distribution to creditors and ordered the Fund's estate in bankruptcy closed and the trustee of said estate discharged on November 21, 1978.

Section 8(f) of the Act provides, in pertinent part, that when the Commission, on its own motion or upon application, finds that a registered investment company has ceased to be an investment company, it shall so declare by order, and, upon the effectiveness of such order, the registration of such company shall cease to be in effect.

Notice is further given that any interested person may, not later than September 21, 1979, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request, and the issues, if any, of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail upon the Fund at the address stated above. Proof of such service (by affidavit, or in case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0–5 of the Rules and Regulations promulgated under the Act, an order disposing of the application will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing, or advice as to whether a hearing is ordered, will receive any notices and orders in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

George A. Fitzsimmons,
Secretary.

BILLING CODE 8010–01–M

[Release No. 34–16145; File No. SR AMEX–79–11]

Self-Regulatory Organizations; Proposed Rule Changes by: American Stock Exchange, Inc.

In the matter of Responses to the Recommendations of the Special Study of the Options Markets as promulgated by the Securities and Exchange Commission in Release No. 34–15575.

Comments Requested by: October 1, 1979.

Pursuant to Section 19(b) (1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s (b) (1) as amended by Pub. L. No. 94–29, 16 (June 4, 1975), notice is hereby given that on August 27, 1979, the American Stock Exchange, Inc. ("AMEX") filed with the Securities and Exchange Commission the proposed rule changes as described in Items I, II and III below, which have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule changes from interested persons.

The Commission has determined that it is necessary and appropriate to provide additional time for public comment on and Commission consideration of the proposed rule changes. Because the subject filing contains numerous rule proposals which, if approved, would affect significantly the operation of the standardized options markets, the Commission believes that additional time is necessary to enable commentators to address meaningfully the substance of the proposals and to enable the Commission to give the proposals the careful consideration they warrant before determining whether to approve the proposals or to initiate proceedings to determine whether they should be disapproved.

Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act, hereby extends until 90 days from the date of publication of notice of filing of the proposed rule changes captioned above, the time period within which the Commission must either approve the proposed rule changes or institute proceedings to determine whether the proposed rule changes should be disapproved.

I. Self-Regulatory Organization's Statement of Terms of Substance of the Proposed Rule Changes

The following is a summary of the rule changes proposed by AMEX. The text of the proposed rule changes is attached as Exhibit A to this notice, with brackets used to indicate words to be deleted and italics used for words to be added.

Rule 921. A new Commentary .01 has been added to the Rule which lists specific categories of minimum information that a member organization must seek to obtain before opening an options account for a customer. Paragraph (b) of the Rule is proposed to be amended to require that customer background and financial information be retained by the member organization as proved in Rule 922. Paragraph (c) of the Rule is proposed to be amended to require that such information be furnished to each new options customer (that is a natural person) for his verification. Also, it is proposed that this information must be sent again to a customer whenever the firm is aware of any material change in the customer's financial situation.

Rule 930. This Rule is proposed to be amended to require customer account statements to bear a legend asking customers to notify the firm of any changes in their financial situation.

Rule 922. A new paragraph (c) of this Rule is proposed to be added to require that customer background and financial information be maintained by members at the branch office servicing the customer's account and the principal supervisory office having jurisdiction over that branch office. Also, it is proposed that monthly account statements for the most recent months and other records necessary to the proper supervision of accounts be maintained at, or easily accessible to, both offices. A new paragraph (b) is proposed to be added which would require member firms that do a public business to specifically identify a Compliance Registered Options Principal ("CROP") having no sales functions to be responsible for the review of the firm's options compliance program and to propose any appropriate remedial action. Final responsibility for supervision of all of the firm's options activities would remain with the Senior Registered Options Principal ("SROP") although the CROP would be required to furnish reports on a regular basis directly to the firm's senior management. The requirement for a non-sales CROP will not apply to firms earning less than $1,000,000 in options commissions annually or having 10 or less options registered representatives.

Rule 923. The Rule is proposed to be amended to prohibit a broker-dealer from recommending any opening transaction to a customer unless he has a reasonable basis for believing that the customer is able to evaluate the risks of the transaction and is financially able to bear them.

Rule 932. This new Rule would require firms to maintain a central, firm-wide file containing specified information concerning all options-related complaints. Copies of such complaints would be required to be forwarded to the central location and maintained at the branch office that is the subject of the complaint.

Rule 342(d). The Rule is proposed to be amended to call for written notification to the AMEX of disciplinary action taken against persons associated with a member as well as against the member itself, including notification of significant action taken by the member against its associated persons.

Rule 341.08(11). The rule is proposed to be amended to extend the period of continued disciplinary jurisdiction over terminated registered employees provided an inquiry is commenced

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

within one year following notice of termination.

Rule 991. The Rule is proposed to be amended to require the approval by the CROP of all communications to customers and to further define the standards applicable to such communications. The proposed amendments would also exempt advertisements from certain of the approval requirements if such advertisements had been previously submitted to another self-regulatory organization having comparable standards regarding advertising. Commentary .01, .02 and .03 contain further detail concerning what should or should not be included in particular types of communications to customers. Relevant costs and other assumptions used in computing annualized rates of return would also be required to be disclosed by Commentary .03 under the Rule. This Commentary would also contain other standards and disclosure requirements pertaining to projected performance figures. Other provisions of Commentary .03 would impose requirements applicable to options work sheets utilized by member firms, including the requirement that such work sheets must be uniform within a given firm. Complete work sheets would be required to be retained by member firms the same as all other written communications to customers. Commentary .03 would also include performance reports within the definition of "sales literature", require that they be approved by the CROP and be retained by the firm, and establish standards for their content.

Rule 981. The Rule is proposed to be amended to require members who utilize random allocation of exercise notices to use either an automated method that has been approved by a self-regulatory organization, of the manual method that has been uniformly specified by all of the self-regulatory organizations. FIFO methods of allocation would also be required to be approved by a self-regulatory organization. Members would be required to notify their customers of the method of allocation utilized and explain how it works. Also, it is proposed that the Rule be amended to require that records relating to exercise allocation be preserved for three years.

Rule 957. The Rule is proposed to be amended to require that Specialists and Registered Traders in options inform the AMEX of all accounts in which they trade stock or options, and also notify the AMEX of all orders for and positions in underlying securities and related securities.

Rule 922. This Rule is proposed to be amended to require every branch manager to be qualified as a Registered Options Principal ("ROP"), unless the branch office has not more than three Registered Representatives, and is otherwise under the supervision of a ROP.

Rule 924. The Rule is proposed to be amended to require that customers over whose accounts members exercise investment discretion be furnished with a written explanation of the risks involved in the systematic use of one or more options strategies in these accounts. All such descriptive material would be required to meet the "sales literature" minimum standards of the proposed Rule 991. The proposed amendment would also require that the SROP review the acceptance of each discretionary account to determine whether the ROP accepting the account had a reasonable basis for believing that the customer was able to understand and bear the risks of the proposed strategies or transactions.

II. Self-Regulatory Organization's Statement of Purpose and Statutory Basis of Proposed Rule Change

In its filing with the Commission, AMEX included the following statements concerning the purpose and basis of the proposed rule changes and discussed comments it received on the proposed rule change. Such statements are reproduced in sections (A), (B) and (C) below.

(A) *Self-Regulatory Organization's Statement of Purpose of and Statutory Basis for Proposed Rule Changes.*—The rule changes filed herewith represent responses to the recommendations of the Special Study of the Options Markets as promulgated by the Commission in Release No. 34–15575.

A discussion of the purpose of each of the rule changes included in this filing is presented below under the caption of the respective recommendation of the Options Study to which the rule change is responsive. To facilitate the Commission's review, the captions of the various responses to recommendations of the Options Study are keyed to the numbering system used in Release No. 34–15575.

The statutory basis for these rule changes, as stated in Release No. 34–15575, is that the implementation of the recommendations of the Options Study is "[c]onsistent with the scheme of self-regulation embodied in the Securities Exchange Act of 1934."

I.A.1.a, b, and c. (Rule 921)

These related recommendations call for the collection and recording of background and financial information concerning customers in order to support the approval of their accounts for options transactions and subsequent suitability determinations, and they also call for the verification by the customer of this information. In response, we propose to add a new Commentary .01 to Rule 921, governing the opening of accounts, that lists specific categories of minimum information that a member organization must seek to obtain before opening an options account for a customer. We have not required that all member organizations adopt a uniform options customer information form, since we believe it appropriate to permit the firms to have some flexibility in this regard, so long as the minimum information required by Commentary .01 is included. However, we understand on the basis of discussions with representatives of the Securities Industry Association that the SIA expects to develop and make available contemporaneously with the effective date of this Commentary, a standard options customer information form that would satisfy the new requirements.

We also propose to add specific record keeping requirements applicable to options customer information by including in paragraph (b) of Rule 921 a cross-reference to the provisions of Rule 922 that state how options customer information should be maintained. (See I.A.1.d. below).

Paragraph (c) to Rule 921 will require that every new options customer that is a natural person be sent for his verification the background and financial information reflected in his customer account information form within 15 days of the approval of his account for options transactions. In addition, this information must again be sent to the customer for verification whenever the firm is aware of any material change in the customer's financial situation. Customer account statements will contain a legend asking that customers notify the firm of any changes in their financial situation (see proposed change to Rule 930).

I.A.1.d. (Rule 922)

In response to this recommendation concerning the maintenance of records of customer background and financial information, we propose to add to Rule 922 a requirement that background and financial information of customers approved for options transactions must be maintained both at the branch office and at the principal supervisory office having jurisdiction over the branch office. In addition, Rule 922 will require that monthly account statements for the most recent 6 months be maintained at both offices and that other records necessary to the proper supervision of

accounts be easily accessible to both offices. With these new record keeping requirements, not only the registered representative servicing a customer's account, but also the persons responsible for supervising the registered representative, will have easy access to all relevant information concerning the customers and his account.

I.A.1.e. (Rule 923)

The purpose of the proposed amendment to Rule 923 is to make applicable to all recommended opening options transactions the more stringent suitability requirements (that the customer be able to evaluate the risks of the transaction and be financially able to bear them) that now apply only to recommendations for uncovered call writing or put writing. Under the amended suitability rule, a broker-dealer would be prohibited from recommending any opening options transaction to a customer unless these requirements are met.

I.A.1.f. (Rule 932)

In response to the recommendation that copies of customer compliants be maintained at a central office and at relevant branch offices, we propose to require member firms to maintain a central, firm-wide file of all options-related complaints containing specified information concerning each complaint. Copies of the complaints themselves would also be forwarded to and maintained at the same central location. In addition, a copy of every options-related complaint would be maintained at the branch office that is the subject of the complaint.

I.A.1.g. (Rule 922)

This proposed amendment to Rule 922 would require member firms that do a public business to specifically identify a Compliance Registered Options Principal having no sales functions to be responsible for the review of the firm's options compliance program and to propose any appropriate remedial action. Final responsibility for supervision over all of the firm's options activities would remain with the SROP, although the CROP would be required to furnish reports on a regular basis directly to the firm's senior management. The separation of responsibilities between the CROP and the SROP (except in those firms that choose to have a non-sales SROP) provides for audit of compliance by someone having no sales functions, and yet recognizes that the leadership of most securities firms appropriately has and will continue to have sales functions in combination with supervisory responsibilities. In order to avoid placing unacceptable economic burdens upon similar firms, the requirement for a non-sales CROP will not apply to firms earning less than $1 million in options commissions or having 10 or less options registered representatives.

I.A.1.h. (Rules 342(d) and 341.08(11))

The proposed amendment to Rule 342(d) provides for notification to the Exchange of disciplinary action taken against members. The Rule will call for written notification of disciplinary action taken against persons associated with a member as well as against the member itself, including notification of significant action taken by the member against its associated persons.

The proposed amendment to Rule 341.08(11) extends the period of continued disciplinary jursidiction over terminated registered employees so long as an inquiry is commenced within 1 year following notice of termination.

I.A.1.i, j, k, and l. and I.A.3.a, b, and c. (Rule 991)

We propose to expand existing Rule 991, which currently deals with advertisements, market letters and sales literature, so as to cover all communications to customers. The expanded rule, together with interpretations thereunder, will incorporate a number of different recommendations of the Options Study.

Proposed revisions to Rule 991 itself are designed to require the approval by the Compliance Registered Options Principal of all communications to customers and to further define the standards applicable to such communications. The Rule would also provide for better coordination among the self-regulatory organizations with respect to the approval of advertisements. Commentary .01, .02, and .03 contain further detail concerning what should or should not be included in particular types of communications to customers.

The recommendations that relevant costs and other assumptions used in computing annualized rates of return must be disclosed will be included in Commentary .03 under the Rule. This commentary also contains other standards and disclosure requirements pertaining to projected performance figures. Other provisions of Commentary .03 would impose requirements applicable to options work sheets utilized by member firms, including the requirement that such work sheets must be uniform within a given firm. Completed work sheets would be required to be retained by member firms the same as all other written communications to customers. Commentary .03 also includes performance reports within the definition of "sales literature," and requires that they be approved by the Compliance Registered Options Principal and retained by the firm, and it contains standards for performance reports to assure that each such report is confined to a specifically identifiable and relevant universe.

Finally, the Rule and its commentary contemplate the distribution to all member firms of a publication entitled "Guidelines for Options Communications" that would provide further information concerning the standards applicable to communications to customers. A copy of this publication is available for inspection and copying in the Commission's Public Reference Room, but is not filed as a proposed rule change.

I.A.1.m. (Rule 981)

We proposed to amend Rule 981 by requiring members who choose to utilize a random allocation of exercise notices to use either an automated method that has been approved by an SRO, or the manual method that has been uniformly specified by all of the SRO's. FIFO methods of allocation must also be approved by an SRO. Members will be required to notify their customers of the method of allocation utilized, explaining how it works.

I.A.1.n. (Rule 981)

We proposed adding to Rule 981 a requirement that records relating to exercise allocation be preserved for three years. This period of retention will facilitate auditing compliance with required methods of exercise allocation.

I.A.1.o and p. (Rule 957)

Rule 957 will be amended by adding a new requirement that Specialists and Registered Traders in options must inform the Exchange of all of the accounts in which they trade stock or options, and must also notify the Exchange of all orders for and positions in underlying securities and related securities. Both of these requirements will improve Exchange surveillance over the options-related trading activities of such persons.

I.A.2.b. (Rule 922)

The proposed amendment to this Rule will require every branch manager to be qualified as a ROP, unless the branch office has not more than three RRs, and is otherwise under the supervision of a ROP. This requirement is one of a

number of changes intended to improve internal supervision of firms' options activities.

I.A.2.c. and I.A.2.d. (Rule 924)

The proposed amendment to this Rule will require that customers over whose accounts members exercise investment discretion must be furnished with a written explanation of the risks involved in the systematic use of one or more options strategies in these accounts. All such descriptive material would be required to meet the "sales literature" minimum standards of the proposed "Communications to Customers" rule. The amendment would also require that the SROP review the acceptance of each discretionary account to determine whether the ROP accepting the account had a reasonable basis for believing that the customer was able to understand and bear the risks of the proposed strategies or transactions. Under existing Rule 923, a ROP must personally accept every discretionary account, and the added step of a SROP's review of the ROP's acceptance is intended to provide an additioinal level of supervisory audit over the acceptance of these kinds of accounts.

(B) *Self-Regulatory Organization's Statement on Burden on Competition.*—The Exchange recognizes that, as pointed out in several of the comments received from members, certain of the proposed rule changes will increase the costs to members in handling customers' options transactions, which in turn may place smaller member organizations at a competitive disadvantage. The Commission will have to determine whether the possible competitive burden of these rule changes is necessary or appropriate in furtherance of the Act in deciding whether to approve these rule changes.

(C) *Self-Regulatory Organization's Statement on Comments Received From Members, Participants, or Others on Proposed Rule Changes.*—Comments on the proposed rule changes were solicited and received from members in several ways. First, representatives of the Securities Industry Association attended and actively participated in most of the meetings of the joint SRO task force that developed the rule changes. Second, a preliminary draft of the rule changes was mailed to every member of each of the SROs involved, with a request that comments be forwarded to any one of the seven signatory SROs. A large number of detailed comments were received in response to this mailing; these are available for inspection and copying in the Commission's Public Reference Room. Many of the comments received in response to the preliminary draft led to revisions in the rule changes that are reflected in the proposals presented in Item 1 hereof. Where the SROs determined not to make changes in response to member comments, often the SROs were sympathetic to the concerns raised by the commentators, but felt that these concerns were outweighed by the emphasis that the Commission had placed upon the particular rule change that was the subject of the comment. The following is a summary of those comments received from members that are relevant to the proposed rule changes in their present form.

Recommendations I.A.1.a.–c. (Opening of Accounts)

A number of members commented that many customers will consider it burdensome and an invasion of privacy to have to provide personal financial information to their brokers, and will refuse to do so. Others questioned the relevance of much of the information that must be sought. In response to these comments, the list of information that must be obtained has been reduced, as explained in Item 3 above. Verification of customer information was subject to much criticism as being very expensive (especially for smaller firms) and not likely to be meaningful. While much of this comment was directed at the requirement for periodic verification, which has since been significantly reduced, the requirement for *any* verification was criticized by many members. One member criticized the inclusion of specific time requirements governing when the record of a new customer's background information must be first sent to him for verification, claiming that such time limits are arbitrary and artificial.

Recommendation I.A.1.d. and f. (Record-Keeping)

Many members criticized as unnecessarily duplicative and expensive the requirement that customer account records be kept both at headquarters and at the branch office.

Recommendation I.A.1.e. (Suitability)

Several firms expressed the belief that expanded concepts of suitability exposed firms to inappropriate risks of liability. Other comments were that customers should be able to make their own investment decisions without having to satisfy a third party, and that strict options suitability rules would drive customers into other, riskier, less regulated products. Specific criticism was made of the requirement that a broker must assess the customer's ability to evaluate risks, claiming that this goes beyond traditional concepts of suitability.

Recommendation I.A.1.g. (Non-Sales Options Compliance Person)

This proposal drew many comments pointing out the cost it would present for small firms. The expanded exemptive provisions of the rule as filed are included in response to this concern. Other comments objected to the concept of separating the sales function from compliance and supervision functions, while others expressed the view that the non-sales compliance officer would amount to a token appointment, but at a high cost. Many comments noted that the costs of complying with this requirement would place smaller firms at a competitive disadvantage.

Recommendation I.A.1.h. (Disciplinary Reports and Jurisdiction)

Some firms observed that a reporting requirement might inhibit firms from taking disciplinary action. Others noted the absence of clear standards defining what constitutes disciplinary action. Several comments objected to the apparent need to file duplicate reports (which will be eliminated upon the implementation of proposed 17d–2 plans). One comment endorsed the extension of SRO disciplinary jurisdiction over former members, while another comment expressed the view that this was improper and inconsistent with the spirit of the Act.

Recommendation I.A.1.i, j, k, l., and Recommendation I.A.3.a.–c. (Communications to Customers)

Comments suggested that this rule imposed too many responsibilities on the CROP, that centralized approval of communications to customers is unworkable, especially in a large firm, and that advance SRO approval of advertising is contrary to the trend in such matters. Many comments were addressed to the requirements applicable to specific types of written communiations, generally critizing them for being inflexible, unworkable, expensive to administer, and enlarging the firms' exposure to liabilities.

Recommendation I.A.1.m. and n. (Allocation of Exercise Notices.)

Comments suggested that firms should be given more flexibility than this rule would permit, and that an explanation of exercise allocation would be confusing to customers. Others noted the expense involved in conforming data processing equipment to required methods of allocation.

Recommendation I.A.1.o. and p. (Market-Makers' Account and Stock Orders)

Many comments characterized these requirements as burdensome and costly. It was suggested that these requirements should apply to exchange floor members only, and not to upstairs traders.

Recommendation I.A.2.b. (ROP Qualification of Branch Managers)

This requirement was criticized as being costly and not likely to result in improved supervision. Some suggested that it should be sufficient if an assistant manager or other supervisor is ROP-qualified, without requiring that the branch manager be so qualified.

Recommendation I.A.2.c. and d. (Discretionary Accounts)

Several firms commented that these requirements would be so onerous as to inhibit firms from offering discretionary accounts. The requirement for providing an explanation of each strategy utilized in the account was the focus of special criticism. We have attempted to respond to this crticism by making the requirement apply to "programs" for trading options, but not to each separate strategy that might be used.

III. Date of Effectiveness of Proposed Rule Change and Timing for Commission Action

On or before December 10, 1979, the Commission will:

(A) By order approve such proposed rule changes, or

(B) Institute proceedings to determine whether the proposed rule changes should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary, Securities and Exchange Commission, 500 North Capitol Street, Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and of all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. Section 522, will be available for inspection and copying in the Commission's Public Reference Section, 1100 L Street, N.W., Washington, D.C. Copies of such filings will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number SR-Amex-79-11 and should be submitted on or before October 1, 1979.

For the Commission by the Division of Market Regulation, pursuant to delegated Authority.

George A. Fitzsimmons,
Secretary.
August 29, 1979.

Exhibit A

Recommendations Rule 921

I.A.1. a., b. and c Opening of Accounts

(a) No member or member organization shall accept an order from a customer [for the] *to* purchase or [sale] *write* an option contract unless the customer's account has been approved for options trading in accordance with the provisions of this Rule.

[(b) through (d)]—Delete

(b) Diligence in Opening Account. In approving a customer's account for options transactions, a member or member oganization shall exercise due diligence to learn the essential facts as to the customer and his investment objectives and financial situation, and shall make a record of such information which shall be retained in accordance with Rule 922. Based upon such information, the branch office manager or other Registered Options Principal shall approve in writing the customer's account for options transactions; provided, that if the branch office manager is not a Registered Options Principal, his approval shall be confirmed within a reasonable time by a Registered Options Principal.

(c) Verification of Customer Background and Financial Information. The background and financial information upon which the account of every new customer that is a natural person has been approved for options trading, unless the information is included in the customer's account agreement, shall be sent to the customer for verification within fifteen (15) days after the customer's account has been approved for options transactions. A copy of the background and financial information on file with the member organization shall also be sent to the customer for verification within fifteen (15) days after the member organization becomes aware of any material change in the customer's financial situation.

(d) Agreements to Be Obtained. Within fifteen (15) days after a customer's account has been approved for options transactions, a member organization shall obtain from the customer a written agreement that the account shall be handled in accordance with the Rules of the Exchange and the Rules of the Options Clearing Corporation and that such customer, acting alone or in concert with others, will not violate the position or exercise limits set forth in Rules 904 and 905.

(e) Prospectus to Be Furnished. At or prior to the time a customer's account is approved for options transactions, a member organization shall furnish the customer with a current Prospectus as defined in Rule 926.

Commentary

[.01 through .04]—Delete

[.05 and .06]—See SR-Amex-79–12

.01 In fulfilling its obligations pursuant to paragraph (b) of this Rule with respect to options customers that are natural persons, a member organization shall seek to obtain the following information at a minimum (information shall be obtained for all participants in a joint account):

1. Investment objectives (e.g., safety or principal, income, growth, trading profits, speculation)

2. Employment status (name of employer, self-employed or retired)

3. Estimated annual income from all sources

4. Estimated net worth (exclusive of family residence)

5. Estimated liquid net worth (cash, securities, other)

6. Marital status; number of dependents

7. Age

8. Investment experience and knowledge (e.g., number of years, size, frequency and types of transactions) for options, stocks and bonds, commodities, other

In addition, the customer's account records shall contain the following information, if applicable:

a. Source or sources of background and financial information (including estimates) concerning the customer

b. Discretionary trading authorization: agreement on file; name, relationship to customer and experience of person holding trading authority

c. Date prospectus furnished to customer

d. Types of transactions for which account is approved (e.g., buying, covered writing, uncovered writing, spreading)

e. Name of registered representative

f. Name of ROP approving account; date of approval

g. Dates of verification of currency of account information

The member organization should consider utilizing a standard account approval form so as to ensure the receipt of all the required information.

.02 Refusal of a customer to provide any of the information called for in

V 4 4 / 176 S E 10 79 UMI

Commentary .01 shall be so noted on the customer's records at the time the account is opened. Information provided shall be considered together with other information available in determining whether and to what extent to approve the account for options transactions.

.03 The requirement of paragraph (c) of this Rule for the initial and subsequent verification of customer background and financial information is to be satisfied by sending to the customer the information required in Items 1 through 6 of Commentary .01 above as contained in the member's records and providing the customer with an opportunity to correct or complete the information. In all cases, absent advice from the customer to the contrary, the information will be deemed to be verified.

Rule 930

I.A.1.c. Statement of Account

Statements of account required by Rule 419 shall be sent not less frequently than once every month to each customer in whose account there has been an entry during the preceding month with respect to an option contract. *The statement shall bear a legend requesting the customer to promptly advise the member of any material change in the customer's investment objectives or financial situation.*

Rule 923

I.A.1.e. Suitability

(a) No member, member organization or registered employee thereof shall recommend to any customer any transaction for the purchase or sale (writing) of an option contract unless such member, member organization or registered employee has reasonable grounds to believe that the entire recommended transaction is not unsuitable for such customer on the basis of information furnished by such customer after reasonable inquiry concerning the customer's investment objectives, financial situation and needs, and any other information known by such member, member organization or registered employee.

[(b)]—Delete

(b) No member, member organization or registered employee thereof, shall recommend to a customer an opening transaction in any option contract unless the person making the recommendation has a reasonable basis for believing, at the time of making the recommendation, that the customer has such knowledge and experience in financial matters that he may reasonably be expected to be capable of evaluating the risks of the recommended transaction, and is financially able to bear the risks of the recommended position in the option contract.

Rule 932 (New)

I.A.1.f. Customer Complaints

Every member organization conducting customer business shall maintain and keep current a separate central log, index or other file for all options-related complaints, through which these complaints can easily be identified and retrieved. The central file shall be located at the principal place of business of the member organization or such other principal office as shall be designated by the member organization. At a minimum, the central file shall include: (i) identification of complainant, (ii) date complaint was received, (iii) identification of Registered Representative servicing the account, (iv) a general description of the matter complained of, and (v) a record of what action, if any, has been taken by the member organization with respect to the complaint. The term "options-related complaint" shall mean any written statement by a customer or person acting on behalf of a customer alleging a grievance arising out of or in connection with listed options. Each options-related complaint received by a branch office of a member organization shall be forwarded to the office in which the separate, central file is located not later than 30 days after receipt by the branch office. A copy of every options-related complaint shall be maintained at the branch office that is the subject of the complaint.

I.A.1.d.

I.A.1.g. Rule 922

I.A.2.b. Supervision of Accounts

(a). Senior Registered Options Principal. In addition to the requirements of Rule 411, every member organization shall provide for the diligent supervision of all its customer accounts, and all orders in such accounts, to the extent such accounts and orders relate to options contracts, by a general partner (in the case of a partnership) or officer (in the case of a corporation) of the member organization who is a Registered Options Principal and who has been specifically identified to the Exchange as the member organization's Senior Registered Options Principal.

(b) *Compliance Registered Options Principal. Member organizations shall designate and specifically identify to the Exchange a Compliance Registered Options Principal, who may be the Senior Registered Options Principal and who shall have no sales functions and shall be responsible to review and to propose appropriate action to secure the member organization's compliance with securities laws and regulations and Exchange rules in respect of its options business. The Compliance Registered Options Principal shall regularly furnish reports directly to the compliance officer (if the Compliance Registered Options Principal is not himself the compliance officer) and to other senior management of the member organization. The requirement that the Compliance Registered Options Principal have no sales functions shall not apply to a member organization that has received less than $1,000,000 in gross commissions on options business as reflected in its FOCUS Report for either of the preceding two fiscal years or that currently has 10 or less Registered Representatives.*

(c) *Maintenance of Customer Records. Background and financial information of customers who have been approved for options transactions shall be maintained at both the branch office servicing the customer's account and the principal supervisory office having jurisdiction over that branch office. Copies of account statements of options customers shall be maintained at both the branch office supervising the accounts and the principal supervisory office having jurisdiction over that branch for the most recent six-month period. Other records necessary to the proper supervision of accounts shall be maintained at a place easily accessible both to the branch office servicing the customer's account and to the principal supervisory office having jurisdiction over that branch office.*

(d) *Branch Offices. No branch office of a member organization shall transport options business with the public unless the principal supervisor of such branch office accepting options transactions has been qualified as a Registered Options Principal; provided, that this requirement shall not apply to branch offices in which no more than three Registered Representatives are located, so long as the options activities of such branch offices are appropriately supervised by a Registered Options Principal.*

Commentary

.01 No change

.02 No change

I.A.1.h. Rule 341

Approval of Registered Employees and Officers

No member or member organization shall permit any employee to perform regularly any of the duties normally performed by a registered employee unless that employee has been registered with and approved by the Exchange. No member corporation shall permit any person to assume the duties of an officer unless such corporation has filed an application with and received the approval of the Exchange.

Commentary

.01 through .08 subparagraph (10)—No change

Subparagraph (11) If the American Stock Exchange, Inc., during the period of [60 days] *one year* immediately following [(a) termination of my employment, or (b)] receipt by the Exchange of written notification of such termination [whichever occurs later,] gives me written notice that the Exchange is making inquiry into any specified matter or matters occurring prior to termination of such employment, I shall agree that I will thereafter comply with any request of the Exchange for me to appear and testify, submit records, respond to written requests, attend hearings, and accept disciplinary charges or penalties with respect to the matter or matters specified in such notice in every respect in conformance with the Constitution and Rules and practices of the Exchange, in the same manner and to the same extent as required to do if I had remained an employee. If I refuse to accept such written notice or, having been given such notice, refuse or fail to comply with any such request of the Exchange, I agree that such refusal or failure may, in the discretion of the Exchange, act as a bar to future Exchange approval of my employment until such time as the Exchange has completed investigation into the matter or matters specified in such notice; has determined a penalty, if any, to be imposed against me; and until the penalty, if any, has been carried out.

.09 and .10—No change

I.A.1.h. Rule 342

Association of Members, Member Organizations and Persons Associated with Member Organizations

(a) through (c)—No change

(f) Disciplinary Action. Every member shall promptly notify the Exchange in writing of any disciplinary action, including the basis therefor, taken by any national securities exchange or association, clearing corporation, commodity futures market or government regulatory body against the member or its associated persons, and shall similarly notify the Exchange of any disciplinary action taken by the member itself against any of its associated persons involving suspension, termination, the withholding of commissions or imposition of fines in excess of $2,500 or any other significant limitation on activities.

I.A.1.i., j., k, 1 Rule 991

I.A.3.a., b., c. Communications to Customers

[Advertisements, Market Letters and Sales Literature Relating to Options]

[(a) through (d)]—Delete

Commentary

[.01]—Delete

(a) General Rule. No member or member organization, and no partner or employee thereof, shall utilize any advertisement, sales literature or other communications to customers or the public concerning options which:

(i) contains any untrue statement or omission of a material fact or is otherwise false or misleading;

(ii) contains promises of specific results, exaggerated or unwarranted claims, opinions for which there is no reasonable basis or forecasts of future events which are unwarranted or which are not clearly labeled as forecasts;

(iii) contains hedge clauses or disclaimers which are not legible, which attempt to disclaim responsibility for the content of such literature or for opinions expressed therein, or which are otherwise inconsistent with such advertisement or sales literature;

(iv) fails to meet general standards of good taste and truthfulness; or

(v) would constitute a prospectus as that term is defined in the Securities Act of 1933, unless it meets the requirements of Section 10 of said Act.

(b) Approval by Compliance Registered Options Principal. All advertisements and sales literature (except completed worksheets) issued by a member or member organization pertaining to options shall be approved in advance by the Compliance Registered Options Principal or his designee. Copies thereof, together with the names of the persons who prepared the material, the names of the persons who approved the material and, in the case of sales literature, the source of any recommendations contained therein, shall be retained by the member or member organization and be kept at an easily accessible place for examination by the Exchange for a period of three years.

(c) Exchange Approval Required for Options Advertisements. In addition to the approval required by paragraph (b) of this Rule, every advertisement of a member or member organization pertaining to options shall be submitted to the Exchange at least ten days prior to use (or such shorter period as the Exchange may allow in particular instances) for approval and, if changed or expressly disapproved by the Exchange, shall be withheld from circulation until any changes specified by the Exchange have been made or, in the event of disapproval, until the advertisement has been resubmitted for, and has received, Exchange approval. The requirements of this paragraph shall not be applicable to:

(i) advertisements submitted to another self-regulatory organization having comparable standards pertaining to advertisements; and

(ii) advertisements in which the only reference to options is contained in a listing of the services of a member organization.

(d) Except as otherwise provided in the Commentary hereunder, no written materials respecting options may be disseminated to any person who has not previously or contemporaneously received a current prospectus of The Options Clearing Corporation.

(e) Definitions. For purposes of this Rule, the following definitions shall apply:

(i) The term "advertisement" shall include any sales material that reaches a mass audience through public media such as newspapers, periodicals, magazines, radio, television, telephone recording, motion picture, audio or video device, billboards, signs, or through written communications to customers or the public not required to be accompanied or preceded by a current prospectus of The Options Clearing Corporation.

(ii) The term "sales literature" shall include any written communication (not defined as an "advertisement") distributed or made available to customers or the public that contains any analysis, performance report, projection or recommendation with respect to options, underlying securities or market conditions, any standard forms of worksheets, or any seminar text which pertains to options and which is communicated to customers of the public at seminars, lectures or similar such events, or any Exchange-produced materials pertaining to options.

Commentary

.01 The special risks attendant to options transactions and the

V 4 4 / 1 7 6 SEP 10 79 UMI

complexities of certain options investment strategies shall be reflected in any communication which discusses the uses or advantages of options. In the preparation of communications respecting options, the following guidelines shall be observed:

A. Any statement referring to the potential opportunities or advantages presented by options should be balanced by a statement of the corresponding risks. The risk statement should reflect the same degree of specificity as the statement of opportunities, and broad generalities should be avoided. Thus, a statement such as "with options, an investor has an opportunity to earn profits while limiting his risk of loss", should be balanced by a statement such as "of course, an options investor may lose the entire amount committed to options in a relatively short period of time."

B. It should not be suggested that options are suitable for all investors. All communications discussing the use of options should include a warning to the effect that options are not for everyone.

C. Statements suggesting the certain availability of a secondary market for options should not be made.

.02 Advertisements pertaining to options shall conform to the following standards:

A. Advertisements may only be used (and copies of the advertisements may be sent to persons who have not received a prospectus of The Options Clearing Corporation) if the material meets the requirements of Rule 134 under the Securities Act of 1933, as that Rule has been interpreted as applying to options. Under Rule 134, advertisements must be limited to general descriptions of the security being offered and of its issuer. Advertisements under this Rule shall state the name and address of the person from whom a current prospectus of The Options Clearing Corporation may be obtained. Such advertisements may have the following characteristics:

(i) The Text of the advertisement may contain a brief description of such options, including a statement that the issuer of every such option is The Options Clearing Corporation. The text may also contain a brief description of the general attributes and method of operation of the exchange or exchanges on which such options are traded and of The Options Clearing Corporation, including a discussion of how the price of an option is determined on the trading floor(s) of such exchange(s);

(ii) The advertisement may include any statement required by any state law or administrative authority;

(iii) Advertising designs and devices, including borders, scrolls, arrows, pointers, multiple and combined logos and unusual type faces and lettering as well as attention-getting headlines and photographs and other graphics may be used, provided such material is not misleading.

B. The use of recommendations or of past or projected performance figures, including annualized rates of return, is not permitted in any advertisement pertaining to options.

.03 Written communications (other than advertisements) pertaining to options shall conform to the following standards:

A. Such communications shall state that supporting documentation for any claims (including any claims made on behalf of options programs or the options expertise of sales persons), comparisons, recommendations, statistics or other technical data, will be supplied upon request.

B. Such communications may contain projected performance figures (including projected annualized rates of return), provided that:

(i) no suggestion of certainty of future performance is made;

(ii) parameters relating to such performance figures are clearly established (e.g., to indicate exercise price of option, purchase price of the underlying stock and its market price, option premium, anticipated dividends, etc.);

(iii) all relevant costs, including commissions and interest charges (if applicable with regard to margin transactions) are disclosed;

(iv) such projections are plausible and are intended as a source of reference or a comparative device to be used in the development of a recommendation;

(v) all material assumptions made in such calculations are clearly identified (e.g., "assume option exercised," etc.);

(vi) the risks involved in the proposed transactions are also discussed;

(vii) in communications relating to annualized rates of return, that such returns are not based upon any less than a sixty-day experience; any formulas used in making calculations are clearly displayed; and a statement is included to the effect that the annualized returns cited might be achieved only if the parameters described can be duplicated and that there is no certainty of doing so.

C. Such communications may feature records and statistics which portray the performance of past recommendations or of actual transactions, provided that:

(i) any records or statistics must be confined to a specific "universe" that can be fully isolated and circumscribed and that covers at least the most recent 12-month period;

(ii) such communications include or offer to provide the date of each initial recommendation or transaction, the price of each such recommendation or transaction as of such date, and the date and price of each recommendation or transaction at the end of the period or when liquidation was suggested or effected, whichever was earlier;

(iii) such communications disclose all relevant costs, including commissions and interest charges (if applicable with regard to margin transactions) and, whenever annualized rates of return are used, all material assumptions used in the process of annualization;

(iv) in the event such records or statistics are summarized or averaged, such communications include the number of items recommended or transacted, the number that advanced and the number that declined;

(v) an indication is provided of the general market conditions during the period(s) covered, and any comparison made between such records and statistics and the overall market (e.g., comparison to an index) is valid;

(vi) such communications state that the results presented should not and cannot be viewed as an indicator of future performance; and

(vii) a Registered Options Principal determines that the records or statistics fairly present the status of the recommendations or transactions reported upon and so initials the report.

D. In the case of an options program (i.e., an investment plan employing the systematic use of one or more options strategies), the cumulative history or unproven nature of the program and its underlying assumptions shall be disclosed.

E. Standard forms of options worksheets utilized by member organizations, in addition to complying with the requirements applicable to sales literature, must be uniform within a member organization.

F. Communications that portray performance of past recommendations or actual transactions and completed worksheets shall be kept at a place easily accessible to the sales office for the accounts or customers involved.

I.A.1.m. Rule 981

I.A.1.n. Allocation of Exercise Notices

(a) Each member organization shall establish fixed procedures for the allocation of exercise notices assigned in respect of a short position in option contracts in such member organization's customers account. Such allocation shall be made on a "first-in, first-out" *or automated random selection basis that has been approved by the Exchange or on a manual random selection basis that has been specified by the Exchange. Each member organization shall inform its customers in writing of the method it uses to allocate exercise notices to its customers' accounts, explaining its manner of operation and the consequences of that system.* [basis, on a basis of random selection or another allocation method that is fair and equitable to the customers of such member organization, provided, however, that such method of allocation may provide that an exercise notice of block size will to the extent possible be allocated to a customer or customers having an open short position of block size and that an exercise notice of less than block size will to the extent possible be allocated to a customer having a short postition of less than block size; and provided further that such method of allocation may provide that a member organization shall allocate an exercise notice to a customer based upon the form of margin deposited by such customer if directed to do so by The Options Clearing Corporation. For the purposes of this Rule, an exercise notice or a short position with respect to 25 or more units of trading of the same class of options shall be deemed to be of "block size"].

(b) Each member organization shall report its proposed method of allocation to the Exchange and obtain the Exchange's prior approval thereof, and no member organization shall change its method of allocation unless the change has been reported to and approved by the Exchange. The requirements of this paragraph shall not be applicable to allocation procedures submitted to and approved by another Exchange having comparable standards pertaining to methods of allocation.

[Each member organization shall, upon the request of a customer, furnish to such customer a description of the method used by it in assigning exercise notices to the accounts of customers.]

(c) Each member organization shall preserve for a three-year period sufficient work papers and other documentary materials relating to the allocation of exercise assignment notices to establish the manner in which allocation of such exercise notices is in fact being accomplished.

I.A.1.o. Rule 957 (New)

I.A.1.p. Securities Accounts and Orders of Registered Traders and Specialists

(a) Identification of Accounts. In a manner prescribed by the Exchange, each Specialist and Registered Trader engaging in options trading shall file with the Exchange and keep current a list identifying all accounts for stock, option and related securities trading in which the Specialist or Registered Trader may, directly or indirectly, engage in trading activities or over which he exercises investment discretion. No Specialist or Registered Trader shall engage in stock, options, or related securities trading in an account which has not been reported pursuant to this Rule.

(b) Reports of Orders. In a manner prescribed by the Exchange, each Specialist or Registered Trader engaging in options trading shall, on the business day following order entry date, report to the Exchange every order entered by the Specialist or Registered Trader for the Purchase or sale of a security convertible into or exchangeable for such underlying security as well as opening and closing positions in all such securities held in each account reported pursuant to this Rule. The report pertaining to orders must include the terms of each order, identification of the brokerage firms through which the orders were entered, the times of entry or cancellation, the times reports of executions were received and, if all or part of the order was executed, the quantity and execution price.

Commentary

Reports of accounts and orders required to be filed with the Exchange pursuant to this rule relate only to accounts in which a Specialist or Registered Trader, as an individual directly or indirectly, controls trading activities. Reports are required for accounts over which a Specialists or Registered Trader exercises investment discretion as well as his proprietary accounts. Reports are not required simply because of a Specialist or Registered Trader's passive interest in his firm's proprietary accounts. For purposes of this rule, related securities include securities convertible into or exchangeable for underlying securities.

I.A.2.c. Rule 924

I.A.2.d. Discretionary Accounts

[a]—Delete

(a) Authorization and Approval required. No member and no partner or employee of a member organization shall exercise any discretionary power with respect to trading in options contracts in a customer's account unless such customer has given prior written authorization and the account has been accepted in writing by a Registered Options Principal. The Senior Registered Options Principal shall review the acceptance of each discretionary account to determine the the Registered Options Principal accepting the account had a reasonable basis for believing that the customer was able to understand and bear the risks of the strategies or transactions proposed, and he shall maintian a record of the basis for his determination. Each discretionary order shall be approved and initialled on the day entered by the branch office manager or other Registered Options Principal, provided that if the branch office manager is not a Registered Options Principal, his approval shall be confirmed within a reasonable time by a Registered Options Principal. Every discretionary order shall be identified as discretionary on the order at the time of entry. Discretionary accounts shall receive frequent appropriate supervisory review by the Compliance Registered Options Principal. The provisions of this paragraph shall not apply to discretion as to the price at which or the time when an order given by a customer for the purchase or sale of a definite number of option contracts in a specified security shall be executed.

(b) Options Programs. Where the discretionary account utilizes options programs involving the systematic use of one or more options strategies, the customer shall be furnished with a written explanation meeting the requirements of Rule 991 of the nature and risks of such programs.

BILLING CODE 8010-01-M

[Rel. No. 16144; File No. SR-NASD-79-2]

National Association of Securities Dealers, Inc.; Order Approving Proposed Rule Change

August 28, 1979.

On June 1, 1979, the National Association of Securities Dealers, Inc. ("NASD" or "Association"), 1735 K Street, N.W., Washington, D.C. 20006, Filed with the Commission pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78(s)(b)(1) (the "Act"), and Rule 19b-4 thereunder, copies of a proposed rule change (the "Proposal") to amend the schedule of charges for users of the NASDAQ System. The new structure will place greater emphasis on usage-based charges and will constitute a reduction in charges paid by all users of the NASDAQ System. Although the percentage of reduction will vary among individual System users, the proposal is designed to produce an overall reduction of approximately 32 percent in user charges.

Notice of the Proposal, together with the terms of substance thereof, was given by publication of a Commission Release (Securities Exchange Act Release No. 15905, June 8, 1979) and by publication in the **Federal Register** (44 FR 34674 June 15, 1979).

All written statements with respect to the proposed rule change which were filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, were considered and (with the exception of those statements or communications which may be withheld from the public in accordance with the provisions of 5 U.S.C. 552) were made available to the public at the Commission's Public Reference Room, 1100 L. Street, N.W., Washington, D.C.

The Commission finds that the Proposal is consistent with the requirements of the Act and the applicable rules and regulations thereunder applicable to the NASD and, in particular, the requirements of Section 15A of the Act. The Commission believes that the revised fee structure provides for the equitable allocation of reasonable charges among NASD members and other persons using the NASDAQ System and is not designed to permit unfair discrimination between brokers or dealers. In addition, the Commission has relied upon the Association's representation that, notwithstanding implementation of the proposal, the NASD and NASDAQ, Inc. expect to generate sufficient future revenues to support operation of the NASDAQ System, to implement proposed System enhancements (including those associated with the establishment of a national market system) and otherwise to carry out the Association's self-regulatory responsibilities.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act, that the Proposal be, and it hereby is, approved.

By the Commission.
George A. Fitzsimmons,
Secretary.

BILLING CODE 8010-01-M

[Release No. 34-16142; File No. SR-MSRB-79-9]

Self-Regulatory Organizations; Proposed Rule Change by Municipal Securities Rulemaking Board

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, 16 (June 4, 1975), notice is hereby given that on August 22, 1979, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Statement of the Terms of Substance of the Proposed Rule Change

The Municipal Securities Rulemaking Board (the "Board") is filing proposed rule A-17 (hereinafter referred to as the "proposed rule change") as described below. The rule is intended to establish procedures to ensure confidential treatment of any report of an examination of a municipal securities broker or municipal securities dealer, or information extracted from such a report, which is furnished to the Board by the Securities and Exchange Commission (the "Commission").

Proposed rule A-17 sets forth the terms and conditions under which members of the members of the Board and its staff will have access to such information. It provides, among other matters, that access to any examination report will be limited to members of the Board's staff who are authorized to review the material by the Board's Executive Director and General Counsel, jointly. The proposed rule change requires each authorized staff member to execute a written undertaking pledging compliance with the confidentiality provisions of rule A-17. Additionally, it requires that examination reports be maintained in locked cabinets with access permitted only to authorized staff members.

The text of the proposed rule change is as follows:

Rule A-17. Confidentiality of Examination Reports

Any report of an examination or of information extracted from a report of an examination ("examination report") of a municipal securities broker or municipal securities dealer furnished to the Board by the Commission pursuant to Section 15B(c)(7)(B) of the Act [1] shall be maintained and utilized in accordance with the following terms and conditions, in order to ensure the confidentiality of any information contained in such reports:

(1) Any such examination report shall be reviewed only by authorized members of the Board's staff; no member of the Board shall have access, directly or indirectly, to an examination report. Anything herein to the contrary notwithstanding, the staff of the Board may furnish to the Board or any appropriate committee thereof summaries or other communications relating to the examination reports, provided that such summaries or other communications shall not contain information which might make it possible to identify the municipal securities brokers or municipal securities dealers or associated persons which are the subject of the examination reports to which any such summary or other communication relates.

(2) The Executive Director and General Counsel shall designate jointly the members of the staff of the Board who shall have access to the examination reports.

(3) Each member of the staff of the Board who is authorized pursuant to section (2) of this rule to have access to the examination reports shall execute a written undertaking that he or she will not copy or use for personal purposes any part of such reports, nor reveal the contents thereof to any unauthorized person.

(4) The examination reports shall be maintained on the premises of the Board in locked cabinets with access thereto limited to authorized members of the staff of the Board.

[1] On May 30, 1979, the Commission published for comment proposed Rule 15Bc7-1, which would govern the furnishing of examination reports to the Board. Upon adoption of the Commission's Rule, the Board will amend its proposed rule to include a textural reference to Rule 15Bc7-1.

Statement of Basis and Purpose

The basis and purpose of the foregoing proposed rule change is as follows:

Purpose of Proposed Rule Change

Section 15B(c)(7)(B) of the Securities Exchange Act of 1934, as amended (the "Act"), provides that the Securities and Exchange Commission (the "Commission") will make available to the Board, upon request, copies of any report of an examination of a municipal securities broker or municipal securities dealer made by or furnished to the Commission, subject to such limitations as the Commission, by rule, deems necessary or appropriate in the public interest.[2] On February 16, 1979, the Board submitted a written request to the Commission pursuant to Section 15B(c)(7) for copies of all such examination reports. The Commission thereafter published for comment Proposed Rule 15Bc7-1 [3] which provides that the Commission will furnish to the Board copies of examination reports, so long as the Board establishes by rule and maintains "adequate procedures for ensuring the confidentiality of any information made available to it by the Commission pursuant to Section 15B(c)(7)(B) of the Act."

The proposed rule change is intended to establish procedures to ensure confidential treatment of such information. The proposed rule change provides, among other matters, that access to any examination report will be limited to members of the board's staff who are authorized to review the material by the board's Executive Director and General Counsel, jointly. In addition, each authorized staff member must execute a written undertaking pledging compliance with the confidentiality provisions of rule A-17. The rule requires the examination reports to be maintained in locked cabinets with access to them permitted only to authorized staff members.

Basis Under the Act for Proposed Rule Change

As noted above, Section 15B(c)(7)(B) of the Act provides that the Commission will make available to the board, upon request, copies of any report of an examination of a municipal securities broker or municipal securities dealer made by or furnished to the Commission, subject to any limitations as the Commission deems necessary or appropriate. The proposed rule change, which is designed to ensure the confidential treatment of such reports, was adopted pursuant to the general authority conferred on the Board by Section 15B(b)(2)(I) of the Act to provide for the operation and administration of the Board.

Comments Received From Members, Participants or Others on Proposed Rule Change

The Board has neither solicited nor received comments on the proposed rule change.

Burden on Competition

The proposed rule change does not affect the conduct of business by any broker, dealer, or municipal securities dealer. The board therefore believes that the proposed rule change does not impose any burden on competition.

On or before October 15, 1979, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before September 25, 1979.

[2] Compliance examinations of municipal securities brokers and municipal securities dealers are conducted periodically by the Commission, the National Association of Securities Dealers, Inc., and the appropriate bank regulatory agencies, which are the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation.

[3] As of the date of this filing, Proposed Rule 15Bc7-1 has not yet been adopted by the Commission.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.
George A. Fitzsimmons,
Secretary.
August 27, 1979.

BILLING CODE 8010-01-M

[Release No. 34-16143; File No. SR-NASD-79-7]

Self-Regulatory Organizations; Proposed Rule Change by National Association of Securities Dealers, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, 16 (June 4, 1975), notice is hereby given that on August 13, 1979, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Statement of the Terms of Substance of the Proposed Rule Change

The NASD's Statement of Text of Proposed Rule Change

The following is the full text of the proposed amendment to Schedule A, under Article III, Section 1 of the By-Laws of the National Association of Securities Dealers, Inc. (Material to be deleted is bracketed, material to be added is italicized).

Schedule A

Assessments and fees, pursuant to the provisions of Article III of the By-Laws of the Corporation, shall be determined on the following basis after [October 1, 1978] *October 1, 1979.*

Section 1—Assessments

Each member shall pay an annual assessment composed of the following:

(a) A basic membership fee of [$250.00] *$300.00.*

(b) An amount equal to:

(i) [0.19%] *0.21%* of annual gross income from state and municipal securities transactions, and

(ii) [0.23%] *0.25%* of annual gross income from over-the-counter securities transactions.

[A member must report annual gross income, as defined in Section 5 of this Schedule, for the preceding calendar year unless the member made a binding, one-time election in 1977 to report annual gross income on the basis of its fiscal year ending during the preceding calendar year. New members may make this election during the first year of membership.]

Each member is to report annual gross income as defined in Section 5 of

V 44/176 SEP 10 79 UMI

this Schedule, for either the preceding calendar year or the member's fiscal year ending in the preceding calendar year. The 12-month reporting period must be in accordance with the member's previous written election. New members will be given an opportunity to make this election after they become members.

Members wishing to change their reporting year must advise the Association, in writing, of the change in dates and provide a reason for the change (i.e., merger or other organizational change and/or change in tax or fiscal year). If the change is from a fiscal year to the calendar year or to a new fiscal year ending at a later date, the member is to provide two reports of gross income covering the 12 consecutive months of both the new and old years. In such case, the assessment in the year of change will be the greater amount determined from the two reports. If the change is from a calendar year or a fiscal year to a new fiscal year ending at an earlier date, the member is to report gross income for the 12 consecutive months to the end of its new fiscal year.

(c) (unchanged)

Section 2—Fees

(a) (unchanged)

(b) Each member shall be assessed a fee of [$35.00] *$50.00* for each application filed with the Association for registration of a registered representative or registered principal.

(c) There shall be an examination fee of [$30.00] *$40.00* assessed as to each individual who is required to take an examination for registration as a registered representative pursuant to the provisions of Schedule "C" of the By-Laws. This fee is in addition to the registration fee described in Item (b). In a case where a broker/dealer applicant for membership in the Corporation who was previously, and at the time of his application for membership is currently, qualified pursuant to the provisions of Section 15(b)(8) of the Securities Exchange Act of 1934, and Rule 15b8–1 thereunder, to act as a broker/dealer, is requird to register contemporaneously 100 or more registered representatives who were previously and are currently qualified pursuant to the aforementioned Section 15(b)(8) and Rule 15b8–1 the examination fee to be assessed pursuant to this subparagraph (c) shall be determined by the President of the Corporation, or his delegate. The fee shall be based upon a stated amount per applicant, a flat fee to the member or some other equitable basis which recognizes the reduced cost per examination of administering examinations to a large number of applicants within a relatively short period of time. In no case shall the amount agreed upon be less than the equivalent of [$12.50] *$20.00* per applicant and such reduced fee shall not apply to any individual not falling within the scope of the provisions of subparagraph (2) of paragraph II of Schedule C of the By-Laws.

(d) There shall be an examination fee of [$30.00] *$40.00* assessed as to each individual who is required to take an examination for principals pursuant to the provisions of Schedule "C" of the By-Laws.

(Remaining portion of Section 2 is unchanged.)

* * * * *

Section 7—Service Charges for Processing Extension of Time Request

(a) (unchanged)

(b) The service charge for processing each initial extension of time request shall be [$1] *$2*. A service charge of $2 shall be imposed on all subsequent extension of time requests (1) involving the same transaction under Regulation T and/or (2) involving an extension of time previously granted pursuant to Rule 15c3–3(n).

The NASD's Statement on Purpose of Proposed Rule Change

The proposed amendments to Schedule A will increase the Association's income to insure that the Association will receive adequate funding to continue to fulfill its regulatory function. The Association anticipates that the proposed changes will generate sufficient income to provide a balanced budget in fiscal 1980. The lower rate for gross income from states and municipal securities transactions is being continued because of the additional financial burden imposed upon municipal securities broker/dealers in supporting the Municipal Securities Rulemaking Board. The provision permitting a change in reporting year has been adopted as a service to members who wish to change their reporting year.

The NASD's Statement on Basis Under the Act for Proposed Rule Change

It is the responsibility of the Association under Section 15A of the Securities Exchange Act, as amended, to regulate its members and persons associated with its members who deal in securities. Section 15A(b) provides that an association of brokers and dealers shall not be registered as a national securities association unless the Commission determines that the rules of the association provide for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility or system which the association operates or controls. The proposed changes in Schedule A provide for an equitable allocation of the reasonable dues and fees among the members of the Association and is in furtherance of the purposes of the Act.

The NASD's Statement on Comments Received From Members, Participants or Others on Proposed Rule Change

Under Article III, Section 1 of the By-Laws of the Association, membership approval of a change in a fee schedule is not necessary. Therefore, comments of the membership on the proposed amendments to Schedule A were not solicited or received.

The NASD's Statement on Burden on Competition

Section 15A of the Securities Exchange Act places on the Association the responsibility to regulate the activities of its members, and provides the statutory basis for the assessment of equitable fees. Thus, it is felt that there is no general burden on competition imposed by the proposed rule change, and that any incidental financial burdens on the membership is in furtherance of the purposes of the Act.

The NASD's Statement on Basis for Taking, or Being Put Into Effect Pursuant to Section 19(b)(3)

The proposed amendments are to take effect upon filing pursuant to paragraph (A) of Section 19(b)(3) of the Act because they establish or change a due, fee, or other charge. The Association will declare the proposed amendments effective as of October 1, 1979.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submission should file six (6) copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and all written submissions will be available for inspections and copying in the public Reference Room, 1100 L Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before October 1, 1979. For the Commission by the Division of Market Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

August 28, 1979.

BILLING CODE 8010–01–M

[Release No. 34–16152; File No. SR–MSRB–77–12]

Self-Regulatory Organizations; Proposed Rule Change by Municipal Securities Rulemaking Board

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on August 28, 1979, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Statement of the Terms of Substance of the Proposed Rule Change

The Municipal Securities Rulemaking Board (the "Board") is filing herewith an amendment to proposed rule G–23 on activities of financial advisors (hereafter referred to as the "proposed rule change"). The text of the proposed rule change is as follows:[1]

Rule G–23. Activities of Financial Advisors

(a) through (c) No change.

(d) Underwriting Activities. No broker, dealer, or municipal securities dealer that has a financial advisory relationship with respect to a new issue of municipal securities shall acquire as principal either alone or as a participant in a syndicate or other similar account formed for the purpose of purchasing, directly or indirectly, from the issuer all or any portion of such issue, or arrange for such acquisition or participation by a person controlling, controlled by, or under common control with such broker, dealer, or municipal securities dealer unless

(i) No change.

(ii) if such issue is to be sold by the issuer at competitive bid, [A] the issuer has expressly consented in writing prior to the bid to such acquisition or participation.[, and]

[(B) all material information concerning the issue or the issuer thereof obtained as a result of the financial advisory relationship and utilized or expected to be utilized by such broker, dealer, or municipal securities dealer in the course of purchasing or selling the securities constituting such issue has been made available on a timely basis upon request to other brokers, dealers, and municipal securities dealers interested in bidding for the issue.]

The limitations and requirements set forth in this section (d) shall also apply to any broker, dealer, or municipal securities dealer controlling, controlled by, or under common control with the broker, dealer, or municipal securities dealer having a financial advisory relationship. The use of the term "indirectly" in this section (d) shall not preclude a broker, dealer, or municipal securities dealer who has a financial advisory relationship with respect to a new issue of municipal securities from purchasing such securities from an underwriter, either for its own trading account or for the account of customers, except to the extent that such purchase is made to contravene the purpose and intent of this rule. Each broker, dealer, and municipal securities dealer subject to the provisions of this section (d) shall maintain a copy of the written disclosures, acknowledgements and consents required by this section in a separate file and in accordance eith the provisions of rule G–9.

(e) through (g) No change.

Statement of Basis and Purpose

The basis and purpose of the foregoing proposed rule change is as follows:

Purpose of Proposed Rule Change

On September 20, 1977, the Board filed with the Securities and Exchange Commission (the "Commission") a series of proposed rules and rule amendments, the general purpose of which was to codify basic standards of fair and ethical business conduct for municipal securities professionals (the "fair practice rules"). One of the fair practice rules was proposed rule G–23 relating to the financial advisory activities of municipal securities professionals. On October 19, 1978, the Commission approved the fair practice rules, except for proposed rule G–23 and a proposed amendment to rule D–8. The proposed rule change would modify proposed rule G–23.

Proposed rule G–23(d)(ii)(B) would permit a municipal securities professional to act as both financial advisor and underwriter in a competitive sale if two conditions are met: (1) the issuer expressly consents in writing to a municipal securities professional acting in such dual capacity, and (2) the municipal securities professional provides, upon request, to other municipal securities dealers interested in bidding for the issue all material information "concerning the issue or issuer thereof obtained . . . and utilized or expected to be utilized" by the municipal securities professional in the course of purchasing or selling the securities.

The Board adopted these requirements principally for the purpose of providing protection to issuers in the situation where a municipal securities professional acts both as financial advisor and underwriter with respect to the same issue of securities. More specifically, the requirement to obtain the written consent of issuers was adopted to assure that issuers are made aware of the intention of their financial advisors to act in such dual capacity and to provide issuers with an opportunity to prohibit their financial advisors from doing so if the issuers determine that such an arrangement is not in their own best interests. The requirement to disclose information to other prospective underwriters was adopted to provide additional protection to issuers by promoting competition through the timely dissemination of material information.

The proposed rule change eliminates the disclosure requirement. On reconsideration, the Board decided to delete this provision primarily because of its concern that compliance with the provision could pose significant practical problems for municipal securities professionals. For example, the provision might place a municipal securities dealer in a potentially difficult position if the dealer is aware of speculative information of a favorable nature concerning the issuer. Disclosure of such information would be required under the provision in question; however, the dealer might be exposed to lawsuits if the anticipated events did not materialize. The Board notes that a similar point was made by the Commission Staff in a comment letter to the Board, dated June 23, 1977, on the exposure draft of rule G–23.

The provision could also present significant practical problems for a municipal securities professional in the situation were an issuer retains separate counsel to provide advice on disclosure matters. In this situation, a financial advisor may have relatively little control over what information is included in, or omitted from, the official statement. A municipal securities professional wishing to act in both capacities could therefore be put in the difficult position of having to decide whether to disclose information which the issuer and its counsel have decided not to include in the official statement because the

[1] *Italics* indicate new language; [brackets] indicate deletions.

V 4 4 / 1 7 6

information is considered either too speculative or immaterial.

Such practical problems might deter municipal securities professionals from bidding on issues for which they act as financial advisors, a result which would be contrary to the purpose of the Board in adopting the rule and not in the best interests of issuers.

The Board does not believe that the deletion of this provision will materially weaken the rule. The other provisions of the rule provide direct protection to issuers in a competitive sale situation. In addition, the Board wishes to stress that the deletion of the disclosure requirement would not affect any obligation which a municipal securities professional may have by reason of the antifraud provisions of the Securities Exchange Act of 1934, as amended (the "Act"), and the rules promulgated thereunder, with respect to the disclosure of material information in connection with the purchase or sale of securities.

Basis Under the Act for Proposed Rule Change

The Board has adopted the proposed rule change pursuant to section 15B(b)(2) of the Act, which authorizes the Board to adopt rules governing transactions in municipal securities effected by brokers, dealers and municipal securities dealers, and in accordance with the standards set forth in section 15B(b)(2)(C) of the Act, which provides in part that the Board's rules shall

> be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, * * * to remove impediments to and perfect the mechanism of a free and open market in numicipal securities, and, in general, to protect investors and the public interest; and [shall] not be designed to permit unfair descrimination between customers, issuers, municipal securities brokers, or municipal securities dealers * * *.

Comments Received From Members, Participants or Others on Proposed Rule Change

No written comments were solicited or received in regard to the proposed rule change. The Board undertook to reconsider proposed rule G-23(d)(ii)(B), however, in response to oral comments made with respect to the provision by industry members and the Commission staff. Several industry commentators expressed concern with the anticipated practical difficulties of complying with the provision. For example, one commentator at a seminar stated that, in view of such problems, his firm would probably either refrain from bidding on issues for which it acts as financial advisor or retain its own counsel solely for the purpose of assuring compliance with the requirements of this provision. The Commission staff also expressed concern regarding the practical consequences of the application of the provision, as well as concern that the provision might conflict with section 15B(d)(2) of the Act.

The Commission staff also raised a question with respect to subparagraph (d)(i)(A) of proposed rule G-23. In the case of negotiated sales of new issues of municipal securities, proposed rule G-23 provides that a municipal securities dealer which has acted as a financial advisor may purchase a new issue of municipal securities if certain specified conditions are met. Subparagraph (d)(i)(A) sets forth one of these conditions, namely, that the municipal securities professional terminate in writing the financial advisory relationship with respect to the issue to be underwritten and obtain the express written consent of the issuer, at or after such termination, to the change in capacity. The Commission staff questioned the need for the termination requirement, and in particular whether such a requirement would have any practical consequences in the situation where there is a continuing financial advisory relationship.

The Board is of the firm belief that the termination requirement is an integral and important part of proposed rule G-23, and should therefore not be deleted from the rule. As indicated in previous filings, the proposed rule is intended to address the inherent conflict of interest involved in a municipal securities professional acting in the dual capacity of financial advisor and underwriter, an arrangement which the Board believes is contrary to the fiduciary obligations of a financial advisor and not consistent with the public interest. The termination requirement would directly address this problem by prohibiting municipal securities professionals from acting simultaneously in both capacities with respect to the same issue.[3] Further, the termination requirement would cause issuers to focus on the intention of their financial advisors to act also as underwriters, and therefore afford issuers the opportunity at a critical point to consider the advisability of permitting them to do so. At a minimum, the requirement would heighten the sensitivity of issuers to the significance of a financial advisor changing capacity and might lead them to scrutinize more closely the consequences of such a development.

In the situation where there is continuing financial advisory relationship, the termination provision would have additional practical importance. Notice of termination of a financial advisory relationship with respect to a particular issue might very well prompt an issuer to renegotiate the fee arrangement under its financial advisory agreement, in order to reflect the diminished services being provided to the issuer pursuant to the agreement. The Board is aware that in many continuing financial advisory relationships the compensation to the dealer is not broken-down by services, but is stated in an aggregate amount or otherwise calculated. The Board believes, however, that municipal securities professionals as a general matter are able to determine with relative precision the cost of providing various services, including the cost of rendering financial advisory services with respect to a particular issue.

Burden on Competition

In the initial filing of the fair practice rules, including proposed rule G-23, the Board stated that in its opinion the fair practice rules "will not impose any burden on competition among brokers, dealers or municipal securities dealers not necessary or appropriate in furtherance of the purposes of the Act." The Board would like to take this opportunity to explain its reasons for this conclusion with respect to proposed rule G-23.

In view of the important purpose of the rule, the Board believes that, to the extent the rule imposes any burden on competition, such a result is justifiable as appropriate and in the public interest. As noted above and in previous filings, the Board believes that there is an inherent conflict of interest in a municipal securities professional acting both as a financial advisor and underwriter with respect to the same issue of municipal securities, and that the existence of this conflict may have serious adverse consequences for issuers and the general public which they represent. Proposed rule G-23 was adopted for the express purpose of providing protection to issuers in such situations.

Further, any burden resulting from the implementation of proposed rule G-23 will necessarily be relatively insignificant. It should be emphasized that there is *no* proscripton in the rule against a municipal securities professional acting both as financial advisor and underwriter with respect to the same issue. A municipal securities professional may act in both capacities in competitive and negotiated sales, provided that certain conditions are met. Moreover, these conditions can be easily satisfied by municipal securities professionals through the disclosure of certain basic information and the taking of other simple actions. Accordingly, proposed rule G-23 would not place municipal securities professionals who act both as financial advisors and underwriters at a material competitive disadvantage to other municipal securities professionals who act only as underwriters.

In this regard, certain persons suggested in their comments on the exposure draft of rule G-23 that, in the absence of federal legislation regulating the activities of independent financial advisors, the rule would place securities professionals at a competitive disadvantage to such advisors. The Board believes that this assertion is without merit. It is precisely the fact that securities professionals may function in a dual capacity as financial advisors and underwriters that forms the basis for the Board's proposal.[3]

The proposed rule change which is the subject of this particular filing would not impose any burden on competition since it eliminates a requirement to which all brokers, dealers, and municipal securities dealers would otherwise be subject.

On or before October 15, 1979, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(A) by order approve such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street NW., Washington, D.C.

Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before October 1, 1979.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

August 30, 1979.

BILLING CODE 8010-01-M

[3] The Board believes that the conflict involved in acting in both capacities is mitigated in competitive bid situations, where the existance of competition among underwriters for award of the securities tends to introduce an arm's-length element into the establishment of the terms of the issue and the underwriting. In these situations, the Board therefore believes that it is sufficient to require disclosure of a financial advisor's intent to bid on an issue in a competitive sale, and to require the prospective underwriter to obtain the consent of the issuer to the dual role. In contrast, in a negotiated sale situation, the element of competition among prospective purchasers is absent, and the Board therefore believes that it is appropriate to require a municipal securities professional to terminate its financial advisory relationship before acting as an underwriter.

[3] The proposed rule would also apply in the situation where a municipal securities dealer acts as a financial advisor and purchases all or part of a new issue for investment, and not for resale. The Board recognizes that an independent financial advisor would not be subject to the rule if it does the same. The Board believes, nonetheless, that the important public purposes served by the rule justify the competitive disadvantage, if any, which municipal securities professionals may be subject to in such circumstances.

[Rel. No. 10848; 812-4465]

Capital Corp. of Wyoming, Inc.; Filing of Application

August 28, 1979.

Notice is hereby given that Capital Corporation of Wyoming, Inc. ("Applicant"), 145 South Durbin Street, P.O. Box 612, Casper, Wyoming 82602, a Wyoming corporation, filed an application on April 20, 1979, pursuant to Section 6(c) of the Investment Company Act of 1940 ("Act") for an order of the Commission exempting Applicant from all provisions of the Act. All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below.

Applicant represents that it was organized during July 1978 under the laws of Wyoming. It proposes to operate as a small business investment company under the Small Business Investment Act of 1958 ("SBIA"), as amended. Applicant has filed an application with the Small Business Administration for a license under the SBIA. The application filed with the Commission states that Applicant is a wholly owned subsidiary of Wyoming Industrial Development Corporation ("WIDC"), which is the sole sponsor of Applicant.

Applicant states that its primary function will be to complement and further the business activities of WIDC in carrying out the purposes of the Wyoming Industrial Corporation Act. The application indicates that WIDC supplies capital to Wyoming businesses otherwise unable to obtain institutional financing and that WIDC conducts business only in Wyoming and only with companies doing or proposing to do business in Wyoming. Applicant represents that WIDC will not own securities of any small business investment company other than the Applicant. Furthermore, Applicant represents that its current directors are Wyoming residents and that the Applicant and WIDC intend to restrict directorships of the Applicant to Wyoming residents.

Applicant states that it will provide WIDC access to borrowed funds not available to WIDC. In this regard, Applicant, as a small business investment company, will be able to borrow up to three times the amount of its capital from the Small Business Administration. The application states that WIDC is not able to borrow funds from the Small Business Administration as a small business investment company.

The application states that Applicant's authorized capitalization is 100,000 shares of common stock, $10.00 par value, of which 100 shares are presently issued and outstanding and held of record by WIDC. Applicant represents that when it becomes a licensed small business investment company, it will issue an additional 30,900 shares to WIDC at a price of $10.00 per share. The application states that Applicant's common stock does not have any redemption rights and that although the Wyoming Business Corporation Act will permit a Wyoming corporation to purchase or acquire its own shares, the Applicant does not anticipate purchasing or acquiring any capital shares which may be issued by it.

The Applicant states that it may make an offering of additional shares of its capital stock in the future, but that there are currently no plans to do so. The application indicates that such an offering would be limited to one issuance and would be made only to banking organizations located in Wyoming who are willing to acquire shares for investment and not with a view to public distribution or sale. Applicant represents that any stock certificate issued to banking organizations would be impressed with a restrictive legend. The application

SEP 10 79

UMI

V 4 4 / 1 7 6 SE 10 79 UMI

states that each banking organization would have access to the books and records of Applicant at the time it makes its investment decision and on an ongoing basis. Applicant states that to the best of its knowledge, banking organizations which may purchase shares of Applicant's capital stock will be engaged in safe and sound banking practices. The application states that Wyoming state banks are subject to examination, supervision and control by the Wyoming State Bank Examiner. Applicant represents that there are currently 81 national and state banks located in Wyoming and several charter applications for new banks pending, and also represents that Applicant has not had discussions with any of the banks concerning the possible issuance of additional shares of its capital stock. The application states that if shares of Applicant's stock are issued to banking organizations, the amount or number of shares issued to any particular bank would in no event exceed the lesser of 1% of capital and surplus of the bank or the amount or number of shares otherwise permitted to be held by the bank pursuant to applicable federal and state laws. The application states that no underwriting commissions would be paid in connection with the offering and that Applicant would rely upon Section 3(a)(11) or Section 4(2) of the Securities Act of 1933 as an exemption from the registration requirements of that Act.

In addition to borrowing funds from the Small Business Administration, Applicant states that it may attempt to obtain both long-term and short-term debt financing from banks, some of which may become stockholders of less than 5% of Applicant, and other lending institutions located inside and outside Wyoming. The application states that the proceeds from any such loans would be used by the Applicant in the ordinary course of its business and that Applicant does not anticipate the issuance of debt securities to the general public or that a public trading market will ever be established in respect of such debt securities.

Applicant anticipates that its portfolio will consist approximately of the following: (i) 30% in loan participations with banks and savings and loan associations; (ii) 65% in companion loans with banks and savings and loan associations; and (iii) 5% in equity investments. Companion loans are loans made directly to operating small businesses by the Applicant whereby a bank and/or a savings and loan association would make a separate financing secured by separate financing statements, security agreements and/or mortgage positions. This financing would be interrelated and thus companion in nature.

The Applicant states that its assets, which will consist primarily of notes, mortgages, financing statements, and various agreements, will be held by the Applicant in the offices of WIDC or in a safety deposit box in a Casper, Wyoming, bank. The Applicant will not have office facilities or personnel apart from WIDC's. Applicant represents that its financial statements will be prepared annually and will be certified by independent auditors on a consolidated basis with WIDC.

The application states that Applicant will be regulated and examined at least annually by the Small Business Administration. Applicant also states that WIDC is subject to annual examinations by the Wyoming State Bank Examiner under the Wyoming Industrial Development Act and that it is probable that Applicant will also be examined by the Wyoming State Bank Examiner since it is a wholly owned subsidiary of WIDC.

Applicant represents that no finder's fee will be paid by the Applicant to any officer, director or stockholder, of either the Applicant or WIDC in connection with loans or investments made by Applicant and no such persons will be permitted to have an interest in any company to which or in which the Applicant loans or invests funds. The application states that no investment advisor or advisory fees will be paid by the Applicant to any such person, although, if additional shares of the Applicant are issued at some future date to banking organizations, WIDC may charge the Applicant a management fee as payment for use of its office facilities and personnel. Applicant represents that no transactions of the type prohibited by Section 17 of the Act will be executed by the Applicant with any affiliated persons, as defined by Section 2(a)(3) of the Act, of either the Applicant or WIDC.

Section 6(c) of the Act provides, in part, that the Commission may conditionally or unconditionally exempt any person from any provision or provisions of the Act or of any rule or regulation under the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

Because the Applicant, as a small business investment company, will be engaged in the business of investing and since it proposes to acquire investment securities having a value exceeding 40% of its total assets, the Applicant will be an investment company within the definition of Section 3(a)(3) of the Act and will be required to register under the Act unless exempted under Section 6(c) of the Act.

Applicant seeks an exemption from all provisions of the Act on the grounds that registration under the Act and compliance with the provisions of the Act is not necessary for the protection of investors and submits that the issuance of such order would be in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and the provisions of the Act.

Notice is further given that any interested person may, not later than September 20, 1979, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter, accompanied by a statement as to the nature of his interest, the reason for such request and the issues of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail upon the Applicant at the address stated above. Proof of such service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0–5 of the Rules and Regulations promulgated under the Act, an order disposing of the application will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing or advice as to whether a hearing is ordered will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

[FR Doc. 79–27877 Filed 9–7–79; 8:45 am]

BILLING CODE 8010–01–M

[Rel. No. 21203; 70–6336]

The Narragansett Electric Co.; Proposed Increase in Permitted Short-Term Indebtedness; Order Authorizing Solicitation of Proxies in Connection Therewith

August 29, 1979.

Notice is hereby given that The Narragansett Electric Company ("Narragansett"), 280 Melrose Street, Providence, Rhode Island 02901, an electric utility subsidiary of New England Electric System, a registered holding company, has filed with this Commission a declaration and an amendment thereto prusuant to the Public Utility Holding Company Act of 1935 ("Act"), designating Sections 6(a), 7(e), and 12(e) of the Act and Rule 62 promulgated thereunder as applicable to the proposed transaction. All interested persons are referred to the amended declaration, which is summarized below, for a complete statement of the proposed transaction.

The preference provisions of Narragansett's preferred stock provide, *inter alia*, that without the affirmative vote of a majority of said stock then outstanding, Narragansett's unsecured indebtedness shall not exceed 10% of the aggregate principal amount of all its bonds and other secured indebtedness and its capital and surplus (capital and retained earnings). By order in file No. 70–5514 dated June 25, 1974 (HCAR No. 18470), Narragansett was authorized to solicit proxies from its preferred stockholders to obtain their approval for the issuance of unsecured indebtedness in excess of the 10% limitation. By order dated July 19, 1974 (HCAR No. 18505), the Commission authorized the proposed increase in unsecured indebtedness, and such proposal was approved by a majority of the preferred stockholders at a special meeting held on July 25, 1974. The authorizations by the preferred stockholders and the Commission expired on July 19, 1979.

In the instant filing Narragansett proposes to submit to the holders of its preferred stock at a special meeting to be held on October 5, 1979, a proposal to renew its permission to issue an increased amount of unsecured indebtedness. Such renewal will require the affirmative vote of a majority of the total number of shares of preferred stock of all series now outstanding. The vote would renew the authorization for Narragansett to issue unsecured indebtedness in excess of the 10% limitation provided (i) such indebtedness be issued within five years of the Commission's order making effective the declaration filed in this proceeding, (ii) such indebtedness have a maturity not more than six years from the date of such order, and (iii) all Narragansett's unsecured indebtedness not exceed 20% of the aggregate principal amount of all its bonds and other secured indebtedness and its capital and surplus (capital and retained earnings).

Narragansett states that it is seeking this authorization in order to provide the flexibility necessary to finance its business. At June 30, 1979, the 10% limitation would have restricted Narragansett's unsecured indebtedness to $18,400,000, whereas the 20% limitation restricted it to $36,800,000. Narragansett desires the flexibility of the 20% limitation to issue greater amounts of short-term debt, when it is advantageous to do so, pending permanent financing. It does not plan to permanently maintain large amounts of unsecured indebtedness.

The fees and expenses to be incurred in connection with the proposed transaction are estimated at $8,925, including $3,000 of services to be performed at cost by New England Power Service Company, an affiliate of Narragansett. It is stated that no state commission and no federal commission, other than this Commission, has jurisdiction over the proposed transaction.

Notice is further given that any interested person may not later than September 25, 1979, request in writing that a hearing be held on such matter, stating the nature of his interest, the reasons for such request, and the issues of fact or law raised by said declaration, as amended, which he desires to controvert; or he may request that he be notified if the Commission should order a hearing thereon. Any such request should be addressed: Secretary, Securities and Exchange Commission, Washington, DC 20549. A copy of such request should be served personally or by mail upon the declarant at the above-stated address, and proof of service (by affidavit or, in case of an attorney at law, by certificate) should be filed with the request. At any time after said date the declaration, as amended or as it may be further amended, may be permitted to become effective as provided in Rule 23 of the General Rules and Regulations promulgated under the Act, or the Commission may grant exemption from such rules as provided in Rules 20(a) and 100 thereof or take such other action as it may deem appropriate. Persons who request a hearing or advice as to whether a hearing is ordered will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof.

It appearing that the declaration, as amended, regarding the proposed solicitation of proxies should be permitted to become effective forthwith pursuant to Rule 62:

It is ordered, pursuant to Rule 62, that the declaration, as amended, regarding the proposed solicitation of proxies be, and it hereby is, permitted to become effective forthwith, subject to the terms and conditions prescribed in Rule 24 under the Act.

For the Commission, by the Division of Corporate Regulation, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

[FR Doc. 79–27878 Filed 9–7–79; 8:45 am]

BILLING CODE 8010–01–M

[File No. 22–10040]

Warner-Lambert Co.; Application and Opportunity for Hearing

August 30, 1979.

Notice Is Hereby Given that Warner-Lambert Company (the "Company") has filed an application under clause (ii) of Section 310(b)(1) of the Trust Indenture Act of 1939 (the "Act") for a finding by the Commission that: a) the trusteeship of the Irving Trust Company ("Irving Trust") under an indenture dated March 1, 1966 (the "1966 Indenture") and two indentures dated April 1, 1975 (the "1975 Debenture Indenture" and the "1975 Note Indenture", respectively), which were qualified under the Act, b) the trusteeship of Irving Trust under indentures dated August 1, 1968 (the "1968 Indenture"), April 2, 1975 (the "1972 Indenture") and April 2, 1973 (the "1973 Indenture"), which were not qualified under the Act, and, c) the trusteeship of Irving Trust under a new indenture to be dated as of July 1, 1979 (the "New Indenture"), which will not be qualified under the Act, is not so likely to involve a material conflict of interest as to make it necessary in the public interest or for the protection of investors to disqualify Irving Trust from acting as trustee under any of said Indentures.

The Company alleges that: 1. As of March 31, 1979, there were outstanding $865,000 principal amount of 4¼% Guaranteed Debentures Due 1981 issued under an indenture dated March 1, 1966 (the "1966 Indenture") among Warner-Lambert International Capital Corporation ("Capital"), the Company and Irving Trust, which was qualified under the Act. The 1966 Debentures are guaranteed by the Company.

V 44/176 SE 10 79 UMI

2. As of March 31, 1979, Warner-Lambert Overseas, Inc. ("Overseas"), a wholly-owned subsidiary of the Company, had outstanding $7,509,000 principal amount of its 4½% Convertible Guaranteed Debentures Due 1988 issued under an indenture dated August 1, 1968 (the "1968 Indenture") among Overseas, the Company and Irving Trust, which was not qualified under the Act. The 1968 Debentures are also guaranteed by the Company.

3. As of March 31, 1979, there were outstanding $40,000,000 principal amount of 4½% Convertible Debentures Due 1987 issued under an indenture dated April 2, 1972 (the "1972 Indenture") between the Company and Irving Trust, which were sold outside the United States. The indenture under which such debentures were issued was not qualified under the Act.

4. As of March 31, 1979, the Company had outstanding $29,850,000 principal amount of 4¼% Convertible Debentures Due 1988 issued under an indenture dated April 2, 1973 between the Company and Irving Trust, which were sold outside the United States. The indenture under which such debentures wee issued was not qualified under the Act.

5. As of March 31, 1979, the Company had outstanding $75,000,000 principal amount of 8⅞% Debentures Due 2000 issued under an indenture dated April 1, 1975 between the Company and Irving Trust which was qualified under the Act.

6. As of March 31, 1979, the Company had outstanding $75,000,000 principal amount of 8.30% Notes Due 1985 issued under an Indenture dated April 1, 1975 between the Company and Irving Trust, which was qualified under the Act.

7. Under an indenture to be dated as of July 1, 1979 between Warner-Lambert International, N.V., a wholly-owned subsidiary of the Company ("International"), the Company, as guarantor, and Irving Trust, the Company proposes to guarantee $100,000,000 principal amount of the 9% Guaranteed Notes Due 1984 of International (the "New Notes"). The New Notes will be sold to purchases who are not nationals or residents of the United States and, in the opinion of the Company's counsel, the New Notes need not be registered under the Securities Act and the New Indenture need not be qualified under the Act.

8. The 1966 Indenture, the 1968 Indenture, the 1972 Indenture, and 1973 Indenture, the 1975 Debenture Indenture, the 1975 Note Indenture and the New Indenture will be wholly unsecured and the Company and Capital are not in default under the 1966 Indenture, the Company and Overseas are not in default under the 1968 Indenture, and the Company is not in default under the 1972 Indenture, the 1973 Indenture, the 1975 Debenture Indenture or the 1975 Note Indenture. The rights of the 1966 Debentures, the 1968 Debentures and the New Notes, pursuant to the guarantees thereof by the Company, rank equally with the rights of the holders of the 1973 Debentures, the 1975 Debentures and the 1975 Notes.

9. Such differences as exist among the 1966, the 1968, 1972 and 1973 Indentures, the 1975 Debenture Indenture, the 1975 Note Indenture and the New Indenture are not so likely to involve a material conflict of interest as to make it necessary in the public interest or for the protection of investors to disqualify Irving Trust from acting as Trustee under any of said Indentures.

The Company has waived notice of hearing any and all rights to specify procedures under the Rules of Practice of the Securities and Exchange Commission in connection with the matter.

For a more detailed statement of the matters of fact and law asserted here, all persons are referred to said application, which is a public document on file in the offices of the Commission, at 1100 L Street, N.W., Washington, D.C. 20005.

Notice is further given that any interested person no later than October 1, 1979 may submit to the Commission in writing his views or any substantial facts bearing on this application or the desirability of a hearing thereon. Any such communications or request should be addressed: Secretary, Securities and Exchange Commission, 500 North Capitol Street, N.W., Washington, D.C. 20549, and should state briefly the nature of the interest of the person submitting such information or requesting the hearing, the reason for such request, and the issues of fact and law raised by the application which he desires to controvert. At any time after said date, an order granting the application may be issued upon request or upon the Commission's own motion.

For the Commission, by the Division of Corporation Finance, pursuant to delegated authority.

George A. Fitzsimmons,

Secretary.

BILLING CODE 8025-01-M

[License No. 05/07-0012]

Wisconsin Capital Corp.; Filing of Application for Transfer of Control

Notice is hereby given that an Application has been filed with the Small Business Administration (SBA) pursuant to § 107.701 of the Regulations governing Small Business Investment Companies (13 CFR 107.701 (1979)) for transfer of control of the Wisconsin Capital Corporation (WCC), 312 East Wisconsin Avenue, Milwaukee, Wisconsin 53202, a federal Licensee under the Small Business Investment Act of 1958 (the Act), as amended (15 U.S.C. 661 *et seq.*). The proposed transfer of control of WCC, which was licensed January 5, 1960, is subject to the prior written approval of SBA.

Pursuant to agreements between Matrix Venture Funds, Inc. (MVF) and shareholders Ronald Herget, Walter Thiede, Earl Charlton, William Charlton and WCC, MVF has offered to purchase a total of 11,624 shares of WCC's stock, 6,974 shares from the above shareholders and 4,650 shares of unissued stock for a total purchase price of $250,000. This purchase will represent 50 percent of WCC's issued and outstanding stock.

Assuming consummation of the proposed transfer of ownership and control, the management and stockholders of WCC will be:

Officers, Directors and Shareholders	Percent of Stock Ownership
MVF, 312 E. Wisconsin Ave., Milwaukee, WI 53202 (Manager/Investment Adviser)	50
Earl A. Charlton, 840 North 3rd St., Milwaukee, WI 53203 (Secretary)	30
William Charlton, 19616 Valado St., Canoga Park, CA (Shareholder)	4
Eugene Shorts, 1000 Chapin St., Florence, WI 54121 (Director)	16
David L. Springob, 1572 E. Capital Dr., Milwaukee, WI 53211 (Director)	
Harold Berlan, 3332 N. Knoll Terrace, Wauwatosa, WI (President & Director) [1]	
Lawrence J. Kujawski, 13870 W. Crawford Ave., New Berlin, WI (Director) [2]	

[1] Mr. Berlan is President and Sole Shareholder of MVF.
[2] Mr. Kujawski is Vice President of MVF.

Matters involved in SAB's consideration of the application include the general business reputation and character of the proposed new shareholders and management, and the probability of successful operations of the company under such management (including profitability and financial soundness) in accordance with the Act and Regulations.

Notice is further given that any person may, not later than September 25, 1979, submit written comments on the proposed transfer of ownership and control to the Acting Associate Administrator for Finance and Investment, Small Business Administration, 1441 "L" Street, N.W., Washington, D.C. 20416.

A copy of this Notice will be published in a newspaper of general circulation in Milwaukee, Wisconsin.

(Catalog of Federal Domestic Assistance Program No. 59.011 Small Business Investment Companies.)

Date: August 31, 1979.

Peter F. McNeish,

Acting Associate Administrator for Finance and Investment.

Office of the Secretary

[Public Notice CM-8/222]

Advisory Committee to the U.S. National Section of the Inter-American Tropical Tuna Commission; Meeting

Notice is hereby given, pursuant to the provisions of Public Law 92-463, that a meeting of the Advisory Committee to the United States National Section of the Inter-American Tropical Tuna Commission will be held on October 4, 1979 from 1:30 P.M. to 5:00 P.M. and on October 5, 1979 from 9:30 A.M. to 12:00 P.M., in the auditorium of the Southwest Fisheries Center of the National Marine Fisheries Service at 8604 La Jolla Shores Drive, La Jolla, California.

The meeting will be open to the public and the public may participate in the discussions subject to the instructions of the Committee Chairman. Subjects to be discussed include an evaluation of the 1979 fishery experience, a preliminary outlook for the 1980 fishery and U.S. views on the overall quota and other aspects of the management program including allocations.

Requests for further information on the meeting should be directed to Brian Hallman, OES/OFA, Room 5806, Department of State. He may be reached by telephone on (202) 632-1073.

Dated: August 30, 1979.

James A. Storer,

Acting Deputy Assistant Secretary for Oceans and Atmosphere.

Federal Aviation Administration

[Summary Notice No. PE-79-19]

Petitions for Exemption; Summary of Petitions Received and Dispositions of Petitions Issued

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for exemptions received and of dispositions of petitions issued.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption (14 CFR Part 11), this notice contains a summary of certain petitions seeking relief from specified requirements of the Federal Aviation Regulations (14 CFR Chapter I) and of dispositions of certain petitions previously received. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Publication of this notice and any information it contains or omits is not intended to affect the legal status of any petition or its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received on or before October 1, 1979.

ADDRESSES: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rules Docket (AGC-24), Petition Docket No. ——, 800 Independence Avenue SW., Washington, D.C. 20591.

FOR FURTHER INFORMATION: The petition, any comments received and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC-24), Room 916, FAA Headquarters Building (FOB 10A), 800 Independence Avenue SW., Washington, D.C. 20591; telephone (202) 426-3644.

This notice is published pursuant to paragraphs (c), (e), and (g) of § 11.27 of Part 11 of the Federal Aviation Regulations (14 CFR Part 11).

Issued in Washington, D.C., on August 31, 1979.

John H. Cassady,

Acting Assistant Chief Counsel, Regulations and Enforcement Division.

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

Petitions for Exemptions

Docket No.	Petitioner	Regulations affected	Description of relief sought
19445	Jay Leslie Wolfson	14 CFR § 135.39(1) (i), (ii), (iii)	To permit petitioner to serve as Director of Operations, Key West Airlines without holding an Airline Transport Pilot Certificate (ATPC).
19486	Executive Air Fleet	14 CFR § 135.297	To permit petitioner to make use of approved visual simulators in the required instrument proficiency check.
19484	American Airlines	14 CFR §§ 135.293, 135.297, and 135.299.	To allow American Airlines Training Corp. to conduct required flight checks in their Cessna 500/501 aircraft simulator.
19485	Utility Helicopters, Inc.	14 CFR § 135.297(d)	To allow Mr. Dave Sanders to complete his instrument proficiency check in an aircraft other than the IFR S58T model used by his company.

Dispositions of Petitions for Exemptions

Docket No.	Petitioner	Regulations affected	Description of relief sought—disposition
18956	Thunderbird Airways, Inc.	14 CFR §§ 135.89(b) (3) and 121.333(c).	To permit Thunderbird Airways, Inc. to operate its Learjet and Sabreliner aircraft under Section 121.333(c)(2), (3) and (4), which allow for oxygen masks to be worn, secured and sealed, above FL 410 with both crewmembers at their stations equipped with quick-donning masks. *Partial grant 8/28/79.*
19114	Airline Training Center	14 CFR Part 141, Appendix D(3)(c).	To allow an additional pilot to be carried during more than 50 hours of the solo practice required by this section. *Denied 8/28/79.*
19247	Air Indiana, Inc	14 CFR § 121.437(a)	To permit the use of pilot Michael A. Chase as pilot in command of Air Indiana all-cargo aircraft without his holding an Airline Transport Pilot Certificate. Mr. Chase is presently 8 months from reaching the required age limit of 23. *Denied 8/28/79.*
19278	Moody Aviation	14 CFR § 135.115	To permit selected pilot trainees to accompany Air Taxi Commercial Operator (ATCO) cargo flights as additional crewmembers, and to manipulate the controls. Such pilots are neither employed for ATCO duties nor FAR qualified for ATCO second-in-command responsibilities. *Denied 8/28/79.*
19331	United States Air Racing Association (USARA)	14 CFR § 91.27(a)(1)	To permit the petitioner, on behalf of the foreign participants of the Cleveland 50th Anniversary National Air Races, to allow them to operate civil aircraft, that does not have within it a current and appropriate airworthiness certificate. *Granted 8/24/79.*
19337	All Island Air, Inc	14 CFR § 135.243(a)	To allow petitioner to operate its air taxi when the pilot-in-command has a commercial pilot certificate rather than an airline transport pilot rating. *Denied 8/28/79.*

BILLING CODE 4910-13-M

Radio Technical Commission for Aeronautics (RTCA) Executive Committee; Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463; 5 U.S.C. App. I) notice is hereby given of a meeting of RTCA Executive Committee to be held September 21, 1979, in RTCA Conference Room 261, 1717 H Street, NW., Washington, D.C. commencing at 9:30 a.m.

The agenda for this meeting is as follows: (1) Approval of Minutes of Meeting held July 20, 1979; (2) Special Committee Activities Report July-August, 1979; (3) Chairman's Report on RTCA Administration and Activities; (4) Approval of SC–138 Report on "Minimum Performance Standards—Airborne Omega Receiving Equipment"; (5) Consideration of Establishing New Special Committees; (6) Discussion on Report of Ad Hoc Committee to Review RTCA Policies and Practices in Making Awards, and (8) Other Business.

Attendance is open to the interested public but limited to space available. With the approval of the Chairman, members of the public may present oral statements at the meeting. Persons wishing to present oral statements or obtain information should contact the RTCA Secretariat, 1717 H Street, NW., Washington, D.C. 20006; (202) 296–0484. Any member of the public may present a written statement to the committee at any time.

Issued in Washington, D.C. on August 22, 1979.

Karl F. Bierach,

Designated Officer.

BILLING CODE 4910-13-M

Federal Railroad Administration

[FRA Waiver Petition Docket HS–79–13]

East Erie Commerical Railroad Co.; Petition for Exemption from the Hours of Service Act

In accordance with 49 CFR §§ 211.41 and 211.9, notice is hereby given that the East Erie Commerical Railroad (EEC) has petitioned the Federal Railroad Administration (FRA) for an exemption from the Hours of Service Act (83 Stat. 464, Pub. L 91–169, 45 U.S.C. (64a(e)). The petition requests that the EEC be granted authority to permit certain employees to continuously remain on duty for in excess of twelve hours.

The Hours of Service Act currently makes it unlawful for a railroad to require or permit specified employees to continuously remain on duty for a period in excess of twelve hours. However, the Hours of Service Act contains a provision that permits a railroad, which employs no more than fifteen employees who are subject to the statute, to seek an exemption from this twelve hour limitation.

The EEC seeks this exemption so that it can permit certain employees to remain continuously on duty for periods not to exceed sixteen hours. The petitioner indicates that granting this exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs no more than fifteen employees and had demonstrated good cause for granting this exemption.

Interested persons are invited to participate in this proceeding by submitting written views or comments. FRA has not scheduled an opportunity for oral comment since the facts do not appear to warrant it. Communications concerning this proceeding should identify the Docket Number, Docket Number HS–79–13, and must be submitted in triplicate to the Docket Clerk, Office of the Chief Counsel, Federal Railroad Administration, Trans Point Building, 2100 Second Street, SW., Washington, D.C. 20590.

Communications received before October 5, 1979, will be considered by the FRA before final action is taken. Comments received after that date will be considered as far as practicable. All comments received will be available for examination both before and after the closing date for comments, during regular business hours in Room 4406, Trans Point Building, 2100 Second Street, SW., Washington, D.C. 20590.

Authority: Sec. 5 of the Hours of Service Act of 1969 (45 U.S.C. 64a), 1.49 (d) of the regulations of the Office of Secretary 49 CFR 1.49 (d).

Issued in Washington, D.C. on August 30, 1979.

J. W. Walsh,

Chairman, Railroad Safety Board.

BILLING CODE 4910-06-M

[FRA Waiver Petition Docket HS–79–14]

Mount Hood Railway Co.; Petition for Exemption From the Hours of Service Act

In accordance with 49 CFR §§ 211.41 and 211.9, notice is hereby given that the Mount Hood Railway Company (MHR) has petitioned the Federal Railroad Administration (FRA) for an exemption from the Hours of Service Act (83 Stat. 464, Pub. L. 91–169), 45 U.S.C. (64a(e)). The petition requests that the MHR be granted authority to permit certain employees to continuously remain on duty for in excess of twelve hours.

The Hours of Service Act currently makes it unlawful for a railroad to require or permit specified employees to continuously remain on duty for a period in excess of twelve hours. However, the Hours of Service Act contains a provision that permits a railroad, which employs no more than fifteen employees who are subject to the statute, to seek an exemption from this twelve hour limitation.

The MHR seeks this exemption so that it can permit certain employees to remain continuously on duty for periods not to exceed sixteen hours. The petitioner indicates that granting this exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs no more than fifteen employees and had demonstrated good cause for granting this exemption.

Interested persons are invited to participate in this proceeding by submitting written views or comments. FRA has not scheduled an opportunity for oral comment since the facts do not appear to warrant it. Communications concerning this proceeding should identify the Docket Number, Docket Number HS–79–14, and must be submitted in triplicate to the Docket Clerk, Office of the Chief Counsel, Federal Railroad Administration, Trans Point Building, 2100 Second Street SW., Washington, D.C. 20590. Communications received before October 5, 1979, will be considered by the FRA before final action is taken. Comments received after that date will be considered as far as practicable. All comments received will be available for examination both before and after the closing date for comments, during regular business hours in Room 4406, Trans Point Building, 2100 Second Street SW., Washington, D.C. 20590.

Authority: Sec. 5 of the Hours of Service Act of 1969 (45 U.S.C. 64a), 1.49 (d) of the regulations of the Office of Secretary 49 CFR 1.49 (d).

Issued in Washington, D.C. on August 30, 1979.

J. W. Walsh,

Chairman, Railroad Safety Board.

[FR Doc. 79–27947 Filed 9–7–79; 8:45 am]

BILLING CODE 4910-06-M

National Railroad Passenger Corp.; Hearing

The National Railroad Passenger Corporation (Amtrak) has petitioned the Federal Railroad Administration (FRA) seeking authority to modify a portion of the signal system which controls train operations between Baldwin, Pennylvania and Regan, Delaware. The proposed modification involves the initial installation of the revised signal system that Amtrak intends to utilize on all portions of the Northeast Corridor trackage between Boston, Massachusetts and Washington, D.C. The proposed signal changes are part of a comprehensive improvement program which will enhance the overall performance of railroad service in this area. The proposed signaling and traffic control system are designed to provide safe operations at high speeds in order to permit travel between Washington, D.C. and Boston, Massachusetts to be accomplished within six and one-half hours.

The Amtrak request is contained in several related proceedings which are identified as FRA Block Signal Application Number 1588, and four waiver petitions designated RS&I Number 607, RS&I Number 608, RS&I Number 609 and RS&I Number 610.

Among the more significant aspects of the Amtrak proposal are the request to eliminate wayside signals other than at interlocking and in selected terminal areas; the installation of an automatic train control system under which train speed will be governed by the displayed cab signal aspects; and the conversion track circuitry to make it compatible ith the selected current for providing traction power for the locomotives operating on this trackage. The details of these proposals are contained in the series of public notices issued by the FRA on June 9, 1979, and in the data submitted by Amtrak in support of these proceedings.

After reviewing these proceedings and the comments received in response to the public notices, the Railroad Safety Board (Board) has voted to hold two public hearings before entering a final decision in these proceedings. In view of the scope of the proposal and the potential impact of these proceedings on rail operations from Washington, D.C. to Boston, Masachusetts, the Board will hold public hearings at 10:00 a.m. on October 16, 1979, in Room 909 of the Curtis Building located at Sixth and Walnut Streets in Philadelphia, Pennsylvania and at 10:00 a.m. on October 18, 1979, in Room 2003–A of the John F. Kennedy Building located at Government Center in Boston, Massachusetts.

The hearings will be informal and will be conducted in accordance with section 25 of the FRA Rules of Practice (49 CFR 211.25) by a representative designated by the Board. The hearings are not judicial or evidentiary hearings and, therefore, there will be no cross examination of persons making statements at the hearings. The representative of the Board will make an opening statement concerning the scope of the hearing and the procedures necessary for the conduct of the hearing.

Issued in Washington, D.C. on August 29, 1979.

J. W. Walsh,

Chairman, Railroad Safety Board.

[FR Doc. 79–27946 Filed 9–7–79; 8:45 am]

BILLING CODE 4910-06-M

National Highway Traffic Safety Administration

Vehicle Identification Number—Standard 115; Assignment of Manufacturer Identifiers

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: Notice of Appointment of Agent for Manufacturer Identifier Assignment.

SUMMARY: This notice announces the appointment of the Society of Automotive Engineers as the NHTSA's agent for the assignment of the manufacturer identifier required by

V 4 4 / 1 7 6

Federal Motor Vehicle Safety Standard No. 115, *Vehicle identification number.*

FOR FURTHER INFORMATION CONTACT: Frederic Schwartz, Jr., Office of the Chief Counsel, National Highway Traffic Safety Administration, 400 Seventh Street, SW., Washington, D.C. 20590, (202–426–1834).

SUPPLEMENTARY INFORMATION: This notice advises the public of a contract entered into by the National Highway Traffic Safety Administration (NHTSA) with the Society of Automotive Engineers (SAE). The contract provides that the SAE will act as NHTSA's agent in assigning the manufacturer identifiers required by S4.5.1 of Federal Motor Vehicle Safety Standard No. 115, *Vehicle identification number.*

The SAE is the assigner of World Manufacturer Identifiers on behalf of the International Standards Organization. As such, it has assigned more than 700 three character identifiers to motor vehicle manufacturers. These identifiers have been submitted to the NHTSA pursuant to S4.5.1 and S6.1. In assigning these identifiers, the SAE has gained considerable experience in the process of manufacturer identification. For this reason, the agency has determined that it would be more efficient and effective to contract with the SAE to act as its agent in acknowledging and/or assigning manufacturer identifiers to the remaining vehicle manufacturers.

All requests for manufacturer identifiers should be forwarded directly to: Society of Automotive Engineers, 400 Commonwealth Avenue, Warrendale, Pennsylvania 15096, Attention: Leo Ziegler.

Manufacturer identifiers will be supplied at no charge. Manufacturers need not request a particular identifier. Requests for the assignment of specific identifiers can be forwarded to the SAE, however, and these identifiers will be assigned by the SAE if they do not conflict with an identifier already assigned or a block of identifiers already reserved. Identifiers supplied directly to the agency by manufacturers have been forwarded to the SAE.

Manufacturer identifiers assigned by the SAE need not be submitted to the NHTSA. The NHTSA, of course, retains final authority over the assignment process, and any questions should be referred to the agency.

Issued on August 31, 1979.

A. C. Malliaris,

Acting Associate Administrator for Rulemaking.

[FR Doc. 79–28055 Filed 9–7–79; 8:45 am]

BILLING CODE 4910–59–M

Final Contract Briefing; Notice of Public Meeting

The National Highway Traffic Safety Administration will hold a public meeting on September 24, 1979, to present the results of a recently completed, contracted research study entitled "Development and Testing of Techniques for Increasing the Conspicuity of Motorcycles and Motorcycle Drivers." The objective of the study was to develop and evaluate various methods for increasing the conspicuity of motorcylces as a countermeasure to the most prevalent type of motorcycle accident—the urban intersection accident where the other motorist was at fault.

The meeting will be held in Room 2230 at the Nassif Building, 400 Seventh Street Southwest, beginning at 9:30 a.m. and lasting until about noon. The briefing, to be presented by the contractor (Highway Safety Research Institute, University of Michigan), will consist of a brief overview of the study findings, a detailed discussion of the results, and an opportunity for audience questions.

Additional information may be obtained from Dr. Robert Henderson, Office of Driver and Pedestrian Research, Room 3202, Transpoint Building, 2100 Second Street Southwest, Washington, D.C. 20590, telephone: 202–755–8753.

Issued in Washington, D.C., on: September 5, 1979.

R. Rhoads Stephenson,

Associate Administrator for Research and Development.

[FR Doc. 79–28056 Filed 9–7–79; 8:45 am]

BILLING CODE 4910–59–M

Final Contract Briefing; Notice of Public Meeting

The National Highway Traffic Safety Administration will hold a public meeting on September 24, 1979, to present the results of a recently completed, contracted research study entitled "Evaluation of the Feasibility of a Single Beam Headlighting System." The objective of the study was to explore various methods for modifying the light distribution provided by current low beam headlamps to improve drivers' visibility and, thereby, help reduce the high rate of nighttime accidents.

The meeting will be held in Room 2230 at the DOT Headquarters Building, 400 Seventh Street Southwest, beginning at 1:30 p.m. and lasting until about 3:30 p.m. The briefing, to be presented by the contractor (The Highway Safety Research Institute, University of Michigan), will consist of a brief overview of the study findings, a detailed discussion of the results, and an opportunity for audience questions.

Additional information may be obtained from Mr. Michael Perel, Office of Driver and Pedestrian Research, Room 3202, Transpoint Building, 2100 Second Street Southwest, Washington, D.C. 20590, telephone: 202–755–8753.

Issued in Washington, D.C., on September 5, 1979.

R. Rhoads Stephenson,

Associate Administrator for Research and Development.

BILLING CODE 4910–59–M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Art Advisory Panel; Closed Meeting

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of Closed Meeting of Art Advisory Panel.

SUMMARY: A closed meeting of the Art Advisory Panel will be held in Washington, D.C.

DATE: The meeting will be held October 10 and 11, 1979.

FOR FURTHER INFORMATION CONTACT: Tom Hartnett, T:C:E:V, 1111 Constitution Avenue, N.W., Room 5547, Washington, D.C. 20224, Telephone No. 202–566–4427 (not a toll free number).

Notice is hereby given pursuant to section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. app. (1976), that a closed meeting of the Art Advisory Panel will be held on October 10 and 11, 1979, beginning at 10:00 a.m. in Room 3411, Internal Revenue Building, 1111 Constitution Avenue, N.W., Washington, D.C. 20224.

The agenda will consist of the review and evaluation of the acceptability of market value appraisals of works of art involved in Federal Income, Estate, or Gift tax returns. This will involve the discussion of material in individual tax returns made confidential by the provisions of section 6103 of Title 26 of the United States Code.

A determination as required by section 10(d) of the Federal Advisory Committee Act has been made that these meetings are concerned with matters listed in section 552b(c) (3), (4), (6), and (7) of Title 5 of the United States Code, and that the meetings will not be open to the public.

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the Treasury Directive appearing in the **Federal Register** for Wednesday, November 8, 1978. (43 FR 52122).

Jerome Kurtz,

Commissioner.

BILLING CODE 4830–01–M

Office of the Secretary

Foreign Portfolio Investment Survey Advisory Committee; Meeting

Pursuant to the Federal Advisory Committee Act, Pub. L. 92–463, notice is hereby given that the initial meeting of the Foreign Portfolio Investment Survey Advisory committee will be held on September 27, 1979 starting at 10:00 A.M. in Room 4121 of the Main Treasury Building, 15th Street and Pennsylvania Avenue, NW., Washington, D.C.

This Committee has been created to provide the Secretary with views from qualified persons representing business, organized labor, and the academic community regarding the collection of statistics on portfolio investment by foreigners in the United States and on U.S. residents portfolio investment abroad as mandated by the International Investment Survey Act of 1976, Pub. L. 94–472.

The Committee will consider the results of a feasibility study of alternative approaches to surveying U.S. residents' portfolio investment abroad. The International Investment Survey Act requires that a balance between costs, burden to the public, and the need for information must be fully considered before implementing any data collection program. In this regard, the views and recommendations of the Committee have been solicited.

The meeting will be open to the public. A limited number of seats will be available on a first come, first serve basis. In order to facilitate admittance, persons interested in attending are asked to call (202) 566–2757 before September 24, 1979.

Interested persons may file a written statement with the Committee before, during or within one week after the meeting. [The Chairman may, as time permits, entertain oral comments from members of the public attending the meeting. Persons interested in making oral statements are asked to so indicate in advance of the meeting.]

Inquiries may be directed to: Mr. George C. Miller, Jr., Executive Assistant, Office of the Assistant Secretary (Economic Policy), U.S. Department of the Treasury, Washington, D.C. 20220.

[Minutes of the meeting will be available from the above office.]

Daniel H. Brill,

Assistant Secretary, Economic Policy.

September 5, 1979.

BILLING CODE 4810–25–M

INTERSTATE COMMERCE COMMISSION

Agricultural Cooperatives; Notice to the Commission of Intent To Perform Interstate Transportation for Certain Nonmembers

Dated: September 5, 1979.

The following Notices were filed in accordance with section 10528(a)(5) of the Interstate Commerce Act. These rules provide that agricultural cooperatives intending to perform nonmember, nonexempt, interstate transportation must file the Notice, Form BOP 102, with the Commission within 30 days of its annual meetings each year. Any subsequent change concerning officers, directors, and location of transportation records shall require the filing of a supplemental Notice within 30 days of such change. The name and address of the agricultural cooperative, the location of the records, and the name and address of the person to whom inquiries and correspondence should be addressed, are published here for interested persons. Submission of information that could have bearing upon the propriety of a filing should be directed to the Commission's Bureau of Investigations and Enforcement, Washington, D.C. 20423. The Notices are in a central file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C.

(1) Special Freight Systems, Inc. (Complete Legal Name Of Cooperative Association Or Federation Of Cooperative Associations), P.O. Box 366—Hwy. 17 South, Wauchula, FL 33873.

Principal Mailing Address (Street No., City, State, and Zip Code): P.O. Box 166—Mt. Royal Plaza, Paulsboro, NJ 08066.

Where Are Records Of Your Motor Transportation Maintained (Street No., City, State and Zip Code): Daniel Latta & Sons, Inc., Mt. Royal Plaza, Paulsboro, NJ 08066 (Person To Whom Inquiries And Correspondence Should Be Addressed (Name and Mailing Address)).

(2) International Farmers Union, Inc. (Complete Legal Name Of Cooperative Association Or Federation Of Cooperative Associations), Ingenieros 430, Nogales, Sonora, Mexico.

Principal Mailing Address (Street No., City, State, and Zip Code): Ingenieros 430, Nogales, Sonora, Mexico.

Where Are Records Of Your Motor Transportation Maintained (Street No., City, State and Zip Code): Alfonso Cuevas, Apdo. Postal No. 329, Nogales, Mexico. [Person To Whom Inquiries And Correspondence Should Be Addressed (Name and Mailing Address)).

(3) Sinaloa Growers and Producers, Inc. (Complete Legal Name Of Cooperative Association Or Federation Of Cooperative Associations), Apartado Postal No. 1–133, Mexicali, Baja California, Mexico.

Principal Mailing Address (Street No., City, State, and Zip Code): 292 Naranjos St., Los Pinos, Mexicali, B.C., Mexico.

Where Are Records Of Your Motor Transportation Maintained (Street No., City, State and Zip Code): Manuel Balenzuela A., Apartado Postal No. 1–133, Mexicali, B.C., Mexico (Person To Whom Inquiries And Correspondence Should Be Addressed (Name and Mailing Address)).

(4) World Growers Alliance, Inc. (Complete Legal Name Of Cooperative Association Or Federation Of Cooperative Associations), 292 Naranjos St., Los Pinos, Mexicali B.C.

Principal Mailing Address (Street No., City, State, and Zip Code): Refugio Rodriguez, 292 Naranjos St., Los Pinos, B.C. Mexico.

Where Are Records Of Your Motor Transportation Maintained (Street No., City, State and Zip Code): Refugio Rodriguez, 292 Naranjos, Los Pinos B.C., Mexico (Person To Whom Inquiries And Correspondence Should Be Addressed (Name and Mailing Address)).

BILLING CODE 7035-01-M

[Notice Finance Docket No. 29121]

Railroad Car Service Pooling Application; Notice of Filing and Proposed Special Rules of Procedure

September 5, 1979.

An application, as summarized below, termed a "Railgon Pooling Application," has been filed by certain common carriers by railroad, the trustees of certain common carriers by railroad, Railgon Company and Trailer Train Company under section 11342 of Title 49, U.S. Code "Transportation" (a) for authority to enter into an agreement for the pooling of car service with respect to gondola cars and the pooling and division of earnings as affected thereby and (b) for approval of said agreement. Thr railroads listed as applicants are:

The Atchison, Topeka and Santa Fe Railway Company; The Baltimore and Ohio Railroad Company; Robert W. Meserve and Benjamin H. Lacy, Trustees of Boston and Maine Corporation, Debtor; Burlington Northern Inc.; Central of Georgia Railroad Company; The Chesapeake and Ohio Railway Company; Chicago and North Western Transportation Company; Richard B. Ogilvie, Trustee of the Property of Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Debtor; William M. Gibbons, Trustee of the Property of Chicago, Rock Island and Pacific Railroad Company, Debtor; Consolidated Rail Corporation; The Denver and Rio Grande Western Railroad Company; Detroit, Toledo & Ironton Railroad, Company; Florida East Coast Railway Company; Illinois Central Gulf Railroad Company; The Kansas City Southern Railway Company; Louisville and Nashville Railroad Company; Missouri-Kansas-Texas Railroad Company; Missouri Pacific Railroad Company; Richmond, Fredericksburg and Potomac Railroad Company; St. Louis-San Francisco Railway Company; St. Louis Southwestern Railway Company; Seaboard Coast Line Railroad Company; Southern Pacific Transportation Company; Southern Railway Company; Toledo, Peoria & Western Railroad Company; Union Pacific Railroad Company; Western Maryland Railway Company; The Western Pacific Railroad Company.

The application and an appended "Railgon Pooling Agreement" propose the joint ownership and management of a pool of gondola cars through Railgon Company, a subsidiary of Trailer Train Company. The latter, principally owned by the Railroad Applicants, is now engaged in a similar activity with respect to flat cars and, through a wholly-owned subsidiary, Railbox Company, with respect to box cars. Under the plan proposed, the Railroad Applicants will agree with each other to act through Railgon Company (a) to pool experience and research and to design and develop standardized types of gondola cars for maximum utilization; (b) to pool information as to equipment needs to secure an evaluation of total needs; (c) jointly to purchase needed equipment so as to achieve early and consistent deliveries and economies which result in low unit costs; (d) to act together to secure favorable equipment financing terms; (e) to pool various aspects of utilization, maintenance and accounting; and (f) to pool the ownership costs and expenses of operation and to provide an equitable sharing of costs and expenses associated with the pooling plan. Applicants state that the gondola cars will be free-running cars, available for loading as needed, and not subject to car service rules and regulations normally applicable to railroad-owned gondola cars.

Participation in the pool will not be limited to the railroads which have joined in the filing of the application, but will be open to all other United States carriers of property by railroad who become signatories to the "Railgon Pooling Agreement" and comply with its provisions. Applicants have requested that the approving order in this proceeding provide a period of 180 days following the date thereof during which other railroads may join the pooling plan by filing with the Commission a request to that effect.

A copy of the application is on file, and can be examined in the Office of the Secretary, Interstate Commerce Commission, Washington, D.C. In addition, applicants have offered to mail each interested party a copy of the application upon receiving a request therefor addressed to:

Mr. Robert J. Williams, Vice President, General Counsel, and Secretary, Trailer Train Company, 300 South Wacker Drive, Chicago, Illinois 60606.

Any person desiring to participate in the proceedings with respect to the application may file a pleading, stating the nature of its interest and its position with respect thereto, on or before October 10, 1979, with copies to applicants' counsel, Mr. Robert J. Williams, at the address stated above, and to Mr. Paul R. Duke, Covington & Burling, 888 Sixteenth Street, N.W., Washington, D.C. 20006.

In the opinion of applicants, the requested Commission action will not constitute major regulatory action within the meaning of the Energy Policy and Conservation Act of 1975 (42 U.S.C. 6201 *et seq.*) and the Commission's regulations thereunder (49 CFR 1106.1 *et seq.*). Any protest may include a statement indicating the presence or absence of any impact of the requested Commission action on energy conservation and energy efficiency. If such impact is alleged, the statement shall be accompanied by supporting data indicating the nature and degree of the anticipated energy impact.

Under the Commission's regulations (49 CFR 1108.10), the proposal is not a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969. In the opinion of applicants, the requested Commission action will not significantly affect the quality of the human environment within the meaning of said Act. Any protest may include a statement indicating the presence or absence of environmental impacts. If any such effect is alleged to be present, the statement shall include the data required by the Commission's regulations (49 CFR 1108.12(e)).

The Commission has adopted the following Special Rules of Procedure for this proceeding:

1. The hearings in these matters will be conducted under modified procedure in accordance with the following provisions:

(a) Applicants' verified statements will be due ten days after the expiration of the date upon which notices of intention to participate in the proceeding shall be due;

(b) Verified statements by all other parties shall be due 20 days thereafter;

(c) Verified reply statements by all parties shall be due ten days thereafter; and

(d) No oral hearing is comtemplated.

2. If the application is approved, a period of 180 days following the effective date of the Commission's order shall be provided during which other carriers of property by railroad shall be authorized to join the pooling agreement.

Any protests submitted shall be filed with the Commission no later than October 10, 1979.

By the Commission.

Agatha L. Mergenovich,

Secretary.

NUCLEAR REGULATORY COMMISSION.

TIME AND DATE: September 5 and 6, 1979.

PLACE: Commissioners' Conference Room, 1717 H St., NW, Washington, D.C.

STATUS: Open/Closed (Changes).

MATTERS TO BE CONSIDERED:

Wednesday, September 5, 2:30 p.m.

The meeting titled "Discussion of Proceeding to Assess Commission Confidence in Safe Disposal of Nuclear Wastes" (Public meeting) was cancelled. The Affirmation Session (Public meeting) will take its place.

Thursday, September 6, 9:30 a.m.

The Briefing by H. Denton on Conclusions of TMI Lessons Learned Recommendations (Public meeting) will begin at 9:30 a.m. instead of 10 a.m., as previously announced.

Thursday, September 6, 3 p.m.

Discussion of Personnel Matter (Approximately 1½ hours—Closed-Ex–6—Continued from 9/4).

CONTACT PERSON FOR MORE INFORMATION: Walter Magee, (202) 634–1410.

Roger M. Tweed,

Office of the Secretary

September 4, 1979.

Part II

Environmental Protection Agency

Standards of Peformance for New Stationary Sources; Gas Turbines

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 60

[FRL 1276-2]

Standards of Performance for New Stationary Sources; Gas Turbines

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: This rule establishes standards of performance which limit emissions of nitrogen oxides and sulfur dioxide from new, modified and reconstructed stationary gas turbines. The standards implement the Clean Air Act and are based on the Administrator's determination that stationary gas turbines contribute significantly to air pollution. The intended effect of this regulation is to require new, modified and reconstructed stationary gas turbines to use the best demonstrated system of continuous emission reduction.

EFFECTIVE DATE: September 10, 1979.

ADDRESSES: The Standards Support and Environmental Impact Statement (SSEIS) may be obtained from the U.S. EPA Library (MD-35), Research Triangle Park, North Carolina 27711 (specify *Standards Support and Environmental Impact Statement, Volume 2: Promulgated Standards of Performance for Stationary Gas Turbines*, EPA-450/2-77-017b).

FOR FURTHER INFORMATION CONTACT: Don R. Goodwin, Director, Emission Standards and Engineering Division, Environmental Protection Agency, Research Triangle Park, North Carolina 27711, telephone No. (919) 541-5271.

SUPPLEMENTARY INFORMATION:

The Standards

The promulgated standards apply to all new, modified, and reconstructed stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules per hour (about 1,000 horsepower). The standards apply to simple and regenerative cycle gas turbines and to the gas turbine portion of a combined cycle steam/electric generating system.

The promulgated standards limit the concentration of nitrogen oxides (NO_x) in the exhaust gases from stationary gas turbines with a heat input from 10.7 to and including 107.2 gigajoules per hour (about 1,000 to 10,000 horsepower), from offshore platform gas turbines, and from stationary gas turbines used for oil or gas transportation and production not located in a Metropolitan Statistical Area (MSA), to 0.0150 percent by volume (150 PPM) at 15 percent oxygen on a dry basis. The promulgated standards also limit the concentration of NO_x in the exhaust gases from stationary gas turbines with a heat input greater than 107.2 gigajoules per hour, and from stationary gas turbines used for oil or gas transportation and production located in an MSA, to 0.0075 percent by volume (75 PPM) at 15 percent oxygen on a dry basis (see Table 1 for summary of NO_x emission limits). Both of these emission limits (75 and 150 PPM) are adjusted upward for gas turbines with thermal efficiencies greater than 25 percent using an equation included in the promulgated standards. These emission limits are also adjusted upward for gas turbines burning fuels with a nitrogen content greater than 0.015 percent by weight using a fuel-bound nitrogen allowance factor included in the promulgated standards, or a "custom" fuel-bound nitrogen allowance factor developed by the gas turbine manufacturer and approved for use by EPA. Custom fuel-bound nitrogen allowance factors must be substantiated with data and approved for use by the Administrator before they may be used for determining compliance with the standards.

The promulgated NO_x emission limits are referenced to International Standard Organization (ISO) standard day conditions of 288 degrees Kelvin, 60 percent relative humidity, and 101.3 kilopascals (1 atmosphere) pressure. Measured NO_x emission levels, therefore, are adjusted to ISO reference conditions by use of an ambient condition correction factor included in the standards, or by a custom ambient condition correction factor developed by the gas turbine manufacturer and approved for use by EPA. Custom ambient condition correction factors can only include the following variables: combustor inlet pressure, ambient air pressure, ambient air humidity, and ambient air temperature. These factors must be substantiated with data and approved for use by the Administrator before they may be used for determining compliance with the standards.

Stationary gas turbines with a heat input at peak load from 10.7 to, and including, 107.2 gigajoules per hour are to be exempt from the NO_x emission limit included in the promulgated standards for five years from the date of proposal of the standards (October 3, 1977). New gas turbines with this heat input at peak load which are constructed, or existing gas turbines with this heat input at peak load which are modified or reconstructed during this five-year period do not have to comply with the NO_x emission limit included in the promulgated standards at the end of this period. Only those new gas turbines which are constructed, or existing gas turbines which are modified or reconstructed, following this five-year period must comply with the NO_x emission limit.

Emergency-standby gas turbines, military training gas turbines, gas turbines involved in certain research and development activities, and firefighting gas turbines are exempt from compliance with the NO_x emission limits included in the promulgated standards. In addition, stationary gas turbines using wet controls are temporarily exempt from the NO_x emission limit during those periods when ice fog created by the gas turbine is deemed by the owner or operator to present a traffic hazard, and during periods of drought when water is not available.

None of the exemptions mentioned above apply to the sulfur dioxide (SO_2) emission limit. The promulgated standards limit the SO_2 concentration in the exhaust gases from stationary gas turbines with a heat input at peak load of 10.7 gigajoules per hour or more to 0.015 percent by volume (150 PPM) corrected to 15 percent oxygen on a dry basis. The standards include an alternative SO_2 emission limit on the sulfur content of the fuel of 0.8 percent sulfur by weight (see Table 1 for summary of exemptions and SO_2 emission limits).

Table 1.—*Summary of Gas Turbine New Source Performance Standard*

Gas turbine size and usage	NO_x emission limit [1]	Applicability date for NO_x	SO_2 emission limit	Applicability date for SO_2
Less than 10.7 gigajoules/hour (all uses)	None	Standard does not apply.	None	Standard does not apply.
Between 10.7 and 107.2 gigajoules/hour (all uses)	150 ppm	October 3, 1982	150 ppm SO_2 or fire a fuel with less than 0.8% sulfur.	October 3, 1977
Greater than or equal to 107.2 gigajoules/hour:				
1. Gas and oil transportation or production not located in an MSA.	150 ppm	October 3, 1977	Same as above	October 3, 1977
2. Gas and oil transportation or production located in an MSA.	75 ppm	October 3, 1977	Same as above	October 3, 1977
3. All other uses	75 ppm	October 3, 1977	Same as above	October 3, 1977
Emergency standby, firefighting, military (except for garrison facility), military training, and research and development turbines.	None	Standard does not apply.	Same as above	October 3, 1977

[1] NO_x emission limit adjusted upward for gas turbines with thermal efficiencies greater than 25 percent and for gas turbines firing fuels with a nitrogen content of more than 0.015 weight percent. Measured NO_x emissions adjusted to ISO conditions in determining compliance with the NO_x emission limit.

Environmental, Energy, and Economic Impact

The promulgated standards will reduce NO_x emissions by about 190,000 tons per year by 1982 and by 400,000 tons per year by 1987. This reduction will be realized with negligible adverse solid waste and noise impacts.

The adverse water pollution impact associated with the promulgated standards will be minimal. The quantity of water or steam required for injection into the gas turbine to reduce NO_x emissions is less than 5 percent of the water consumed by a comparable size steam/electric power plant using cooling towers. There will be no adverse water pollution impact associated with those gas turbines which employ dry NO_x control technology.

The energy impact associated with the promulgated standards will be small. Gas turbine fuel consumption could increase by as much as 5 percent in the worst cases. The actual energy impact depends on the rate of water injection necessary to comply with the promulgated standards. Assuming the "worst case," however, the standards would increase fuel consumption of large stationary gas turbines (i.e., greater than 10,000 horsepower) by about 5,500 barrels of fuel oil per day in 1982. The standards would increase fuel consumption of small stationary gas turbines (i.e., less than 10,000 horsepower) by about 7,000 barrels of fuel oil per day in 1987. This is equivalent to an increase in projected 1982 and 1987 national crude oil consumption of less than 0.03 percent. As mentioned, these estimates are based on "worst case" assumptions. The actual energy impact of the promulgated standard is expected to be much lower than these estimates because most gas turbines will not experience anywhere near a 5 percent fuel penalty due to water or steam injection. In addition, many gas turbines will comply with the standards using dry control, which in most cases has no energy penalty.

The economic impact associated with the promulgated standards is considered reasonable. The standards will increase the capital costs or purchase price of a gas turbine for most installations by about 1 to 4 percent. The annualized costs will be increased by about 1 to 4 percent, with the largest application, utilities, realizing less than a 2 percent increase.

The promulgated standards will increase the total capital investment requirements for users of large stationary gas turbines by about 36 million dollars by 1982. For the period 1982 through 1987, the standards will increase the capital investment requirements for users of both large and small stationary gas turbines by about 67 million dollars. Total annualized costs for these users of stationary gas turbines will be increased by about 11 million dollars in 1982 and by about 30 million dollars in 1987. These impacts will result in price increases for the end products or services provided by industrial and commercial users of stationary gas turbines ranging from less than 0.01 percent in the petroleum refining industry, to about 0.1 percent in the electric utility industry.

Public Participation

Prior to proposal of the standards, interested parties were advised by public notice in the **Federal Register** of meetings of the National Air Pollution Control Techniques Advisory Committee to discuss the standards recommended for proposal. These meetings occurred on February 21, 1973; May 30, 1973; and January 9, 1974. The meetings were open to the public and each attendee was given ample opportunity to comment on the standards recommended for proposal. The standards were proposed and published in the **Federal Register** on October 3, 1977. Public comments were solicited at that time and, when requested, copies of the Standards Support and Environmental Impact Statement (SSEIS) were distributed to interested parties. The public comment period extended from October 3, 1977, to January 31, 1978.

Seventy-eight comment letters were received on the proposed standards of performance. These comments have been carefully considered and, where determined to be appropriate by the Administrator, changes have been made in the standards which were proposed.

Significant Comments and Changes to the Proposed Regulation

Comments on the proposed standards were received from electric utilities, oil and gas producers, gas turbine manufacturers, State air pollution control agencies, trade and professional associations, and several Federal agencies. Detailed discussion of these comments can be found in Volume 2 of the SSEIS. The major comments can be combined into the following areas: general, emission control technology, modification and reconstruction, economic impacts, environmental impacts, energy impacts, and test methods and monitoring.

General

Small stationary gas turbines (i.e, those with a heat input at peak load between 10.7 and 107.2 gigajoules per hour—about 1,000 to 10,000 horsepower) are exempt from the standards for a period of five years following the date of proposal. Some commenters felt it was not clear whether small gas turbines would be required to retrofit NO_x emissions controls after the exemption period ended. These commenters felt this was not the intent of the standards and they recommended that this point be clarified.

The intent of both the proposed and the promulgated standards is to consider small gas turbines which have commenced construction on or before the end of the five year exemption period as existing facilities. These facilities will not have to retrofit at the end of the exemption period. This point has been clarified in the promulgated standards.

Several commenters requested exemptions for temporary and intermittent operation of gas turbines to permit research and development into advanced combustion techniques under full scale conditions.

This is considered a reasonable request. Therefore, gas turbines involved in research and development for the purpose of improving combustion efficiency or developing emission control technology are exempt from the NO_x emission limit in the promulgated standards. Gas turbines involved in this type of research and development generally operate intermittently and on a temporary basis. The standards have been changed, therefore, to allow exemptions in such situations on a case-by-case basis.

Emissions Control Technology

The selection of wet controls, or water injection, as the best system of emission reduction for stationary gas turbines was criticized by a number of commenters. These commenters pointed out that although dry controls will not reduce emissions as much as wet controls, dry controls will reduce NO_x emissions without the objectionable results of water injection (i.e., increased fuel consumption and difficulty in securing water of acceptable quality). These commenters, therefore, recommended postponement of standards until dry controls can be implemented on gas turbines.

As pointed out in Volume 1 of the SSEIS, a high priority has been established for control of NO_x emissions. Wet and dry controls are considered the only viable alternative control techniques for reducing NO_x emissions from gas turbines. Control of NO_x emissions by either of these two

V 4 4 / 1 7 6

alternatives clearly favored the development of the standards of performance based on wet controls from an environmental viewpoint. Reductions in NO_x emissions of more than 70 percent have been demonstrated using wet controls on many large gas turbines used in utility and industrial applications. Thus, wet controls can be applied immediately to large gas turbines, which account for 85–90 percent of NO_x emissions from gas turbines.

The technology of wet control is the same for both large and small gas turbines. The manufacturers of small gas turbines, however, have not experimented with or developed this technology to the same extent as the manufacturers of large gas turbines. In addition, small gas turbines tend to be produced or more of an assembly line basis than large gas turbines. Consequently, the manufacturers of small gas turbines need a lead time of five years (based on their estimates) to design, test, and incorporate wet controls on small gas turbines.

Even with a five-year delay in application of standards to small gas turbines, standards of performance based on wet controls will reduce national NO_x emissions by about 190,000 tons per year by 1982. Therefore, the reduction in NO_x emissions resulting from standards based on wet controls is significant.

Dry controls have demonstrated NO_x emissions reduction of only about 40 percent in laboratory and combustor rig tests. Because of the advanced state of research and development into dry control by the manufacturers of large gas turbines, the much longer lead time involved in ordering large gas turbines, and the greater attention that can be given to "custom" engineering designs of large gas turbines, dry controls can be implemented on large gas turbines immediately. Manufacturers of small gas turbines, however, estimate that it would take them as long to incorporate dry controls as wet controls on small gas turbines. Basing the standards only on dry controls, therefore, would significantly reduce the amount of NO_x emission reductions achieved.

The economic impact of standards based on wet controls is considered reasonable for large gas turbines. (See Economic Impact Discussion.) Thus, wet controls represent ". . . the best system of continuous emission reduction . . . (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) . . ." for large gas turbines.

The economic impact of standards based on wet controls, however, is considered unreasonable for small gas turbines, gas turbines located on offshore platforms, and gas turbines employed in oil or gas production and transportation which are not located in a Metropolitan Statistical Area. The economic impact of standards based on dry controls, on the other hand, is considered reasonable for these gas turbines. (See Economic Impact Discussion.) Thus, dry controls represent ". . . the best system of continuous emission reduction . . . (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) . . ." for small gas turbines, gas turbines located on offshore platforms, and gas turbines employed in oil or gas production and transportation which are not located in a Metropolitan Statistical Area.

Volume 1 of the SSEIS summarizes the data and information available from the literature and other nonconfidential sources concerning the effectiveness of dry controls in reducing NO_x emissions from stationary gas turbines. More recently, additional data and information have been published in the Proceedings of the Third Stationary Source Combustion Symposium (EPA–600/7–79–050C). Advanced Combustion Systems for Stationary Gas Turbines (interim report) prepared by the Pratt and Whitney Aircraft Group for EPA (Contract 68–02–2136), "Experimental Clean Combustor Program Phase III" (NASA CR–135253) also prepared by the Pratt and Whitney Aircraft Group for the National Aeronautics and Space Administration (NASA), and "Aircraft Engine Emissions" (NASA Conference Publication 2021). These data and information show that dry controls can reduce NO_x emissions by about 40 percent. Multiplying this reduction by a typical NO_x emission level from an uncontrolled gas turbine of about 250 ppm leads to an emission limit for dry controls of 150 ppm. This, therefore, is the numerical emission limit included in the promulgated standards for small gas turbines, gas turbines located on offshore platforms, and gas turbines employed in oil or gas production or transportation which are not located in Metropolitan Statistical Areas.

The five-year delay from the date of proposal of the standards in the applicability date of compliance with the NO_x emission limit for small gas turbines has been retained in the promulgated standards. As discussed above, manufacturers of small gas turbines have estimated that it will take this long to incorporate either wet or dry controls on these gas turbines.

Several commenters criticized the fuel-bound nitrogen allowance included in the proposed standards. It was felt that greater flexibility in the equations used to calculate the fuel-bound nitrogen NO_x emissions contribution should be permitted, due to the limited data on conversion of fuel-bound nitrogen to NO_x. These commenters recommended that manufacturers of gas turbines be allowed to develop their own fuel-bound nitrogen allowance.

As discussed in Volume I of the SSEIS, the reaction mechanism by which fuel-bound nitrogen contributes to NO_x emissions is not fully understood. In addition, emission data are limited with respect to fuels containing significant amounts of fuel-bound nitrogen. The problem of quantifying the fuel-bound nitrogen contribution to total NO_x emissions is further complicated by the fact that the amount of nitrogen in the fuel has an effect on this contribution.

In light of this sparsity of data, the commenters' recommendations seem reasonable. Therefore, a provision has been added to the standards to allow manufacturers to develop custom fuel-bound nitrogen allowances for each gas turbine model. The use of these factors, however, must be approved by the Administrator before the initial performance test required by Section 60.8 of the General Provisions. Petitions by manufacturers for approval of the use of custom fuel-bound nitrogen allowance factors must be supported by data which clearly provide a basis for determining the contribution of fuel-bound nitrogen to total NO_x emissions. In addition, in no case will EPA approve a custom fuel-bound nitrogen allowance factor which would permit an increase in NO_x emissions of more than 50 ppm. (See Energy Impact Discussion.) Notice of approval of the use of these factors for various gas turbine models will be given in the **Federal Register.**

Modification and Reconstruction

Some commenters felt that existing gas turbines which now burn natural gas and are subsequently altered to burn oil should be exempt from consideration as modifications. The high cost and technical difficulties of compliance with the standards would discourage fuel switching to conserve natural gas supplies.

As outlined in the General Provisions of 40 CFR Part 60, which are applicable to all standards of performance, most changes to an existing facility which result in an increase in emission rate to the atmosphere are considered modifications. However, according to section 60.14(e)(4) of the General Provisions, the use of an alternative fuel or raw material shall not be considered a modification if the existing facility was designed to accommodate that alternative use. Therefore, if a gas turbine is designed to fire both natural gas and oil, then switching from one fuel to the other would not be considered a modification even if emissions were increased. If a gas turbine that is not designed for firing both fuels is switched from firing natural gas to firing oil, installation of new injection nozzles which increase mixing to reduce NO_x production, or installation of new NO_x combustors currently on the market, would in most cases maintain emissions at their previous levels. Since emissions would not increase, the gas turbine would not be considered modified, and the real impact of the standards on gas turbines switching from natural gas to oil will probably be quite small. Therefore, no special provisions for fuel switching have been included in the promulgated standards.

Economic Impact

Several commenters stated that water injection could increase maintenance costs significantly. One reason cited was that chemicals and minerals in the water would likely be deposited on internal surfaces of gas turbines, such as turbine blades, leading to downtime for repair and cleaning. In addition, the commenters felt that higher maintenance requirements could be expected due to the increased complexity of a gas turbine with water injection.

As pointed out in Volume 1 of the SSEIS, to avoid deposition of chemicals and minerals on gas turbine blades, the water used for water injection must be treated. Costs for water treatment were included in the overall costs of water injection and, for large gas turbines, these costs are considered reasonable.

Actual maintenance and operating costs for gas turbines operating with water or steam injection are limited. Several major utilities, however, have accumulated significant amounts of operating time on gas turbines using water or steam injection for control of NO_x emissions. There have been some problems attributable to water or steam injection, but based on the data available, these problems have been confined to initial periods of operation of these systems. Most of these reported problems such as turbine blade damage, flame-outs, water hammer damage, and ignition problems, were easily corrected by minor redesign of the equipment hardware. Because of the knowledge gained from these systems, such problems should not arise in the future.

As mentioned, some utilities have accumulated substantial operating experience without any significant increase in maintenance or operating costs or other adverse effects. One utility, for example, has used water injection on two gas turbines for over 55,000 hours without making any major changes to their normal maintenance and operating procedures. They followed procedures essentially identical to those required for a similar gas turbine not using water injection, and the plant experienced no outages attributable to the water injection system. Another company has accumulated over 92,000 hours of operating time with water injection on 17 gas turbines with approximately 116 hours of outage attributable to their water injection system. Increased maintenance costs which can be attributed to these water injection systems are not available, as such costs were not accounted for separately from normal maintenance. However, they were not reported as significant.

Some commenters exresssed the opinion that the cost estimates for controlling NO_x emissions from large gas turbines were too low. Accordingly, these commenters felt that wet control technology should not be the basis of the standards for large stationary gas turbines.

The costs associated with wet control technology for large gas turbines were reassessed. In a few cases, it appeared the water-to-fuel ratio used in Volume 1 of the SSEIS was somewhat low. In these cases, the capital and annualized operating costs associated with wet control on large gas turbines were revised to reflect injection of more water into the gas turbine. None of these revisions, however, resulted in a significant change in the projected economic impact of wet controls on large gas turbines. Thus, depending on the size and end use of large gas turbines, wet controls are still projected to increase capital and annualized operating costs by no more than 1 to 4 percent. Increases of this order of magnitude are considered reasonable in light of the 70 percent reduction in NO_x emissions achieved by wet controls. Consequently, the basis of the promulgated standards for large gas turbines remains the same as that for the proposed standards—wet controls.

A number of commenters also expressed the opinion that the cost estimates for wet controls to reduce NO_x emissions from small gas turbines were too low. Therefore, the standards for small gas turbines should not be based on wet controls.

Information included in the comments submitted by manufacturers of small gas turbines indicated the costs of redesigning these gas turbines for water injection are much greater than those included in Volume 1 of the SSEIS. Consequently, it appears the costs of water injection would increase the capital cost of small gas turbines by about 16 percent, rather than about 4 percent as originally estimated. Despite this increase in capital costs, it does not appear water injection would increase the annualized operating costs of small gas turbines by more than 1 to 4 percent as originally estimated, due to the predominance of fuel costs in operating costs. An increase of 16 percent in the capital cost of small gas turbines, however, is considered unreasonable.

Very little information was presented in Volume 1 of the SSEIS concerning the costs of dry controls. The conclusion was drawn, however, that these costs would undoubtedly be less than those associated with wet controls.

Little information was also included in the comments submitted by the manufacturers of small gas turbines concerning the costs of dry controls. Most of the cost information dealt with the costs of wet controls. One manufacturer, however, did submit limited information which appears to indicate that the capital cost impact of dry controls on small gas turbines might be only a quarter of that of wet controls. Thus, dry controls might increase the capital costs of small gas turbines by only about 4 percent. The potential impact of dry controls on annualized operating costs would certainly be no greater than wet controls, and would probably be much less. Consequently, it appears dry controls might increase the capital costs of small gas turbines by about 4 percent and the annualized operating costs by about 1 to 4 percent.

S E 1 0 7 9

UMI

V 44/176 SEP 10 79

The magnitude of these impacts is essentially the same as those originally associated with wet controls in Volume 1 of the SSEIS, and they are considered reasonable. Consequently, the basis of the promulgated standards for small gas turbines is dry controls.

A number of commenters stated that the costs associated with wet controls on gas turbines located on offshore platforms, and in arid and remote regions were unreasonable. These commenters felt that the costs of obtaining, transporting, and treating water in these areas prohibited the use of water injection.

As mentioned by the commenters, the costs associated with water injection on gas turbines in these locations are all related to lack of water of acceptable quality or quantity. Review of the costs included in Volume 1 of the SSEIS for water injection on gas turbines located on offshore platforms, indicates that the required expenditures for platform space were not incorporated into these estimates. Based on information included in the comments, platform space is very expensive, and averages approximately $400 per square foot. When this cost is included, the use water treatment systems to provide water for NO_x emissions control would increase the capital costs of a gas turbine located on an offshore platform by approximately 33 percent. This is considered an unreasonable economic impact.

Dry controls, unlike wet controls, would not require additional space on offshore platforms. Although most gas turbines located on offshore platforms would be considered small gas turbines under the standards, it is possible that some large gas turbines might be located on offshore platforms. Therefore, all the information available concerning the costs associated with standards based on dry controls for large gas turbines was reviewed.

Unfortunately, no additional information on the costs of dry controls was included in the comments submitted by the manufacturers of large gas turbines. As mentioned above, the information presented in Volume 1 of the SSEIS is very limited concerning the costs of dry controls, although the conclusion is drawn that these costs would undoubtedly be less than the costs of wet controls. It also seems reasonable to assume that the costs of dry controls on large gas turbines would certainly be less than the costs of dry controls on small gas turbines. Consequently, standards based on dry controls should not increase the capital and annualized operating costs of large gas turbines by more than the 1 to 4 percent projected for small gas turbines. This conclusion even seems conservative in light of the projected increase in capital and annualized operating costs for wet controls on large gas turbines of no more than 1 to 4 percent. In any event, the costs of standards based on dry controls for large gas turbines are considered reasonable. Therefore, the promulgated standards for gas turbines located on offshore platforms are based on dry controls.

In many arid and remote regions, gas turbines would have to obtain water by trucking, installing pipelines to the site, or by construction of large water reservoirs. While costs included in Volume 1 of the SSEIS do not show trucking of water to gas turbine sites to be unreasonable, these costs are not based on actual remote area conditions. That is, these costs are based on paved road conditions and standard ICC freight rates. Gas turbines located in arid and remote regions, however, are not likely to have good access roads. Consequently, it is felt that the costs of trucking water, laying a water pipeline, or constructing a water reservoir would be unreasonable for most arid and remote areas.

As discussed above, the economic impact of standards based on dry controls for both large and small gas turbines in considered reasonable. Consequently, provisions have been included in the promulgated standards which essentially require gas turbines located in arid and remote areas to comply with an NO_x emission limit based on the use of dry controls. A number of options were considered before the specific provisions included in the promulgated standards were selected.

The first option considered was defining the term "arid and remote." While this is conceptually straightforward, it proved impossible to develop a satisfactory definition for regulatory purposes. The second option considered was defining all gas turbines located more than a certain distance from an adequate water supply as "arid and remote" gas turbines. Defining the distance and an adequate water supply, however, proved as impossible as defining the term "arid and remote." The third option considered was a case-by-case exemption for gas turbines where the costs of wet controls exceeded certain levels. This option, however, would provide incentive to owners and operators to develop grossly inflated costs to justify exemption and would require detailed analysis of each case on the part of the Agency to insure this did not occur. In addition, the numerous disputes and disagreements which would undoubtedly arise under this option would lead to delays and demands on limited resources within both the Agency and industry to resolve.

Analysis of the end use of most gas turbines located in arid and remote regions gave rise to a fourth option. Generally, gas turbines located in arid or remote regions are used for either oil and gas production, or oil and gas transportation. Consequently, the promulgated standards require gas turbines employed in oil and gas production or oil and gas transportation, which are not located in a Metropolitan Statistical Area (MSA), to meet an NO_x emission limit based on the use of dry controls. The promulgated standards, however, require gas turbines employed in oil and gas production or oil and gas transportation which are located in a MSA to meet the 75 ppm NO_x emission limit. This emission limit is based on the use of wet controls and in an MSA a suitable water supply for water injection will be available.

Environmental Impact

A number of commenters felt gas turbines used as "peaking" units should be exempt. Peaking units operate relatively few hours per year. According to commenters, use of water injection would result in a very small reduction in annual NO_x emissions and negligible improvement in ground level concentrations.

As pointed out in Volume 1 of the SSEIS, about 90 percent of all new gas turbine capacity is expected to be installed by electric utility companies to generate electricity, and possibly as much as 75 percent of all NO_x emissions from stationary gas turbines are emitted from these installations. Of these electric utility gas turbines, a large majority are used to generate power during periods of peak demand. Consequently, by their very nature, peaking gas turbines tend to operate when the need for emission control is greatest, that is, when power demand is highest and air quality is usually at its worst. Therefore, it does not seem reasonable to exempt peaking gas turbines from compliance with the standards.

A number of commenters also felt that small gas turbines should be exempt from the standards because they emit only about 10 percent of the total NO_x emissions from all stationary gas turbines and therefore, the environmental impact of not regulating these turbines would be small.

A high priority has been established for NO_x emission control and dry control techniques are considered a demonstrated and economically reasonably means for reducing NO_x emissions from small gas turbines. Therefore, the promulgated standards limit NO_x emissions from small gas turbines to 150 ppm based on the use of dry control technology.

Energy Impact

A number of writers commented on the potential impact of the standards on the use of the oil-shale, coal-derived, and other synthetic fuels. It was generally felt that these types of fuels should not be covered by the the standards at this time, since this could hinder their development.

Total NO_x emissions from any combustion source, including stationary gas turbines, are comprised of thermal NO_x and organic NO_x. Thermal NO_x is formed in a well-defined high temperature reaction between oxygen and nitrogen in the combustion air. Organic NO_x is produced by the combination of fuel-bound nitrogen with oxygen during combustion in a reaction that is not yet fully understood. Shale oil, coal-derived, and other synthetic fuels generally have high nitrogen contents and, therefore, will produce relatively high organic NO_x emissions when combusted.

Neither wet nor dry control technology for gas turbines is effective in reducing organic NO_x emissions. As discussed in Volume I of the SSEIS, as fuel-bound nitrogen increases, organic NO_x emissions from a gas turbine become the predominant fraction of total NO $^{2}_{x}$ emissions. Consequently, emission standards must address in some manner the contribution to NO_x emissions of fuel-bound nitrogen.

Low nitrogen fuels, such as premium distillate fuel oil and natural gas, are now being fired in nearly all stationary gas turbines. Energy supply considerations, however, may cause more gas turbines to fire heavy fuel oils and synthetic fuels in the future. A standard based on present practice of firing low nitrogen fuels, therefore, would too rigidly restrict the use of high nitrogen fuel, especially in light of the uncertainty in world energy markets.

Since control technology is not in reducing organic NO_x emissions from gas turbines, the possibility of basing standards on removal of nitrogen from the fuel prior to combustion was considered. The cost of removing nitrogen from fuel oil, however, ranges from $2.00 to $3.00 per barrel. Another alternative considered was exempting gas turbines using high nitrogen fuels, as some commenters requested. Exempting gas turbines based on the type of fuel used, however, would not require the use of best control technology in all cases.

A third alternative considered was the use of a fuel-bound nitrogen allowance. Beyond some point it is simply not reasonable to allow combustion of high nitrogen fuels in gas turbines. In addition, high nitrogen fuels, including shale oil and coal-derived fuels, can be used in other combustion devices where some control of organic NO_x emissions is possible. Greater reduction of nationwide NO_x emissions could be achieved by utilizing these fuels in facilities where organic NO_x emission control is possible than in gas turbines where organic NO_x emissions are essentially uncontrolled. This approach, therefore, balances the trade-off between allowing unlimited selection of fuels for gas turbines controlling NO_x emissions.

A limited fuel-bound nitrogen allowance which would allow increased NO_x emissions above the numerical NO_x emissions limits including in the promulgated standards seems most reasonable. An upper limit on this allowance of 50 ppm NO_x was selected. Such a limit would allow approximately 50 percent of existing heavy fuel oils to be fired in stationary gas turbines. (See Volume I of the SSEIS.) This approach is considered a reasonable means of allowing flexibility in the selection of fuels while achieving reductions in NO_x emissions from stationary gas turbines. (See Control Technology for further discussion.)

A number of commenters felt the efficiency correction factor included in the standards should use the overall efficiency of a gas turbine installation rather than the thermal efficiency of the gas turbine itself. For example, many commenters recommended that the overall efficiency of a combined cycle gas turbine installation be used in this correction factor.

Section 111 of the Clean air Act requires that standards of performance for new sources reflect the use of the best system of emission reduction. With the few exceptions noted above, water injection is considered the best system of emission control for reducing NO_x emissions from stationary gas turbines. To be consistent with the intent of section 111, the standards must reflect the use of water injection independent of any ancillary waste heat recovery equipment which might be associated with a gas turbine to increase its overall efficiency. To allow an upward adjustment in the NO_x emission limit based on the overall efficiency of a combined cycle gas turbine could mean that water injection might not have to be applied to the gas turbine. Thus, the standards would not reflect the use of the best system of emission reduction. Therefore, the efficiency factor must be based on the gas turbine efficiency itself, not the overall efficiency of a gas turbine combined with other equipment.

Test Methods and Monitoring

A large number of commenters objected to the amount of monitoring required. The proposed standards called for daily monitoring of sulfur content, nitrogen content, and lower heating value of the fuel. The commenters were generally in favor of less frequent periodic monitoring.

These comments seem reasonable. Therefore, the standards have been changed to permit determination of sulfur content, nitrogen content, and lower heating value only when a fresh supply of fuel is added to the fuel storage facilities for a gas turbine. Where gas turbines are fueled without intermediate storage, such as along oil and gas transport pipelines, daily monitoring is still required by the standards unless the owner or operator can show that the composition of the fuel does not fluctuate significantly. In these cases, the owner or operator may develop an individual monitoring schedule for determining fuel sulfur content, nitrogen content, and lower heating value. These schedules must be substantiated by data and submitted to the Administrator for approval on a case-by-case basis.

Several commenters stated that the standards should be clarified to allow the performance test to be performed by the gas turbine manufacturer in lieu of the owner/operator. To simplify verification of compliance with the standards and to reduce costs to everyone involved, the recommendation was made that each gas turbine be performance tested at the manufacturer's site. The commenters maintained that gas turbines should not be required to undergo a performance test at the owner/operator's site if they have been shown to comply with the standard by the gas turbine manufacturer.

Section 111 of the Clean Air Act is not flexible enough to permit the use of a formal certification program such as that described by the commenter. Responsibility for complying with the standards ultimately rests with the owner/operator, not with the gas turbine manufacturers. The general provisions of 40 CFR Part 60, however, which apply to all standards of performance, allow the use of approaches other than performance tests to determine compliance on a case-by-case basis. The

UMI

V 4 4 / 1 7 6

alternate approach must demonstrate to the Administrator's satisfaction that the facility is in compliance with the standard. Consequently, gas turbine manufacturers' tests may be considered, on a case-by-case basis, in lieu of performance tests at the owner/operator's site to demonstrate compliance with the standards. For a gas turbine manufacturers's test to be acceptable in lieu of a performance test, as a minimum the operating conditions of the gas turbine at the installation site would have to be shown to be similar to those during the manufacturer's test. In addition, this would not preclude the Administrator from requiring a performance test at any time to demonstrate compliance with the standards.

Miscellaneous

It should be noted that standards of performance for new stationary sources established under section 111 of the Clean Air Act reflect:

". . . application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environment impact and energy requirements) the Administrator determines has been adequately demonstrated. [section 111(a)(1)]

Although there may be emission control technology available that can reduce emissions below those levels required to comply with standards of performance, this technology might not be selected as the basis of standards of performance due to costs associated with its use. Accordingly, standards of performance should not be viewed as the ultimate in achievable emission control. In fact, the Act requires (or has potential for requiring) the imposition of a more stringent emission standard in several situations.

For example, applicable costs do not play as prominent a role in determining the "lowest achievable emission rate" for new or modified sources located in nonattainment areas, i.e., those areas where statutorily mandated health and welfare standards are being violated. In this respect, section 173 of the act requires that a new or modified source constructed in an area which exceeds the National Ambient Air Quality Standard (NAAQS) must reduce emissions to the level which reflects the "lowest achievable emission rate" (LAER), as defined in section 171(3), for such category of source. The statute defines LAER as that rate of emission which reflects:

(A) The most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable, or

(B) The most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event can the emission rate exceed any applicable new source performance standard (section 171(3)).

A similar situation may arise under the prevention of significant deterioration of air quality provisions of the Act (part C). These provisions require that certain sources (referred to in section 169(1)) employ "best available control technology" (as defined in section 169(3)) for all pollutants regulated under the Act. Best available control technology (BACT) must be determined on a case-by-case basis, taking energy, environmental and economic impacts, and other costs into account. In no event may the application of BACT result in emissions of any pollutants which will exceed the emissions allowed by any applicable standard established pursuant to section 111 (or 112) of the Act.

In all events, State implementation plans (SIPs) approved or promulgated under section 110 of the Act must provide for the attainment and maintenance of National Ambient Air Quality Standards designed to protect public health and welfare. For this purpose, SIPs must in some cases require greater emission reductions than those required by standards of performance for new sources.

Finally, States are free under section 116 of the Act to establish even more stringent emission limits than those established under section 111 or those necessary to attain or maintain the NAAQS under section 110. Accordingly, new sources may in some cases be subject to limitations more stringent than EPA's standards of performance under section 111, and prospective owners and operators of new sources should be aware of this possibility in planning for such facilities.

This regulation will be reviewed 4 years from the date of promulgation. This review will include an assessment of such factors as the need for integration with other programs, the existence of alternative methods, enforceability, and improvements in emissions control technology.

No economic impact assessment under Section 317 was prepared on this standard. Section 317(a) requires such an assessment only if "the notice of proposed rulemaking in connection with such standard . . . is published in the Federal Register after the date ninety days after August 7, 1977." This standard was proposed in the Federal Register on October 3, 1977, less than ninety days after August 7, 1977, and an assessment was therefore not required.

Dated: August 28, 1979.

Douglas M. Costle,

Administrator.

PART 60—STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES

It is proposed to amend Part 60 of Chapter I, Title 40 of the Code of Federal Regulations as follows:

1. By adding subpart GG as follows:

Subpart GG—Standards of Performance for Stationary Gas Turbines

Sec.

60.330 Applicability and designation of affected facility.
60.331 Definitions.
60.332 Standard for nitrogen oxides.
60.333 Standard for sulfur dioxide.
60.334 Monitoring of operations.
60.335 Test methods and procedures.

Authority: Secs. 111 and 301(a) of the Clean Air Act, as amended, [42 U.S.C. 1857c-7, 1857g(a)], and additional authority as noted below.

Subpart GG—Standards of Performance for Stationary Gas Turbines

§ 60.330 Applicability and designation of affected facility.

The provisions of this subpart are applicable to the following affected facilities: all stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules per hour, based on the lower heating value of the fuel fired.

§ 60.331 Definitions.

As used in this subpart, all terms not defined herein shall have the meaning given them in the Act and in subpart A of this part.

(a) "Stationary gas turbine" means any simple cycle gas turbine, regenerative cycle gas turbine or any gas turbine portion of a combined cycle steam/electric generating system that is not self propelled. It may, however, be mounted on a vehicle for portability.

(b) "Simple cycle gas turbine" means any stationary gas turbine which does not recover heat from the gas turbine exhaust gases to preheat the inlet combustion air to the gas turbine, or which does not recover heat from the gas turbine exhaust gases to heat water or generate steam.

(c) "Regenerative cycle gas turbine" means any stationary gas turbine which recovers heat from the gas turbine exhaust gases to preheat the inlet combustion air to the gas turbine.

(d) "Combined cycle gas turbine" means any stationary gas turbine which recovers heat from the gas turbine exhaust gases to heat water or generate steam.

(e) "Emergency gas turbine" means any stationary gas turbine which operates as a mechanical or electrical power source only when the primary power source for a facility has been rendered inoperable by an emergency situation.

(f) "Ice fog" means an atmospheric suspension of highly reflective ice crystals.

(g) "ISO standard day conditions" means 288 degrees Kelvin, 60 percent relative humidity and 101.3 kilopascals pressure.

(h) "Efficiency" means the gas turbine manufacturer's rated heat rate at peak load in terms of heat input per unit of power output based on the lower heating value of the fuel.

(i) "Peak load" means 100 percent of the manufacturer's design capacity of the gas turbine at ISO standard day conditions.

(j) "Base load" means the load level at which a gas turbine is normally operated.

(k) "Fire-fighting turbine" means any stationary gas turbine that is used solely to pump water for extinguishing fires.

(l) "Turbines employed in oil/gas production or oil/gas transportation" means any stationary gas turbine used to provide power to extract crude oil/natural gas from the earth or to move crude oil/natural gas, or products refined from these substances through pipelines.

(m) A "Metropolitan Statistical Area" or "MSA" as defined by the Department of Commerce.

(n) "Offshore platform gas turbines" means any stationary gas turbine located on a platform in an ocean.

(o) "Garrison facility" means any permanent military installation.

(p) "Gas turbine model" means a group of gas turbines having the same nominal air flow, combuster inlet pressure, combuster inlet temperature, firing temperature, turbine inlet temperature and turbine inlet pressure.

§ 60.332 Standard for nitrogen oxides.

(a) On and after the date on which the performance test required by § 60.8 is completed, every owner or operator subject to the provisions of this subpart, as specified in paragraphs (b), (c), and (d) of this section, shall comply with one of the following, except as provided in paragraphs (e), (f), (g), (h), and (i) of this section.

(1) No owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any stationary gas turbine, any gases which contain nitrogen oxides in excess of:

$$STD = 0.0075 \frac{(14.4)}{Y} + F$$

where:

STD = allowable NO_x emissions (percent by volume at 15 percent oxygen and on a dry basis).

Y = manufacturer's rated heat rate at manufacturer's rated load (kilojoules per watt hour) or, actual measured heat rate based on lower heating value of fuel as measured at actual peak load for the facility. The value of Y shall not exceed 14.4 kilojoules per watt hour.

F = NO_x emission allowance for fuel-bound nitrogen as defined in part (3) of this paragraph.

(2) No owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any stationary gas turbine, any gases which contain nitrogen oxides in excess of:

$$STD = 0.0150 \left(\frac{14.4}{Y}\right) + F$$

where:

STD = allowable NO_x emissions (percent by volume at 15 percent oxygen and on a dry basis).

Y = manufacturer's rated heat rate at manufacturer's rated peak load (kilojoules per watt hour), or actual measured heat rate based on lower heating value of fuel as measured at actual peak load for the facility. The value of Y shall not exceed 14.4 kilojoules per watt hour.

F = NO_x emission allowance for fuel-bound nitrogen as defined in part (3) of this paragraph.

(3) F shall be defined according to the nitrogen content of the fuel as follows:

Fuel-Bound Nitrogen (percent by weight)	F (NO_x percent by volume)
$N \leq 0.015$	0
$0.015 < N \leq 0.1$	$0.04(N)$
$0.1 < N \leq 0.25$	$0.004 + 0.0067(N-0.1)$
$N > 0.25$	0.005

where:

N = the nitrogen content of the fuel (percent by weight).

or:

Manufacturers may develop custom fuel-bound nitrogen allowances for each gas turbine model they manufacture. These fuel-bound nitrogen allowances shall be substantiated with data and must be approved for use by the Administrator before the initial performance test required by § 60.8. Notices of approval of custom fuel-bound nitrogen allowances will be published in the Federal Register.

(b) Stationary gas turbines with a heat input at peak load greater than 107.2 gigajoules per hour (100 million Btu/hour) based on the lower heating value of the fuel fired except as provided in § 60.332(d) shall comply with the provisions of § 60.332(a)(1).

(c) Stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules per hour (10 million Btu/hour) but less than or equal to 107.2 gigajoules per hour (100 million Btu/hour) based on the lower heating value of the fuel fired, shall comply with the provisions of § 60.332(a)(2).

(d) Stationary gas turbines employed in oil/gas production or oil/gas transportation and not located in Metropolitan Statistical Areas; and offshore platform turbines shall comply with the provisions of § 60.332(a)(2).

(e) Stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules per hour (10 million Btu/hour) but less than or equal to 107.2 gigajoules per hour (100 million Btu/hour) based on the lower heating value of the fuel fired and that have commenced construction prior to October 3, 1982 are exempt from paragraph (a) of this section.

(f) Stationary gas turbines using water or steam injection for control of NO_x emissions are exempt from paragraph (a) when ice fog is deemed a traffic hazard by the owner or operator of the gas turbine.

(g) Emergency gas turbines, military gas turbines for use in other than a garrison facility, military gas turbines installed for use as military training facilities, and fire fighting gas turbines are exempt from paragraph (a) of this section.

(h) Stationary gas turbines engaged by manufacturers in research and development of equipment for both gas turbine emission control techniques and gas turbine efficiency improvements are exempt from paragraph (a) on a case-by-case basis as determined by the Administrator.

(i) Exemptions from the requirements of paragraph (a) of this section will be granted on a case-by-case basis as determined by the Administrator in specific geographical areas where mandatory water restrictions are required by governmental agencies because of drought conditions. These

SEP 10 79
UMI

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

exemptions will be allowed only while the mandatory water restrictions are in effect.

§ 60.333 Standard for sulfur dioxide.

On and after the date on which the performance test required to be conducted by § 60.8 is completed, every owner or operator subject to the provision of this subpart shall comply with one or the other of the following conditions:

(a) No owner or operator subject to the provisions of this subpart shall cause to be discharged into the atmosphere from any stationary gas turbine any gases which contain sulfur dioxide in excess of 0.015 percent by volume at 15 percent oxygen and on a dry basis.

(b) No owner or operator subject to the provisions of this subpart shall burn in any stationary gas turbine any fuel which contains sulfur in excess of 0.8 percent by weight.

§ 60.334 Monitoring of operations.

(a) The owner or operator of any stationary gas turbine subject to the provisions of this subpart and using water injection to control NO_x emissions shall install and operate a continuous monitoring system to monitor and record the fuel consumption and the ratio of water to fuel being fired in the turbine. This system shall be accurate to within ±5.0 percent and shall be approved by the Administrator.

(b) The owner or operator of any stationary gas turbine subject to the provisions of this subpart shall monitor sulfur content and nitrogen content of the fuel being fired in the turbine. The frequency of determination of these values shall be as follows:

(1) If the turbine is supplied its fuel from a bulk storage tank, the values shall be determined on each occasion that fuel is transferred to the storage tank from any other source.

(2) If the turbine is supplied its fuel without intermediate bulk storage the values shall be determined and recorded daily. Owners, operators or fuel vendors may develop custom schedules for determination of the values based on the design and operation of the affected facility and the characteristics of the fuel supply. These custom schedules shall be substantiated with data and must be approved by the Administrator before they can be used to comply with paragraph (b) of this section.

(c) For the purpose of reports required under § 60.7(c), periods of excess emissions that shall be reported are defined as follows:

(1) *Nitrogen oxides.* Any one-hour period during which the average water-to-fuel ratio, as measured by the continuous monitoring system, falls below the water-to-fuel ratio determined to demonstrate compliance with § 60.332 by the performance test required in § 60.8 or any period during which the fuel-bound nitrogen of the fuel is greater than the maximum nitrogen content allowed by the fuel-bound nitrogen allowance used during the performance test required in § 60.8. Each report shall include the average water-to-fuel ratio, average fuel consumption, ambient conditions, gas turbine load, and nitrogen content of the fuel during the period of excess emissions, and the graphs or figures developed under § 60.335(a).

(2) *Sulfur dioxide.* Any daily period during which the sulfur content of the fuel being fired in the gas turbine exceeds 0.8 percent.

(3) *Ice fog.* Each period during which an exemption provided in § 60.332(g) is in effect shall be reported in writing to the Administrator quarterly. For each period the ambient conditions existing during the period, the date and time the air pollution control system was deactivated, and the date and time the air pollution control system was reactivated shall be reported. All quarterly reports shall be postmarked by the 30th day following the end of each calendar quarter.

(Sec. 114 of the Clean Air Act as amended [42 U.S.C. 1857c-9]).

§ 60.335 Test methods and procedures.

(a) The reference methods in Appendix A to this part, except as provided in § 60.8(b), shall be used to determine compliance with the standards prescribed in § 60.332 as follows:

(1) Reference Method 20 for the concentration of nitrogen oxides and oxygen. For affected facilities under this subpart, the span value shall be 300 parts per million of nitrogen oxides.

(i) The nitrogen oxides emission level measured by Reference Method 20 shall be adjusted to ISO standard day conditions by the following ambient condition correction factor:

$$NO_x = (NO_{x_{obs}}) \left(\frac{P_{ref}}{P_{obs}}\right)^{0.5} e^{19(H_{obs} - 0.00633)} \left(\frac{T_{AMB}}{288°K}\right)^{1.53}$$

where:

NO_x = emissions of NO_x at 15 percent oxygen and ISO standard ambient conditions.

$NO_{x_{obs}}$ = measured NO_x emissions at 15 percent oxygen, ppmv.

P_{ref} = reference combuster inlet absolute pressure at 101.3 kilopascals ambient pressure.

P_{obs} = measured combustor inlet absolute pressure at test ambient pressure.

H_{obs} = specific humidity of ambient air at test.

e = transcendental constant (2.718).

T_{AMB} = temperature of ambient air at test.

The adjusted NO_x emission level shall be used to determine compliance with § 60.332.

(ii) Manufacturers may develop custom ambient condition correction factors for each gas turbine model they manufacture in terms of combustor inlet pressure, ambient air pressure, ambient air humidity and ambient air temperature to adjust the nitrogen oxides emission level measured by the performance test as provided for in § 60.8 to ISO standard day conditions. These ambient condition correction factors shall be substantiated with data and must be approved for use by the Administrator before the initial performance test required by § 60.8. Notices of approval of custom ambient condition correction factors will be published in the **Federal Register.**

(iii) The water-to-fuel ratio necessary to comply with § 60.332 will be determined during the initial performance test by measuring NO_x emission using Reference Method 20 and the water-to-fuel ratio necessary to comply with § 60.332 at 30, 50, 75, and 100 percent of peak load or at four points in the normal operating range of the gas turbine, including the minimum point in the range and peak load. All loads shall be corrected to ISO conditions using the appropriate equations supplied by the manufacturer.

(2) The analytical methods and procedures employed to determine the nitrogen content of the fuel being fired shall be approved by the Administrator and shall be accurate to within ±5 percent.

(b) The method for determining compliance with § 60.333, except as provided in § 60.8(b), shall be as follows:

(1) Reference Method 20 for the concentration of sulfur dioxide and oxygen or

(2) ASTM D2880-71 for the sulfur content of liquid fuels and ASTM D1072-70 for the sulfur content of gaseous fuels. These methods shall also be used to comply with § 60.334(b).

(c) Analysis for the purpose of determining the sulfur content and the nitrogen content of the fuel as required by § 60.334(b), this subpart, may be performed by the owner/operator, a service contractor retained by the owner/operator, the fuel vendor, or any other qualified agency provided that the analytical methods employed by these agencies comply with the applicable paragraphs of this section.

(Sec. 114 of the Clean Air Act as amended [42 U.S.C. 1857c-9]).

Appendix A—Reference Methods

2. Part 60 is amended by adding Reference Method 20 to Appendix A as follows:

* * * * *

Method 20—Determination of Nitrogen Oxides, Sulfur Dioxide, and Oxygen Emissions from Stationary Gas Turbines

1. Applicability and Principle

1.1 Applicability. This method is applicable for the determination of nitrogen oxides (NO_x), sulfur dioxide (SO_2), and oxygen (O_2) emissions from stationary gas turbines. For the NO_x and O_2 determinations, this method includes: (1) measurement system design criteria, (2) analyzer performance specifications and performance test procedures; and (3) procedures for emission testing.

1.2 Principle. A gas sample is continuously extracted from the exhaust stream of a stationary gas turbine; a portion of the sample stream is conveyed to instrumental analyzers for determination of NO_x and O_2 content. During each NO_x and OO_2 determination, a separate measurement of SO_2 emissions is made, using Method 6, or it equivalent. The O_2 determination is used to adjust the NO_x and SO_2 concentrations to a reference condition.

2. Definitions

2.1 Measurement System. The total equipment required for the determination of a gas concentration or a gas emission rate. The system consists of the following major subsystems:

2.1.1 Sample Interface. That portion of a system that is used for one or more of the following: sample acquisition, sample transportation, sample conditioning, or protection of the analyzers from the effects of the stack effluent.

2.1.2 NO_x Analyzer. That portion of the system that senses NO_x and generates an output proportional to the gas concentration.

2.1.3 O_2 Analyzer. That portion of the system that senses O_2 and generates an output proportional to the gas concentration.

2.2 Span Value. The upper limit of a gas concentration measurement range that is specified for affected source categories in the applicable part of the regulations.

2.3 Calibration Gas. A known concentration of a gas in an appropriate diluent gas.

2.4 Calibration Error. The difference between the gas concentration indicated by the measurement system and the known concentration of the calibration gas.

2.5 Zero Drift. The difference in the measurement system output readings before and after a stated period of operation during which no unscheduled maintenance, repair, or adjustment took place and the input concentration at the time of the measurements was zero.

2.6 Calibration Drift. The difference in the measurement system output readings before and after a stated period of operation during which no unscheduled maintenance, repair, or adjustment took place and the input at the time of the measurements was a high-level value.

2.7 Residence Time. The elapsed time from the moment the gas sample enters the probe tip to the moment the same gas sample reaches the analyzer inlet.

2.8 Response Time. The amount of time required for the continuous monitoring system to display on the data output 95 percent of a step change in pollutant concentration.

2.9 Interference Response. The output response of the measurement system to a component in the sample gas, other than the gas component being measured.

3. Measurement System Performance Specifications

3.1 NO_2 to NO Converter. Greater than 90 percent conversion efficiency of NO_2 to NO.

3.2 Interference Response. Less than ± 2 percent of the span value.

3.3 Residence Time. No greater than 30 seconds.

3.4 Response Time. No greater than 3 minutes.

3.5 Zero Drift. Less than ± 2 percent of the span value.

3.6 Calibration Drift. Less than ± 2 percent of the span value.

4. Apparatus and Reagents

4.1 Measurement System. Use any measurement system for NO_x and O_2 that is expected to meet the specifications in this method. A schematic of an acceptable measurement system is shown in Figure 20-1. The essential components of the measurement system are described below:

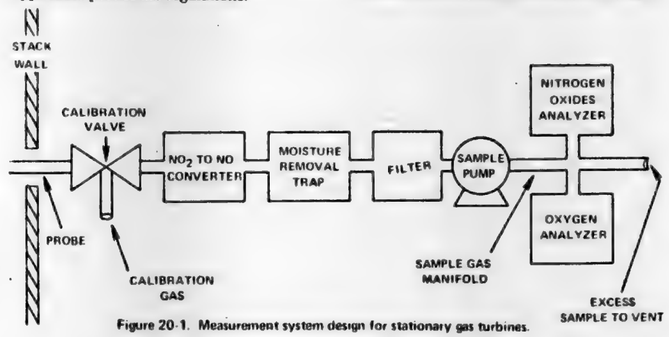

Figure 20-1. Measurement system design for stationary gas turbines.

4.1.1 Sample Probe. Heated stainless steel, or equivalent, open-ended, straight tube of sufficient length to traverse the sample points.

4.1.2 Sample Line. Heated (>95°C) stainless steel or Teflon® tubing to transport the sample gas to the sample conditioners and analyzers.

4.1.3 Calibration Valve Assembly. A three-way valve assembly to direct the zero and calibration gases to the sample conditioners and to the analyzers. The calibration valve assembly shall be capable of blocking the sample gas flow and of introducing calibration gases to the measurement system when in the calibration mode.

4.1.4 NO_2 to NO Converter. That portion of the system that converts the nitrogen dioxide (NO_2) in the sample gas to nitrogen oxide (NO). Some analyzers are designed to measure NO_x as NO_2 on a wet basis and can be used without an NO_2 to NO converter or a moisture removal trap provided the sample line to the analyzer is heated (>95°C) to the inlet of the analyzer. In addition, an NO_2 to NO converter is not necessary if the NO_2 portion of the exhaust gas is less than 5 percent of the total NO_x concentration. As a guideline, an NO_2 to NO converter is not necessary if the gas turbine is operated at 90 percent or more of peak load capacity. A converter is necessary under lower load conditions.

4.1.5 Moisture Removal Trap. A refrigerator-type condenser designed to continuously remove condensate from the sample gas. The moisture removal trap is not necessary for analyzers that can measure NO_x concentrations on a wet basis; for these analyzers, (a) heat the sample line up to the inlet of the analyzers, (b) determine the moisture content using methods subject to the approval of the Administrator, and (c) correct the NO_x and O_2 concentrations to a dry basis.

4.1.6 Particulate Filter. An in-stack or an out-of-stack glass fiber filter, of the type specified in EPA Reference Method 5; however, an out-of-stack filter is recommended when the stack gas temperature exceeds 250 to 300°C.

4.1.7 Sample Pump. A nonreactive leak-free sample pump to pull the sample gas through the system at a flow rate sufficient to minimize transport delay. The pump shall be made from stainless steel or coated with Teflon or equivalent.

4.1.8 Sample Gas Manifold. A sample gas manifold to divert portions of the sample gas stream to the analyzers. The manifold may be constructed of glass, Teflon, type 316 stainless steel, or equivalent.

4.1.9 Oxygen and Analyzer. An analyzer to determine the percent O_2 concentration of the sample gas stream.

4.1.10 Nitrogen Oxides Analyzer. An analyzer to determine the ppm NO_x concentration in the sample gas stream.

4.1.11 Data Output. A strip-chart recorder, analog computer, or digital recorder for recording measurement data.

4.2 Sulfur Dioxide Analysis. EPA Reference Method 6 apparatus and reagents.

4.3 NO_x Caliberation Gases. The calibration gases for the NO_x analyzer may be NO in N_2, NO_2 in air or N_2, or NO and NO_2

in N_2. For NO_x measurement analyzers that require oxidation of NO to NO_2, the calibration gases must be in the form of NO in N_2. Use four calibration gas mixtures as specified below:

4.3.1 High-level Gas. A gas concentration that is equivalent to 80 to 90 percent of the span value.

4.3.2 Mid-level Gas. A gas concentration that is equivalent to 45 to 55 percent of the span value.

4.3.3 Low-level Gas. A gas concentration that is equivalent to 20 to 30 percent of the span value.

4.3.4 Zero Gas. A gas concentration of less than 0.25 percent of the span value. Ambient air may be used for the NO_x zero gas.

4.4 O_2 Calibration Gases. Use ambient air at 20.9 percent as the high-level O_2 gas. Use a gas concentration that is equivalent to 11–14 percent O_2 for the mid-level gas. Use purified nitrogen for the zero gas.

4.5 NO_2/NO Gas Mixture. For determining the conversion efficiency of the NO_2 to NO converter, use a calibration gas mixture of NO_2 and NO in N_2. The mixture will be known concentrations of 40 to 60 ppm NO_2 and 90 to 110 ppm NO and certified by the gas manufacturer. This certification of gas concentration must include a brief description of the procedure followed in determining the concentrations.

5. Measurement System Performance Test Procedures

Perform the following procedures prior to measurement of emissions (Section 6) and only once for each test program, i.e., the series of all test runs for a given gas turbine engine.

5.1 Calibration Gas Checks. There are two alternatives for checking the concentrations of the calibration gases. (a) The first is to use calibration gases that are documented traceable to National Bureau of Standards Reference Materials. Use *Traceability Protocol for Establishing True Concentrations of Gases Used for Calibrations and Audits of Continuous Source Emission Monitors* (Protocol Number 1) that is available from the Environmental Monitoring and Support Laboratory, Quality Assurance Branch, Mail Drop 77, Environmental Protection Agency, Research Triangle Park, North Carolina 27711. Obtain a certification from the gas manufacturer that the protocol was followed. These calibration gases are not to be analyzed with the Reference Methods. (b) The second alternative is to use calibration gases not prepared according to the protocol. If this alternative is chosen, within 1 month prior to the emission test, analyze each of the calibration gas mixtures in triplicate using Reference Method 7 or the procedure outlined in Citation 8.1 for NO_x and use Reference Method 3 for O_2. Record the results on a data sheet (example is shown in Figure 20–2). For the low-level, mid-level, or high-level gas mixtures, each of the individual NO_x analytical results must be within 10 percent (or 10 ppm, whichever is greater) of the triplicate set average (O_2 test results must be within 0.5 percent O_2); otherwise, discard the entire set and repeat the triplicate analyses. If the average of the triplicate reference method test results is within 5 percent for NO_x gas or 0.5 percent O_2 for the O_2 gas of the calibration gas manufacturer's tag value, use the tag value; otherwise, conduct at least three additional reference method test analyses until the results of six individual NO_x runs (the three original plus three additional) agree within 10 percent (or 10 ppm, whichever is greater) of the average (O_2 test results must be within 0.5 percent O_2). Then use this average for the cylinder value.

5.2 Measurement System Preparation. Prior to the emission test, assemble the measurement system following the manufacturer's written instructions in preparing and operating the NO_2 to NO converter, the NO_x analyzer, the O_2 analyzer, and other components.

Date _____ (Must be within 1 month prior to the test period)

Reference method used _____

Sample run	Gas concentration, ppm		
	Low level[a]	Mid level[b]	High level[c]
1			
2			
3			
Average			
Maximum % deviation[d]			

[a] Average must be 20 to 30% of span value.

[b] Average must be 45 to 55% of span value.

[c] Average must be 80 to 90% of span value.

[d] Must be ≤ ± 10% of applicable average or 10 ppm, whichever is greater.

Figure 20-2. Analysis of calibration gases.

5.3 Calibration Check. Conduct the calibration checks for both the NO_x and the O_2 analyzers as follows:

5.3.1 After the measurement system has been prepared for use (Section 5.2), introduce zero gases and the mid-level calibration gases; set the analyzer output responses to the appropriate levels. Then introduce each of the remainder of the calibration gases described in Sections 4.3 or 4.4, one at a time, to the measurement system. Record the responses on a form similar to Figure 20–3.

5.3.2 If the linear curve determined from the zero and mid-level calibration gas responses does not predict the actual response of the low-level (not applicable for the O_2 analyzer) and high-level gases within ±2 percent of the span value, the calibration shall be considered invalid. Take corrective measures on the measurement system before proceeding with the test.

5.4 Interference Response. Introduce the gaseous components listed in Table 20–1 into the measurement system separately, or as gas mixtures. Determine the total interference output response of the system to these components in concentration units; record the values on a form similar to Figure 20–4. If the sum of the interference responses of the test gases for either the NO_x or O_2 analyzers is greater than 2 percent of the applicable span value, take corrective measure on the measurement system.

Table 20–1.—*Interference Test Gas Concentration*

CO	500 ± 50 ppm.
SO_2	200 ± 20 ppm.
CO_2	10 ± 1 percent.
O_2	20.9 ± 1 percent.

Date of test _____

Analyzer type _____ Serial No. _____

Test gas type	Concentration, span	Analyzer output response	% of span

% of span = $\frac{\text{Analyzer output response}}{\text{Instrument span}} \times 100$.

Figure 20-4. Interference response.

Turbine type: _____ Identification number _____

Date: _____ Test number _____

Analyzer type: _____ Identification number _____

	Cylinder value, ppm or %	Initial analyzer response, ppm or %	Final analyzer responses, ppm or %	Difference: initial-final, ppm or %
Zero gas				
Low - level gas				
Mid - level gas				
High - level gas				

$$\text{Percent drift} = \frac{\text{Absolute difference}}{\text{Span value}} \times 100.$$

Figure 20-3. Zero and calibration data.

Conduct an interference response test of each analyzer prior to its initial use in the field. Thereafter, recheck the measurement system if changes are made in the instrumentation that could alter the interference response, e.g., changes in the type of gas detector.

In lieu of conducting the interference response test, instrument vendor data, which demonstrate that for the test gases of Table 20–1 the interference performance specification is not exceeded, are acceptable.

5.5 Residence and Response Time.

5.5.1 Calculate the residence time of the sample interface portion of the measurement system using volume and pump flow rate information. Alternatively, if the response time determined as defined in Section 5.5.2 is less than 30 seconds, the calculations are not necessary.

5.5.2 To determine response time, first introduce zero gas into the system at the

calibration valve until all readings are stable: then, switch to monitor the stack effluent until a stable reading can be obtained. Record the upscale response time. Next, introduce high-level calibration gas into the system. Once the system has stabilized at the high-level concentration, switch to monitor the stack effluent and wait until a stable value is reached. Record the downscale response time. Repeat the procedure three times. A stable value is equivalent to a change of less than 1 percent of span value for 30 seconds or less than 5 percent of the measured average concentration for 2 minutes. Record the response time data on a form similar to Figure 20–5, the readings of the upscale or downscale reponse time, and report the greater time as the "response time" for the analyzer. Conduct a response time test prior to the initial field use of the measurement system, and repeat if changes are made in the measurement system.

Date of test _____

Analyzer type _____ S/N _____

Span gas concentration _____ ppm

Analyzer span setting _____ ppm

Upscale
1 _____ seconds
2 _____ seconds
3 _____ seconds

Average upscale response _____ seconds

Downscale
1 _____ seconds
2 _____ seconds
3 _____ seconds

Average downscale response _____ seconds

System response time = slower average time = _____ seconds.

Figure 20-5. Response time

5.6 NO_2 NO Conversion Efficiency. Introduce to the system, at the calibration valve assembly, the NO_2/NO gas mixture (Section 4.5). Record the response of the NO_x analyzer. If the instrument response indicates less than 90 percent NO_2 to NO conversion, make corrections to the measurement system and repeat the check. Alternatively, the NO_2 to NO converter check described in Title 40 Part 86: *Certification and Test Procedures for Heavy-Duty Engines for 1979 and Later Model Years* may be used. Other alternate procedures may be used with approval of the Administrator.

6. Emission Measurement Test Procedure

6.1 Preliminaries.

6.1.1 Selection of a Sampling Site. Select a sampling site as close as practical to the exhaust of the turbine. Turbine geometry, stack configuration, internal baffling, and point of introduction of dilution air will vary for different turbine designs. Thus, each of these factors must be given special consideration in order to obtain a representative sample. Whenever possible, the sampling site shall be located upstream of the point of introduction of dilution air into the duct. Sample ports may be located before or after the upturn elbow, in order to accommodate the configuration of the turning vanes and baffles and to permit a complete, unobstructed traverse of the stack. The sample ports shall not be located within 5 feet or 2 diameters (whichever is less) of the gas discharge to atmosphere. For supplementary-fired, combined-cycle plants, the sampling site shall be located between the gas turbine and the boiler. The diameter of the sample ports shall be sufficient to allow entry of the sample probe.

6.1.2 A preliminary O_2 traverse is made for the purpose of selecting low O_2 values. Conduct this test at the turbine condition that is the lowest percentage of peak load operation included in the program. Follow the procedure below or alternative procedures subject to the approval of the Administrator may be used:

6.1.2.1 Minimum Number of Points. Select a minimum number of points as follows: (1) eight, for stacks having cross-sectional areas less than 1.5 m^2 (16.1 ft^2); (2) one sample point for each 0.2 m^2 (2.2 ft^2 of areas, for stacks of 1.5 m^2 to 10.0 m^2 (16.1–107.6 ft^2) in cross-sectional area; and (3) one sample point for each 0.4 m^2 (4.4 ft^2) of area, for stacks greater than 10.0 m^2 (107.6 ft^2) in cross-sectional area. Note that for circular ducts, the number of sample points must be a multiple of 4, and for rectangular ducts, the number of points must be one of those listed in Table 20–2; therefore, round off the number of points (upward), when appropriate.

6.1.2.2 Cross-sectional Layout and Location of Traverse Points. After the number of traverse points for the preliminary O^2 sampling has been determined, use Method 1 to located the traverse points.

6.1.2.3 Preliminary O^2 Measurement. While the gas turbine is operating at the lowest percent of peak load, conduct a preliminary O^2 measurement as follows: Position the probe at the first traverse point and begin sampling. The minimum sampling time at each point shall be 1 minute plus the average system response time. Determine the average steady-state concentration of O^2 at each point and record the data on Figure 20–6.

6.1.2.4 Selection of Emission Test Sampling Points. Select the eight sampling points at which the lowest O^2 concentration were obtained. Use these same points for all the test runs at the different turbine load conditions. More than eight points may be used, if desired.

Table 20–2.—*Cross-sectional Layout for Rectangular Stacks*

No. of traverse points	Matrix layout
9	3 x 3
12	4 x 3
16	4 x 4
20	5 x 4

Figure 20-6. Preliminary oxygen traverse.

6.2 NO_x and O_2 Measurement. This test is to be conducted at each of the specified load conditions. Three test runs at each load condition constitute a complete test.

6.2.1 At the beginning of each NO_x test run and, as applicable, during the run, record turbine data as indicated in Figure 20–7. Also, record the location and number of the traverse points on a diagram.

6.2.2 Position the probe at the first point determined in the preceding section and begin sampling. The minimum sampling time at each point shall be at least 1 minute plus the average system response time. Determine the average steady-state concentration of O_2 and NO_x at each point and record the data on Figure 20–8.

BILLING CODE 6560-01-C

6.2.3 After sampling the last point, conclude the test run by recording the final turbine operating parameters and by determining the zero and calibration drift, as follows:

Immediately following the test run at each load condition, or if adjustments are necessary for the measurement system during the tests, reintroduce the zero and mid-level calibration gases as described in Sections 4.3, and 4.4, one at a time, to the measurement system at the calibration valve assembly. (Make no adjustments to the measurement system until after the drift checks are made). Record the analyzers' responses on a form similar to Figure 20-3. If the drift values exceed the specified limits, the test run preceding the check is considered invalid and will be repeated following corrections to the measurement system. Alternatively, the test results may be accepted provided the measurement system is recalibrated and the calibration data that result in the highest corrected emission rate are used.

6.3 SO_2 Measurement. This test is conducted only at the 100 percent peak load condition. Determine SO_2 using Method 6, or equivalent, during the test. Select a minimum of six total points from those required for the NO_x measurements; use two points for each sample run. The sample time at each point shall be at least 10 minutes. Average the O_2 readings taken during the NO_x test runs at sample points corresponding to the SO_2 traverse points (see Section 6.2.2) and use this average O_2 concentration to correct the integrated SO_2 concentration obtained by Method 6 to 15 percent O_2 (see Equation 20-1).

If the applicable regulation allows fuel sampling and analysis for fuel sulfur content to demonstrate compliance with sulfur emission unit, emission sampling with Reference Method 6 is not required, provided the fuel sulfur content meets the limits of the regulation.

7. Emission Calculations

7.1 Correction to 15 Percent Oxygen. Using Equation 20-1, calculate the NO_x and SO_2 concentrations (adjusted to 15 percent O_2). The correction to 15 percent O_2 is sensitive to the accuracy of the O_2 measurement. At the level of analyzer drift specified in the method (±2 percent of full scale), the change in the O_2 concentration correction can exceed 10 percent when the O_2 content of the exhaust is above 16 percent O_2. Therefore O_2 analyzer stability and careful calibration are necessary.

$$C_{adj} = C_{meas} \times \frac{5.9}{20.9 - \%O_2} \quad \text{(Equation 20-1)}$$

Where:

C_{adj} = Pollutant concentration adjusted to 15 percent O_2 (ppm)

C_{meas} = Pollutant concentration measured, dry basis (ppm)

5.9 = 20.9 percent O_2 − 15 percent O_2, the defined O_2 correction basis

Percent O_2 = Percent O_2 measured, dry basis (%)

7.2 Calculate the average adjusted NO_x concentration by summing the point values and dividing by the number of sample points.

Part III

Securities and Exchange Commission

Update of Listing of Certain Regulatory Matters

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

SECURITIES AND EXCHANGE COMMISSION

[17 CFR Ch. II]

[Release Nos. 33-6117; 34-16153; 35-21204; IC-10853; IA-697]

Update of Listing of Certain Regulatory Matters

AGENCY: Securities and Exchange Commission.

ACTION: Publication of Updated Listing.

SUMMARY: The Securities and Exchange Commission has determined to publish an update of its March 22, 1979 listing of anticipated major rulemaking and related regulatory matters likely to be considered by the Commission during the balance of 1979. The earlier listing appears in Securities Act Release No. 6040, March 22, 1979 (44 FR 20354); April 4, 1979.

FOR FURTHER INFORMATION CONTACT: Christine Delaney, Office of the Secretary, Securities and Exchange Commission, 500 North Capitol Street, Washington, D.C. 20549, (202) 272-2600.

SUPPLEMENTARY INFORMATION: On March 22, 1979, the Commission published a listing of anticipated major rulemaking and related regulatory matters. Since that time, the Commission has taken action on a number of the items listed, and additional matters, not included last March, have come under consideration. Accordingly, the Commission has determined that the publication of an updated version of its listing would be useful to the public.

As the Commission noted in Securities Act Release No. 6040, any listing of this nature is necessarily based upon priorities at the time of publication. Because the Commission must respond to the developments in the capital markets, changes in economic conditions, new Congressional priorities, and similar circumstances not easily predictable, no such listing can be definitive. Additionally, this listing does not include matters which, although under consideration, have not yet evolved to a point in the deliberative process where public Commission action may be anticipated. Accordingly, while the Commission believes that the information contained herein will be of use to interested persons, those affected by Commission action should not rely solely upon this document.

This updated listing follows the sections utilized in Securities Act Release No. 6040. Significant changes and developments concerning each of the items in that release are set forth below and numbered so as to correspond to the earlier release; a more complete description of these items may be found in Securities Act Release No. 6040. In addition, certain new matters are included at the end of each section.

* * * * *

A. Significant Initiatives in the Areas of Capital Formation and Corporate Disclosure

1. *Tender Offer Rule Proposals.* The Commission has proposed rules which would provide specific filing and disclosure requirements, and additional substantive regulatory protection, for public investors with respect to certain cash tender offers and exchange tender offers. In addition, these propoals embody antifraud provisions which would apply to all tender offers. The staff is actively engaged in analyzing the public comments on these proposals, and the Commission will consider the proposed rules further following completion of that review. For further information, see Securities Act Release No. 6022 (February 5, 1979) (44 FR 9956).

2. *Proposed Rules Concerning Activities of Public Companies Which Seek to Become Private Corporations.* The Commission recently adopted Rule 13e-3 and Schedule 13E-3 to provide disclosure requirements and antifraud provisions with respect to "going private" transactions. Certain amendments to Rule 13e-3 and Schedule 13E-3 were proposed for comment concurrently with the adoption of the rule and schedule. These proposals would require an issuer or an affiliate engaging in a "going private" transaction to disclose projections of revenues, income and earnings per share, prepared by or on behalf of the issuer during the preceding 18 months, which have been furnished to lenders or to persons who have provided certain reports, opinions or appraisals which are materially related to the transaction. For further information, see Securities Act Release Nos. 6100 (August 2, 1979) (44 FR 46736) and 6101 (August 2, 1979) (44 FR 46748).

3. *Small Business Capital Formation.* As a result of the staff's continuing analysis of the file developed during its small business hearings, the Commission expects to consider staff proposals concerning a special limited offering exemption for small businesses, a general revision of the Regulation A exemption, and the classification of issuers for Securities Exchange Act reporting purposes. For further information, see Securities Act Release No. 6049 (April 3, 1979) (44 FR 21562).

4. *Corporate Governance.* As a result of its ongoing comprehensive study of issues relating to corporate governance, the Commission, in December 1978, adopted rules to expand and supplement disclosures made to shareholders in proxy statements. These rules are intended to provide investors with enhanced information on the structure, composition and function of corporate boards of directors. At the time these rules were adopted, the Commission's staff was directed to monitor carefully the quality of the disclosures made in order to determine whether amendments would be appropriate. In light of the staff review to date, as well as the volume of requests for interpretive advice received during the recently completed proxy season, the staff intends to recommend the publication of a release providing certain interpretive views of the Division of Corporation Finance and requesting additional comments on the operation of the proxy rules. [*See also* Item No. 10, *infra*, this section.] In addition, the Commission anticipates that a staff report on corporate governance issues will be completed in early 1980.

5. *Projections.* this proceeding was completed with the adoption of rules providing a "safe harbor" from liability under the Federal securities laws for certain management projections of revenues, income and earnings per share. For further information, see Securities Act Release No. 6084 (June 25, 1979) (44 FR 38810).

6. *Form 10-K.* In its report to the Commission in November 1977, the Advisory Committee on Corporate Disclosure recommended revisions to the annual report filed pursuant to Section 13(a) of the Securities Exchange Act on Form 10-K. The Commission subsequently published a release requesting comments on Form 10-K and on the proposed revised format recommended by the Advisory Committee. The staff anticipates recommending to the Commission revisions to Form 10-K and related rules before the end of 1979. For further information, see Securities Exchange Act Release No. 15068 (August 16, 1978) (43 FR 37460).

New Matters

7. *Statistical Disclosure by Bank Holding Companies.* At the time the Commission issued Guides 61 and 3, it stated that the experiences of registrants and users of the information would be reviewed to see whether the new disclosures made under the guides are necessary or appropriate. The Commission has just issued a release implementing that review process by requesting comments from interested parties on the guides. For further information, see Securities Exchange Act Release No. 6115 (August 30, 1979).

8. *Proposed Guidelines for Disclosure by Electric Gas and Utility Companies.* The Commission recently issued for comment proposed staff guidelines for disclosure in registration statements and reports filed by electric and gas utility companies. These proposed guidelines were developed in response to the recommendation of the Advisory Committee on Corporate Disclosure that the Commission develop disclosure guidelines for specific industries with the requirements for each reflecting the particular characteristics of the industry under consideration. The proposed guidelines, which are intended to improve the quality of the disclosure contained in various documents filed by electric and gas utility companies, reflect practices presently followed by the Commission's Division of Corporation Finance and a number of suggestions derived from the public comments. The comment period on the proposed guidelines expires on Septmeber 24, 1979. For further information, see Securities Act Release No. 6085 (June 25, 1979) (44 FR 38792).

9. *Relationships Between Attorneys and Registrants.* The Commission has requested written comments on a rulemaking petition submitted by the Institute for Public Representation. The petitioner's proposal would require disclosure of certain information concerning the relationships between registered issuers and their counsel, as well as disclosure about resignations or dismissals of an issuer's legal counsel. The public comment period expires September 30, 1979. For further information, see Securities Exchange Act Release No. 16045 (July 25, 1979) (44 FR 44881).

10. *Proxy Rule Amendments.* As a further result of its ongoing corporate governance study, the Commission recently proposed for comment amendments to its proxy rules, including provisions relating to the format of proxies, that are intended to provide for greater participation by shareholders in the corporate electoral process and greater opportunities for shareholders to obtain information and advice with respect to matters on which they vote. [*See also* Item No. 4, *supra*, this section.] For further information, see Securities Exchange act Release No. 16104 (August 13, 1979) (44 FR 48938).

B. Significant Initiatives Affecting Regulation of the Securities Markets and the Securities Industry

1. *Rule 15c3-1.* The staff is continuing its study of the "net-capital rule" and intends to recommend to the Commission proposed amendments to Rule 15c3-1 early in 1980.

2. *National Market System.* The Commission recently has proposed several rules under the Securities Exchange Act designed to govern aspects of the national market system. Proposed Rule 19c-3 would amend the rules of national securities exchanges which limit or condition the ability of their members to engage in over-the-counter transactions in certain exchange traded securities. The Commission held six days of public hearings on this proposal and expects to consider shortly whether to adopt the rule. For further information, see Securities Exchange Act Release No. 15769 (April 26, 1979) (44 FR 26688).

In addition, the Commission has proposed several rules under Section 11A of the Securities Exchange Act which are designed to facilitate the development of a national market system.

a. Proposed Rule 11Acl-3 is intended to provide protection for all displayed public limit orders by requiring satisfaction of those orders at their limit prices, or under certain circumstances, the transaction price. For further information, see Securities Exchange Act Release No. 15770 (April 26, 1979) (44 FR 26692).

b. Proposed Rule 11Aa2-1 is intended to provide procedures for designating securities as qualified for trading in a national market system and would require the dissemination of transaction and quotation information with respect to certain over-the-counter securities included in the system. For further information, see Securities Exchange Act Release No. 15926 (June 15, 1979) (44 FR 36912).

c. Proposed Rule 11Aa3-1 would amend Rule 17a-15, which currently governs the operation of the consolidated transaction reporting system, to permit vendors to retransmit the entire data stream of transaction reports for purposes of creating a moving ticker display. For further information, see Securities Exchange Act Release No. 15250 (October 20, 1978) (43 FR 50606).

d. Proposed Rule 11Acl-2 would establish minimum requirements with respect to the manner in which vendors of securities information display transaction and quotation information. For further information, see Securities Exchange Act Release No. 15251 (October 20, 1978) (43 FR 50615).

3. *Proposed Rule 13e-4 and Schedule 13E-4.* The Commission recently adopted Rule 13e-4 and Schedule 13E-4, dealing with tender and exchange offers by certain issuers and their affiliates for the issuer's equity securities, and intends to propose for comment certain amendments to the rule. For further information, see Securities Act Release No. 6108 (August 16, 1979) (44 FR 49406).

4. *Proposed Rule 13e-2.* The staff intends shortly to make its recommendation to the Commission on whether to publish for comment a revised version of proposed Rule 13e-2, under the Securities Exchange Act, which would impose restrictions on certain issuers and their affiliates repurchasing the issuer's securities in open market transactions, and related amendments to Rule 10b-6, also under the Securities Exchange Act.

5. *Proposed Rule 10b-21.* The staff has not yet recommended further action on proposed Rule 10b-21, under the Securities Exchange Act, which would regulate shortselling prior to underwritten offerings, but expects to make its recommendation to the Commission by the end of 1979. For further information, see Securities Exchange Act Release No. 13092 (December 21, 1976) (41 FR 56542).

6. *Registration Standards for the Regulation of Clearing Agencies.* The staff has not yet recommended further action with respect to the establishment of registration standards for the registration of clearing agencies, but expects to make its recommendation to the Commission by the end of 1979.

7. *Proposed Rule 17Ad-8.* The staff has not yet recommended further action on proposed Rule 17Ad-8, under the Securities Exchange Act. The rule would codify the existing depository practice of transmitting to an issuer, either at regular intervals or at the issuer's request and upon payment of a reasonable fee to the depository, a listing of persons on whose behalf the depository holds that issuer's securities. The staff expects to make its recommendations to the Commission by the end of 1979. For further information, see Securities Exchange Act Release No. 14493 (February 22, 1978) (43 FR 8269).

8. *Rule 19b-4.* The Commission recently has proposed amendments to Rule 19b-4, under the Securities Exchange Act. The rule prescribes procedures to be followed by self-regulatory organizations in filing proposed rule changes and other materials with the Commission. The proposed amendments are designed to simplify and clarify the requirements

V 4 4 / 1 7 6 S E 1 0 7 9 UMI

and to facilitate the review of proposed rule changes. The Commission intends to consider the proposals following the completion of the staff review of the public comments. For further information, see Securities Exchange Act Release No. 15838 (May 18, 1979) (44 FR 30924).

9. *Rule 10b–10 and Proposed Rule 15c2–12.* The staff has not yet recommended further action on proposed amendments to Rule 10b–10 and proposed Rule 15c2–12 under the Securities Exchange Act. These proposals would require brokers, dealers and municipal securities dealers to disclose, on customer confirmations, the amount of remuneration received by the broker, dealer or municipal securities dealer in certain transactions in debt securities. For further information, see Securities Exchange Act Release Nos. 15219 (October 6, 1978) (43 FR 47495) and 15220 (October 6, 1978) (44 FR 47538).

10. *Proposed Rule 3a4–1.* The staff has not yet recommended further action on proposed Rule 3a4–1, under the Securities Exchange Act, which would provide guidance to issuers as to the circumstances under which the issuer's own officers and employees would be brokers under the Securities Exchange Act if they participated in the sale of the issuer's securities. The staff intends to make its recommendations to the Commission by early 1980. For further information, see Securities Exchange Act Release No. 13195 (January 21, 1977) (42 FR 5084).

11. *Rule 15b9–2.* The Commission recently has proposed for comment amendments to Rule 15b9–2, under the Securities Exchange Act, which would require SECO firms to pay an annual assessment to be automatically set, unless the Commission determines otherwise, at the same level as the corresponding assessment imposed by the National Association of Securities Dealers, Inc. on its members. The public comment period expires on September 7, 1979. For further information, see Securities Exchange Act Release No. 16080 (August 3, 1979) (44 FR 47953).

12. *Rule 15b10–12.* The Commission has proposed for comment amendments to Rule 15b10–12, under the Securities Exchange Act, which specifies those rules not applicable to municipal securities brokers and dealers, in an effort to eliminate duplicate regulation of SECO municipal securities brokers and dealers. For further information, see Securities Exchange Act Release No. 16018 (July 11, 1979) (44 FR 41832).

13. *Rule 15c3–4.* The staff is continuing to study the possibility of proposing a new Rule 15c3–4, under the Securities Exchange Act, which would set forth standards regarding the borrowing of securities by brokers or dealers.

14. *Proposed Rule 15Bc7–1.* The Commission will consider, following staff review of the public comments, whether to adopt proposed Rule 15Bc7–1 to make available to the Municipal Securities Rulemaking Board copies of reports of examinations, or information contained in examinations, of municipal securities brokers and municipal securities dealers, subject to limitations designed to protect the confidentiality of reports supplied to the MSRB. For further information, see Securities Exchange Act Release No. 15885 (May 30, 1979) (44 FR 32616).

15. *Form MSD.* The Commission will consider, following staff review of the public comments, the adoption of amendments to Form MSD, the form required to be filed for registration as a municipal securities broker or municipal securities dealer, to permit the use of schedules prepared for bank regulatory agencies and otherwise to clarify the form. For further information, see Securities Exchange Act Release No. 14971 (July 17, 1978) (44 FR 32309).

16. *Section 12(f) Applications.* The staff is continuing to study the possibility of proposing rules under the Securities Exchange Act governing the information to be supplied in applications for unlisted trading privileges pursuant to Section 12(f) and enunciating the standards to be applied by the Commission in reviewing such applications.

17. *Options Study Recommendations.* The Commission will consider the steps that the self-regulatory organizations are taking to comply with certain of the recommendations contained in the Special Study of the Options Markets, and the steps the Commission must take to address certain other recommendations. In addition, the Commission will consider the most appropriate way to terminate the existing moratorium on expansion of the standardized options markets. For further information, see Securities Exchange Act Release No. 15575 (Februrary 22, 1979) (44 FR 11876).

18. *Underwriting Practices.* The National Association of Securities Dealers, Inc. filed a proposed rule change in June 1978, dealing with fixed price underwriting practices. The initial impetus for the proposed rule change was the Federal district court decision in *Papilsky* v. *Berndt* [1976–77 Transfer Binder] CCH Fed. Sec. L Rep. ¶95,627 (S.D.N.Y., 1976). The Commission has scheduled public hearings on the NASD proposal to begin in September 1979, and will consider what action to take with respect to the rule proposal after the staff completes its review of the public comments and testimony at the hearings. For further information, see Securities Exchange Act Release No. 15807 (May 9, 1979) (44 FR 28574).

C. Significant Initiatives Affecting Investment Companies and Investment Advisers

1. *"Start Up" Exemptions for Unit Investment Trusts.* This proceeding was completed with the adoption of a proposal which provides "start up" exemptions from the provisions of the Investment Company Act for unit investment trusts. For further information, see Investment Company Act Release No. 10690 (May 15, 1979) (44 FR 29644).

2. *Proposed Rule 434d.* This proceeding was completed with the adoption of Rule 434d, under the Securities Act, which permits the use of "summary prospectuses" by investment companies. For further information, see Securities Act Release No. 6116 (August 31, 1979).

3. *Bearing of Distribution Expenses by Mutual Funds.* The staff has completed its review of the public comments and the Commission shortly will consider whether to propose a rule under Section 12(b) of the Investment Company Act dealing with the circumstances under which investment companies may finance the distribution of their own shares. For further information, see Investment Company Act Release No. 10252 (May 23, 1978) (43 FR 23589).

4. *Rule 17j–1.* The staff has not yet made its recommendation to the Commission on revised Rule 17j–1 under the Investment Company Act, which would require investment companies to develop codes of ethics governing purchases or sales by investment company insiders of the same securities held or to be acquired by the investment company. The staff expects to make its recommendations by the end of 1979. For further information, see Investment Company Act Release Nos. 10162 (March 20, 1978) (43 FR 12721) and 10222 (April 28, 1978) (43 FR 19669).

5. *Rule 10f–3.* This proceeding was completed with the adoption of amendments to Rule 10f–3 under the Investment Company Act, which deals with the circumstances under which investment companies may participate in underwritings in which affiliated persons are participating. For further information, see Investment Company Act Release No. 10736 (June 14, 1979) (44 FR 36151).

6. *Proposed Rule 17e–2.* This proceeding was completed with the adoption of proposed Rule 17e–2 as Rule 17e–1 under the Investment Company Act to define what is a "usual and customary" brokerage fee for purposes of Section 17(e)(2)(A) of the Act. For further information, see Investment Company Act Release Nos. 10740 (June 20, 1979) (44 FR 37202) and 10741 (June 20, 1979) (44 FR 37204).

7. *Proposed Rule 154.* The Commission determined to withdraw proposed Rule 154 and instead issued an interpretive release concerning the circumstances under which guaranteed investment contracts issued by insurance companies may constitute securities requiring registration. For further information, see Securities Act Release Nos. 6050 (April 5, 1979) (44 FR 21656) and 6051 (April 5, 1979) (44 FR 21626).

New Matters

8. *Rule 156.* The Commission will consider whether to adopt a proposed interpretive rule concerning investment company sales literature following completion of the staff review of the public comments. For further information, see Securities Act Release No. 6034 (March 8, 1979) (44 FR 16935).

9. *Rule 205–3.* The Commission has recently invited public comment on proposed Rule 205–3 under the Investment Advisers Act, which would permit certain registered investment advisers to business development companies to be compensated on the basis of a share of net capital gains upon, or net capital appreciation of, the funds of the business development company. Such means of compensation is not currently permitted under the Investment Advisers Act. Upon completion of the staff review of the public comments received, the Commission will consider whether to adopt the proposed rule. For further information, see Investment Advisers Act Release No. 680 (June 19, 1979) (44 FR 37470).

D. Accounting Related Initiatives

1. *Review of Regulation S–X.* In response to a recommendation in the 1977 Report of the Advisory Committee on Corporate Disclosure, the staff has been reviewing Regulation S–X, which governs the form and content of financial statements filed with the Commission, to identify requirements which needlessly duplicate generally accepted accounting principles. Before the end of 1979, the staff intends to recommend to the Commission proposed amendments to Regulation S–X to eliminate any such duplication.

2. *Management Reports.* In its 1978 Report, the Commission on Auditors' Responsibilities ("Cohen Commission"), a commission established by the American Institute of Certified Public Accountants, encouraged companies to publish reports acknowledging the responsibility of management for the representations in financial statements and discussed specific areas which might be covered by such a report. Since that time, there have been various private initiatives directed toward the development of the kind of report by management envisioned by the Cohen Commission. While the staff is not now planning to recommend any initiative in this area during 1979, it intends to follow closely the further efforts of the private sector and will consider the need to propose rules relating to matters that might be included in a management report. [*See also* Item No. 3, *infra*, this section.]

3. *Reporting on Internal Accounting Control.* In April 1979, the Commission proposed for comment rules which would require the inclusion of a statement by management on internal accounting control in annual reports on Form 10–K and in annual reports to securities holders furnished pursuant to the proxy rules. The proposal would also require that the statement of management be examined and reported on by an independent public accountant. Following staff review of the public comments, the Commission will determine whether to adopt the proposed rules. For further information, see Securities Exchange Act Release No. 15772 (April 30, 1979) (44 FR 26702).

4. *Presentation in Financial Statements of Preferred and Common Stocks.* This proceeding was completed with the adoption of amendments to Regulation S–X to require separate balance sheet presentation of preferred stocks subject to mandatory redemption requirements or whose redemption is outside the control of the issuer. For further information, see Securities Exchange Act Release No. 16047 (July 27, 1979) (44 FR 23971).

5. *Proposed Oil and Gas Supplemental Earnings Summary.* In June 1979, the Commission reopened the comment period on this proposal to allow respondents to consider experience in preparing and reporting valuation information on oil and gas reserves for the year ended December 31, 1978. Following staff consideration of the public comments and the recommendations of the Advisory Committee on Oil and Gas Accounting, the Commission will consider the next appropriate steps to take on the proposal. For further information, see Securities Act Release Nos. 5969 (August 31, 1978) (43 DR 40726) and 6080 (June 14, 1979) (44 FR 36070).

6. *Report on the Accounting Profession.* The Commission submitted its second Report to Congress on the Accounting Profession and the Commission's Oversight Role on June 28, 1979.

New Matters

7. *Scope of Services by Independent Accountants.* In June 1979, the Commission issued an interpretive release setting forth its views concerning certain factors which accountants, and corporate boards or audit committees, should consider in assessing the possible effects upon auditing independence of accountants in performing nonaudit services for publicly-held audit clients. If future events indicate that further action is appropriate, the Commission will reconsider this issue. To facilitate this process, the Commission invited public comment on the interpretive release. For further information, see Securities Act Release No. 6078 (June 14, 1979) (44 FR 36156).

8. *Disclosure Requirements Affecting Oil and Gas Producers.* In June 1979, the Commission proposed an amendment to its reporting requirements for oil and gas producers to permit the financial statement disclosure of oil and gas reserve information required by Regulation S–X to be made in a note or separate schedule designated "unaudited" for fiscal years ending before December 26, 1980. Following staff consideration of the public comments received, the Commission will consider this issue. For further information, see Securities Act Release No. 6079 (June 14, 1979) (44 FR 36068).

9. *Proposed Rules Concerning Accountants Liability Under Section 11(a) of the Securities Act of 1933 for SAS No. 24 Reports.* The Commission shortly will publish for comment two alternative rules which would exclude accountants from liability under Section 11(a) of the Securities Act for SAS No. 24 reports included in Securities Act filings.

E. Consumer Protection Studies

1. *Predispute Arbitration Clauses in Agreements Between Broker-Dealers and Their Public Customers.* On July 2, 1979, the Commission issued a release cautioning broker-dealers about the use of arbitration clauses in customer agreements. For further information, see Securities Exchange Act Release No. 15984 (July 2, 1979) (44 FR 40462).

2. *Uniform Arbitration Code.* The Commission has recieved proposals for a uniform arbitration system from the Securities Industry Conference on Arbitration, which the staff is presently

V 44 / 176 SEP 10 79 UMI

reviewing. In addition, proposed rule amendments corresponding to these proposals have been filed pursuant to Rule 19b–4 by the New York Stock Exchange, and other self-regulatory organizations are expected to file similar proposed rule amendments. For further information, see Securities Exchange Act Release No. 16038 (July 18, 1979) (44 FR 43378).

F. Public Utility Holding Company Act Regulation

Annual Report for Service Companies. In February 1979, the Commission approved a revision to Rule 93 of the Public Utility Holding Company Act modernizing the Uniform System of Accounts for Mutual and Subsidiary Service Companies. This revision has necessitated a revision of Rule 94, under the Public Utility Holding Company Act which requires jurisdictional service companies to file an annual report of their financial and accounting operations. The staff intends to recommend that the Commission propose for comment revisions to Form U–13–60, under Rule 94. For further information, see Public Utility Holding Company Act Release No. 20910 (February 2, 1979) (44 FR 8247).

G. Miscellaneous

Rules Relating to Requests for Confidential Treatment. The staff is presently studying the possibility of proposing for public comment rules setting forth formal procedures to be followed by persons wishing to seek confidential treatment of material submitted to the Commission and expects to make its recommendation to the Commission by the end of 1979.

By the Commission.

George A. Fitzsimmons,

Secretary.

August 31, 1979.

Part IV

Securities and Exchange Commission

Advertising by Investment Companies

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 230

[Release Nos. 33-6116, IC-10852; File No. S7-705]

Advertising by Investment Companies

AGENCY: Securities and Exchange Commission.

ACTION: Final rules.

SUMMARY: The Commission is adopting a rule which permits a new type of investment company advertising, in the form of an "omitting" prospectus, subject to certain restrictions and conditions. It is also adopting two amendments to existing rules. One amendment removes the restriction limiting the use of certain information in tombstone advertisements by investment companies to companies whose registration statements under the Securities Act of 1933 have become effective, and the other modifies a filing requirement with respect to advertisements under the new rule being adopted herein.

EFFECTIVE DATE: August 31, 1979.

FOR FURTHER INFORMATION CONTACT: Stanley B. Judd, Division of Investment Management, Securities and Exchange Commission, Washington, D.C. 20549, (202) 755-0213.

SUPPLEMENTARY INFORMATION: Notice is hereby given that the Securities and Exchange Commission has adopted a rule under the Securities Act of 1933 (the "1933 Act") [15 U.S.C. 77a et seq.] permitting any investment company which is registered under the Investment Company Act of 1940 (the "1940 Act") [15 U.S.C. 80a et seq.], and which is selling or proposing to sell its securities under a registration statement filed under the 1933 Act, to advertise with respect to the securities referred to in such registration statement so long as the advertisement (1) appears in a bona fide newspaper or magazine or on radio or television, (2) contains only information the substance of which is included in the company's full prospectus, (3) states conspicuously from whom a prospectus containing more complete information can be obtained and that an investor should read that prospectus carefully before investing, and (4) if used prior to effectiveness of the registration statement, contains the statement required by Rule 433(b) [17 CFR 230.433(b)] under the 1933 Act.

The Commission also has adopted an amendment to Rule 134 [17 CFR 230.134] under the 1933 Act, concerning "tombstone" advertisements. The amendment removes the prohibition presently contained in that rule with respect to the use by investment companies, during the time between the filing of a registration statement and the time such statement becomes effective, of an advertisement containing information that the rule formerly permitted only after the registration statement had become effective. In addition, the Commission has adopted an amendment to Rule 424 [17 CFR 230.424] under the 1933 Act to provide that advertisements pursuant to the new rule being adopted herein need not be filed as part of the company's registration statement. However, such advertisements must otherwise be filed in accordance with Rule 424.

I. Background

The adoption of new Rule 434d and the amendment of Rule 134 were proposed in Release Nos. 33-5833, IC-9811 on June 3, 1977.[1]

The notice invited interested persons to submit views and comments on the proposed rule and the proposed amendment.

New Rule 434d was proposed primarily to permit investment companies to publish advertisements containing a broader range of information than is permitted in tombstone advertisements under Rule 134, thereby assisting investors in considering alternative investment opportunities. In this regard, the Commission noted in the release containing the proposed rule that institutions such as savings and loan companies and insurance companies, which compete with investment companies for investor interest, are not subject to the same advertising limitations as investment companies, and thus existing limitations on investment company advertising may have had the effect of restricting the availability to investors of information about all relevant investment possibilities. The amendment to existing Rule 134 was intended to remove a seemingly unnecessary restriction as to the time when tombstone advertisements under that rule could be used.

The proposed new Rule 434d was the subject of considerable controversy, but upon consideration of the public comments the Commission has determined to adopt that rule with certain modifications. In connection with the adoption of Rule 434d, the Commission is also adopting an amendment to a filing requirement contained in existing Rule 424. The proposed amendment to Rule 134 was the subject of relatively little comment, and the Commission has determined to adopt that amendment as proposed. The Commission's determinations with respect to these matters are discussed below.

[1] 42 FR 30379.

1. New Rule 434d

Although none of the commenters opposed an easing of the restrictions on investment company advertising, a number of commenters argued that proposed Rule 434d was not the proper vehicle to accomplish this purpose. Specifically, commenters objected to the fact that advertisements under a rule adopted pursuant to section 10(b) of the 1933 Act would constitute prospectuses for purposes of the 1933 Act, and prospectus liability could result from false or misleading statements of material fact in such advertisements. As an alternative, it was suggested that expanded investment company advertising be permitted pursuant to section 2(10)(b) of the 1933 Act. Section 2(10)(b) provides an exception to the definition of "prospectus." Advertisements pursuant to a rule under that section would not be subject to the provisions of, *inter alia*, section 12(2) of the 1933 Act, which provides a civil remedy for investors who purchase securities as a result of a false or misleading prospectus.

The Commission is not persuaded that amendment of its rules under section 2(10)(b) to permit mutual fund advertisements to contain significantly more information than is presently permitted in "tombstone" advertisements pursuant to Rule 134 under that section would be consistent with the protection of investors. Thus, apart from the legal question of whether the Commission would have the authority to permit "tombstone" advertisements to include information on performance, for example, with no prospectus liability for false or misleading advertisements, the Commission does not believe that rule making under section 2(10)(b) is a reasonable alternative to adoption of proposed Rule 434d as a means of significantly expanding the range of permissible investment company advertising and thereby enabling investors to be more fully informed as to available investment alternatives. Furthermore, since the rule is permissive, obviously investment companies need not make use of the rule if they do not choose to do so. In this regard, in order to make clear that the rule does not, to any extent, supplant

Rule 134, the rule explicitly provides that it does not apply to advertisements which are excepted from the definition of prospectus by section 2(10) of the Act and Rule 134 thereunder. Conversely, an advertisement which contains information beyond that permitted under Rule 134 is a prospectus under current law and the rule adopted herein will not alter that status. Such a prospectus may qualify under Rule 434d, however, if the provisions of that rule are met. Accordingly, the Commission has determined to adopt proposed Rule 434d with the modifications discussed below.

In response to comments, the Commission has decided to eliminate the proposed requirement that advertisements under the rule not exceed 600 words. That limitation has been designed to keep advertisements under the rule from being so long that the advertisement, rather than the section 10(a) propectus, might be viewed as the primary sales document for mutual fund shares. However, after consideration the Commission now believes that the expense of advertising will function as a deterrent to unduly long advertisements, and that the 600 word limit therefore is not needed.

The Commission has also decided to modify the proposed requirement that all advertisements pursuant to Rule 434d appear in a "newspaper or magazine of general circulation." Specifically, the Commission has determined that it would be inappropriate not to permit advertisements under the rule from being carried on radio or television, and the rule as adopted therefore permits advertisements on radio and television subject to the same conditions that apply to advertisements in print media.

In addition, with respect to advertisements in print media, the rule as adopted omits the "general circulation" requirement and instead contains a requirement that the newspaper or magazine be "bona fide." The purpose of the proposed "general circulation" limitation was to preclude the use of the rule for advertisements sent by direct mail. Direct mail advertisements may have a greater potential than newspaper or magazine advertisements for supplanting the full section 10(a) prospectus as the primary selling document.[2] However, it appears from some public comments that the "general circulation" limitation might be interpreted as excluding publications with a limited circulation, such as professional journals. The substitution of the "bona fide" limitation for the "general circulation" limitation is intended to make clear that advertisements under the rule may appear in any legitimate publication, including a specialized one.

Certain commenters objected to the rule's limitation of advertising content to information the substance of which is contained in the investment company's section 10(a) prospectus. Any expansion of investment company advertising by means of a rule promulgated under section 10(b) of the 1933 Act must contain this limitation, however, because section 10(b) provides authority only for a prospectus which "omits in part" or "summarizes" information in the section 10(a) prospectus. some of the commenters objecting to this limitation suggested that more guidance be given regarding what information would be permitted in advertisments under the rule. The intent of the limitation is to ensure that all material facts included in advertisments under the rule appear in the company's section 10(a) prospectus. Precise tracking of the language used in the section 10(a) prospectus is not required. Moreover, items such as headlines, logos, or pictures in printed advertisements, and music or pictures in broadcast advertisments, can be used even though they are not part of the section 10(a) prospectus, so long as they do not contain material facts not included in the section 10(a) prospectus.

Some commentators requested that the Commission indicate what information should be included in an advertisement under Rule 434d in order to make the advertisement not misleading. The question of whether a particular advertisment omits material facts necessary to make the statements made not misleading will depend upon the content of such statements and guidance as to what additional information would be necessary in each case to make the particular statement made not misleading is, therefore, not possible. However, the Commission has proposed an interpretative rule which would give general guidance as to some types of representations or presentations in investment company sales literature which might be misleading.[3]

The Commission notes that, under section 12(2), only an untrue statement of material fact, or an omission of a material fact necessary to make the statements made not misleading, gives rise to possible liability. Accordingly, an advertisement which contains only statements that are true, and does not omit facts needed to make those statements not misleading, would not provide a basis for liability under section 12(2) merely because facts which were included in the full prospectus were not included in the advertisement.

The Commission has decided to eliminate the filing requirement contained in Rule 434d when it was submitted for public comment. Because advertisements under the rule will be prospectuses, they will be subject to the filing requirements of the Commission's existing Rule 424 under the 1933 Act, and a separate filing requirement in the new rule does not appear necessary.

Section 10(b) provides, however, that a prospectus permitted thereunder shall be filed as part of the registration statement unless the Commission provides otherwise. The Commission is exempting prospectuses permitted under the new rule from the requirements that they be filed as part of the registration statement for two reasons. The first is that all material facts included in such a prospectus are required to be included in the registration statement. The second is that if such a prospectus were filed as part of the registration statement, it would constitute an amendment to that statement which would not become effective until clearance by the Commission. This could result in unnecessary delays in the use of advertisements. Furthermore, the Commission is amending Rule 424 to provide that the requirement of subsection (a) of that rule that prospectuses used prior to the effective date of a company's registration statement be filed as a part of the registration statement will not apply to advertisments under the new rule.[4] It should be noted that a filing pursuant to Rule 424 also will satisfy the filing requirement for sales literature contained in section 24(b) of the 1940 Act.

2. Amendment of Rule 134

The proposed modification of Rule 134 would allow tombstone advertisements by investment companies to contain certain information prior to the effective date of the company's registration statement under the 1933 Act, which information may presently be used only

[2] Sales literature may be sent by direct mail under section 2(10)(a) of the 1933 Act. Such sales literature, however, must be accompanied or preceded by a full prospectus.

[3] Release Nos. 33-6034, 34-15621, and IC-10621, March 8, 1979, 44 FR 16935.

[4] The amendment to Rule 424 was not proposed for comment as such. However, Rule 434d provides that advertisements under the rule need not be filed as part of the registration statement, and the fact that Rule 424 is being amended to conform to that provision of Rule 434d represents only a technical change from the proposed rule. For this reason, and because the amendment to Rule 424 imposes no burden upon any person, the Commission finds that notice and public procedure upon the amendment to Rule 424 as such are unnecessary.

V 4 4 / 1 7 6

after the effective date of the registration. This amendment was addressed by only three commenters, two of whom supported it and the other of whom opposed it. The sole objection to the proposed amendment was based on an assertion that staff review of registration statements often results in changes in the disclosures and even in the basic concepts of the registrant. The Commission believes that, although changes in registration statements and prospectuses frequently are made as a result of staff review and comments, such changes are unlikely to affect items permitted to be included in tombstone advertisements. Even companies with effective registration statements occasionally make significant changes in their modes of operation, and this normally does not cause serious problems with their advertising copy. Moreover, even if changes were made in the registration statement which altered the accuracy of information contained in a company's advertisements, the company would have an opportunity to correct these inaccuracies prior to sale of shares to prospective investors, since no sales could be made until the registration statement became effective.

It should be noted that the modification of Rule 134 does not result in any change in the permissible content of tombstone advertisements by investment companies. All information permitted to be used in a tombstone advertisement during the "waiting period" under the amended Rule 134 is information that can be used at a later date in such advertisements under the existing rule. The present restriction on "waiting period" advertisements applies only to investment companies, since only such companies may use the expanded tombstone advertisements provided for in Rule 134(d)(3)(iii). There does not appear to be any compelling reason to disallow advertising which otherwise complies with Rule 134 during an investment company's "waiting period."

(Secs. 2(10), 10(b), 10(c), 10(d), 10(f), and 19(a) of the 1933 Act [15 U.S.C. 77b(10), 77j(b), 77j(c), 77j(d), 77j(f), and 77s(a)].)

In consideration of the foregoing, the Commission hereby amends Part 230 of Chapter II of Title 17 of the Code of Federal Regulations as follows:

§ 230.134 [Amended]

1. In § 230.134, paragraph (a)(3)(iii) is amended by deleting the words "whose registration statement under the Act is effective" immediately preceding paragraph (A).

2. Paragraph (a) of § 230.424 is amended to provide as follows:

§ 230.424 Filing of prospectuses, number of copies.

(a) Five copies of every form of prospectus sent or given to any person prior to the effective date of the registration statement which varies from the form or forms of prospectus included in the registration statement as filed pursuant to § 230.402(a) of this chapter shall be filed as a part of the registration statement not later than the date such form of prospectus is first sent or given to any person: *Provided, however,* That an investment company advertisement which is deemed to be a prospectus pursuant to § 230.434d of this chapter and which is required to be filed pursuant to this paragraph shall not be filed as part of the registration statement.

* * * * *

3. By adding a new § 230.434d, to provide as follows:

§ 230.434d Advertisement by an investment company as satisfying requirements of section 10.

(a) An advertisement, other than one excepted from the definition of prospectus by section 2(10) of the act and rule 134 thereunder, shall be deemed to be a prospectus under section 10(b) of the act for the purpose of section 5(b)(1) of the act if

(1) It is with respect to an investment company registered under the Investment Company Act of 1940 which is selling or proposing to sell its securities pursuant to a registration statement which has been filed under the act,

(2) It appears in a bona fide newspaper or magazine or is used on radio or television,

(3) It contains only information the substance of which is included in the section 10(a) prospectus,

(4) It states, conspicuously, from whom a prospectus containing more complete information may be obtained and that an investor should read that prospectus carefully before investing, and

(5) It contains the statement required by § 230.433(b) when used prior to effectiveness of the company's registration statement.

(b) An advertisement made pursuant to paragraph (a) of this section need not contain the statement required by § 230.425.

(c) An advertisement made pursuant to paragraph (a) of this section need not be filed as part of the registration statement filed under the Act.

Note.—Such advertisement must, however, be otherwise filed in accordance with the requirements of § 230.424.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

[17 CFR Parts 231 and 241]

[Release Nos. 33-6115 and 34-16149; File No. S7-797]

Publication for Comment of Existing Guides for Statistical Disclosure by Bank Holding Companies

AGENCY: Securities and Exchange Commission.

ACTION: Request for public comment on existing staff guidelines for statistical disclosure by bank holding companies.

SUMMARY: The Commission is requesting comments on the quality and desirability of disclosure made under the existing Guides for "Statistical Disclosure by Bank Holding Companies." These comments are requested to fulfill the Commission's undertaking expressed at the time the Guides were promulgated to review the experience of registrants and users of the information to see whether the new disclosures are necessary and appropriate.

DATE: Comments must be received on or before October 30, 1979.

ADDRESS: All communications on the matters discussed in this release should be submitted in triplicate to George A. Fitzsimmons, Secretary, Securities and Exchange Commission, 500 North Capitol Street, Washington, D.C. 20549. Comments should refer to File No. S7-797 and will be available for public inspection at the Commission's Public Reference Room, 1100 L Street, N.W., Washington, D.C.

FOR FURTHER INFORMATION CONTACT: William H. Carter, Office of Disclosure Policy and Proceedings (202-272-2604), or Charles A. Oglebay, Office of Chief Accountant (202-272-3243), Division of Corporation Finance, Securities and Exchange Commission, 500 Capitol Street, Washington, D.C. 20549.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission today requested public comments on the quality and desirability of disclosure made under the existing Guides 61 and 3, "Statistical Disclosure by Bank Holding Companies," of the Guides for the Preparation and Filing of Registration Statements under the Securities Act of 1933 [15 U.S.C. 77a et seq.] and of the Guides for the Preparation and Filing of Reports and Proxy and Registration Statements under the Securities Exchange Act of 1934 [15 U.S.C. 78a et seq.]. At the time Guides 61 and 3 (the "Guides") were published [1] the Commission stated that the experience of registrants and users of the information would be reviewed to see whether the new disclosures made under the Guides are necessary and appropriate. The purpose of this release is to implement that review function.

[1] Securities Act of 1933 Release No. 5735 (August 31, 1976) (41 FR 39007).

Background of Guides

Guides 61 and 3 are intended to provide registrants with a convenient reference to the statistical disclosures sought by the staff of the Division of Corporation Finance in registration statements and other disclosure documents filed by bank holding companies. They are not Commission rules nor do they bear the Commission's official approval.

In the preparation of the Guides, the staff was mindful of the investor's need to assess uncertainties and the investor's need for substantial and specific disclosure about changes in risk characteristics of loan portfolios. *See* Accounting Series Release No. 166 (December 24, 1974) (40 FR 2678, January 15, 1975). Accordingly, the Guides call for extensive disclosure about loan portfolios and related items in filings by bank holding companies. In addition, many of the suggested disclosures are intended to provide information to facilitate analysis and comparison of sources of income and exposure to risks. Such information assists investors in evaluating the potential impact of future economic events upon a registrant's business and earnings and in assessing the ability of a bank holding company to move into or out of situations with favorable or unfavorable risk/return characteristics.

The Guides are intended to apply only to the description of business portion of a bank holding company registration statement, proxy statement or report. Although the Guides describe certain information that should be disclosed, they do not purport to be all inclusive and in no way limit the type of information required. Appropriate disclosure must always depend on the individual facts and circumstances concerning each registrant.

Inquiries

The Commission invites comments on all aspects of Guides 61 and 3. Comments are also requested on the following specific matters:

General

1. Recognizing that the Guides were designed to provide, in the Commission's judgment, both the minimum information needed for the protection of investors and the minimum needed to analyze bank holding companies on a comparative basis, what, if any, information could be deleted or simplified without impairing the Guides' utility?

2. What information, if any, could be added to the Guides to enhance their utility?

3. Should the provisions be expanded so that compliance with the Guides would result in full compliance with items 1 and 2 of Regulation SK which are concerned with "Description of business" and "Description of property," respectively?

4. In lieu of requiring information to be presented almost uniformly for a "reported period," what items under the Guides could be presented for shorter periods without loss of significance? [A "reported period" is defined as the latest five years and any interim period and any additional period which may be appropriate.]

5. What specific additional burdens and identifiable expenses are incurred by registrants in complying with the Guides? What particular benefits have been realized as a result of the promulgation of the Guides?

6. What changes, if any, have the Guides had on operating procedures and substantive business conduct of bank holding companies?

Specific

7. What benefits are derived from the five year average balance sheet provision of Item I (Distribution of Assets, Liabilities and Stockholders' Equity)? Is it necessary to provide both average dollar amounts and percentages? Could this requirement be combined with Item VII A (Interest Rates and Interest Differential)?

8. When discussing a tax equivalent presentation, should an explanation be furnished for material shifts in the tax-free investment portfolio where such material shifts have occurred during the period being discussed?

9. Should the 60 day past-due period for determining nonperforming loans, as found in Item III C (Loan Portfolio, Nonperforming Loans), be revised?

10. What changes, if any, could be made in Item III (Loan Portfolio) and Item IV (Summary of Loan Loss Experience) to better illustrate any risks or uncertainties in the loan portfolio? For example, would a narrative discussion of risks by type of loan in the portfolio be an appropriate alternative to the breakdown of the loan loss reserve by category of loan and, if so, what specific type of information should be included in the narrative discussion?

11. Should Item V (Deposits) be revised to include a separate category for time certificates of deposit which bear interest at a rate based upon the weekly sale of Treasury bills or upon some other governmental rate or index?

12. Should there be any additions to or deletions from the ratios included under Item VI (Return on Equity or Assets)?

13. Would it be more appropriate to include the information under Item VII (Interest Rates and Interest Differentials) on a condensed basis as part of the management's discussion and analysis?

14. Should the use of tax equivalent adjusted information in connection with the presentation of information called for by the Guides or otherwise in a report or registration statement be limited to statements or schedules which present only adjusted net interest income after provision for loan losses?

The Commission is aware that differences in presentation currently exist between certain items of the Guides and Article 9 of Regulation S-X. Any future revision of the Guides is expected to resolve these differences by adopting the approach of Article 9. Accordingly, in commenting upon the Guides interested parties need not point out this type of problem. In addition, the Division of Corporation Finance is presently considering the requirements of Article 9 of Regulation S-X with respect to the reporting of loans to certain "insiders" as a separate issue from the reconsideration of Guide 61. Accordingly, the Commission is also not requesting comments on the reporting of loans to such persons at this time.

By the Commission.

Shirley E. Hollis,

Assistant Secretary.

August 30, 1979.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR NOTICE FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY*	USDA/ASCS		DOT/SECRETARY*	USDA/ASCS
DOT/COAST GUARD	USDA/APHIS		DOT/COAST GUARD	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/FHWA	USDA/FSQS		DOT/FHWA	USDA/FSQS
DOT/FRA	USDA/REA		DOT/FRA	USDA/REA
DOT/NHTSA	MSPB/OPM		DOT/NHTSA	MSPB/OPM
DOT/RSPA	LABOR		DOT/RSPA	LABOR
DOT/SLSDC	HEW/FDA		DOT/SLSDC	HEW/FDA
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

***NOTE: As of July 2, 1979, all agencies in the Department of Transportation, will publish on the Monday/Thursday schedule.**

REMINDERS

The items in this list were editorially compiled as an aid to **Federal Register** users. Inclusion or exclusion from this list has no legal significance. Since this list is intended as a reminder, it does not include effective dates that occur within 14 days of publication.

Rules Going Into Effect Today

FEDERAL COMMUNICATIONS COMMISSION

45627 8–3–79 / Making restrictions governing use of frequency 157.425 MHz (channel 88) by aircraft consistent with restrictions applying to other marine VHF frequencies available to aircraft

FEDERAL HOME LOAN BANK BOARD

47761 8–15–79 / Investment in areas receiving concentrated development assistance

47764 8–15–79 / Investment in State housing corporation

47759 8–15–79 / Investment in State and local government obligations

47763 8–15–79 / Loans for alteration, improvement and repair

FEDERAL RESERVE SYSTEM

46432 8–8–79 / Electronic fund transfers; written notification of loss or theft of access device

HOUSING AND URBAN DEVELOPMENT DEPARTMENT

Office of the Assistant Secretary for Fair Housing and Equal Opportunity—

47012 8–9–79 / Compliance procedures for affirmative fair housing marketing

LABOR DEPARTMENT

52847 **Fare Levels For Certain Air Carriers** CAB proposes to permit carriers from U.S. Mainland-Alaska and intra-Alaska markets to exercise greater degree of downward pricing flexibility; comments by 11–13–79, reply comments 11–28–79

52827 **Mine Accident, Injury and Illness Reports** Labor/MSHA amends rules on investigation and reporting; effective 10–11–79

52916 **Fuel Costs** ICC authorizes extra surcharge for carriers not utilizing owner-operators; effective 9–7–79

CONTINUED INSIDE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $5.00 per month or $50 per year, payable in advance. The charge for individual copies of 75 cents for each issue, or 75 cents for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register.**

Area Code 202–523–5240

Highlights

52842 **Outer Continental Oil and Gas Lease Sales** DOE proposes to establish subsequent bidding process; comments by 11–14–79, requests to speak by 9–27–79, hearings 10–2, 10–4, and 10–15–79

52888 **Title I—Elementary and Secondary Education** HEW/OE issues notice of intent to waive certain requirements for American Samoa; effective 10–11–79

52838 **Grain Inspection** USDA/FGIS issues rules regarding fees for original online grain inspection services and mileage costs; effective 12–2–79

52858 **Certain Cotton, Wool, and Man-Made Fiber Textile Products from Republic of Phillippines** CITA anounces additional import controls; effective 9–12–79

52859 **Lawn Trimmers and Edgers** CPSC denies petition to establish rule

52832 **Private Express** PS amends rules regarding enforcement and suspension; effective 10–11–79

Rules and Regulations

Federal Register
Vol. 44, No. 177
Tuesday, September 11, 1979

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

FEDERAL RESERVE SYSTEM

12 CFR Part 272

Federal Open Market Committee Rules of Practice

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule.

SUMMARY: The Federal Open Market Committee of the Federal Reserve System has amended its Rules of Procedure to delete references to Deputy Managers, because of a realignment of staff personnel.

EFFECTIVE DATE: August 14, 1979.

FOR FURTHER INFORMATION CONTACT: Murray Altmann, Secretary, Federal Open Market Committee, Board of Governors of the Federal Reserve System, Washington, D.C. 20551 (202/452-3253).

The Federal Open Market Committee has amended its Rules of Procedure.

1. Effective August 14, 1979 § 272.3(d) and (e) of Rules of Procedure (12 CFR Part 272) is revised to read as follows:

§ 272.3 Meetings.

* * * * *

(d) *Attendance at meetings.* Attendance at Committee meetings is restricted to members and alternate members of the Committee, the Presidents of Federal Reserve Banks who are not at the time members or alternates, staff officers of the Committee, the Managers, and such other advisers as the Committee may invite from time to time.

(e) *Meeting agendas.* The Secretary, in consultation with the Chairman, prepares an agenda of matters to be discussed at each meeting and the Secretary transmits the agenda to the members of the Committee within a reasonable time in advance of such meeting. In general, the agendas include approval of minutes of actions; reports by the Managers on open market operations since the previous meeting, and ratification by the Committee of such operations; reports by Economists on, and Committee discussion of, the economic and financial situation and outlook; Committee discussion of monetary policy and action with respect thereto; and such other matters as may be considered necessary.

(5 U.S.C. 552)

2. The provisions of section 553 of Title 5, United States Code, relating to notice and public participation and to deferred effective dates, are not followed in connection with the adoption of this action because the rules involved are procedural in nature and accordingly do not constitute substantive rules subject to the requirements of such section.

By order of the Federal Open Market Committee, August 27, 1979.

Murray Altmann,

Secretary.

BILLING CODE 6210-01-M

FEDERAL HOME LOAN BANK BOARD

12 CFR Part 505c

[No. 79-467]

National Security Information; Handling Classified Information

September 5, 1979.

AGENCY: Federal Home Loan Bank Board.

ACTION: Final rule.

SUMMARY: This new regulation establishes the policy of the Federal Home Loan Bank Board regarding handling of classified material. The Bank Board has not previously adopted regulations on this subject. Publication of this regulation is required by Executive Order.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: John R. Hall, Attorney, Federal Home Loan Bank Board, 1700 G Street, NW., Washington, D.C. 20552 (202-377-6445).

SUPPLEMENTARY INFORMATION: Executive Order 12065, 43 FR 28949 (1978), established new policy for the classification, safeguarding, and declassification of national security information, i.e., information classified Top Secret, Secret, or Confidential. Under that Order, each agency that handles such information must establish procedures regarding such handling and publish them in the **Federal Register**. In accordance with that requirement the Bank Board is amending its General Regulations (12 CFR Subchapter A) by adding a new Part 505c.

The new part includes the following:

(1) Statement of Bank Board policy regarding information security;

(2) Designation of an administrator for the Bank Board's information security program; and

(3) Mandatory review procedure.

The Bank Board finds that notice and public procedure are unnecessary under 12 CFR 508.11 and 5 U.S.C. 553(b) because the regulation concerns internal Bank Board procedures, and that publication of the regulation for the 30-day period specified in 12 CFR 508.14 and 5 U.S.C. 553(d) prior to effective date is unnecessary for the same reason.

Accordingly, the Bank Board hereby amends Subchapter A of its regulations by adding a new Part 505c thereto, to read as follows:

PART 505c—NATIONAL SECURITY INFORMATION

Sec.

505c.1 Purpose and scope.
505c.2 Policy.
505c.3 Administration of program.
505c.4 Procedures.

Authority: Sec. 17, 47 Stat. 736, as amended (12 U.S.C. 1437); E.O. 12065, 43 FR 28949 (1978). Reorg. Plan No. 3 of 1947, 12 FR 4981, 3 CFR, 1943-48 Comp., p. 1071

§ 505c.1 Purpose and scope.

(a) This part is issued by the Board pursuant to the requirement of Sec. 5-402 of Executive Order 12065, 43 FR 28949 (1978) ("the Order"), that unclassified regulations that establish information security policy and unclassified guidelines for systematic declassification review, which affect the public, be published in the **Federal Register.**

(b) This part covers all information and material handled by the Board that is owned by, produced for or by, or under the control of, the United States Government, has been determined pursuant to the Order or prior Orders to require protection against unauthorized disclosure, and is so designated. Such

material is referred to in this Part as classified information.

§ 505c.2 Policy.

It is the Board's policy to act in accordance with the Order with respect to all classified information.

§ 505c.3 Administration of program.

The Director, Administrative Services Division (the "Director"), shall (a) implement and oversee the Board's information security program; (b) receive questions, suggestions, and complaints regarding it; (c) make changes to it as he deems advisable; (d) assure that it is at all times consistent with the Order; and (e) receive requests for declassification regardless of the origin of the request, assuring that requests are acted upon within 60 days and that requests submitted under the Freedom of Information Act are handled in accordance with that Act.

§ 505c.4 Mandatory review procedure.

The Director shall process requests for mandatory review for declassification. The Director shall not refuse to confirm the existence or non-existence of a document requested under the Freedom of Information Act or the Mandatory Review Provision of the Order, unless the fact of its existence or non-existence would itself be classifiable under the Order.

By the Federal Home Loan Bank Board.

J. J. Finn,

Secretary.

[FR Doc. 79-28279 Filed 9-10-79; 8:45 am]

BILLING CODE 6720-01-M

12 CFR Part 526

[No. 79-466]

Maximum Rate of Return on Accounts Subject to Automatic Transfer

September 5, 1979.

AGENCY: Federal Home Loan Bank Board.

ACTION: Final rule.

SUMMARY: This amendment increases from 5% to 5.25% the maximum return that members of the Federal Home Loan Bank System may pay on accounts that are subject to automatic transfer of funds to another account. The maximum authorized rate on such accounts in member institutions is required by statute to equal the maximum rate that FDIC-insured banks (excluding mutual savings banks) may pay on such accounts. The maximum authorized rate on commercial bank deposits was recently increased to 5.25%, and this amendment conforms the Bank System regulations to that change.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: John R. Hall, Attorney, Federal Home Loan Bank Board, 1700 G Street, NW., Washington, D.C. 20552 (202-377-6445).

SUPPLEMENTARY INFORMATION: Section 526.3(a)(9) of the Regulations for the Federal Home Loan Bank System (12 CFR 526.3(a)(9)) limits to 5% the rate that a member institution may pay on any savings account or deposit that is subject to automatic transfers to the institution itself or to a demand or deposit account of the accountholder. This limitation was adopted to implement title XVI of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 which provided that there shall be no differential between the maximum interest payable on such accounts by banks (other than savings banks) whose deposits are insured by the Federal Deposit Insurance Corporation and by thrift institutions whose deposits are insured by the Federal Savings and Loan Insurance Corporation or by mutual savings banks. The 5% maximum rate in § 526.3(a)(9) equalled the maximum authorized rate on bank deposits at the time the section was adopted.

However, the maximum authorized rate of return on bank deposits was recently increased to 5.25%. Therefore, in conformity with that change, the Bank Board is amending § 526.3(a)(9) to reflect an equal increase in the rate applicable to member institutions.

It should be noted that § 526.3(a)(9) in no way authorizes automatic transfer accounts. It merely sets the maximum interest rate payable on these accounts in any State where any provision of State or Federal law permits them to be offered by member institutions.

Because this change is conforming in nature, and because the Bank Board believes it is in the public interest that there should be no interruption in the uniformity of rate ceilings applicable to these accounts, the Bank Board has determined to dispense with (1) notice and public procedure under 5 U.S.C. 553(b) and 12 CFR 508.11 and (2) publication of the amendment for the 30-day period prescribed in 5 U.S.C. 553(d) and 12 CFR 508.14.

Accordingly, the Bank Board hereby amends § 526.3(a)(9) of the Bank System Regulations (12 CFR 526.3(a)(9)), to read as set forth below.

§ 526.3 Maximum rates of return payable by members on savings accounts.

(a) Except as provided in § 526.3-1 for certificate accounts of $100,000 or more, no member may pay an annual rate of return on a savings account exceeding the applicable maximum percentage, as follows:

* * * * *

(9) 5.25%—savings accounts or deposits which are subject to automatic transfers to the member itself or to a demand or deposit account of the same accountholder, made as a normal practice, according to a prearranged agreement with the accountholder, to cover checks, drafts, or similar instruments drawn by the accountholder on the member.

* * * * *

(Sec. 4, 80 Stat. 824 (12 U.S.C. 1425b). Reorg. Plan No. 3 of 1947, 12 FR 4981, 3 CFR 1943-48 Comp., p. 1071)

By the Federal Home Loan Bank Board.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION, PLEASE CONTACT: John R. Hall, Attorney, Federal Home Loan Bank Board, 1700 G Street, N.W., Washington, D.C. 20552 (202-377-6445).

SUPPLEMENTARY INFORMATION: The Federal Home Loan Bank Board, by Board Resolution No. 79-316, published in the **Federal Register** July 3, 1979 (44 F.R. 39108), adopted a revision of most of the Rules and Regulations for the Federal Savings and Loan System, including Part 545 of those Regulations (12 CFR Part 545). The effective date of the revision was August 3, 1979.

On August 2, 1979, the Bank Board, by Board Resolution No. 79-421, adopted additional amendments to Part 545 which became effective immediately. Those amendments were published in the **Federal Register** August 8, 1979 (44 F.R. 46441). The amendments were intended to supersede and amend the revision published on July 3, and the section numbers changed by the amendments were those of revised Part 545. However, because the effective date of the earlier revision follows the effective date of the later amendments, the effect of the two amendments may be unclear.

Therefore, the Bank Board has determined to restate the affected language of the sections involved. Accordingly, §§ 545.1-1 and 545.4 should read in part as set forth below.

§ 545.1-1 Rates of return on savings accounts.

* * * * *

(b) *Fixed balance bonus account.* The board of directors of a Federal association which has adopted the bylaw in § 544.6(e) of this subchapter may determine that, in addition to earnings distributed on savings accounts, the association will distribute a bonus on accounts of a minimum amount maintained for a minimum qualifying period (at least 3 months but not more than 36 months), as follows:

* * * * *

(4) If any part of a fixed-balance bonus account is withdrawn before expiration of the term, the penalty prescribed in § 526.7(a) of this chapter shall apply. If any earnings were distributed on the account before the withdrawal, deduction shall be made from the amount withdrawn to adjust for the penalty applicable thereto. Section 526.7(b) shall apply with respect to accounts issued before July 1, 1979. However, in the circumstances prescribed in § 526.7(c), such penalty shall not be applied.

* * * * *

§ 545.4 Withdrawals.

(a) *Withdrawal prior to expiration of term.* (1) If any part of a savings account authorized under § 545.1-1(f), or any part of a fixed-term savings deposit, is withdrawn before expiration of the term, the penalty prescribed in § 526.7(a) of this Chapter shall apply. If any earnings were distributed on the account before the withdrawal, deduction shall be made from the amount withdrawn to adjust for the penalty applicable thereto. Section 526.7(b) shall apply with respect to accounts issued before July 1, 1979. However, in the circumstances prescribed in § 526.7(c), such penalty shall not be applied.

* * * * *

(3) An association may provide that an account owner cannot withdraw any part of a fixed-term savings deposit or certificate account before its term expires except in the event of death, or adjudication of incompetence, of an account owner and under such other emergency circumstances as may be set forth in the certificate evidencing the account.

* * * * *

(Sec. 5, 48 Stat. 132, as amended (12 U.S.C. § 1464). Reorg. Plan No. 3 of 1947, 12 F.R. 4981, 3 CFR, 1943-48 Comp., p. 1071)

By the Federal Home Loan Bank Board.

J. J. Finn,

Secretary.

BILLING CODE 6720-01-M

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Food and Drug Administration

21 CFR Part 184

[Docket No. 78N-0106]

Direct Food Substances Affirmed as Generally Recognized as Safe; Propyl Gallate

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) amends the conditions of use for propyl gallate as generally recognized as safe (GRAS) direct human food ingredient. The change is made because the currently permitted conditions of use are not in accord with traditional good manufacturing practice, the conditions FDA considered in its evaluation of the safety of propyl gallate as a GRAS ingredient. This action revokes the currently permitted conditions of use for the ingredient in food and affirms as GRAS the conditions of use traditionally permitted under good manufacturing practice.

EFFECTIVE DATE: October 11, 1979.

ADDRESS: Written objections to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Corbin I. Miles, Bureau of Foods (HFF-335), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C St. SW., Washington, DC 20204, 202-472-4750.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of May 5, 1978 (43 FR 19422), FDA proposed to modify the regulation affirming the GRAS status of propyl gallate to restore the conditions of use traditionally permitted under good manufacturing practice and considered during FDA's evaluation of the safety of propyl gallate as a GRAS ingredient. Traditionally, under good manufacturing practice, propyl gallate, alone or in combination with other antioxidants, did not exceed 0.02 percent of the fat or oil content of the food. However, the GRAS affirmation proposal for propyl gallate that was published in the **Federal Register** of September 23, 1974 (39 FR 34199) inadvertently proposed different conditions of use. These conditions (maximum level of 0.015 percent of food) permitted the use of propyl gallate in food independent of both the fat and oil content of the food and the content of other antioxidants. This altered condition of use was adopted in the final regulation (§ 184.1660 (21 CFR 184.1660)), published in the **Federal Register** of December 7, 1976 (41 FR 53613).

One comment was received in response to the agency's proposed modification of § 184.1660. A manufacturer of cereal grain products requested an additional condition of use for propyl gallate in food and particularly in breakfast cereals. The suggested additional condition of use would permit a level of propyl gallate, alone or in combination with other antioxidants, of 50 parts per million (ppm) (0.005 percent) in food, irrespective of the fat or oil content of the food.

In 1960, the same manufacturer petitioned FDA for a food additive regulation to permit the use of 50 ppm propyl gallate in breakfast cereals. This petition was denied by FDA because of insufficient safety information to support this use. Based on the safety information for propyl gallate that was accumulated and evaluated under the GRAS Review Program, the manufacturer requested FDA to reconsider this use.

FDA recognizes that the Select Committee, in its evaluation of the safety of propyl gallate in food, concluded there was no evidence demonstrating propyl gallate to be a hazard to the public when it is used at levels that are now current or that might reasonably be expected in the future. Despite this conclusion, however, the Select Committee recognized difficulties in the interpretation of some reports. In addition, results from the 1970 National Academy of Science/National Research Council survey of food manufacturers on the use of GRAS ingredients and the Market Research Corporaton of America survey of food consumption suggest that the use of propyl gallate in breakfast cereals could result in a twofold or greater increase in overall consumption of propyl gallate. Moreover, the greatest increase (in terms of milligrams (mg) propyl gallate consumed per kilogram (kg) body weight) would occur in infants (0 to 5 months, 6 to 11 months) on

V 4 4 / 1 7 7

account of the disproportionate consumption (per kg body weight) of breakfast cereals by these groups. Furthermore, butylated hydroxyanisole (BHA) and butylated hydroxytoluene (BHT), two alternative antioxidants to propyl gallate, are currently under review by FDA, and uncertainties exist regarding some aspects of their safety. Traditionally permitted conditions of use for propyl gallate, as established in this final rule, would permit its substitution for the GRAS uses of BHA and BHT. This substitution of antioxidants would itself result in a considerable increase in consumer exposure to propyl gallate. Finally, the available toxicity studies for propyl gallate were conducted in the late 1940's and early 1950's. Although these data, combined with the long history of use of propyl gallate as an antioxidant, are currently adequate to reaffirm the GRAS status of current and predicted future uses of propyl gallate at a level of 0.02 percent of the fat or oil content of the food, they are inadequate to support additional new uses of the ingredient.

Propyl gallate has traditionally been added to food to retard rancidity development, and traditional conditions of use, as reestablished by this final rule, are 0.02 percent of the fat or oil content of the food. Data available to FDA are insufficient to establish the functionality of 0.005 percent propyl gallate as an antioxidant in low-fat-containing foods.

As a result of these considerations, the agency concludes that the current safety data for propyl gallate are insufficient to support the potentially vast expansion in consumption of the ingredient that might result from the requested use of propyl gallate at a level of 0.005 percent in food irrespective of the fat or oil content of the food. The agency also concludes that the data concerning the functionality of propyl gallate as an antioxidant in low-fat-containing foods are also inadequate to support this use.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201(s), 409, 701(a), 52 Stat. 1055, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Part 184 is amended in § 184.1660 by revising paragraph (d) to read as follows:

§ 184.1660 Propyl gallate.

* * * * *

(d) The ingredient is used in food at levels not to exceed good manufacturing practice in accordance with § 184.1(b)(1). Good manufacturing practice results in a maximum total content of antioxidants (consisting of propyl gallate alone or in combination with other antioxidants) of 0.02 percent of the fat or oil content, including the essential (volatile) oil content, of the food.

Effective date. This regulation shall be effective October 11, 1979.

(Secs. 201(s), 409, 701(a), 52 Stat. 1055, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348, 371(a)).)

Dated: September 4, 1979.

Joseph P. Hile,

Associate Commissioner for Regulatory Affairs.

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Parts 40, 41, 43, 44, 46, 48, 70, 75, 77, and 100

Federal Mine Safety and Health; Technical, Nonsubstantive Revisions and Miscellaneous Amendments; Corrections

AGENCY: Mine Safety and Health Administration, Department of Labor.

ACTION: Correction of Final Rules.

SUMMARY: This document corrects authority citations to several MSHA rules that appeared in the **Federal Register** in 1978 and 1979 without complete parallel citations.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: Manuel R. Lopez, Room 436, Ballston Tower No. 3, 4015 Wilson Boulevard, Arlington, Virginia 22203, (703) 235-1157.

SUPPLEMENTARY INFORMATION: This is a technical amendment that is nonsubstantive in nature. Therefore, the Secretary finds that advance notice and public participation are unnecessary. The corrections are as follows:

PART 40—REPRESENTATIVE OF MINERS

1. 30 CFR Part 40. In FR Doc. 78-18892 appearing on pages 29508 through 29510 in the **Federal Register** of Friday, July 7, 1978, the authority citation on page 29509 is corrected to read:

Authority: Secs. 5(f)(1), 101(c) and (e), 103(c), (f), (g)(1) and (g)(2), 104(c), 105(a), (b)(1), (c)(1), (c)(2), (c)(3), and (d), 107(b)(1) and (e)(1), 109(b), 115(a)(1) and (a)(2), 302(a), 305(b), 312(b), 505 and 508 of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 83 Stat. 745, 91 Stat. 1294, 1295, 1298, 1299, 1301, 1303, 1304, 1305, 1308, 1310 and 1316, 83 Stat. 766, 777, 785, 802, and 803 (30 U.S.C. 804(f)(1), 811(c) and (e), 813(c), (f), (g)(1) and (g)(2), 814(c), 815(a), (b)(1), (c)(1), (c)(2), (c)(3) and (d), 817(b)(1) and (e)(1), 819(b), 825(a)(1) and (a)(2), 862(a), 865(b), 872(b), 954 and 957); Sec. 307 of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1322 (30 U.S.C. 801 note).

PART 41—NOTIFICATION OF LEGAL IDENTITY

2. 30 CFR Part 41. In FR Doc. 78-18893 appearing on pages 29510 through 29513 in the **Federal Register** of Friday, July 7, 1978, the authority citation on page 29512 is corrected to read:

Authority: Secs. 103(h), 109(d) and 508 of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1299 and 1310, 83 Stat. 803 (30 U.S.C. 813(h), 819(d) and 957); Sec. 307 of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1322 (30 U.S.C. 801 note).

PART 43—PROCEDURES FOR PROCESSING HAZARDOUS CONDITIONS COMPLAINTS

3. 30 CFR Part 43. In FR Doc. 78-18894 appearing on pages 29513 through 29516 in the **Federal Register** of Friday, July 7, 1978, the authority citation on page 29515 is corrected to read:

Authority: Secs. 103(g), and 508 of the Federal Mine Safety and Health Act of 1977 Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1298 83 Stat. 803 (30 U.S.C. 813(g) and 957); Sec. 307 of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1322 (30 U.S.C. 801 note).

PART 44—RULES OF PRACTICE FOR PETITIONS FOR MODIFICATION OF MANDATORY SAFETY STANDARDS

4. 30 CFR Part 44. In FR Doc. 78-18895 appearing on pages 29516 through 29524 in the **Federal Register** of Friday, July 7, 1978, the authority citation on page 29518 is corrected to read:

Authority: Secs. 101 and 508 of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1291, 83 Stat. 803 (30 U.S.C. 811 and 957); Sec. 301(c)(3) of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1318 (30 U.S.C. 961(c)(3)).

5. 30 CFR Part 44. In FR Doc. 78-22222 appearing on page 35687 in the **Federal Register** of Friday, August 11, 1978, insert the following authority citation immediately following correction item number 2 and before the words "Dated: August 1, 1978.":

(Secs. 101 and 508 of the Federal Mine Safety and Health Act of 1977 Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1291, 83 Stat. 803 (30 U.S.C. 811 and 957); Sec. 301(c)(3) of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1318 (30 U.S.C. 961(c)(3)))

PART 46—STATE GRANTS FOR ADVANCEMENT OF HEALTH AND SAFETY IN COAL AND OTHER MINES

6. 30 CFR Part 46. In FR Doc. 79-15163 appearing on pages 28588 through 28592 in the **Federal Register** of Tuesday, May 15, 1979, the authority citation on page 28588 is corrected by adding at the end of the citation the following:

* * * 83 Stat. 800, 803 (30 U.S.C. 953, 957).

PART 48—HEALTH AND SAFETY TRAINING AND RETRAINING OF MINERS

7. 30 CFR Part 48. In FR Doc. 78-29001 appearing on pages 47454 through 47468 in the **Federal Register** of Friday, October 13, 1978, the authority citation on page 47460 is corrected to read:

Authority: Secs. 101 and 115 (a), (b) and (c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1291, 1315-1316 (30 U.S.C. 811, 825 (a), (b), and (c)).

8. 30 CFR Part 48. In FR Doc. 79-871 appearing on pages 1979 through 1980 in the **Federal Register** of Tuesday, January 9, 1979, insert the following authority citation on page 1980 immediately following amendment item No. 6 and before the words "Dated: January 2, 1979.":

(Secs. 101 and 115 (a), (b) and (c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1291, 1315-1316 (30 U.S.C. 811, 825 (a), (b) and (c))).

PART 70—MANDATORY HEALTH STANDARDS—UNDERGROUND COAL MINES

9. 30 CFR Part 70. In FR Doc. 78-35640 appearing on pages 40760 through 40764 in the **Federal Register** of Tuesday, September 12, 1978, insert the following authority citation on page 40764 immediately following amendment item No. 9:

(Sec. 101 of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 91 Stat. 1291 (30 U.S.C. 811); Sec. 301 of the Federal Mine Safety and Health Amendments Act of 1977, Pub. L. 95-164, 91 Stat. 1317 (30 U.S.C. 961)).

PART 75—MANDATORY SAFETY STANDARDS—UNDERGROUND COAL MINES.

PART 77—MANDATORY SAFETY STANDARDS, SURFACE COAL MINES AND SURFACE WORK AREAS OF UNDERGROUND COAL MINES

10. 30 CFR Parts 75 and 77. In FR Doc. 79-4713 appearing on pages 9379 through 9380 in the **Federal Register** of Tuesday, February 13, 1979, insert the following authority citation on page 9380 immediately following amendment item No. 9 and before the words "Dated: February 2, 1979.":

(Sec. 508 of the Federal Mine Safety and Health Act of 1977, Pub. L. 91-173 as amended by Pub. L. 95-164, 83 Stat. 803 (30 U.S.C. 957)).

PART 100—CIVIL PENALTIES FOR VIOLATIONS OF THE FEDERAL MINE SAFETY AND HEALTH ACT OF 1977

11. 30 CFR Part 100. In FR Doc. 78-14789 appearing on pages 23514 through 23519 in the **Federal Register** of Tuesday, May 30, 1978, the authority citation on page 23517 is corrected to read:

30 CFR Part 50

Mine Accident, Injury, and Illness Reports

AGENCY: Mine Safety and Health Administration (MSHA), Department of Labor.

ACTION: Final rule.

SUMMARY: This final rule amends the existing regulation on the investigation of mine accidents and injuries and the reporting of mine accidents, injuries, illnesses, employment, and coal production. The amended regulation requires operators to complete all of section C of the Mine Accident, Injury and Illness Report (Form 7000-1) for occupational injuries and illnesses.

The information now clearly required by the amended regulation is necessary to enable MSHA to analyze injury and illness causation factors needed to properly evaluate and develop Federal mine safety and health standards and programs.

EFFECTIVE DATE: October 11, 1979.

FOR FURTHER INFORMATION CONTACT: Inga A. Watkins, Room 436, Ballston Tower No. 3, 4015 Wilson Boulevard, Arlington, Virginia 22203, 703-235-1157.

SUPPLEMENTARY INFORMATION:

I. Statutory and Rulemaking Background

This amendment is issued pursuant to the Federal Mine Safety and Health Act of 1977, (Sec. 508, Pub. L. 91-173, as amended by Pub. L. 95-164, 83 Stat. 803 (30 U.S.C. 957)) and is exempted from the notice and comment procedures of 5 U.S.C. § 553 by 5 U.S.C. § 553(b)(B). The Assistant Secretary for Mine Safety and Health finds that advance notice and public participation is unnecessary and contrary to the public interest for the reasons stated below.

The existing § 50.20-6(a) was intended to apply to accidents, occupational injuries and occupational illnesses and has been consistently interpreted by MSHA to so apply. The manner in which the regulation has been construed and enforced is well known to members of the mining industy and the vast majority of mine operators have been complying with § 50.20-6(a) accordingly. However, in a recent case, an administrative law judge of the Federal Mine Safety and Health Review Commission held that § 50.20-6(a) only requires mine operators to provide information concerning accidents as defined in § 50.2(h). Since this amendment undertakes to clarify, not change, the original intent of the existing regulation, and since it is consistent with the administrative practice thereunder, the amendment will have a minimal impact on the mining industry as a whole.

Part 50 implements §§ 103 (a) and (h) of the Federal Mine Safety and Health Act of 1977 (30 U.S.C. 801, 813, 841), and was intended to achieve the statutory objective of acquisition and analysis of accident, injury and illness data for the purpose of reducing mine safety and health hazards. Part 50 provides a mechanism for the indentification of those aspects of mining which need intensified attention through health and safety regulation. The information now clearly required by the amended regulation is necessary to enable MSHA to analyze injury and illness causation factors needed to properly evaluate and develop Federal mine safety and health standards and programs. The omission of the data which the revised § 50.20-6(a) requires to be provided in section C

SEP 11 1979 UMI

V 4 4 / 1 7 7 SEP 19 79 UMI

of the Mine Accident, Injury and Illness Report Form 7000–1 would render the submission of the form partially useless and frustrate the purpose of Part 50. Therefore, immediate clarification is necessary to accomplish the intention of the regulation.

The Mine Accident, Injury and Illness Report (Form 7000–1) will be revised to conform to the changes made by this amendment of Part 50. The revision will not be executed until the next printing of the Form 7000–1. Therefore, operators may utilize the existing form to comply with the amended Part 50 until a revised form is made available by the Mine Safety and Health Administation.

It has been determined that this document does not contain a major proposal requiring preparation of a regulatory analysis under Executive Order 12044 or constitute a major Federal action significantly affecting the quality of the human environment requiring the preparation of an environmental impact statement.

II. Drafting Information

The principal persons responsible for drafting this rule are Inga A. Watkins and Edward P. Clair, Office of the Solicitor, Department of Labor.

30 CFR Part 50 is amended as follows:

§ 50.20 [Amended]

1. In § 50.20, the last sentence of paragraph (a), is revised to read as follows:

* * * * * *

"When an accident specified in § 50.10 occurs, which does not invlove an occupational injury, sections A, B, and items 5 through 11 of section C of Form 7000–1 shall be completed and mailed to MSHA in accordance with the instructions in § 50.20–1 and criteria contained in § 50.20–4 through § 50.20–6."

§ 50.20–6 [Amended]

2. Section 50.20–6 is amended as follows:

(a) By revising the first sentence to read as follows: "(a) Complete items 5 through 12 for each accident, occupational injury, or occupational illness."

(b) By deleting the paragraph designation and subheading "(a) Accident Information" preceding "Item 5."

(c) By deleting the subheading "Injury and illness information" following the paragraph designation "(b)."

(d) By revising the first sentence in paragraph (b) to read as follows: "Complete items 13–27 for each occupational injury or occupational illness."

(e) By adding the words "injury or illness" after the word "accident" each time it appears in the body of § 50.20–6.

(Secs. 103 (a) and (h), and 508, Pub. L. 91–173, as amended by Pub. L. 95–164, 91 Stat. 1297, 1299, 83 Stat. 803 (30 U.S.C. 801, 813, 957)).

Dated: July 26, 1979.

Robert B. Lagather,

Assistant Secretary for Mine Safety and Health.

[FR Doc. 79–28292 Filed 9–10–79; 8:45 am]

BILLING CODE 4510–43–M

POSTAL SERVICE

39 CFR Part 111

Mandatory Use of Business Reply Mail by Federal Agencies

AGENCY: Postal Service.

ACTION: Final Rule.

SUMMARY: The final rule requires all Federal Government departments and agencies to use a modified form of business reply mail, metered reply mail, or stamped self-addressed envelopes when providing envelopes, cards and mailing labels to correspondents for official business reply purposes. Exceptions are provided for census reply mail authorized by Title 13, U.S.C., and fourth class and special service reply mail. This rule is intended to improve accountability for official reply mail.

EFFECTIVE DATE: September 1, 1980.

FOR FURTHER INFORMATION CONTACT: James S. Stanford, Manager, Government Revenue and Examination Branch, (202) 245–5001.

SUPPLEMENTARY INFORMATION: On August 14, 1978, the Postal Service published for comment in the **Federal Register** (43 FR 35951; as corrected on August 25, 1978, 43 FR 38049) a proposal to revise sections 137.25 and 137.273f of the Postal Service Manual to carry out the rule summarized above.[1] Interested persons were invited to submit written comments concerning the proposed change by September 13, 1978. Written comments were received from 23 Federal Government organizations and 2 non-government parties. Twenty of the commenters opposed the proposal; five favored it as published, or offered no objections if requested modifications were made. All comments were carefully considered by the Postal Service in adopting the amendments to the regulations set forth below.

Thirteen commenters objected to the additional costs and/or the "complex administration" of the proposed rule. The Postal Service has no wish to impose unnecessary cost or administrative burdens on those agencies which find it necessary to use reply mail. We have consequently made a number of changes to reduce the administrative cost of these procedures where it is feasible within the constraints of law. We believe, however, that the financial interests of the Postal Service, as well as those of Federal agencies in general, will best be served by providing a more accurate accounting for returned reply mail. The data provided in such an accounting will ensure proper payment to the Postal Service and also permit agency managers to make cost-effective decisions on the use of reply mail. Considerable experience with similar procedures in use by private mailers leads us to conclude that these regulations as modified are less complex administratively and no more costly than any alternatives which would produce an accurate determination of reply volume.

Six commenters recommended increasing the accuracy of the present system of sampling "Postage and Fees Paid" reply envelopes instead of adopting the business reply mail system. Present procedures call for reply mail to be counted when it is returned to the agency, whereas other official mail is counted when it is sent. While some improvement to this approach may be possible with extensive management attention and increased costs, the basic problem with the current procedures that prevents achieving an acceptable level of accuracy is the difficulty in identifying and separating "Postage and Fees Paid" reply mail being returned to a Federal agency from incoming "Postage and Fees Paid" mail. The two kinds of mail appear to be identical. Available evidence indicates that significant volumes of reply mail are not counted, primarily because they are not recognized as reply mail. This is supported by the fact that many Federal agency accounts report little or no official reply volume.

Four agencies requested exemption from the proposed procedures. Three of these argued that they should not be required to use business reply mail since their postage charges are determined by the Postal Service sampling procedures. Postal Service sampling procedures produce statistically reliable results only when a very large volume of mail is available for sampling. Many agencies simply do not have the necessary volume, and such an option would be unavailable to them. We believe it would not be equitable to grant exceptions based solely upon use of Postal Service sampling when that option is not available to all agencies. Official business reply mail, however, would be open to all agencies regardless of size. In addition, that part of the cost of the Postal Service sampling procedures that relates to the counting of official reply mail should properly be paid by the agency for whom the work is performed. The official business reply system provides a fair and equitable method of assigning that cost to the using Federal agency.

The fourth agency, the Bureau of the Census, requested an exemption for the following reasons, among others. The Bureau advised that on March 28, 1980 it will mail out about 80 million addressed questionnaires to households throughout the country for the 1980 Census of Population and Housing. Householders will be asked to return the completed questionnaires on April 1, 1980. It is anticipated that over 50 million households will return the forms by mail within a three day period. As to the remaining 30 million households, they must be contacted by census enumerators for a direct interview. The Bureau said that if it were required to use official business reply mail for this census, vital time would be lost while the 50 million reply questionnaires were being counted in destination post offices. This would delay the process of hiring and training enumerators and determining which households they must visit. Ultimately, the ability of the Bureau to meet its obligation to provide final population figures to the President by January 1, 1981 might be put in jeopardy. Although the effective date of this rule would not require its application to the 1980 Census of Population and Housing, the same argument will apply to the next such Census in 1985.

It appears to the Postal Service that if the business reply system were applied to the Census Bureau, delays might be incurred in the process of counting immense amounts of such business reply census mail. It also appears that the prime mission of the Census Bureau, to count accurately the people and households of the United States, and the systems it has developed to carry out that mission, practically insure an accurate count and record of the Bureau's census reply mail. For these reasons, and in reliance upon the Bureau's statements, the Postal Service believes it would be in the public interest to grant an exemption for official mail relating to a collection of statistics, survey, or census authorized by title 13, United States Code, and addressed to the Department of Commerce or a bureau or agency thereof. Accordingly, mail of this kind, which is specifically authorized by statute, see 39 U.S.C. 3202(a)(3), would continue to qualify for "Postage and Fees Paid" treatment pursuant to 137.31 of the Domestic Mail Manual.

As to 137.32 of the Domestic Mail Manual, we have revised that section to make clear that official business reply mail may be used by clerks of court to transmit mail relating to naturalization.

Six commenters said that the $75 accounting fee in proposed 137.273f(2)(b) for each post office where mail for an agency is authorized to be returned would be unjustified. We based this fee on procedures used for regular business reply mail in which payment and accounting occur at each post office where mail is returned. For official business reply mail, however, commenters stated that the low volume of business reply at numerous small offices would make the acounting fee alone greatly exceed existing postage, and would be excessive. We agree that the accounting fee as orginally proposed would not be appropriate because of the unique aspects of our official mail accounting system. That system is centralized at Postal Service Headquarters and does not require more than one annual accounting fee for each permit issued.

Four agencies said that the requirement in proposed 137.252c for a printed address on official business reply mail would be costly and administratively complex, because each of the large number of locations to which reply mail would be returned would need a separate supply of business reply envelopes, cards and labels. The commenters pointed out that the problem would be further complicated by the low reply mail usage rate at many of these locations. We believe these to be valid points and have consequently modified 137.252c(2) to permit use of typewritten or handstamped addresses or printed, gummed address labels.

One commenter objected to the requirement in proposed 137.252c(2) that the agency return address appear in the upper left corner of the mail piece. The purpose of this requirement was to ensure that the agency be clearly identified, since the address where the mail is to be returned may not always provide the agency name. We note, however, that the agency name will be required as part of the statement "Postage Will be Paid By (Name of Goverment Agency)". Accordingly, we believe this will be sufficient identification for Postal Service employees to determine that the agency is an authorized user of Official Mail. The regulation has consequently been modified to eliminate the requirement for a return address in the upper left corner. The statement "Official Business, Penalty for Private Use, $300" will continue to be required in that area.

Three commenters indicated that they presently use "Postage and Fees Paid" covers for return of fourth-class matter, and for registered return of official mail matter. Neither of these uses is presently authorized for business reply mail. Regular business reply mail is limited to First-Class Mail and cannot be accompanied by special services. However, special services and fourth class reply are permitted by the existing regulations for official reply mail. The Postal Service does not wish to eliminate a service currently provided and needed by our Federal customers. Accordingly, we are including an exception in new 137.252f, which permits, after written approval is granted, distribution of "Postage and Fees Paid" covers for return of official mail at fourth-class rates or with a special service provided. There must be an agreement between each using agency and the Manager, Government Revenue and Examination Branch, concerning procedures for distribution and accounting for return volume. Although this exception will continue limited use of current reply procedures, we believe the relatively low volume, the small number of agencies likely to be involved, and the unique nature of the requirement will permit accurate accounting based upon special agreements with each agency.

One commenter objected to the requirement that agencies notify the Postal Service of all post offices through which official business reply mail will be returned under a single permit number. It is essential that the Postal Service have this information in order to alert each post office where mail will be returned and to ensure proper reporting. This information should also be used by agency mail managers to evaluate and control the use of official business reply mail. We would not expect that

[1] When this proposed rule was published in the **Federal Register** in August 1978, it was drafted as an amendment to Chapter I of the Postal Service Manual. Since that time, however, Chapter I of the Postal Service Manual has been replaced by the Domestic Mail Manual, which, among other things, carries forward the regulations on official mail and became effective on July 30, 1979. See 44 FR 39742. In view of the obsolescence (with certain exceptions not pertinent here) of Chapter I of the Postal Service Manual, the final rule has been drafted as an amendment of the Domestic Mail Manual. The numbering system of Part 137—OFFICIAL MAIL in the Domestic Mail Manual is the same as it was in the Postal Service Manual.

providing this information would be excessively complex or would add significant additional cost. In fact, it seems to us that the required information would already be available to agency mail managers if they were properly monitoring the current agency sampling procedures for reply mail. For these reasons, this requirement must be retained.

Another commenter suggested that the format instructions in 131.235 should be made applicable to official business reply mail. This has already been done, both in the proposal and the final rule. See 137.252c of the Domestic Mail Manual, as revised. The same commenter said that the illustration of the business reply format should also show the dimensions relating to the exact placement of the bar code pattern. This has been done in the final rule.

Four commenters objected to the proposed implementation date of April 1, 1979. To provide time to use existing stocks of "Postage and Fees Paid" reply envelopes and implement the new procedures, the effective date of the final rule has been extended to September 1, 1980. 137.252g has been added to reflect this effective date. If there should be additional problems with this date because of otherwise unusable stocks of "Postage and Fees Paid" envelopes, agencies should contact the Postal Service.

We also made minor, clarifying changes to 137.273f(3) of the Domestic Mail Manual.

For the above reasons, the Postal Service hereby adopts, as amended, the following amendment to the Domestic Mail Manual, effective September 1, 1980:

Part 137—Official Mail

1. In 137.2 of the Domestic Mail Manual, revise .25 and .273f to read as follows:

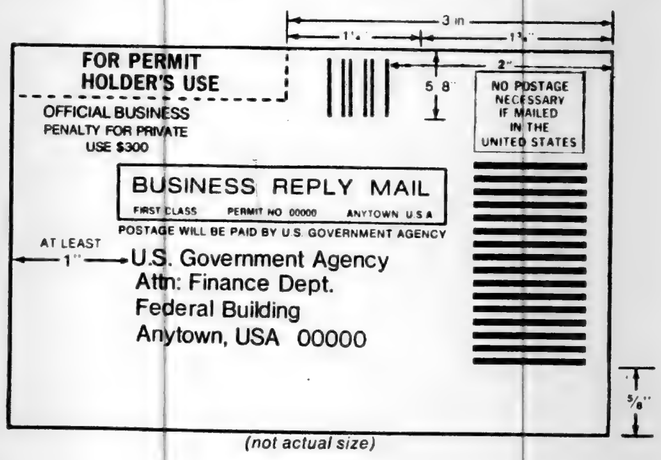
137.25 Reply and Contractor Use.

.251 *General.* Except as provided in 137.252, .253, and 137.31, a department or agency authorized to use the official mail privilege may not loan or furnish official envelopes, cards, cartons, or labels to any private person, concern, or organization or permit the use of such envelopes, cards, cartons, or labels for private benefit.

.252 Business Reply.

a. A department or agency authorized to use the official mail privilege that wishes to distribute official envelopes, cards, cartons, or labels to any person, concern, or organization from or through whom official matter is desired, must use either the business reply format provided by 137.252 c and d, the metered reply format provided by 144.112, the fourth class and special services reply procedures in 137.252f or affix adhesive postage stamps. "Postage and Fees Paid" envelopes, cards, cartons, and labels (described in 137.242 and .243) may not be distributed for reply purposes except as provided in 137.252f and 137.31.

b. To use business reply mail, a department or agency must apply for a business reply permit in accordance with the provisions of 137.273f. A department or agency which holds a postage meter license may distribute official metered reply cards and envelopes for return to the meter license holder as provided in 144.112. Fourth class and special service reply procedures may be used only after application and approval in accordance with 137.252f. Adhesive postage stamps may be pre-applied to cards and envelopes distributed for reply purposes under the provisions of 137.248.



c. Official business reply envelopes must bear the address of one of the authorized departments or agencies listed in 137.231 or one of their component units. They must be printed in the format required by 917.5 with the following exceptions:

(1) The legend required by 917.52a(4) must read "POSTAGE WILL BE PAID BY (name of authorized U.S. Government Agency)".

(2) The address may be printed, typewritten, or handstamped directly on the mail piece, or a printed gummed label may be affixed in the address area. All other preparation requirements for the address side in 917.51 must be met.

(3) The space for permit holders' use described in 917.52b(3)(e) must include the statement, "Official Business, Penalty for Private Use, $300". Space above this statement may be used for return address, logos, distribution codes, etc.

d. The following is an illustration of the official business reply mail format:

(not actual size)

e. Instructions in 144.112 a, b, and c governing the preparation of the address side of metered reply cards and envelopes also apply to official metered reply mail.

f. Departments and agencies that wish to distribute official envelopes, cards, cartons or labels for return at fourth class rates or which require a special service may use the "Postage and Fees Paid" format in 137.242 and .243 after written approval is granted by the Manager, Government Revenue and Examination Branch. Requests to use this procedure should be submitted in writing to the Manager, Government Revenue and Examination Branch, Finance Department, U.S. Postal Service Headquarters, Washington, D.C. 20260. Such request must include: (1) the service desired, (2) the post offices to which the mail will be returned, and (3) the proposed procedures to determine actual volume and postage due. Return envelopes, cards, cartons, or labels used under this provision must have the appropriate fourth-class classification or the special service desired preprinted on them.

g. All official envelopes, cards, cartons, or labels distributed for reply purposes after August 31, 1980 must comply with the requirements of 137.251 and .252 a, b, c, d, e and f as appropriate.

.253 Contractor

a. A department or agency authorized to use the official mail privilege may request the Manager, Government Revenue and Examination Branch, Finance Department, to issue a permit for that department or agency to authorize printer-mailer contractors to use official envelopes and labels to mail, on behalf of that department or agency matter printed at Government expense. As provided in 137.254, any department or agency requesting a permit must furnish with the request all information the Manager considers necessary to insure accurate reimbursement to the Postal Service for private use of official envelopes and labels.

b. A department or agency authorized to use the official mail privilege may request the Manager, Government Revenue and Examination Branch, Finance Department, to issue a permit for that department or agency to authorize non-printer-mailer contractors to use official envelopes and labels, pre-addressed to a Federal Government office or officer, for the transmission of official matter for a specified time, or in the performance of specific contracts with the office or officer. As provided in 137.254, any department or agency requesting a permit must furnish with the request all information the Manager considers necessary to insure accurate reimbursement to the Postal Service for private use of official envelopes and labels.

c. The Manager, Government Revenue and Examination Branch, Finance Department, or his designee, shall review each request under 137.253 a or b and permit the department or agency to authorize contractor use of official envelopes and labels for a period of one year if he determines that the department or agency has established sufficient accountability procedures to insure reimbursement to the Postal Service for mail service provided to contractors. In making this determination, the Manager, or his designee, shall consider factors including, but not limited to, the following:

(1) Any relevant misuse of the official mail privilege, including the misuse of official envelopes or labels for the transmission of nonofficial matter by contractors licensed by the department or agency under 137.253 a or b.

(2) Any relevant failure of the department or agency to comply with official mail reimbursement instructions issued by the Manager under 137.21, including failure to establish accurate methods for estimating or measuring the volume of official mail;

(3) The method, such as use of a permit imprint, bulk permit, or meter, proposed by the department or agency for obtaining adequate information to insure full reimbursement for the proposed contractor use of official mail.

d. Official envelopes and labels used by any contractor (as provided in 137.253 a and b) must bear the printed return address of one of the authorized departments or agencies listed in 137.321 and must be printed in the form set out in 137.242 and .243. No return name and address of a private person, concern, organization, or contractor may be shown. When a special service is required for contractor mailings, the type of special service desired must be preprinted on the envelope or label. Private users of official envelopes and labels may not add their own marking for these services.

. 254 Reimbursement

Departments and agencies authorized to use the official mail privilege must reimburse the Postal Service for the private use of official envelopes and labels under 137.252 and .253, as provided in instructions issued and administered by the Manager, Government Revenue and Examination Branch, Finance Department. Departments and agencies, and any contractors authorized by them to use official envelopes and labels, shall promptly furnish, in the manner and form requested, all information, including but not limited to contractor name, points and dates of mailing, classes, quantities, and single-piece weights of mail matter, the Manager considers necessary to insure accurate reimbursement to the Postal Service for private use of official envelopes and labels.

* * * * *

.273 Mailing Permits

* * * * *

f. *Business Reply Mail.* (1) *Application.* (a) A Federal Government department or agency that wishes to furnish official return envelopes to correspondents may apply for an official business reply mail permit by filing an application in duplicate on Form 3614, *Application to Distribute Business Reply Cards, Envelopes, Cartons and Labels.* The application may be filed at the post office where the mail will be returned, or at the post office where the agency headquarters is located if mail bearing a single business reply mail permit number will be returned to offices in more than one city.

(b) When the postmaster receives the application, he will annotate both copies "Federal Government Agency" and complete the approval and permit portions of the form. The orginal permit portion of the form will be given to the applicant. The original application portion will be filed at the post office by permit number. The postmaster will forward the duplicate copy of the application and the duplicate permit portion to the Manager, Government Revenue and Examination Branch, Finance Department, U.S. Postal Service Headquarters, Washington, D.C. 20260.

(c) Departments and agencies must notify the Manager, Government Revenue and Examination Branch, at the above address if business reply mail having a single permit number will be returned through post offices other than the permit issuing post office. This notification must include, for each permit number, the addresses and cities where mail will be returned. The Manager, Government Revenue and Examination Branch will forward the required information to each affected post office.

(2) *Postage and Fees.* (a) An annual business reply permit fee of $30 and an annual accounting fee of $75 will be charged each calendar year for each permit issued.

(b) The amount to be paid for official business reply mail is the appropriate first-class or priority postage plus a fee of 3.5 cents per piece.

(c) *Post offices will not collect money from Federal Government agencies in connection with issuance of business reply permits or for postage and fees due on such mail.* Annual permit fees, accounting fees, postage, and business reply fees will be paid by Federal Government agencies in accordance with the reimbursement procedures of 137.21.

(3) Mailings. The number of pieces of business reply mail returned to a Federal Government agency, together with the amount chargeable for postage fees, will be recorded daily on Form 25, *Trust Fund Account,* by each unit to which mail is returned. At the end of each postal quarter, these Forms 25 will be totaled and sent by the units to the postmaster for consolidation and forwarding to the Manager, Government

Revenue and Examination Branch, Finance Department, U.S. Postal Service Headquarters, Washington, D.C. 20260 for billing purposes. Negative reports on Form 25 are required for each permit if no business reply items are received during a quarter.

* * * * *

2. In 137.3 of the Domestic Mail Manual, revise .32 to read as follows:

137.3 Census and Naturalization Mail.

* * * * *

.32 *Naturalization Mail.* Official envelopes and labels prepared in accordance with 137.252 and pre-addressed to the Department of Justice, to the Immigration and Naturalization Service, or to any of its officials may be used by clerks of courts to transmit mail relating to naturalization.

A transmittal letter making these changes in the pages of the Domestic Mail Manual will be published and will be transmitted to subscribers automatically. These changes will be published in the **Federal Register** as provided in 39 CFR 111.3.

(39 U.S.C. 401(2))

W. Allen Sanders,
Acting Deputy General Counsel.

39 CFR Parts 310 and 320

Enforcement and Suspension of the Private Express Statutes

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: This final rule amends the Private Express regulations as follows: (1) The definition of letter is amended to exclude: certain tangible objects not normally used as letters; liens, releases, and orders of quasi-judicial bodies; letters sent to or from storage, whether or not sent in bulk; tags, bumper stickers and other items intended to be attached to other objects; photographic materials, such as microfilm, sent for and returned from processing; "copy" sent to, and proofs or printed matter returned from, a printer; sound recordings, films, and packets of letters which are to be disseminated to the public; (2) minor changes are made in the definitions of "packet" and "person"; (3) the phrase "identical printed letters" is defined; (4) minor changes are made in the exceptions for cargo, letters of the carrier, and private hands without compensation, and the suspension for certain data processing materials; (5) new suspensions are established for letters carried by colleges or universities for their student and faculty organizations, and certain documents relating to, but not carried with, cargo shipped by ocean carriers.

EFFECTIVE DATE: October 11, 1979.

FOR FURTHER INFORMATION CONTACT:
Charles Hawley, (202) 245-4584.

SUPPLEMENTARY INFORMATION: On December 28, 1978, the Postal Service proposed a number of changes in its regulations which implement the Private Express Statutes (43 FR 60615). In the **Federal Register** of July 6, 1979 (44 FR 40899), the Postal Service announced, among other things, that it expected shortly to publish final rules on certain proposals in the December 28, 1978, rulemaking that had drawn little public comment because they were perceived as easing the restrictions on private carriage or as making minor changes. In this document, we are adopting those rules. A listing and explanation of the adopted rules and a discussion of the comments on them, if any, appears below:

Certain tangible objects not normally used as letters, § 310.1(a)(1): The Postal Service proposed to add a new second sentence to this section to make clear that not all tangible objects upon which messages appear, such as T-shirts, coffee mugs, tombstones, or automobile tires, constitute letters.

One commenter supported and none objected to this proposal.

Liens, releases, and orders of quasi-judicial bodies, § 310.1(a)(7)(iii): The Postal Service proposed to amend this section to list liens in general, releases, and orders of quasi-judicial bodies among the legal documents excluded from coverage of the Private Express Statutes. No comments were received on this proposal.

Letters sent to or from storage, whether or not sent in bulk, § 310.1(a)(7)(vii): The Postal Service proposed to amend this section to eliminate the requirement that packets of letters sent to or from storage or to destruction or as part of a business or household relocation must be sent in bulk to qualify for the exclusion. One commenter supported and none objected to the proposal.

Tags, bumper stickers and other items intended to be attached to other objects, § 310.1(a)(7)(viii): The Postal Service proposed to amend the regulations to provide a general rule for dealing with the matter of messages for attachment to or posting on other tangible objects. One commenter supported and none objected to the proposal.

Photographic materials, such as microfilm, sent for and returned from processing, § 310.1(a)(7)(ix): One commenter said that the exclusion for these materials should apply when they are sent elsewhere than to the originator of the materials. This could result in applying the exclusion to processed materials which are bring sent because of their informational content, *i.e.*, as letters. We have, therefore, not adopted this suggestion.

"Copy" sent from a publisher to a printer, and proofs or printed matter returned from the printer to the office of the publisher, § 310.1(a)(7)(x): Commenters suggested that the exclusion should not be limited to those who publish books or magazines, as implied by the word "publisher" which we used in the proposal, but should include those who "publish" other things, e.g., menus, business forms, and advertising circulars. This comment has merit. The purpose of the proposal is to create an exclusion for printing "work-in-progress". The transmittal of menus, business forms and advertising circulars for publication clearly falls within such an exclusion.

One commenter suggested that the exclusion should cover materials sent to compositors as well as to printers. This suggestion also appears reasonable and has been incorporated into the final regulation.

Despite comments to the contrary, we believe that the exclusion should not apply when proofs or printed matter are returned from the printer to locations other than the originating office of the publisher. The purpose of this restriction is to limit the exclusion to "work-in-progress" between the originating person or his office and the printer. In order to make it clear that the exclusion applies only for material sent between the originating person or his office and the printer, we are deleting the word "single" used in the proposal, since that word might be interpreted to imply that material could be originated in an office in one place and returned by the printer to an office in another place so long as it was a "single" office. That is not our intention.

Sound recordings, films, and packets of letters, when all or the overwhelming bulk of the messages are to be disseminated to the public, § 310.1(a)(7)(xi): This exclusion would cover packets of circulars sent for subsequent distribution, as well as recordings and films to be played in public areas, *e.g.*, in stores, as "commercials". The exclusion would not apply to shipments of letters which are intended, for example, for employees of the place to which they are sent or for persons "reasonably identifiable to the sender". The quoted phrase was criticized on the grounds that it is not sufficiently clear. We disagree. Moreover, we intend to interpret the phrase not to defeat the exclusion, but rather to prevent its misapplication to situations not covered by it.

Definitions of "packet", "person" and identical printed letters", §§ 310.1 (b), (c), and (g): No comments were received concerning the revised definitions of "packet", and "person", and the new definition of "identical printed letters". They are being adopted as proposed.

Modification of the exception for letters which accompany cargo, § 310.3(a): The change will permit the private carriage of letters which accompany cargo not only when, as is now the case, they relate exclusively to the cargo, but also when they relate "in all substantial respects" to the cargo or its ordering, shipping, or delivering. It was suggested that there should be an exception for "written or printed matter enclosed with cargo or merchandise." The proposed exception would be so broad as to become the entire rule. It would sweep away the entire rationale for the letters accompanying cargo exception. We cannot adopt it.

"Letters of the carrier", § 310.3(b), and "private hands without compensation", § 310.3(c): No comments were received on the proposed revisions of these phrases. They are being adopted as proposed.

Modification of the suspension for certain data processing materials, § 320.2: This modification would: (a) Treat keypunching as the commencement of data processing; (b) require that the materials be produced "recurringly" rather than "on a regular periodic basis"; (c) specify that when materials are sent to a data processing center, they be sent exclusively for that purpose; (d) make the suspension applicable to the carriage of direct output from the data processing center back to the office of origination if data processing was commenced within 36 hours of receipt at the center; (e) clarify that the suspension does not apply, even though the recipient performs data processing functions, when such processing is not done for or specified by the sender. In response to comments, the final rule utilizes the word "carriage" instead of "transmission" in order to avoid the implication that the regulation relates to electronic transmission. Also, the final rule specifies that clerical work preparatory and incidental to the entry of data will not void the suspension. Use of the data, however, for purposes which are not preparatory and incidental, but, for example, are for substantive decision making, will make the suspension inapplicable. The reason for this is that such use is inconsistent with the purpose of the suspension—facilitating the rapid commencement of data processing.

Some parties commented that data processing materials should not be considered to be letters at all. This suggestion ignores the fact that materials sent to data processing centers contain information recorded in or on tangible objects. Accordingly, materials sent to the centers are letters as defined in § 310.1(a) of the Postal Service's regulations. Similarly, the direct output of data processing consists of information recorded in or on tangible objects, so they too are letters. The suspension for data processing materials is operative when specified time factors pertaining to the carriage and to the commencement of processing of such materials are present, but not otherwise. The suggestion that data processing materials are not letters at all is inconsistent with the definition of letter; the public interest does not require the exclusion of such materials from the definition.

Another commenter suggested that "programs", the instructions which are entered into computers so as to direct the manner in which they process data, should not be treated as letters. Inasmuch as "programs" are separate from the information which is entered into computers for "processing", we believe the comment has merit and it has been incorporated in our final regulation in § 310.1(a)(7)(xii). This reverses a prior advisory opinion.

Two minor clarifying changes were made in the suspension. One change makes it clear that only carriers—not shippers—are required to notify the Private Express Liaison Officer before operating under the suspension. This change is reflected in § 320.2(d). In addition, containers of materials carried under the suspension must show the names and addresses of the sender and the addressee, as an aid to assuring that the operations under the suspension are conducted in accordance with the requirements of the suspension. This is reflected in §§ 320.2(e.)

Suspension of the statutes for letters carried by universities and colleges for their student or faculty organizations. § 320.4: One commenter suggested that the new suspension should apply to the use of internal mail systems for the delivery of letters of student and faculty organizations between campuses of a multi-campus university. We concur with this suggestion and it is reflected in the text of the regulation.

We note also that a university or college's "internal mail system", for purposes of this suspension, is one which operates under the *Letters of the carrier* exception in § 310.3(b). Appropriate clarifying language has been added to the regulation.

Letters related to cargo shipped internationally on ocean vessels. § 320.5: The proposed suspension has been made applicable to shipments not only between the United States and foreign locations, but also to shipments between one of the 48 contiguous states and other states and possessions. We did not consider that the public interest required adoption of the suggestion that the suspension be made applicable to documents when they are shipped in connection with, but separate from, the cargo from the port into which the cargo is imported or to the port from which it will be exported. Also, we did not accept the suggestion that the suspension be made applicable to documents other than those which relate to the cargo. We believe that the suspension, as adopted, is responsive to basic problems which confront ocean carriers with respect to documents which would fall within the *Cargo* exception if they were shipped with the cargo. Other needs of this industry may be satisfied if the Postal Service adopts the recently published proposal for a suspension for "extremely urgent" letters. 44 FR 40076.

Revocation or amendment of suspensions, § 320.6: This section is taken from and is a minor revision of existing § 320.2(d). No comments were received concerning it.

In view of the considerations discussed above, 39 CFR is amended as follows:

PART 310—ENFORCEMENT OF THE PRIVATE EXPRESS STATUTES

1. In § 310.1, revise paragraphs (a)(1), (a)(7)(iii), (a)(7)(vii), and paragraphs (b) and (c), and add new paragraphs (a)(7)–(viii)(xii) and paragraph (g) to read as follows:

§ 310.1 Definitions.

(a) * * *

(1) Tangible objects used for letters include, but are not limited to, paper (including paper in sheet or card form), recording disks, and magnetic tapes. Tangible objects used for letters do not include (i) objects the material or shape and design of which make them valuable or useful for purposes other than as media for long-distance communications, unless they are actually used as media for personal and business correspondence, and (ii) outsized, rigid objects not capable of enclosure in envelopes, sacks, boxes or

other containers commonly used to transmit letters or packets of letters.

* * * * *

(7) * * *

(iii) Abstracts of title, mortgages and other liens, deeds, leases, releases, articles of incorporation, papers filed in lawsuits or formal quasi-judicial proceedings, and orders of courts and of quasi-judicial bodies.

* * * * *

(vii) Letters sent to a records storage center exclusively for storage, letters sent exclusively for destruction, letters retrieved from a records storage center, and letters sent as part of a household or business relocation.

(viii) Tags, labels, stickers, signs or posters the type-size, layout or physical characteristics of which indicate they are primarily intended to be attached to other objects for reading.

(ix) Photographic material being sent by a person to a processor and processed photographic material being returned from the processor to the person sending the material for processing.

(x) Copy sent from a person to an independent or company-owned printer or compositor, or between printers and compositors, and proofs or printed matter returned from the printer or compositor to the office of the person who initially sent the copy.

(xi) Sound recordings, films, and packets of identical printed letters containing messages all or the overwhelming bulk of which are to be disseminated to the public. The "public" does not include individuals residing at the place of address; individuals employed by the organization doing business at the place of address (whether or not the actual place of employment is the place of address); individuals who are members of an organization, if an organization is located at the place of address; or other individuals who, individually or as members of a group, are reasonably identifiable to the sender.

(xii) Computer programs recorded on media suitable for direct input. For the conditions under which the Private Express Statutes are suspended for data processing materials, see § 320.2.

(b) "Packet" means two or more letters, identical or different, or two or more packets of letters, under one cover or otherwise bound together. As used in these regulations, unless the context otherwise requires, "letter" or "letters" includes "packet" or "packets".

(c) "Person" means an individual, corporation, association, partnership, governmental agency, or other organization or entity.

* * * * *

(g) The term "identical printed letters" includes letters that differ only in name, address or serial number.

2. In § 310.3, revise paragraphs (a), (b)(1) and (2), and (c) to read as follows:

§ 310.3. Exceptions.

(a) *Cargo.* The sending or carrying of letters is permissible if they accompany and relate in all substantial respects to some part of the cargo or to the ordering, shipping or delivering of the cargo.

(b) *Letters of the carrier.* (1) The sending or carrying of letters is permissible if they are sent by or addressed to the person carrying them. If the individual actually carrying the letters is not the person sending the letters or to whom the letters are addressed, then such individual must be an officer or employee of such person (see § 310.3(b)(2)) and the letters must relate to the current business of such person.

(2) The fact that the individual actually carrying the letters may be an officer or employee of the person sending the letters or to whom the letters are addressed for certain purposes does not necessarily mean that he is an officer or employee for purposes of this exception. The following factors bear on qualifications for the exception: the carrying employee is employed for a substantial time, if not fulltime (letters must not be privately carried by casual employees); the carrying employee carries no matter for other senders; the carrying employee is a regular salaried employee and shares in all privileges enjoyed by other regular employees (including employees not engaged primarily by the letter carrying function), including but not limited to salary, annual vacation time, absence allowed for illness, health benefits, workmen's compensation insurance, and retirement benefits.

* * * * *

(c) *Private hands without compensation.* The sending or carrying of letters without compensation is permitted. Compensation generally consists of a monetary payment for services rendered. Compensation may also consist, however, of non-monetary valuable consideration and of good will. Thus, for example, when a business relationship exists or is sought between the carrier and its user, carriage by the carrier of the user's letter will ordinarily not fall under this exception; or, when a person is engaged in the transportation of goods or persons for hire, his carrying of letters "free of charge" for customers whom he does charge for the carriage of goods or persons does not fall under this exception.

3. Revise § 320.2 to read as follows:

§ 320.2. Suspension for certain data processing materials.

(a) The operation of 39 U.S.C. 601(a)(1) through (6) and § 310.2(b)(1) through (6) of this chapter is suspended on all post routes for data processing materials defined in paragraph (c) on the terms detailed in paragraph (b), subject to the operating requirements in § 320.3.

(b) The suspension referred to in paragraph (a) of this section is for data processing materials conveyed (1) to a data processing center, if carriage is completed within 12 hours or by noon of the addressee's next business day and if data processing work is commenced on such materials within 36 hours of their receipt at the center; or (2) back from the data processing center to the address of the office originating the incoming materials, if carriage is completed within 12 hours or by noon of the addressee's next business day, and if data processing work was commenced on the incoming materials within 36 hours of their receipt at the center.

For purposes of the time limitations for completion of delivery referred to in the preceding sentence, delivery of shipments between a domestic point and a foreign point shall be deemed to begin at the time materials of foreign origin are received at the international gateway city or end at the time materials of domestic origin leave the international gateway city. This suspension does not apply to carriages from or to originating offices that are neither part of the firm owning the data processing center nor data processing customers of the firm owning the data processing center.

(c) For purposes of this suspension, (1) "addressee's next business day" means the first calendar day, stated in his local time, on which he conducts business, following the calendar day of dispatch, stated in the sender's local time; (2) "data processing" means electro-mechanical or electronic processing and includes the recording of data by electro-mechanical or electronic means for further processing; and (3) "data processing materials" means materials of all types that are sent exclusively for data processing and are ready for immediate data processing, but only if they are produced recurringly in the course of the normal business operations of the office originating them or receiving them back from the processing center. The performance of clerical work which is merely preparatory and incidental to the commencement of data processing is not, for purposes of this suspension, inconsistent with the requirement that the materials be sent exclusively for data processing and be ready for immediate data processing.

§ 320.3 [Amended]

4. In § 320.3, strike out the first word of paragraphs (a) and (b) and insert "Carriers" in lieu thereof; and revise the heading to read as follows:

§ 320.3 Operations under suspension for certain data processing materials.

5. Add new §§ 320.4, 320.5, and 320.6 reading as follows:

§ 320.4 Suspension for certain letters of college and university organizations.

The operation of 39 U.S.C. 601(a) (1) through (6) and § 310.2(b) (1) through (6) of this chapter is suspended on all post routes to permit colleges and universities to carry in their internal mail systems the letters of their *bona fide* student or faculty organizations to campus destinations. This suspension does not cover the letters of faculty members, students, or organizations other than *bona fide* student or faculty organizations of the carrying college or university. Colleges and universities choosing to provide their student or faculty organizations access to their internal mail systems are responsible for assuring that only letters of *bona fide* student or faculty organizations addressed to campus destinations are carried. (See § 310.4.)

For purposes of this suspension, "internal mail systems" are those which carry letters on, between, and among the various campuses of a single college or university and which operate in accordance with the *Letters of the carrier* exception in 39 CFR 310.3(b).

§ 320.5 Suspension for certain international-ocean carrier-related documents.

The operation of 39 U.S.C. 601(a) (1) through (6) and § 310.2(b) (1) through (6) of this chapter is suspended on all post routes for documents, sent by a shipper or an ocean carrier from a foreign origin to a United States ocean-carrier port city destination or from a United States ocean-carrier port city origin to a foreign destination, that would be excepted under § 310.3(a) if the documents accompanied the cargo. This suspension covers only shipments to or from ports where the cargo to which the documents relate is actually loaded on, or unloaded from, an ocean vessel. For purposes of this suspension "foreign origins" or "foreign destinations" means origins or destinations outside the contiguous 48 states.

§ 320.6 Revocation or amendment of suspensions.

These suspensions may be revoked or amended in accordance with § 310.7. No revocation of the suspension provided in § 320.2 will curtail operations of particular carriers existing at the time of the revocation to a level of operations (in dollar or volume terms, whichever is larger) lower than that antedating the revocation in a particular market served prior to the revocation. Should the suspension referred to in § 320.2 be revoked, carriers, as a condition to continuing operations under this section, will be required to provide reasonably complete and accurate data to support estimates of past operating levels in particular markets.

(39 U.S.C. 401, 404, 601–606; 18 U.S.C. 1693–1699, 1724)

W. Allen Sanders,

Acting Deputy General Counsel.

[FR Doc. 79-28135 Filed 9-10-79; 8:45 am]

BILLING CODE 7710-12-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Public Land Order 5681

[C-18304]

Colorado; Partial Revocation of Reclamation Project Withdrawal

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This order will restore approximately 2,118 acres to operation of the public land laws generally, including the mining laws.

EFFECTIVE DATE: October 5, 1979.

FOR FURTHER INFORMATION CONTACT: Evelyn Tauber, 202–343–6486.

By virtue of the authority contained in section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751, 43 U.S.C. 1714, it is ordered as follows:

1. The Secretarial Order of June 3, 1946, which withdrew lands for the Gunnison-Arkansas Project, is hereby revoked so far as it affects the following described lands:

Sixth Principal Meridian

T. 24 S., R. 66 W.
  Sec. 22, SW¼NW¼ and E½NW¼.
T. 25 S., R. 65 W.
  Sec. 10, E½NE¼ and SW¼NE¼;
  Sec. 11, NW¼NW¼;
  Sec. 19, Lot 1;
  Sec. 28, S½SE¼;
  Sec. 29, W½NW¼, SE¼NW¼, N½SW¼, SW¼SW¼ and NW¼SE¼;
  Sec. 30, SE¼;
  Sec. 31, NE¼.
T. 27 S., R. 65 W.
  Sec. 1, Lot 1, SE¼NE¼ and N½SE¼;
  Sec. 2, S½SW¼.
T. 25 S., R. 64 W.
  Sec. 21, N½NE¼, SW¼NE¼, SE¼NW¼ and E½SW¼;
  Sec. 28, W½NE¼, E½W½, W½SE¼, SE¼SE¼;
  Sec. 32, S½SE¼;
  Sec. 33, E½NW¼, SW¼SW¼ and E½SW¼.

The area described aggregates 2,118 acres in Huerfano County and Pueblo County. The lands are located primarily along the slopes of river drainages in the plains country of eastern Colorado. Vegetative cover is native grasses, weeds, and some pinyon pine and juniper trees.

2. At 10 a.m. on October 5, 1979 the public lands shall be open to operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, and requirements of applicable law. All valid applications received at or prior to 10 a.m. on October 5, 1979, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing.

3. The lands will be open to location under the United States mining laws at 10 a.m. on October 5, 1979. They have been open to applications and offers under the mineral leasing laws.

Inquiries concerning the lands should be addressed to the Bureau of Land Management, Colorado State Office, Colorado State Bank Building, 1600 Broadway, Denver, Colorado 80202.

Guy R. Martin,

Assistant Secretary of the Interior.

August 30, 1979.

BILLING CODE 4310-84-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

[Docket No. FEMA 5693]

List of Withdrawal of Flood Insurance Maps Under the National Flood Insurance Program

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Final rule.

SUMMARY: This rule lists communities where Flood Insurance Rate Maps or Flood Hazard Boundary Maps published by the Office of Federal Insurance and Hazard Mitigation have been temporarily withdrawn for administrative or technical reason.

During that period that the map is withdrawn, the insurance purchase requirement of the National Flood Insurance Program is suspended.

EFFECTIVE DATES: The date listed in the fifth column of the table.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Krimm, Office of Flood Insurance, (202) 755–5581 or Toll Free Line 800–424–8872, Room 5270, 451 Seventh Street, SW., Washington, DC 20410.

SUPPLEMENTARY INFORMATION: The list includes the date that each map was withdrawn, and the effective date of its republication, if it has been republished. If a flood prone location is now being identified on another map, the community name for the effective map is shown.

The Flood Disaster Protection Act of 1973 (Pub. L. 93–234), as amended, requires, at Section 102, the purchase of flood insurance as a condition of Federal financial assistance if such assistance is:

(1) for acquisition and construction of buildings, and

(2) for buildings located in a special flood hazard area identified by the Director of Federal Emergency Management Agency.

One year after the identification of the community as flood prone, the requirement applies to all identified special flood hazard areas within the United States, so that, after that date, no such financial assistance can legally be provided for acquisition and construction of buildings in these areas unless the community has entered the program. The denial of such financial assistance has no application outside of the identified special flood hazard areas of such flood-prone communities.

Prior to July 1, 1975, the statutory requirement for the purchase of flood insurance did not apply until and unless the community entered the program and the special flood hazard areas were identified by the issuance of a flood insurance map. However, after July 1, 1975, or one year after identification, whichever is later, the requirement applies to all communities in the United States that are identified as having special flood hazard areas within their community boundaries, so that, no such financial assistance can legally be provided for buildings in these areas unless the community has entered the program.

The insurance purchase requirement with respect to a particular community may be altered by the issuance or withdrawal of the Office of Federal Insurance and Hazard Mitigation's (FEMA) official Flood Insurance Rate Map (FIRM) or the Flood Hazard Boundary Map (FHBM). A FHBM is usually designated by the letter "E" following the community number and a FIRM by the letter "R" following the community number. If the FIA withdraws a FHBM for any reason the insurance purchase requirement is suspended during the period of withdrawal. However, if the community is in the Regular Program and only the FIRM is withdrawn but a FHBM remains in effect, then flood insurance is still required for properties located in the identified special flood hazard areas shown on the FHBM, but the maximum amount of insurance available for new applications or renewal is first layer coverage under the Emergency Program, since the community's Regular Program status is suspended while the map is withdrawn. (For definitions see 44 CFR Part 59 et seq.).

As the purpose of this revision is the convenience of the public, notice and public procedure are unnecessary, and cause exists to make this amendment effective upon publication. Accordingly, Subchapter B of Chapter X of Title 24 of the Code of Federal Regulations is amended as follows:

1. Present § 65.6 is revised to read as follows:

§ 65.6 Administrative withdrawal of maps.

(a) *Flood Hazard Boundary Maps (FHBM's).*

The following is a cumulative list of withdrawals pursuant to this Part:

40 FR 5149
40 FR 17015
40 FR 20798
40 FR 46102
40 FR 53579
40 FR 56672
41 FR 1478
41 FR 50990
41 FR 13352
41 FR 17726
42 FR 8895
42 FR 29433
42 FR 46226
42 FR 64076
43 FR 24019
44 FR 815
44 FR 6383
44 FR 18485
44 FR 25636
44 FR 34120
44 FR 52835

(b) *Flood Insurance Rate Maps (FIRM's)*

The following is a cumulative list of withdrawals pursuant to this Part:

40 FR 17015
41 FR 1478
42 FR 49811
42 FR 64076
43 FR 24019
44 FR 25636
44 FR 52835

2. The following additional entries (which will not appear in the Code of Federal Regulations) are made Pursuant to § 65.6:

State, community name, and number	County	Hazard ID date	Rescission date	Reason
Georgia, Dearing, TN, 130356	McDuffie	4–4–75	8–8–79	1
Georgia, Woodbury, TN, 130436	Meriweather	6–27–75	8–8–79	1
Iowa, Salix, city, 190296	Woodbury	3–19–76	8–8–79	1
Indiana, Washington, city, 180037C	Daviess	3–19–76	8–8–79	1A
Kansas, Macksville, city, 200435	Stafford	8–6–76	8–8–79	1
Ohio, McDonald, village, 390538A, C	Trumbull	4–9–76	8–8–79	1A
California, Half Moon Bay, city, 060319C	San Mateo	10–22–76	8–8–79	1A
Michigan, Bark River, township, 260385	Delta	11–19–76	8–25–79	1
Michigan, Escanaba, township, 260387	Delta	3–25–77	8–25–79	1
Michigan, Gourley, township, 260455	Menominee	10–8–76	8–25–79	1
Michigan, Harris, township, 260456	Menominee	2–24–78	8–25–79	1
Michigan, Inwood, township, 260518	Schoolcraft	2–24–78	8–25–79	1
Michigan, Limestone, township, 260344	Alger	11–26–76	8–25–79	1
Michigan, Michigamme, township, 260451	Marquette	4–28–78	8–25–79	1
Michigan, Meyer, township, 260458	Menominee	6–24–77	8–25–79	1
Michigan, Mellen, township, 260692	Menominee	4–28–78	8–25–79	1
Michigan, Nadeau, township, 260459	Menominee	3–25–77	8–25–79	1

Michigan, Spaulding, township, 260461	Menominee	3–11–77	8–25–79	1
Michigan, Thompson, township, 260519	Schoolcraft	12–3–76	8–25–79	1

KEY TO SYMBOLS

E—The community is participating in the Emergency Program. It will remain in the Emergency Program without a FHBM.

C—The community is participating in the Emergency Program. It will be converted to the Regular Program without an FIA map.

R—The community is participating in the Regular Program.

1. The Community appealed its flood-prone designation and FIA determined the Community would not be inundated by a flood having a one-percent chance of occurrence in any given year.

1A. FIA determined the Community would not be inundated by a flood having a one-percent chance of occurrence in any given year.

2. The Flood Hazard Boundary Map (FHBM) contained printing errors or was improperly distributed. A new FHBM will be prepared and distributed.

3. The Community lacked land-use authority over the special flood hazard area.

4. A more accurate FIA map is the effective map for this community.

5. The FHBM does not accurately reflect the Community's special flood hazard areas (i.e., sheet flow flooding, extremely inaccurate map, etc.). A new FHBM will be prepared and distributed.

6. The Flood Insurance Rate Map was rescinded because of inaccurate flood elevations contained on the map.

7. The Flood Insurance Rate Map was rescinded in order to re-evaluate the mudslide hazard in this Community.

8. The T&E or H&E Map was rescinded.

9. A revision of the FHBM within a reasonable period of time was not possible. A new FHBM will be prepared and distributed

(National Flood Insurance Act of 1968 (title XIII of the Housing and Urban Development Act of 1968); effective Jan. 28, 1969 (33 FR 17804, Nov. 28, 1968), as amended, 42 U.S.C. 4001–4128; Executive Order 12127, 44 FR 19367; and delegation of authority to Federal Insurance Administrator, 44 FR 20963.)

BILLING CODE 4210–23–M

DEPARTMENT OF COMMERCE

Maritime Administration

46 CFR Part 293

Inventories of Vessels Covered by Operating-Differential Subsidy Agreements; Revocation

AGENCY: Maritime Administration.

ACTION: Revocation of Part (Final Rule).

SUMMARY: The Maritime Administration has determined that the regulation in this part no longer serves a useful purpose and is hereby revoking this part. Revocation of this part will remove an economic burden now being imposed on U.S. operators of vessels under ODSA by eliminating accounting and reporting requirements which are not necessary to administer a major Agency program. It will also reduce the Agency's administrative burden.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: Ernest J. Bruemmer, (202) 377–2562.

SUPPLEMENTARY INFORMATION: By provision of the Merchant Marine Act of 1970 (Pub. L. 91–469), reserve fund and recapture provisions have been deleted from operating-differential subsidy agreements (ODSA). Consequently, inventories of vessels under ODSA are no longer required for reserve fund or recapture determination reasons, effectively nullifying part of the justification for 46 CFR Part 293. Also, the regulation defines several expense categories of vessel stores, supplies, and equipment which no longer qualify for subsidy under all ODSA. In addition, the initial on-subsidy inventory requirement is being waived (pursuant to § 293.8) as a matter of Agency practice, and the value of the ending inventory is included in the vessel sale or trade-in price through negotiation. Furthermore, the recording and reporting by operators of subsidizable spare parts expenses (the only category still receiving subsidy under some ODSA), required by 46 CFR Part 272, provide the Maritime Administration with adequate opportunity to monitor and audit these expenses throughout the life of an ODSA. For these reasons, 46 CFR Part 293 is revoked.

The Maritime Administration has determined that this is not a significant action that requires publication in proposed form with an opportunity for public comment, pursuant to criteria in Executive Order 12044 (43 FR 12661), Department of Commerce Administrative Order 218–7 and Maritime Administration procedures (44 FR 2082).

Dated: September 4, 1979.

Robert J. Patton, Jr.,

Acting Secretary, Maritime Administration.

[FR Doc. 79–28272 Filed 9–10–79; 8:45 am]

BILLING CODE 3510–15–M

MARINE MAMMAL COMMISSION

50 CFR Part 530

Procedures Supplementing the National Environmental Policy Act Regulations

AGENCY: Marine Mammal Commission.

ACTION: Final Rule.

SUMMARY: On July 31, 1979, the Marine Mammal Commission published, at 44 FR 44916–44917, proposed procedures to supplement the National Environmental Policy Act (NEPA) regulations promulgated by the Council on Environmental Quality and thereby implement the provisions of the NEPA as they apply to the functions and responsibilities of the Commission. An error in the text of that notice indicating that written comments may be submitted on or before July 31, 1979 was corrected by notice published on August 3, 1979 at 44 FR 45654 indicating that comments may be submitted on or before August 30, 1979. No comments were received and the procedures have therefore been adopted without change.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: Robert Eisenbud, General Counsel, Marine Mammal Commission, Room 307, 1625 I Street, N.W., Washington, D.C. 20006, telephone (202) 653–6237.

Accordingly, Chapter V, Marine Mammal Commission, of 50 CFR is amended by adding a new Part 530 as follows:

PART 530—COMPLIANCE WITH THE NATIONAL ENVIRONMENTAL POLICY ACT

Sec.

530.1 Purpose.
530.2 Ensuring that environmental documents are actually considered in agency decision-making.
530.3 Typical classes of action.
530.4 Environmental information.

Authority: National Environmental Policy Act, P.L. 91–190; 42 U.S.C. 4321 et seq.

§ 530.1 Purpose.

The purpose of this Part is to establish procedures which supplement the National Environmental Policy Act (NEPA) regulations and provide for the implementation of those provisions identified in § 1507.3(b) of the regulations which are applicable to the activities of the Commission in light of its statutory functions and responsibilities.

§ 530.2 Ensuring that environmental documents are actually considered in agency decision-making.

Section 1505.1 of the NEPA regulations contains requirements to ensure adequate consideration of environmental documents in agency decision-making. To implement these requirements, Commission officials shall: (a) consider all relevant environmental documents in evaluating proposals for agency actions; (b) ensure that all relevant environmental documents, comments, and responses accompany the proposal through existing agency review processes; (c) consider only those alternatives encompassed by the range of alternatives discussed in the relevant environmental documents when evaluating any proposal for action by the Commission which is likely to significantly affect the quality of the human environment; and (d) where an environmental impact statement (EIS) has been prepared, consider the specific alternatives analyzed in the EIS when evaluating the proposal which is the

subject of the EIS. All Commission officials directly involved in developing, evaluating, and/or reaching decisions on proposed actions shall consider relevant environmental documents and comply with the applicable provisions of the NEPA process.

§ 530.3 Typical classes of action.

Section 1507.3(b)(2), in conjunction with Sec. 1508.4, requires agencies to identify typical classes of action that warrant similar treatment under NEPA with respect to the preparation of EIS's or environmental assessments. As a general matter, the Commission's activities do not include actions for which EIS's or environmental assessments are required. Its activities involve: (a) consultation with and recommendations to other Federal agencies for actions relating to marine mammal protection and conservation for which an EIS or environmental assessment is either not required by the NEPA regulations or for which an EIS or environmental assessment is prepared by another Federal agency; and (b) research contracts relating to policy issues, biological-ecological data needed to make sound management decisions, and better methods for collecting and analyzing data. These activities are not, by themselves, major Federal actions significantly affecting the quality of the human environment and the Commission's activities are therefore categorically excluded from the requirement to prepare an EIS or environmental assessment except for proposals for legislation which are initiated by the Commission, for which the Commission shall develop environmental assessments or EIS's, as appropriate, in accordance with the NEPA regulations. The Commission shall independently determine whether an EIS or an environmental assessment is required where: (1) a proposal for agency action is not covered by one of the typical classes of action above; or (2) for actions which are covered, the presence of extraordinary circumstances indicates that some other level of environmental review may be appropriate.

§ 530.4 Environmental information.

Interested persons may contact the Office of the General Counsel for information regarding the Commission's compliance with NEPA.

Dated: September 4, 1979.

John R. Twiss, Jr.,

Executive Director.

[FR Doc. 79-28273 Filed 9-10-79; 8:45 am]

BILLING CODE 6820-31-M

DEPARTMENT OF AGRICULTURE

Federal Grain Inspection Service

7 CFR Part 26

Fees for Original Online Grain Inspection Services and Mileage Costs

AGENCY: Federal Grain Inspection Service (FGIS), USDA.

ACTION: Final rule

SUMMARY: This rule establishes an hourly method and rescinds the unit-of-grain method for the assessment of fees for original online grain inspection services provided by FGIS in the United States. The rule expands the definition for online inspection services to include all services which are based on official samples obtained during the loading or unloading of grain. The rule establishes fees for online services performed under contract and rescinds the 2-consecutive-hour grace period for the assessment of fees for standby services. The rule will reduce the fees for certain original non-online inspection services and help standardize the fee schedules for inspection and weighing services provided by FGIS. Mileage costs will continue to be included as part of the FGIS inspection fee on a nationwide apportionment basis.

EFFECTIVE DATE: December 2, 1979.

FOR FURTHER INFORMATION CONTACT: John W. Marshall, Director, Inspection Division, Federal Grain Inspection Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 0624–S, Washington, D.C 20250, (202) 447–8497.

SUPPLEMENTARY INFORMATION: Section 7(j) of the United States Grain Standards Act, as amended [7 U.S.C. 79(j)], hereinafter cited as the Act, authorizes the Administrator of the FGIS to prescribe, charge, and collect reasonable fees to cover the estimated costs of inspection services provided by the Federal Grain Inspection Service (FGIS). The Act provides that the fees shall, as nearly as practicable, cover the costs incident to the performance of the services, excluding administrative and supervisory costs.

On January 9, 1978, pursuant to section 7(j) of the Act, FGIS prescribed a unit-of-grain method (per 1,000 bushels) for the assessment of fees for original online grain inspection services. Comments received later from users of the online inspection services suggested that an hourly method would be a more equitable way of assessing fees for the services. In response to the comments, FGIS published on May 31, 1979, a Notice in the **Federal Register** (44 FR 31243) requesting comments on two alternate methods of assessing fees for original online inspection services—the hourly method and the unit-of-grain method. The Notice also requested comments on two alternate methods of assessing fees for FGIS mileage costs—a standard-rate-per-mile method and an apportionment method.

Ten comments were received in response to the Notice. Nine commentors favored the hourly method of assessing online inspection fees. Five of the nine commentors recommended that both methods be adopted and that the users of the service have the option of specifying the method of their choice. One commentor suggested only that the fees be as reasonable as possible.

Although the comments on adopting both methods were not within the scope of the Notice, consideration has been given to the comments. A fee system that would provide both an hourly method and a unit-of-grain method would require the establishment of unit fees on a location-by-location basis, would result in a complex fee schedule that would not be compatible with the fee schedule for FGIS weighing services, and would substantially increase the recordkeeping and billing responsibilities of FGIS. The added responsibilities would increase FGIS operating costs that would be reflected in the fees assessed by FGIS.

Original Online Inspection Service Fees

On the basis of the comments received and other available information, it is concluded that the hourly method of assessing fees as herein adopted, establishes fees as nearly as practicable to cover estimated costs of FGIS incident to the performance of inspection services and more adequately meets the general needs of the users of the online inspection services.

In adopting the hourly method, fees are prescribed for contract and noncontract services, and for regular workday and nonregular workday services. The hourly fees for non-online original inspection services have been adjusted to conform with the hourly fees for noncontract online inspection services. These adjustments will result in a 20 percent decrease in the hourly fees for noncontract original inspection services performed during a regular workday and a 5 percent decrease for such services performed during a nonregular workday. The term "regular workday" continues to mean the hours of 6 a.m. to 6 p.m., local time, any Monday, Tuesday, Wednesday, Thursday, or Friday that is not a holiday; the term "nonregular workday" continues to mean any holiday and any other time that is not included in a regular workday. "Contract service" means an inspection or weighing service performed pursuant to a contract between the user of the service and FGIS.

In adopting the hourly method of assessing fees for original online inspection services, FGIS is rescinding the 2-consecutive-hour grace period for the assessment of fees for standby services. The grace period was established in the July 2, 1979, issue of the **Federal Register** (44 FR 38439) on the basis of the revenue that was being generated under the unit-of-grain method of assessing fees. Under the hourly method, the justification for the grace period no longer exists and its deletion will help standardize the fees for inspection and weighing services provided by FGIS.

Definition for Online Inspection Service

In the May 31, 1979, Notice, the term "online inspection service" was defined as an inspection service performed during the loading or unloading of grain when the sample for inspection is obtained with an approved diverter-type mechanical sampler. On the basis of the comments received and other information, FGIS has concluded that the definition is too restrictive. The definition has been expanded to include all inspection services which are based on official samples obtained by an approved method from a flowing stream of grain during the loading or unloading of grain.

FGIS Mileage Costs

Only three commentors expressed an opinion regarding the assessment of FGIS mileage costs. Two commentors preferred the standard-rate-per-mile method and one commentor favored the apportionment method. After considering the comments and other available information, FGIS has concluded that there is not sufficient basis at this time to justify a change from the present apportionment method. Accordingly, FGIS mileage costs will continue to be included as part of the FGIS inspection fee on a nationwide apportionment basis.

Fee Schedule

The prescribed fees are based on estimated income and expenses for fiscal year 1980, including an estimated 7.0 percent salary increase for FGIS employees in October 1979. The fees are expected to generate income adequate for fiscal year 1980 operating costs plus maintaining a nominal operating reserve. The fees remain unchanged for reinspection, appeal inspection, and weighing services performed by FGIS in the United States and for original inspection, reinspection, appeal inspection, and weighing services performed by FGIS in Canada.

The costs to FGIS of providing the services for which fees are prescribed are matters known only to FGIS, and the collection of fees for such costs is prescribed by law. Therefore, it is found upon good cause that publication of a notice of proposed rulemaking and other public procedures on the provisions of § 26.71 and § 26.72 of the regulations as set forth in this document are impractical and unnecessary, and good cause is found for making these changes effective December 2, 1979.

This final rule has been reviewed under the USDA criteria established to implement Executive Order 12044, "Improving Government Regulations." A determination has been made that this action should not be classified "significant" under those criteria. An impact statement may be obtained by writing to: John W. Marshall, Director, Inspection Division, Federal Grain Inspection Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 0624–S, Washington, D.C. 20250 (202) 447–8497.

Accordingly, pursuant to section 7(j) (7 U.S.C. 79(j)) of the Act, § 26.71(a) and § 26.72(b)(1) of the regulations (7 CFR 26.71(a) and 26.72(b)(1)) under the Act are hereby amended or restated to read as follows:

§ 26.71 Fees for official services performed by the Service.

(a) *General.* The fees shown in schedules A and B apply to official grain inspection and weighing services performed by the Service in the United States and Canada.

Schedule A.—*Fees for official inspection and weighing services performed by the Service in the United States* [1]

Table 1

Inspection services (bulk or sacked grain)	Original inspection service	Reinspection or appeal inspection service [2,3]
(1) Official sample-lot inspection service (white certificate):		
(i) For official grade and official factor determinations:		
(A) Online inspection services (per man-hour per Service representative): [4]		
(1) Contract service:		
(a) Regular workday	$11.20	(5)
(b) Nonregular workday	14.40	(5)
(2) Noncontract service:		
(a) Regular workday	12.80	(5)
(b) Nonregular workday	16.00	(5)
(B) Other than online inspection services:		
(1) Truck or trailer (per truck or trailer or part truck or part trailer)	8.50	$16.00
(2) Boxcar (per car or part car)	10.00	19.60
(3) Hopper car (per car or part car)	13.50	23.80
(4) Barge (per 1,000 bushels or fraction thereof)	2.50	3.50
(5) Ship, bin and all other lots of grain (per 1,000 bushels or fraction thereof) (but see 2 below)	(5)	3.50
(C) Based on official file sample (any lot or part lot)	(5)	13.50
(ii) For official factor or official criteria determinations:		
(A) Based on a sample used for official grade and official factor determinations not obtained during loading or unloading:		
(1) Factor determination (per factor)	4.20	5.45
(2) Protein test (per sample)	3.35	4.35
(B) Based on new sample (any lot or part lot)	(7)	(7)
(2) Special inspection services (sampling, stowage examination, testing of inspection equipment, demonstrating official inspection functions, furnishing standard illustrations, and related services) (per man-hour per Service representative): [6]		
(i) Regular workday	12.80	21.80
(ii) Nonregular workday	16.00	21.80
(3) Warehouseman's sample-lot inspection service (yellow certificate) or submitted sample inspection service (pink certificate):		
(i) For official grade and official factor determinations (per sample)	5.50	13.50
(ii) For official factor or official criteria determinations:		
(A) Factor determinations (per factor)	4.20	5.45
(B) Protein test (per sample)	3.35	4.35
(4) Minimum fee per service request (applicable when the request for service is cancelled after the Service representative(s) arrive at the point of service—fee does not include standby):		
(i) Grain in trucks, trailers, boxcars, or hopper cars	(8)	(8)
(ii) All other lots of grain and special services (per Service representative):		
(A) Regular workday	25.60	43.60
(B) Nonregular workday	32.00	43.60
(5) Standby (per man-hour per Service representative): [9]		
(i) Regular workday	12.80	21.80
(ii) Nonregular workday	16.00	21.80
(6) Extra copies of certificates (per copy)	2.50	2.50

Table 2

Weighing services (bulk or sacked grain)	Official weighing services					
	Specified inspection point				Noninspection point	
	Contract service		Noncontract service		Contract service	
	Regular workday	Non-regular workday	Regular workday	Non-regular workday	Regular workday	Non-regular workday
(1) Official weighing or supervision of weighing services (per man-hour per Service representatives)	$11.20	$14.40	$12.80	$16.00	$11.20	$14.40
(2) Special weighing services, (stowage examination, testing of weighing equipment, checkweighing sacked grain, checkloading sacked grain, demonstrating official weighing functions, and related services) (per man-hour per Service representative) [8]	11.20	14.40	12.80	16.00	11.20	14.40
(3) Minimum fee per service request (applicable only when request is cancelled after Service representative arrives at point of service—fee does not include standby) (per Service representative)	[9]	14.40	12.80	16.00	[9]	14.40
(4) Standby (per man-hour per Service representative) [8]	[9]	14.40	12.80	16.00	[9]	14.40
(5) Carrier condition and/or scale record report (not available as a single service)	[10]	[10]	5.00	5.00	[10]	[10]
(6) Extra copies of certificates (per copy)	2.50	2.50	2.50	2.50	2.50	2.50

[1] The fees include the cost of performing official inspection and official class X or class Y weighing functions by Service representatives. For incidental costs included in the fees, and fees in addition to the unit and the hourly fees, see sec. 26.72, paragraphs (a) and (b).

[2] If it is found that there was a material error in the inspection from which a reinspection, a field appeal inspection, or a Board appeal inspection is taken, the specified reinspection, field appeal inspection, or Board appeal inspection fee shall not be assessed. (But see sec. 26.72(b) for fees that are assessed in all instances.)

[3] Board appeal inspections are based on file samples. The fee for Board appeal inspection service shall be $34.00 per sample except for protein which shall be $15.00 per sample.

[4] Online inspection services include all inspection services which are based on official samples obtained from a flowing stream of grain during the loading or unloading of grain.

[5] Not applicable.

[6] The unit fee.

[7] Same fees as in (1)(i)(B), plus applicable sampling charge—see (2).

[8] Only one inspection or weighing fee, as applicable, will be charged for these services whether performed singly or concurrently.

[9] For application of fee for standby, see sec. 26.72(b).

[10] No Charge.

* * * * * * *

Schedule B.—*Fees for official inspection and weighing services performed by the Service in Canada* [1]

Table 1

Services (bulk or sacked grain)	Regular workday	Nonregular workday
(1) Original inspection, or official weighing, or special services: [2]		
(i) Contract service (per man-hour per service representative)	$20.00	$24.00
(ii) Noncontract service (per man-hour per service representative)	30.00	36.00
(2) Reinspection or field appeal inspection (per man-hour per service representative) [3] [6]	32.00	38.00
(3) Board appeal inspection (per sample) [3] [4]	34.00	40.00
(4) Minimum fee per service request:		
(i) Noncontract, original inspection, or original weighing, or special services (per service representative) [5]	90.00	108.00
(ii) Reinspection, or field appeal inspection (per service representative) [6] [8]	96.00	114.00
(5) Standby (per man-hour per service representative) [7]	30.00	36.00
(6) Extra copies of certificates (per copy) [8]	2.50	2.50

[1] The fees include the cost of performing official inspection and official class X or class Y weighing functions by Service representatives. For incidental costs included in the fees, and fees in addition to the unit and the hourly fees, see sec. 26.72, paragraphs (a) and (b).

[2] Special services include, but are not limited to the following: sampling, stowage examination, testing of inspection or weighing equipment, demonstrating official inspection or weighing functions, furnishing standard illustrations, checkweighing of sacked grain, checkloading of sacked grain, and related services.

[3] If it is found that there was a material error in the inspection from which a reinspection, a field appeal inspection or Board appeal inspection is taken, the specified reinspection, field appeal inspection or Board appeal inspection fee shall *not* be assessed. (But see § 26.72(b) for fees that are assessed in all instances.)

[4] Appeal inspections are based on file samples. Board appeal inspections for protein shall be $15.00 per sample.

[5] Applicable when the requested service is performed in 3 hours or less, or the request for service is cancelled after Service representative arrives at the point of service.

[6] Not applicable if the reinspection or field appeal inspection is performed concurrently with an original inspection.

[7] For application of fee for standby, see § 26.72(b).

[8] For application of fee for extra copies of certificates see § 26.72(b)(2).

§ 26.72 Federal services: Explanation of fees.

* * * * *

(b) *Fees in addition to unit and hourly fees.* (1) fees for standby services shall be assessed in all cases except no fee shall be assessed for standby performed during a regular workday under a service contract for inspection or weighing services in the United States or Canada.

1132 Texas Panhandle
1138 Rio Grande Valley

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Suspension of effective date of rules.

SUMMARY: This document suspends the September 1, 1979, effective date of uniform base-excess plan provisions that were issued by the Department for 11 southwestern milk orders. This action stems from an order by the U.S. District Court for the Northern District of Texas which restrains the Secretary of Agriculture from implementing the base-excess plans at this time.

EFFECTIVE DATE: September 11, 1979.

FOR FURTHER INFORMATION CONTACT: Robert F. Groene, Marketing Specialist, Dairy Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250, 202–447–4824.

SUPPLEMENTARY INFORMATION: Prior documents in this proceeding:

Notices of hearing: Issued February 11, 1977, published February 14, 1977 (42 FR 9674); issued March 3, 1977, published March 8, 1977 (42 FR 13024); and issued March 25, 1977, published March 31, 1977 (42 FR 17130).

Notice of extension of time for filing briefs: Issued May 18, 1977, published May 25, 1977 (42 FR 26217).

Recommended decision: Issued December 20, 1977, published December 29, 1977 (42 FR 65088).

Notices of extension of time for filing exceptions: Issued January 20, 1978, published January 26, 1978 (43 FR 3568); issued February 15, 1978, published February 22, 1978 (43 FR 7327).

Final decision: Issued July 23, 1978, published July 28, 1978 (43 FR 33192).

Final order: Issued August 29, 1978, published September 5, 1978 (43 FR 39324).

Statement of Consideration

1. This order of suspension is issued pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*), and of the orders regulating the handling of milk in the aforesaid marketing areas.

2. On August 29, 1978 (43 FR 39324), the Assistant Secretary for Marketing Services issued on order amending the 11 aforesaid orders. The amended orders were to become effective on September 1, 1979, and would establish uniform base-excess plans for the 11 markets.

3. On March 27, 1979 (44 FR 18938), the Assistant Secretary issued an order amending several of the order provisions (which were not yet in effect) that had been issued in the August 29, 1978, order amending the 11 aforesaid orders. These additional amendments also were to become effective on September 1, 1979. They were issued for the purpose of correlating the new base-excess plan provisions with the provisions that were being issued on March 27, 1979, in connection with changes in the advertising and promotion programs under 10 of the 11 orders. (The Neosho Valley order does not contain an advertising and promotion program.)

4. On August 31, 1979, the U.S. District Court for the Northern District of Texas issued an order restraining the Secretary of Agriculture from implementing the uniform base-excess plan provisions for the 11 aforesaid orders.

It is therefore ordered, That on the basis of the restraining order of the U.S. District Court, the September 1, 1979, effective date of the order amending the 11 aforesaid orders that was issued on August 29, 1978 (43 FR 39324), and of the order amending the 11 aforesaid orders that was issued on March 27, 1979 (44 FR 18938), is hereby suspended until further notice.

(Secs. 1–19, 48 Stat. 31, as amended; (7 U.S.C. 601–674))

Effective date: September 11, 1979.

Signed at Washington, D.C., on September 6, 1979.

Jerry C. Hill,

Deputy Assistant Secretary for Marketing and Transportation Services.

Proposed Rules

Federal Register
Vol. 44, No. 177
Tuesday, September 11, 1979

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

Office of the Secretary

[10 CFR Part 376]

Leasing; Proposed Rulemaking and Public Hearing Regarding Outer Continental Shelf Oil and Gas Sequential Bidding Process

AGENCY: Department of Energy.

ACTION: Proposed Rule.

SUMMARY: This regulation proposes to establish a sequential bidding process under which Outer Continental Shelf (OCS) oil and gas lease sales would be conducted. This proposal provides a new bidding process that is designed to foster competition for OCS leases. The sequential bidding process would be employed in lieu of the existing procedure used by the Department of the Interior (DOI). This regulation implements a portion of the Department of Energy's rulemaking responsibilities under Section 302(b)(1) of the Department of Energy Organization Act.

DATES: Written comments are due by 4:00 p.m., November 14, 1979. Requests to speak are due by 4:00 p.m., September 27, 1979. Washington hearing: October 15, 1979. New Orleans hearing: October 2, 1979. Los Angeles hearing: October 4, 1979.

ADDRESSES: All written comments and requests to speak at the Washington, D.C. public hearing should be sent to: Office of Public Hearings Management, Economic Regulatory Administration, Box XJ (Docket No. LPD–79–04), 2000 M Street, NW., Washington, D.C. 20461.

All requests to speak at the New Orleans and Los Angeles public hearings should be sent to:

New Orleans hearing: Department of Energy, 2626 Mockingbird Lane, P.O. Box 352228, Dallas, Texas 75435, Att: Mac L. Lacefield.
Los Angeles hearing: Department of Energy, 111 Pine Street, 3rd Floor, San Francisco, California 94111, Att: Robert Laffel.

HEARING LOCATIONS:

Washington hearing: Room 2105, 2000 M Street, NW., Washington, D.C. 20461.
New Orleans hearing: F. Edward Hebert Building, Room 629, 600 South Street, New Orleans, LA 70130.
Los Angeles hearing: New Otani Hotel, Ballroom No. 2, 120 South Los Angeles Street, Los Angeles, California 90012.

FOR FURTHER INFORMATION CONTACT:

VII. Environmental Analysis

I. Introduction

Sections 302 and 303 of the Department of Energy Organization Act (DOE Act, Pub. L. 95–91, 91 Stat. 565 (42 U.S.C. 7101 *et seq.*)) Transferred from the Department of the Interior (DOI) to the Department of Energy (DOE) certain authorities previously held by the Secretary of the Interior under the Outer Continental Shelf Lands Act (OCSLA), the Mineral Lands Leasing Act, the Mineral Leasing Act for Acquired Lands, the Geothermal Steam act of 1970, and the Energy Policy and Conservation Act. As a result, with respect to Federal leases, the Secretary of Energy is authorized to promulgate regulations that (1) foster competition, (2) implement alternative bidding systems, (3) establish diligence requirements, (4) set rates of production, and (5) specify the procedures, terms, and conditions for the acquisition and disposition of Federal royalty interests taken in kind. In addition, under section 302(c) of the DOE Act, the Secretary of Energy is granted the authority to establish rates of production for Federal leases, and under section 303(c)(1) the Secretary reviews and may disapprove any term or condition of a Federal lease that relates to DOE's section 302(b) DOE Act authority to promulgate regulations.

This regulation implements part of DOE's authority under DOE Act section 302(b)(1). As required under section 303(b) of the DOE Act, the Secretary of the Interior was consulted during preparation of these proposed regulations and afforded not less than 30 days to comment formally on them. The Secretary of the Interior provided comments which were considered in redrafting these regulations prior to today's publication.

As proposed in this regulation, the sequential bidding process that would be established would be applied exclusively, on an experimental basis, to all OCS lease sales in lieu of the present bidding process of opening and reading bids concurrently, now used by DOI (43 CFR 3316.5(a)). Application of sequential bidding to OCS lease sales on this basis will supply the data and experience needed in order to obtain an early indication of the results of this experiment. Ultimately, the use of sequential bidding as the permanent bidding process will depend upon the observed effects resulting from imposition of the process on an experimental basis. DOE is interested in public comments on the concept of using the experimental sequential bidding process exclusively for all sales immediately upon promulgation until sufficient evidence is obtained to determine whether use of the process should be made permanent.

There are several reasons for initially proposing the use of sequential bidding on an experimental rather than a permanent basis. The impact of sequential bidding on competition for Federal leases is difficult to anticipate. Much of the information on which to base predictions of impacts on competition is closely held by the firms that generally participate in OCS lease sales, thereby precluding evaluation of sequential bidding, except through experimentation. Similarly, it is difficult to predict the reactions of sale participants to sequential bidding, with respect to both preexploratory evaluations and bidding behavior. Empirical evidence of its impacts will be collected and analyzed and a decision made whether or not to continue to apply sequential bidding to OCS lease sales.

Under certain circumstances, it may be beneficial and appropriate during the initial implementation of sequential bidding to exempt particular OCS lease sales from application of the sequential bidding process, i.e., to revert to use of the present DOI process. DOE is interested in obtaining specific comment with regard to the need for an exemption provision, and the types of circumstances surrounding a lease sale that might make exemption advisable. Please refer to Section IV.A. of this preamble for specific comments requested on the issue of exemption.

II. Current OCS Bidding Process Regulations

The existing OCS bidding process regulations require that all tracts included in an OCS lease sale be offered for sale at the same time. All bids must be submitted, by sealed bid accompanied by a certified or cashier's check, bank draft, money order, or cash for one-fifth of the cash bonus amount, by the deadline specified in the Final Notice of Sale. The bids are opened, publicly announced, and recorded, but no bids are accepted or rejected and no leases are awarded at that time. Within 60 days of the opening of the bids, DOI determines whether to accept a bid from the highest qualified responsible bidder for each tract receiving bids. If the highest bid for a lease is not accepted by DOI within the 60 day period following the opening of bids, all bids for that lease are rejected. Notice of that action is transmitted to all the bidders, and cash bonus deposits on all rejected bids are returned.

III. Proposed Regulations

A. Specific Proposals

1. *Purpose and Scope (§ 376.201).* This proposed regulation is designed to foster competition for federal leases through the exercise of DOE's rulemaking responsibility, under section 302(b)(1) of the DOE Act. This proposed regulation is expected to foster competition for Federal leases through structuring an OCS lease sale so as to apportion OCS tracts among three or more bidding sessions. This is expected to increase the number and amount of bids for OCS leases, increase bidders' financial flexibility, increase the return to the United States from OCS lease sales, and permit bidders to revise their bidding strategies several times during an OCS lease sale in order to react to patterns established in completed bidding sessions.

2. *Definitions (§ 376.202).* Two new definitions are proposed by this regulation. They are the definition of "bidding session" and "bidding process". The former is central to the sequential bidding process. It is defined as one of the segments into which an OCS lease sale is devided and during which a portion of the tracts included in an OCS lease is offered for sale. The conclusion of a bidding session is the deadline, announced by DOI, for the submission of bids on tracts offered in that session.

3. *The Sequential Bidding Process (§ 376.210).* A minimum of three bidding sessions per sale would be required by the application of the proposed sequential bidding process to an OCS lease sale (§ 376.210(a)). Fewer than three, we believe, would not be sufficient to achieve the objectives of this regulation.

The regulation requires in § 376.210(a)(1) that there be at least 24 hours between the time fixed by DOI as the dealine for the submission of bids for one bidding session until the same deadline applicable to the following bidding session. DOE seeks comments on whether 24 hours is sufficient for sale participants to readjust their bidding strategies and prepare new bids for the next bidding session.

A random selection procedure would be used to assure that tracts are distributed as equally as possible among bidding sessions with respect to quality or resource potential (§ 376.210(a)(2)). Each bidding session would contain a substantially equal number of OCS lease sale tracts as well (§ 376.210(a)(2)). Although several random selection procedures may be available, such as stratified random selection by geologic structure, the procedure used would be that which best fosters the purposes of this proposed regulation.

At the conclusion of a bidding session, bids would be opened, but the only information announced at this point would be the amount of the highest bid for each tract offered for sale in that bidding session (§ 376.210(a)(3)). In addition to equalizing somewhat the information available to sale participants, this limited release of information should minimize the ability of bidders to predict the bidding strategies of other bidders through the use of gaming techniques. Additional bid information, *e.g.*, the names of bidders and the amounts of their bids for tracts would be announced publicly at the conclusion of the sale (§ 376.210(a)(6)).

At the end of each bidding session, DOI would return the cash bonus bid deposits of all bidders for a tract except that of the highest bidder (§ 376.210(a)(4) and (5)). This return of deposits would enable unsuccessful bidders to recycle these funds for use in the preparation of bids for tracts offered for sale in upcoming bidding sessions.

Within 60 days of the conclusion of the final bidding session in an OCS lease sale, DOI would determine whether or not to except bids from the highest bidders for tracts offered during the sale (§ 376.210(a)(7)).

The sequential bidding process to be established in this regulation shall be used exclusively for each OCS lease sale following promulgation in lieu of the present process used by DOI (§ 376.210(b)). Initial use of the process will be on an experimental basis. When sufficient evidence to judge the merit of the process is available, DOE will determine whether to retain sequential bidding as the exclusive bidding procedure for OCS lease sales, to return to exclusive use of the present DOI process, or to authorize alternative use of the sequential process and the present DOI process.

4. *Analysis and Criteria (§ 376.220).* Before each OCS lease sale, the variable elements of sequential bidding that would apply to a sequential bidding sale, *i.e.*, the number and scheduling of bidding sessions, the random selection procedure used to select tracts for each bidding session, and the number of tracts and specific tracts to be offered for sale in each bidding session, would be analyzed by DOE and recommendations made to DOI. In this analysis, DOE would consider whether different design options would (1) foster competition in the Federal leasing process, (2) permit greater bidding flexibility and increase bidders' chances to compete for more tracts than would the existing bidding process, (3) provide an opportunity to experiment with various bidding processes and permit the identification of those that would best achieve the Government's goals in leasing OCS oil and gas lands, (4) provide a fair and equitable return to the United States, and (5) not impose excessive administrative burdens on either the Government or OCS lease

V 4 4 / 1 7 7

sale partricipants. DOE seeks public comment on these criteria.

B. General Objectives

The requirement of the current OCS bidding process that all tracts be offered for sale at one time appears to strain some bidders' financial resources. It compels bidders, when cash bonus bidding is used, to commit all of their cash bonus funds simultaneously, thereby limiting both the number and size of bids that many bidders can afford to submit. In addition, this capital constraint may cause some bidders to focus primarily on tracts that would not command much attention from bidders with greater financial resources. The application of the sequential bidding process to an OCS lease sale is expected, therefore, to afford bidders greater financial flexibility.

Apportioning the total number of tracts offered for sale among several bidding sessions and returning cash bonus deposits to unsuccessful bidders at the end of each bidding session will enable bidders to bid on more tracts and to submit higher bids for those tracts that appear to have the greatest potential for discovery and development. Bidders will be able to concentrate their resources on a smaller number of tracts at a time. Therefore, sequential bidding is also expected to increase the number of bids that are received for each tract.

In addition, the financial flexibility made possible by the sequential bidding process may increase the number of participants in an OCS lease sale, and may attract more interest from smaller firms that have not participated in OCS lease sales previously as a result of the restrictions implicit in the existing bidding process.

Offering all OCS lease sale tracts at the same time also influences bidding strategies. Prior to a lease sale, a bidder must prepare a single, inflexible bidding plan for the whole lease sale. Bidding strategies, therefore, are based on information about tract potential that is available to a bidder before the actual lease sale. For bidders who are unable to engage in extensive pre-sale evaluations, a bidding strategy must often be prepared on the basis of little or no such information. This lack of information may inhibit some bidders from participating in the lease sale at all, and those bidders who submit bids on the basis of little or no information are likely to discount their bids to such an extent that their likelihood of winning leases is small.

Dividing an OCS lease sale into sequential bidding sessions diminishes, to some extent, the information advantage available to bidders that engage in extensive pre-sale evaluation. At the end of each bidding session, DOI would divulge the amount of the highest bid submitted for each tract offered for sale during that bidding session. Since the tracts to be offered for sale in subsequent bidding sesions are known in advance to sale participants, it would be possible for them to adjust their bids for these tracts on the basis of the amounts bid for comparable tracts in earlier bidding sessions. While this type of information will benefit all lease sale participants, it should benefit those with little or no pre-sale information about offered tracts to a greater extent than bidders with a significant amount of such information. While it is difficult to predict with any exactness how the imposition of sequential bidding will affect the evaluative efforts of prospective bidders, it is not expected to diminish significantly such activity.

DOE recognizes that the amount of time allowed between bidding sessions is critical to the success of this proposed rule. The 24-hour minimum time interval between the deadlines of bidding sessions proposed by this regulation would enable bidders to readjust their bidding strategies in mid-sale. Resources freed from previous unsuccessful bids can be redirected to new bids, or be used to increase the amount of their bids to a level that would give them a greater opportunity to obtain leases. Increased bid amounts generally are expected to have the collateral public benefit of increasing the return to the United States from OCS leasing.

The sequential bidding process may also obviate the problem that some bidders now face of obtaining too many tracts in an OCS lease sale. The simultaneous offering of all tracts earmarked for a particular OCS lease sale makes prediction of how many leases a sale participant will obtain virtually impossible. If a bidder ends up with more tracts than it can afford to develop, then OCS oil and gas development and production will be delayed. While this inefficency may be alleviated by the sale, assignment, exchange or other transfer of leases by a winning bidder after the OCS lease sale (authorized, subject to DOI approval, by 43 CFR Subpart 3319), the availability of the "assignments market" is no guarantee that such a transaction can be effected or that the seller will be able to secure the price sought.

With the exception of easing capital constraints, the expected beneficial effects of the sequential bidding process described above would apply to any OCS bidding system, and not solely when the cash bonus is the bid variable.

DOE has also considered the possible impact of sequential bidding on joint ventures, *i.e.*, agreements among bidders to bid jointly for tracts. Joint venture agreements appear mostly to be of two types:

First, joint venturers can agree to contribute a percentage share of the joint venture's bids, leaving the decision as to which tracts to bid on to the organizer. A sequential bidding procedure would not affect the ability of bidders to form this type of joint venture, as the organizer would be able to react to the results of a completed bidding session and revise the joint venture's bidding strategy just as well as an individual bidder.

The second type of joint venture is one that is put together to bid on a specific lease or leases. With respect to leases offered for sale in the first bidding session, sequential bidding would have no adverse effect on the ability of the members to form the joint venture. Any difficulties that may arise from the necessity to revise bidding strategies as a result of a prior bidding session are greatly reduced by the publication in the **Federal Register**, 30 days or more prior to an OCS lease sale, of the scheduling of specific tracts in each bidding session and of the time interval between bidding sessions. These time intervals should permit lease-specific joint venturers to develop and take advantage of contingency plans.

IV. Public Comments and Public Hearing Procedures

We request comments on any aspect of the regulation as proposed. To the extent comments are submitted in response to this notice either proposing or opposing amendments, they should be accompanied by as much supporting data as possible. Data submitted pursuant to this notice that is deemed proprietary should be so labeled.

A. Specific Comments Requested

DOE is requesting comments on the following matters in particular:

1. Does capital represent a bidding constraint or a barrier to entry for some firms more than others; and if so, does the "assignment market" alleviate this constraint?

2. How many bidding sessions are necessary in order for this proposed regulation to achieve its objectives?

3. What time interval between bidding session deadlines would be required for bidders to digest the results of prior bidding sessions, adjust bidding strategies accordingly, and prepare bids for the next round of bidding?

4. Would sequential bidding tend to inhibit the formation joint ventures? That is, would the process encourage more individual bidding?

5. Would the proposal to announce only the amount of the highest bid for tracts at the end of each bidding session be the most effective way to achieve the goal of equalizing information while minimizing gaming possibilities?

6. In addition to random selection, what other systems for ordering tracts among bidding sessions would make for a rational offering of tracts?

7. Given the experimental nature of this proposed rule, what duration of use would be appropriate in order to assess properly the proposed system's impact?

8. During the period in which the sequential bidding process would be applied to each OCS lease sale, should provision be made for exemption of particular OCS lease sales or of certain categories of OCS lease sales? What circumstances, factors, or conditions might justify exemption of a lease sale from application of the sequential bidding process? What criteria might be used to evaluate whether a particular lease sale should be exempted from application of the sequential bidding process as proposed?

9. What specific operational criteria should be employed in order to determine the variable elements of the sequential bidding process for each OCS lease sale, *i.e.*, number and scheduling of bidding sessions, random selection procedure for distribution of tracts among bidding sessions, and number of tracts and specific tracts to be offered during each bidding session, given the general criteria outlined in § 376.220(b)?

B. Written Comments

You are invited to participate in this rulemaking by submitting data, views or arguments with respect to the proposals set forth in this notice. Written comments should be submitted by 4:00 p.m., October 9, 1979 to the address indicated in the "ADDRESSES" section of this preamble and should be identified on the outside envelope and on the document with the designation: Box XJ, "DOE Proposed Sequential Bidding Process Regulations (Docket No. LPD–79–04)". Ten copies should be submitted.

Any information submitted which you consider to be confidential must be so identified and submitted in writing, one copy only. We reserve the right to determine the confidential status of the information and to treat it according to our determination.

C. Public Hearing

1. *Procedure for Request to Make Oral Presentation.* The times and places of the hearings are indicated in the "Dates" and "Hearing Locations" section of the preamble.

If you have an interest in the proposed amendments issued today, or represent a group or class of persons that has an interest, you may make a written request (see "Addresses" section of this preamble) for an opportunity to make oral presentation by 4:00 p.m., September 27, 1979. Please describe your interest and, if appropriate, state why you are a proper representative of a group or class of persons that has such an interest, and give a concise summary of the proposed oral presentation. You should also provide a phone number where you may be contacted through the day before the hearing.

If you are selected to be heard, you will be so notified before 4:00 p.m., September 28, 1979. One hundred copies of your statement, labeled "Sequential Bidding Process Regulations" are due, for the Washington hearing, October 14, 1979, and should be delivered to the "Requests to Speak" address; and, for the regional hearings, are due by 9 a.m. on the day of the hearing and should be brought to the hearing location. In the event any person wishing to testify cannot meet the 100 copy requirement, alternative arrangements can be made with the Office of Public Hearings Management in advance of the hearing by so indicating in the letter requesting an oral presentation or by calling the Office of Public Hearings Management at 202–254–5201.

2. *Conduct of the Hearing.* DOE reserves the right to select the persons to be heard at each hearing, to schedule their respective presentations, and to establish the procedures governing the conduct of the hearing. The length of each presentation may be limited, based on the number of persons requesting to be heard.

A DOE official will be designated to preside at each hearing. These will not be judicial or evidentiary-type hearings. Questions may be asked only by those conducting the hearing, and there will be no cross-examination of persons presenting statements. At the conclusion of all initial oral statements, each person who has made an oral statement will be given the opportunity to make a rebuttal statement. The rebuttal statements will be given in the order in which the initial statements were made and will be subject to time limitations.

You may submit questions to be asked of any person making a statement at a hearing to the addresses indicated above for requests to speak not later than 4:00 p.m., the day before the hearing. If you wish to ask a question at a hearing, you may submit the question, in writing, to the presiding officer. DOE or, if the question is submitted at the hearing, the presiding officer will determine whether the question is relevant, and whether the time limitations permit it to be presented for answer.

Any further procedural rules needed for the proper conduct of the hearing will be announced by the presiding officer.

A transcript of each hearing will be made and the entire record of the hearings, including the transcripts, will be retained by DOE and made available for inspection at the DOE Freedom of Information Office, Room GB–145, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday. You may purchase a copy of the transcript from the reporter.

V. Significance Review

DOE has determined that this proposed regulation is significant and will have a major impact within the meaning of DOE's procedures to implement Executive Order 12044 on "Improving Government Regulations" (DOE Order 2030.1, 44 FR 1032, January 3, 1979). Therefore, a regulatory analysis is required for this proposed regulation. In accordance with DOE Order 2030.1, regulatory analyses must address alternative courses of action and reasons for the selection of the preferred alternative, *i.e.*, the proposed regulation.

A summary of the regulatory analysis prepared for this regulation is included below. Copies of the complete regulatory analysis are available for public review in the DOE Freedom of Information Reading Room, Room GB–145, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C.20585. Interested parties are invited to submit written comments on the regulatory analysis to the address indicated in the "ADDRESSES" section of this preamble.

VI. Summary of Regulatory Analysis

A. Introduction

The dual requirement of the existing OCS lease sale bidding process of submitting all bids simultaneously and of backing them with substantial deposits creates a degree of financial exposure on all participants that influences both the number and magnitude of bids each participant submits at the time of the sale. It is

SEP 11 79
UMI

believed that smaller bidders are the most severely restricted by the economic requirements of the present system. Moreover, it is likely that the levels of financial exposure, which many firms face under the current process, represent an effective barrier to entry for a number of firms who otherwise might be interested in leasing and developing OCS tracts.

B. Policy Objectives

During its evaluation of alternative methods of structuring the OCS bidding process, DOE has considered a number of OCS leasing policy objectives. Of primary concern is increasing competition for OCS leases, by reducing a present barrier to entry, *i.e.*, increasing bidding opportunities for smaller firms through a reduction in financial constraints, and thereby increasing the number of bids per tract and the total percentage of tracts in a sale that receive bids. The policy objectives conform to one of the major goals of the National Energy Plan: ensuring "competition in the energy industry generally and among the major oil and gas companies in particular."

C. Alternative Courses of Action

The regulatory analysis considers four alternative courses of action: the "status quo", the holding of "mini-sales", the imposition of a bid limit, and design options for a sequential bidding process.

1. *The Status Quo—Retention of the Current Bidding Process.* While this alternative obviates the need for additional regulations and preserves a maximum degree of simplicity with regard to administrative matters, it has not been selected as the most desired alternative because it does not effectively advance the policy objectives. The maintenance of the status quo would continue to provide larger firms the subtle advantage of being able to dominate in the bidding for prime tracts.

2. *Mini-Sale—A Scheduling Alternative.* Under this alternative, sales would be held more frequently, with a smaller number of tracts. For example, four mini-sales (25 tracts each) might replace a lease sale originally scheduled to encompass 100 tracts.

However, approximately 18 to 24 mini-sales would be needed each year to reduce a firm's financial exposure as effectively as the sequential bidding process. This implies that a sale would be held every two or three weeks. The administrative burdern associated with such a system would be much greater than under sequential bidding.

3. *The "Bid Limit" Option.* Under this option, firms would submit their own maximum aggregate winning cash bonus limitation that would apply to a particular lease sale. In this way a firm can submit bids on all tracts in the sale and yet be assured that its winning bids will not exceed its own pre-stipulated amount.

The bid limit option has several serious deficiencies. For example, the plan could not deal with the situation where a portion of the participants in a joint venture have reached their bid limit before the tract for which the joint venture was formed is put up for sale.

4. *Design Options for a Sequential Bidding Procedure.* In any form, a sequentially-bid sale would apportion the OCS tracts up for bid in a lease sale over several bidding sessions. The adoption of the sequential bidding process (over the three options listed above) is recommended since this process accomplishes the goals of (a) increasing the number and amount of bids for OCS leases; (b) increasing bidders' financial flexibility, (c) increasing the return to the United States from OCS lease sales, and (d) permitting bidders to revise their bidding strategies several times during an OCS lease sale in order to react to patterns established in completed bidding sessions without imposing the drawbacks which are associated with these other alternatives. As part of the decision to utilize sequential bidding, there are several elements of the process which lend themselves to further design options:

a. The amount and timing of information about an OCS lease sale that would be disclosed by the Federal Government.

b. The determination and scheduling of the number of bidding sessions in an OCS lease sale.

c. The determination of the number of tracts to be offered in each bidding session.

d. The ordering of tracts among bidding sessions.

e. The handling of cash bonus bid deposits by the Federal Government.

D. The Preferred Alternative

A regulation implementing a sequential bidding process for OCS lease sales would best accomplish the policy objectives of fostering competiton for Federal leases and of increasing competition in the energy industries generally and among major oil and natural gas companies in particular.

VII. Environmental Analysis

After reviewing the proposed regulations pursuant to DOE's responsibilities under the National Environmental Policy Act of 1969 (Pub. L. 91-190, 83 Stat. 852 (42 U.S.C. 4321 *et seq.*)), DOE has determined that the proposed action does not constitute a major Federal action significantly affecting the quality of the human environment. Therefore, DOE has determined that no environmental assessment or environmental impact statement is required for the proposed regulations.

(Outer Continental Shelf Lands Act, Act of August 7, 1953, ch. 345, 67 Stat. 462 (43 U.S.C. 1331 *et seq.*), as amended by Pub. L. 95-372, 92 Stat. 629; Department of Energy Organization Act, Pub. L. 95-91, 91 Stat. 565 (42 U.S.C. 7101 *et seq.*); E.O. 12009, 42 F.R. 46267.)

In consideration of the foregoing, it is proposed to amend Chapter II, title 10 of the Code of Federal Regulations as set forth below.

Issued in Washington, D.C., September 7, 1979.

George S. McIsaac,

Assistant Secretary, Resource Applications.

Part 376 of Chapter II of Title 10, Code of Federal Regulations, is amended by adding a Subpart C, to read as follows:

PART 376—OUTER CONTINENTAL SHELF OIL AND GAS LEASING

* * * * *

Subpart C—Sequential Bidding

Sec.
376.201 Purpose and scope.
376.202 Definitions.
376.210 Sequential bidding process.
376.220 Analysis and criteria.

Authority: Act of August 7, 1953, ch. 345, sec. 8(a)(1), 67 Stat. 468 (43 U.S.C. 1335(a)(1)) as amended by sec. 205, Pub. L. 95-372, 92 Stat. 640; secs. 302(b)(1), 303(c), Pub. L. 95-91, 91 Stat. 578-579, 579-580 (42 U.S.C. 7152(b)(1), 7153(c)); E.O. 12009, 42 F.R. 46267.

Subpart C—Sequential Bidding Process

§ 376.210 Purpose and scope.

The regulations in this Subpart C establish a sequential bidding process to be utilized in connection with the offering and sale of Federal leases for the exploration, development and production of oil and gas resources located on the OCS. This sequential bidding process is designed to foster increased competition for OCS leases by apportioning the tracts included in an OCS lease sale among several separate bidding sessions. Structuring an OCS lease sale in this manner is expected to:

(1) Provide certain bidders an opportunity to submit bids for more OCS leases than is generally possible when all the tracts included in an OCS lease sale are offered for sale in a single bidding session;

(2) Give bidders greater financial flexibility in submitting bids for OCS leases;

(3) Encourage more bids on OCS tracts offered in OCS lease sales;

(4) Provide a fair and equitable return to the United States from the sale of OCS tracts; and

(5) Give bidders an opportunity to revise bidding strategies during the interval that is provided between the conclusions of each bidding session in an OCS lease sale.

§ 376.202 Definitions.

For purposes of this Subpart C:

"Bidding session" means one of the segments into which an OCS lease sale is divided and during which a portion of the tracts included in an OCS lease sale is offered for sale. The conclusion of a bidding session is the deadline (announced by DOI) for the submission of bids on tracts offered in that session.

"Bidding process" means the method by which bids for OCS leases included in an OCS lease sale are solicited, submitted, opened, and announced, and by which OCS leases are awarded.

§ 376.210 Sequential bidding process.

(a) The sequential bidding process, as administered by DOI, shall consist of the following steps:

(1) An OCS lease sale shall be divided into not less than three bidding sessions with successive deadlines for the submission of bids separated by a time interval of not less than 24 hours;

(2) A substantially equal number of tracts, assigned to bidding sessions through a random selection procedure, shall be offered for sale in each bidding session;

(3) At the conclusion of each bidding session, bids submitted for tracts included in the bidding session shall be opened and, within 4 hours of such conclusion, the amount of the highest bid submitted for each tract included in the bidding session shall be announced publicly;

(4) At the conclusion of each bidding session, the cash bonus bid deposit submitted by the apparent highest qualified responsible bidder for each tract offered for sale during a bidding session shall be retained;

(5) At the conclusion of each bidding session, cash bonus bid deposits shall be returned to bidders other than the apparent highest qualified responsible bidder for each tract offered during that bidding session;

(6) At the conclusion of the final bidding session of an OCS lease sale, a public announcement of all bids received and the names of the bidders that submitted them shall be made; and

(7) An apparent highest qualified bid for an OCS lease shall be accepted not later than 60 days after the conclusion of the final bidding session in an OCS lease sale, or all bids for that lease shall be considered rejected.

(b) The sequential bidding process shall be applied to each OCS lease sale.

§ 376.220 Analysis and criteria.

(a) Prior to each OCS lease sale, DOE shall perform analyses and make recommendations to DOI with regard to:

(1) The number and schedule of sequential bidding sessions;

(2) The random selection procedure to be applied to assignment of tracts among bidding sessions; and

(3) The number of tracts and the specific tracts to be offered during each bidding session, as assigned by DOE through application of the random selection procedure recommended under paragraph (a)(2) of this section.

(b) In performing the analyses required by this section, DOE shall consider the following purposes and policies as criteria, recognizing that the order of listing does not denote a ranking:

(1) Fostering competition in the Federal leasing process;

(2) Permitting greater flexibility in bidding and increasing the opportunities for bidders to participate in bidding on a greater number of the tracts offered in an OCS lease sale;

(3) Providing an opportunity to experiment with various bidding processes to enable the identification of those that are more appropriate for the satisfaction of the objectives of the United States in OCS lease sales;

(4) Providing a fair and equitable return to the Federal Government; and

(5) Limiting administrative burdens on Government and industry.

[FR Doc. 79-28306 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

CIVIL AERONAUTICS BOARD

[14 CFR Parts 221, 399]

[EDR-388/PSDR-63; Docket No. 29198; Dated September 5, 1979]

Carriers in U.S. Mainland—Alaska and Intra-Alaska Market Fares

AGENCY: Civil Aeronautics Board.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The CAB is proposing to permit carriers in U.S. Mainland-Alaska and intra-Alaska markets to exercise a greater degree of downward pricing flexibility in order that they may be better able to experiment with price/quality of service options tailored to their individual costs as well as to the requirements of individual markets. The proposals would establish ceiling fare levels from which carriers would be permitted to reduce fares within a specified zone. Fares within the zone ordinarily would not be suspended on the grounds that they might be unreasonable. While we are not proposing additional significant fare flexibility above the ceiling in this rule, we would permit an additional upward adjustment in "non-competitive" markets, thereby allowing carriers in all markets to raise fares up to 5 per cent above the Standard Industry Fare Level. This proposal is an extension of the Board's policy of promoting increased competition and consistent with the Airline Deregulation Act.

DATE: Comments due by: November 13, 1979. Reply Comments due by: November 28, 1979.

Comments and other relevant information received after these dates will be considered by the Board only to the extent practicable.

ADDRESSES: Twenty copies of comments should be sent to Docket Section, Civil Aeronautics Board, 1825 Connecticut Ave., NW., Washington, D.C. 20428. Individuals may submit their views as consumers without filing mulitiple copies. Comments may be examined in Room 711, Universal Building, 1825 Connecticut Ave., NW., Washington, D.C., as soon as they are received.

FOR FURTHER INFORMATION CONTACT: Robert S. Goldner, Attorney-Advisor, Division of Pricing and Entry, Office of the General Counsel, Civil Aeronautics Board, 1825 Connecticut Ave., NW., Washington, D.C. 20428;

SUPPLEMENTARY INFORMATION:

Background

This new phase of Docket 29198 is the outgrowth of a series of Board orders suspending proposed fare increases in the Mainland-Alaska markets and in the "nonbush" intra-Alaska markets. An investigation was undertaken into the lawfulness of fares in effect in these markets during the course of which a full evidentiary hearing was held. Prior to the enactment of the Airline Deregulation Act (ADA), Pub. L. 95-504, Administrative Law Judge Stephen J. Gross issued a four-part initial decision in this proceeding in which he costed the two major Mainland-Alaska markets individually and divided the remaining markets into two groups.[1] Judge Gross

[1] The Initial Decision divided the markets into four separate groups: Part I—Seattle-Anchorage; Part II—Chicago-Anchorage; Part III—Anchorage-New York, Portland, Minneapolis/St. Paul;

Footnotes continued on next page

found that the coach fares in the Seattle-Anchorage and Chicago-Anchorage markets are unlawfully high, but that fares in other markets are lawful.

The Board took review of all parts of the initial decision and ordered the proceeding bifurcated into a hearing phase, consisting of the record developed to date, and a rulemaking phase which commences with filing of this notice. At the same time, the Board ordered that the hearing phase be terminated (Order 79-9-11, issued concurrently with this Notice of Proposed Rulemaking).

In view of the fact that the ADA generally precludes the Board from finding the Mainland-Alaska fares to be unlawful, we have decided to issue this notice of proposed rulemaking as part of this proceeding. It has been the policy of the Board to liberalize fare flexibility beyond the statutory minima imposed by the ADA. We have already issued rules extending the so-called "zone of reasonableness" in markets within the contiguous 48 states, PS-80, 43 FR 39535, September 5, 1978, and are currently in the process of considering similar rules for Hawaii and Puerto Rico markets, EDR-373, PDR-64, and PSDR-57, 44 FR 18688, March 29, 1979 (Hawaii markets), and EDR-366, PDR-58, and PSDR-52, 43 FR 51641, Nov. 6, 1978 (Puerto Rico markets). This rule proposes to implement additional fare flexibility in Mainland Alaska and intra-Alaska markets by increasing the carriers' flexibility to offer lower fares.

Accordingly, rather than adopt the costing of the initial decision, either to prescribe fares or to prescribe a fare ceiling, we are proposing this rule in order to implement additional fare flexibility in all of the Alaska markets.

The Standard Industry Fare Level (SIFL)

In establishing a proposed zone of reasonableness, we must initially define a baseline from which all allowable fare flexibility may be measured. For purposes of the statutory zone, the ADA defines the SIFL as the fare level (after adjustment for inflation) in effect on July 1, 1977. These fares are to be applied on a market-by-market and class-by-class basis.

Owing to the nature of pricing policies in Alaska markets, on both an interstate and intrastate basis, we do not need to undertake the analysis of fare levels which we found necessary in PSDR-52, where we proposed a similar zone for Hawaiian service. This is largely due to the absence of peak and off-peak pricing options in Alaska, thereby resulting in discrete fare levels based upon class of service within particular markets. However, because Alaska represents the only domestic market which has not undergone a comprehensive costing analysis, we do not have the option of using a DPFI-type baseline for those fares which fall above or below the statutory zone, as was the case in markets in the 48 contiguous states. Consequently, we are proposing to use the actual fares which were in effect on July 1, 1977, as a single baseline for both the statutory zone as well as the regulatory zone which we are proposing in this rule.

Fare Flexibility Below the Ceiling

We have tentatively concluded that a downward zone comparable to the one we have adopted in the *Domestic Passenger-Fare Rulemaking* (PS-80) should be superimposed on the statutory zone. The ADA permits carriers to propose fare reductions of up to 50 percent from the standard industry fare level for the same or similar classes of service without being subject to a Board finding that these fare levels are unjust or unreasonable. The proposed rule would extend the suspend-free zone an additional 20 percent, on 40 percent of a carrier's yearly available seat miles (ASM), thereby encouraging carriers to undertake innovative peak-off pricing policies, particularly on a seasonal basis.

In PS-80 we allowed a 70 percent zone on a similar amount of ASM's on a weekly basis. In view, however, of the extremely seasonal character of traffic in the Alaska markets, we are of the view that the carriers require the additional flexibility of being allowed to further reduce fares during prolonged seasonal periods of low traffic demand without regard to weekly restrictions. As explained below, we are considering a similar form of seasonal zone on the upward end of the proposed ceiling. We ask that commenters explore this aspect of our proposed rule thoroughly.

Under our proposal, fares within these zones could only be suspended by the Board if all of the following circumstances are present:

1. The high probability that the fares would be found to be unlawful after investigation;

2. The substantial likelihood that the fare is predatory so that there would be an immediate and irreparable harm to competition if it were allowed to go into effect;

3. The harm to competition would be greater than the injury to the traveling public if the proposed fare were unavailable; and

4. The suspension is in the public interest.

Fare Flexibility Above the Ceiling

The ADA permits carriers to increase fares up to 5 percent beyond the SIFL without being subject to possible Board suspension or investigation on the ground that such fare levels are unjust or unreasonable. This provision is only applicable, however, where the carrier's share of a particular market is below 70 percent of the total traffic. In PS-80 we expanded this zone to provide additional upward flexibility to a maximum, depending on the number of carriers authorized to serve the particular market, of up to 10 percent above the SIFL.

We are not, at this time, persuaded to expand similarly the upward zone in competitive Alaska markets.[2] In PS-80 we addressed the necessity of increased price competition as a prerequisite to additional upward fare flexibility. We remain reluctant to prematurely enlarge the ceiling of the zone before competitive market forces have the opportunity to establish themselves as a viable price determinant. While we have recently sought to increase competition by encouraging the entry of new carriers into numerous Alaska markets,[3] the realization of these policies is only beginning to be accomplished. We have, therefore, tentatively decided to allow upward flexibility in competitive Alaska markets to remain at the statutory level for the present time, and to treat adjustments above five percent on an *ad hoc* basis. As competition increases and market forces begin to predominate pricing policies in Alaska, we will further enlarge the perimeters of the zone and encourage greater carrier flexibility in the determination of fare ceilings.

We have tentatively decided to allow carriers in "non-competitve" markets the same 5 percent upward flexibility as all other carriers are permitted under the Act. We are proposing to do this because we are concerned that small markets, which are typically non-competitive, and where service is already marginal, might suffer further reductions in non-subsidized services were we to refuse to allow carriers additional upward flexibility. This would avoid any substantial withdrawals of service from these markets as well as the consequent need to underwrite continued service with Federal subsidy.

Additionally, it is administratively difficult to differentiate between competitive and non-competitive markets, even using the Act's 70 percent market share as a basis for evaluation. As a result of increased competition from both new and established carriers, schedule changes, and fluctuations in demand, a carrier's market share of traffic over a given period of time is extremely fluid. An elimination of the distinction between competitive and non-competitive markets for the purpose of upward flexibility serves to alleviate this difficulty, as well as eliminating the resulting uncertainty about the ability of a carrier to raise fares at any given point in time.

Under this proposal all carriers would be allowed, without formal justification, to raise fares the additional 5 percent permitted by the statute. Carriers would continue to justify any additional fare increases on the basis of increased costs, in much the same manner as they have traditionally done.

While we have found potential difficulties in initiating additional upward fare flexibility in Alaska, we strongly recommend that commenters use this opportunity to address the feasibility of implementing alternative approaches. One proposal which might serve to reflect the highly seasonal nature of the Alaska markets would include some form of peak, off-peak pricing. Carriers would be permitted to raise fares up to a set percentage above the statutory ceiling for a certain number of days out of the year. In PS-80 we proposed a similar form of flexibility which was designed to encourage more efficient passenger utilization on a year around basis.

First Class Fares

The Board has previously sought to free first class fares from the constraints of regulatory floors or ceilings which have been imposed on other fare classes. In PS-80 we permitted carriers to exercise complete authority over the establishment of first class fare levels. This policy has also been proposed for Mainland-Hawaii and Mainland-Puerto Rico markets, and we believe that it should also be applicable to Mainland-Alaska as well as intra-Alaska markets. This is a premium service whose price will clearly be set reasonably through the market interaction of willing buyers and sellers.

Procedures for Fare Filing

In the *Domestic Passenger-Fare Rulemaking*, we also amended our economic regulations in order to relieve the proponent of a fare within the zones from having to justify the fare initially. We are now proposing to modify § 221.165 so that the requirement of economic data with fare filings no longer applies to fares within the proposed zones in Alaska markets.

Environment

We tentatively conclude that this proposal does not constitute a major Federal action significantly affecting the environment under the National Environmental Policy Act of 1969, 42 U.S.C. 4321, *et. seq.* No appreciable increase in operations is expected to result from implementation of the proposed policy. The Board, in its environmental assessment for the earlier fare rulemaking covering the 48 states (PS-80), found that increasing the carriers' fare flexibility will serve to shift emphasis away from service competition and encourage more vigorous price competition. Since efficiency gains can be expected to accompany increased price competition, these gains may be passed on to the consumer in the form of lower fares. In general, fare reductions will generate additional traffic, depending on the price elasticity of demand in the relevant markets. However, such increases should result in higher load factors rather than in an increase in the number of available flights. Moreover, because Alaska fares have not increased significantly over the past several years, there exists little likelihood of fare decreases of such magnitude as to greatly stimulate additional traffic resulting in a significant impact upon the environment.

Proposed Rules

The Board proposes to amend 14 CFR Part 221 and 14 CFR Part 399 as follows:

PART 221—CONSTRUCTION, PUBLICATION, FILING AND POSTING OF TARIFFS OF AIR CARRIERS AND FOREIGN AIR CARRIERS

Paragraph (d)(4) of § 221.165 would be revised to read as follows:

§ 221.165 Explanations and data supporting tariff changes and new matter in tariff publications.

* * * * *

(d) * * *

(4) The requirement for data and/or information in paragraph (b) of this section shall not apply to fares for scheduled passenger service within the 48-contiguous states, the District of Columbia, and Alaska or between the 48-contiguous states and the District of Columbia, on the one hand, and Alaska on the other, which are within the zones set forth under section 399.31 and § 399.34 of this chapter.

PART 399—STATEMENT OF GENERAL POLICY

A new § 399.34 would be added to read as follows:

§ 399.34 Passenger-fare policies for other entities.

It is the policy of the Board to extend the principles of fare flexibility established for domestic fares to other entities as follows:

(a) [Reserve]

(b) [Reserved]

(c) For the Mainland-Alaska and Intra-Alaska ratemaking entities:

(1) Ceiling Fares, other than first class, should be based on the fares in effect July 1, 1977.

(2) Each carrier, including monopoly carriers, as defined in section 1002(d)(4)(A) of the Act, should have the opportunity to set fares, other than for first class, in each market within a zone ranging to 50 percent below the ceiling fares. Also, on 40 percent of their weekly available seat miles, carriers should have the opportunity to set fares in each market down to a 70 percent level below the ceiling. Fares within these zones will not be suspended by the Board absent all of the following extraordinary circumstances:

(i) The high probability that the fare would be found to be unlawful after investigation;

(ii) The substantial likelihood that the fare is predatory so that there would be an immediate and irreparable harm to competition if it were allowed to go into effect;

(iii) The harm to competition would be greater than the injury to the travelling public if the proposed fare were unavailable; and

(iv) The suspension is in the public interest;

(3) Carriers should be free to set market fares below these minima on the basis of such factors as their individual costs or specialized marketing needs, unless the level of the proposed fare reductions will result in an inability of the carriers in the market to provide adequate service to the public or the fares are otherwise unlawful;

(4) Carriers should be permitted to raise fares up to 5 percent above the

---

Footnotes continued from last page
Fairbanks-New York, Portland; and Kodiak-Seattle: Part IV—Seattle-Southeast Alaska and Intra-Alaska markets.

[2] Under this proposal, regular fares in most Alaska markets could experience a significant upward adjustment, even without additional fare flexibility, because carriers in these markets have not previously raised fares to compensate for recently experienced inflation. This, of course, may simply reflect an historically high fare level as well as the increased competition resulting from recent Board policies.

[3] The Board has already granted additional authority in Alaska markets in both the *Southeast Alaska Service Investigation* (Order 79-4-168), and the *West Coast-Alaska Investigation* (Order 79-4-36), and is presently considering the question of additional authority in the *Northwest Alaska Service Investigation* (Docket 31571).

SIFL regardless of whether they provide air transportation to 70 per cent or more of persons traveling in a particular market. Such increases will not be suspended by the Board on account of the reasonableness of the fare absent unusual or extraordinary circumstances;

(5) Carriers should be free to set the level of first class fares.

(Secs. 204, 403, 404, 1002, Federal Aviation Act of 1958, as amended, 72 Stat. 743, 758, 760 and 788, as amended; (49 U.S.C. 1324, 1373, and 1482))

By the Civil Aeronautics Board.

BILLING CODE 6320-01-M

[14 CFR Part 223]

[EDR-389; Docket No. 36534; Dated: September 6, 1979]

Free Transportation of Security Guards, et al.; Proposed Rule

AGENCY: Civil Aeronautics Board.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The CAB is proposing to allow, but not require, free transportation of official security guards by foreign air carriers. The Board is proposing this action on its own initiative to relieve administrative burdens on the foreign air carriers, the U.S. Secret Service, and itself.

DATES: Comments by November 13, 1979. Comments received after the above date will be considered only to the extent practical.

ADDRESS: Mail an original and twenty copies to Docket 36534, Civil Aeronautics Board, 1825 Connecticut Avenue, NW., Washington, D.C. 20428. Individuals may submit single copies. Comments will be available for public inspection in room 711 at the above address as soon as they are received.

FOR FURTHER INFORMATION CONTACT: Richard M. Loughlin, Chief, Regulatory Affairs Division, Bureau of International Aviation, Civil Aeronautics Board, 1825 Connecticut Avenue, NW., Washington, D.C. 202-673-5880.

SUPPLEMENTARY INFORMATION: Section 223.21 of the Economic Regulations requires free carriage of official security personnel aboard U.S. air carrier flights. Foreign-flag carriers transporting dignitaries on official business to the United States often board agents of the U.S. secret Service to afford protection to the foreign dignitary according to established protocol. This happens frequently enough to impose administrative burden on the carrier, the U.S. Secret Service, and the CAB if we were to require individual approval in each instance. The necessity for individual approval may be obviated by amending section 223.21 to allow (but not require) the carriage of official security guards by foreign air carriers.

Accordingly, the Board proposes to amend § 223.21 of 14 CFR Part 223, *Free and Reduced-Rate Transportation*, to read:

§ 223.21 Security guards.

Every air carrier shall carry, without charge, on any aircraft which it operates, any duly authorized person who has been assigned to the duty of guarding such aircraft against unlawful seizure, sabotage or other unlawful interference. Any air carrier or foreign air carrier may carry without charge, on any aircraft which it operates, any duly authorized person who has been assigned the duty of guarding foreign government dignitaries, traveling on official business, against unlawful interference.

(Secs. 204, 403, 416, Federal Aviation Act of 1958, as amended, 72 Stat. 743, 758 (as amended by 74 Stat. 445, 88 Stat. 2105, 91 Stat. 1281, 1282, 92 Stat. 1724), 760 (as amended by 86 Stat. 95, 92 Stat. 1724), 771 (as amended by 92 Stat. 1731, 1732), (49 U.S.C. 1324, 1373, 1374, 1386).)

By the Civil Aeronautics Board.

Phyllis T. Kaylor,

Secretary.

Internal Revenue Service

[31 CFR Part 1]

Privacy Act 1974; Proposed Notice of Rule To Delete an Exempt System of Records from Certain Requirements of Privacy Act of 1974

AGENCY: Internal Revenue Service, Department of the Treasury.

ACTION: Notice of Proposed rule to delete a System of Records.

SUMMARY: The internal Revenue Service gives notice that the system of records entitled "File of Persons Making Threats of Force or Forcible Assaults (26.005) be deleted from the exempt systems listing in 31 CFR 1.36. This system notice will be eliminated when it is incorporated into an existing automated system for increased efficiency.

EFFECTIVE DATE: The notice of final rule will be published after the 30 day public comment period and the 60 day advance notice requirement.

FOR FURTHER INFORMATION CONTACT: Mr. William E. Mulroy, Director, Internal Security Division, Office of Assistant Commissioner (Inspection), Internal Revenue Service, Washington, DC 20224, (202) 566-4564.

After approval of related revisions, 31 CFR 1.36 internal Revenue Service, Notice of Exempt Systems will be amended by eliminating from section (b) the system entitled, "File of Persons Making Threats of Force or Forcible Assaults" (26.005) which appears between Collateral Files (26.002) and Form 2209, Courtesy Investigations (26.006).

Dated: August 24, 1979.

W. J. McDonald,

Assistant Secretary (Administration).

BILLING CODE 4830-01-M

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 81]

[FRL 1315-8]

Designation of Areas for Air Quality Planning Purposes; Attainment Status Designations—California

AGENCY: Environmental Protection Agency (EPA).

ACTIONS: Proposed rulemaking.

SUMMARY: This notice proposes to revise the attainment status designation of Humboldt County, California, for total suspended particulates (TSP). On March 3, 1978 (43 FR 8970), under section 107(d)(2) of the Clean Air Act (CAA), as amended, Humboldt County was designated nonattainment (primary) for TSP (40 CFR 81.305). On March 19, 1979 (44 FR 16392), Humboldt County was redesignated nonattainment (secondary) for TSP, as recommended by the State of California. The EPA now proposes to redesignate Humboldt County as attainment for TSP.

The EPA invites public comments on the proposed redesignation. If the area is redesignated attainment, the requirements of Title I, Part D, of the CAA, as amended, would no longer apply to Humboldt County for TSP.

DATES: Comments will be accepted if received on or before October 11, 1979.

ADDRESSES: Comment should be directed to: Arnold Den, Chief, Air Technical Branch (A-4), Air and Hazardous Materials Divisions, Environmental Protection Agency, Region IX, 215 Fremont Street, San Francisco, CA 94105.

Information pertinent to the proposed redesignation is available for public inspection during normal business hours at the following locations:

Public Information Reference Unit, Library (Room 2922), Environmental Protection Agency, 401 "M" Street, S.W., Washington, D.C. 20460.
EPA Region IX Library, 215 Fremont Street, San Francisco, CA 94105.
California Air Resources Board, 1102 "Q" Street, Sacramento, CA 95812.
Humboldt County Air Pollution Control District, 5600 South Broadway, Eureka CA 95501.

FOR FURTHER INFORMATION CONTACT: Morris I. Goldberg (A-4-3), Technical Analysis Section, Air Technical Branch, Air and Hazardous Materials Division, Environmental Protection Agency, Region IX, 215 Fremont Street, San Francisco, CA 94105. Phone: (415) 556-2463.

SUPPLEMENTARY INFORMATION: On March 3, 1978 (43 FR 8970), under Section 107(d)(2) of the CAA, as amended, the EPA promulgated the State of California's designation of Humboldt County as nonattainment (primary) for TSP.

On March 19, 1979 (44 FR 16388), under Section 107(d)(5) the EPA revised the designation of Humboldt County to nonattainment (secondary) for TSP, as recommended by the State of California, because some data were found by the State Air Resources Board (ARB) to be invalid. The remaining data indicated violations of the annual "guideline" to the secondary standard, but no violation of the annual primary standard.

A June 28, 1979 letter from the ARB states that Humboldt County was inadvertantly omitted from a list of areas earlier recommended for redesignation to attainment for TSP because of a misunderstanding regarding the "guideline" value of 60 ug/m^3 (see 40 CFR 50.7(a)). The ARB therefore requested the redesignation of Humboldt County to attainment for TSP.

Under Section 107(d)(5) of the CAA, as amended, a state may revise its designations of attainment status and submit them to the EPA for promulgation. Based upon a review of the TSP air quality data for Humboldt County, the EPA believes that the NAAQS for TSP have been attained.

If Humboldt County is redesignated attainment for TSP as proposed, the State would no longer be subject to the requirements of Part D of the CAA, as amended, for TSP in Humboldt County. However, Humboldt County remains subject to the requirements of Part D until the EPA approves in a final rulemaking action the State's redesignation of Humboldt County as attainment for TSP.

Note.—The Environmental Protection Agency has determined that this document is not a significant regulation and does not require preparation of a regulatory analysis under Executive Order 12044.

(Secs. 107(d) and 301(a) of the Clean Air Act, as amended (42 U.S.C. 7407(d) and 7601(a)))

Dated: August 31, 1979.

Sheila M. Prindiville,

Acting Regional Administrator.

BILLING CODE 6560-01-M

[40 CFR Part 146]

[FRL 1315-2]

State Underground Injection Control Programs

AGENCY: Environmental Protection Agency.

ACTION: Extension of Comment Period on Supporting Document, "Estimated Cost of Compliance, Proposed Underground Injection Control Program Regulations, Class II Wells," and on the document, "Potential Production Impacts from the Underground Injection Control Regulations."

SUMMARY: This notice sets a new due date of October 12, 1979, for public comment on the report prepared for the EPA Office of Drinking Water by Arthur D. Little, Inc., on the cost of compliance with the proposed underground injection control program for oil and gas wells and on the EPA analysis performed to estimate the potential impact of the State Underground Injection Control Programs on operators of Class II wells.

DATES: Comments on the Arthur D. Little, Inc., report and the EPA analysis of potential production impacts from the proposed UIC regulations are due October 12, 1979.

ADDRESSES: Written public comments should be sent to the Comment Clerk UIC Program Regulations, Office of Drinking Water (WH-550), EPA, Washington, D.C. 20460. Comments and the supporting documents will be available for public inspection and copying at a reasonable fee during normal business hours at the Environmental Protection Agency, Public Information Reference Unit, Room 2922, 401 M Street, SW., Washington, D.C. 20460. Copies of the supporting documents will also be available for inspection and copying in the Library at the ten EPA Regional Offices.

FOR FURTHER INFORMATION CONTACT: Thomas E. Belk, EPA, Office of Drinking Water (WH-550), Washington, D.C. 20460, (202) 426-3934.

SUPPLEMENTARY INFORMATION: The purpose of this notice is to extend, for thirty (30) days, the deadline for submission of public comments on the supporting document, "Estimated Cost of Compliance, Proposed Underground Injection Control Program Regulations, Class II Wells," prepared for the EPA Office of Drinking Water by Arthur D. Little, Inc., and on the analysis, "Potential Production Impacts from the Underground Injection Control Regulations," July, 1979, prepared by the EPA Office of Drinking Water.

The Safe Drinking Water Act requires EPA to develop minimum requirements for State Programs to protect underground drinking water sources. EPA proposed regulations specifying minimum requirements on August 31, 1976 [41 FR 36730]. In response to numerous public comments, EPA has made significant changes in the regulations and has reproposed them for public comment.

The regulations have been separated into two portions. First, regulations under 40 CFR Parts 122, 123, and 124 will consolidate the Agency's major permit programs. Part 122 will contain the basic framework of the underground injection control program (as well as the NPDES permit program under the Clean Water Act and the Hazardous Waste Management Program under the Resource Conservation and Recovery Act) when administered by EPA. Part 123 will specify the requirements for an approvable State program and Part 124 will describe the procedures for issuing permits under the covered programs. These consolidated permit regulations were proposed on June 14, 1979, [44 FR 34244] and the public comment period on them ends on September 12, 1979. Second, 40 CFR Part 146 establishes the technical criteria and standards to be used in implementing the underground injection control program. Part 146 was reproposed on April 20, 1979 [44 FR 23738]. The comment period for 40 CFR

Part 146 was due to end on August 20, 1979, as announced in the April 20, 1979, Federal Register notice. On July 11, 1979, [44 FR 40532], EPA extended the comment period for 40 CFR Part 146 to September 12, 1979, to coincide with the comment period for the proposed consolidated permits regulations.

The preamble to the reproposed 40 CFR Part 146 included an estimate that 12,000 barrels of oil per day potentially could be affected by promulgation of the regulations. After this figure was published, significant interest was shown in the 12,000 barrels per day figure and in the methodology employed in its derivation. Therefore, EPA decided to prepare, in succinct form, a description of the methodology and its application. Development of this description led to refinements in application of the models used. These refinements led to a reduction in the estimates of the potential impact from 12,000 barrels per day to 9,400 barrels per day.

The EPA Office of Drinking Water document, "Potential Production Impacts from the Underground Injection Control Regulations," July 1979, was made available to the public on July 30, 1979. In its preface, EPA stated that it welcomed comments on its analysis including those which could improve the models and their applications. Most of the assumptions used in the EPA analysis are contained in the report "Estimated Cost of Compliance, Proposed Underground Injection Control Program Regulations, Class II Wells," June 1979, prepared by Arthur D. Little, Inc. The Arthur D. Little report has been available to the public since June 15, 1979.

During the comment period for the reproposed Part 146 regulations, EPA has received several letters and oral statements at the public hearings requesting an extension of the comment period beyond the September 12, 1979, due date. Those letters which explained in detail the reasons for the requested extension generally focused on the potential impact of the State underground injection control programs on operators of Class II wells and, in particular, focused on the need for more time to analyze the cost of compliance for operators of oil and gas wells and on the estimated 9,400 barrel per day potential reduction of domestic oil production which would result from promulgation of 40 CFR Part 146. The Agency believes that in light of the current energy situation, the cost of compliance to the oil and gas industry and the possible loss of domestic oil production, it is in the public interest for it to extend the comment period on the Arthur D. Little report and on the Office of Drinking Water analysis of potential production impacts from proposed underground injection control regulations to October 12, 1979. The Agency believes the impacts of the proposed underground injection control regulations to be small but, for the foregoing reasons, EPA believes that good cause exists for extending the comment period for these two documents to October 12, 1979.

After carefully considering all of the requests for an extension of the comment period on the proposed underground injection control regulations, the Agency does not believe that an extension of time on any other issues concerning these proposed regulations is warranted, and the Agency is not granting an extension of the comment period on any other issues.

The comment period on the supporting document, "Estimated Cost of Compliance, Proposed Underground Injection Control Program Regulations, Class II Wells," June 1979, prepared for the EPA Office of Drinking Water by Arthur D. Little, Inc., (44 FR 23752) and on the analysis prepared by the EPA Office of Drinking Water, "Potential Production Impacts from the Underground Injection Control Regulations," July 1979, is hereby extended to October 12, 1979.

Dated: August 29, 1979.

Thomas C. Jorling,

Assistant Administrator for Water and Waste Management.

BILLING CODE 6560-01-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[50 CFR Part 650]

Mid-Atlantic and New England Fishery Management Councils; Public Hearings

AGENCY: National Oceanic and Atmospheric Administration/ Commerce.

ACTION: Jointly sponsored public hearing on proposed regulations for fixed fishing gear in the fishery conservation zone (FCZ) of the North Atlantic.

SUMMARY: The Mid-Atlantic and New England Fishery Management Councils, the U.S. Coast Guard, and the National Marine Fisheries Service jointly announce a series of public hearings to consider fixed gear regulations for the FCZ of the Northwest Atlantic, and the means of implementing them. The listed agencies have worked for two years with the fishing industry advisors to produce a set of draft regulations and alternatives which are expected to provide for the orderly marking, setting, and reporting of fixed gear. Due to the continued loss of and damage to fixed fishing gear as a result of the activities of foreign and domestic fishing vessels and from other circumstances, it is the opinion of the agencies indicated that a logical system for fixed fishing gear placement, identification, and position reporting would allow other users, in most cases, to be able to anticipate the location of such gear, its direction of set, its magnitude, and whom to contact in the event an incident does occur. The draft regulations are intended to provide for a mandatory, systematic program to apply to specific areas only within the FCZ of the Northwest Atlantic.

DATES: The hearings will be held on the dates and at the times and places indicated below: All hearings are scheduled for evenings from 7:00 to 10:00 p.m.

Revised listing of Hearing Dates

Gear Conflict Hearings

Sept. 18 (Tuesday), Dutch Inn, Great Island Road, Galilee, RI 02882.
Sept. 18 (Tuesday), Golden Eagle Inn, Philadelphia and Beach Drive, Cape May, NJ 08204.
Sept. 19 (Wednesday), Holiday Inn, Route 1 and Route 128, Peabody, MA 01960.
Sept. 19 (Wednesday), Holiday Inn—Riverhead, Route 25, Riverhead, LI, NY 11901.
Sept. 20 (Thursday), North Carolina Marine, Resources Center, Bogue Banks, Atlantic Beach, NC 28512.
Sept. 21 (Friday), Sheraton Inn—Military Circle, 870 N. Military Highway, Norfolk, VA 23502.
Sept. 25 (Tuesday), Holiday Inn, Jct. US 1 and Route 3, Ellsworth, ME 04605.
Sept. 25 (Tuesday), Asbury Pavilion, South Asbury and Ocean Avenue, Asbury Park, NJ 07712.
Sept. 27 (Thursday), Sheraton Fountainbleau, 10100 Ocean Highway, Ocean City, MD 21842.
Sept. 27 (Thursday), Massachusetts, Maritime Academy, Taylor's Point, Buzzards Bay, MA 02532.
Oct. 3 (Wednesday), Holiday Inn, Route 1 and 4, Portsmouth, NH 03801.

FOR FURTHER INFORMATION CONTACT:

Douglas Marshall, Executive Director, New England Fishery Management Council, Peabody Office Building, One Newbury Street, Peabody, Massachusetts, 01960, telephone: (617) 535–5450.
Lt. J. G. Raymond Blowitski, Commander, Atlantic Area (Ao1), U.S. Coast Guard Building 125, Governors Island, New York, New York 10004, telephone: (212) 668–7878.
Dr. Robert W. Hanks, Deputy Regional Director, National Marine Fisheries Service, 14 Elm Street, Gloucester, Massachusetts 01930, telephone: (617) 281–3600.

SUPPLEMENTARY INFORMATION: For the years 1971 through 1978, 246 fixed gear incidents, involving damage or loss of fixed fishing gear, were reported to the Coast Guard by fishermen operating in the area encompassing the FCZ of the Northwest Atlantic Ocean. These represent known incidents of damage or loss; however, there is reason to believe that a substantial number of incidents have occurred which were subsequently not reported to the Coast Guard. There were 24 incidents reported since the enactment of the FCMA (between March 1976 and December 1978), not including any that occurred during 1979. There were 39 claims submitted to the National Marine Fisheries Service in the first half of 1979 for compensation under the Fisherman's Protective Act. Of these, 22 were a result of incidents in the Northwest Atlantic Ocean in waters under jurisdiction of the New England and Mid-Atlantic Fishery Management Councils. Only 13 of these claims are presently documented, however, they exceed $100,000. The circumstances described are a major concern to the agencies sponsoring the public hearings. While the actual cause of the incidents in some cases may never be identified, it is the firm belief of the listed agencies that a substantial number of incidents could have been avoided if fixed fishing gear were appropriately marked and reported to the Coast Guard for subsequent broadcast to mobile fishing gear vessels and other operations in the area. Broadcast fixed fishing gear positions, to include a proposed buffer zone, would alert vessel operators to take appropriate measures to avoid the areas.

For the reasons stated, the sponsoring agencies are seeking public input to determine the utility of the proposed regulations in an attempt to resolve the problems outlined. An agenda of discussion items follows:

Signed this 5th day of September, 1979 at Washington, D.C.

Authority: 16 U.S.C. 1801 *et seq.*

Jack W. Gehringer,

Deputy Assistant Administrator, National Marine Fisheries Service.

Notices

Federal Register
Vol. 44, No. 177
Tuesday, September 11, 1979

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Federal Grain Inspection Service

Official Designation of the South Carolina Department of Agriculture, Columbia, South Carolina, and Proposal of Geographic Area

AGENCY: Federal Grain Inspection Service.

ACTION: Notice and Request for Comments.

SUMMARY: This notice announces the designation of the South Carolina Department of Agriculture, Columbia, South Carolina, as an official agency to perform official inspection services under the authority of the United States Grain Standards Act, as amended. This notice also proposes a geographic area within which that agency will operate.

DATE: Comments by October 26, 1979.

FOR FURTHER INFORMATION CONTACT: J. T. Abshier, Director, Compliance Division, Federal Grain Inspection Service, United States Department of Agriculture, Washington, D.C. 20250, (202) 447–8262.

SUPPLEMENTAL INFORMATION: South Carolina Department of Agriculture (the "Agency"), P.O. Box 11280, Columbia, South Carolina 29211, an existing official agency, made application pursuant to Section 7 of the United States Grain Standards Act, as amended (7 U.S.C. 72 *et seq.*) (the "Act"), to be officially designated under the Act, to perform official inspection services, not including official weighing.

The Federal Grain Inspection Service (FGIS), has conducted the required investigation of the Agency which included onsite reviews of its inspection points (hereinafter "specified service points") and the Agency was deemed eligible for designation to perform official inspection services (other than appeal inspection), not including official weighing. A document designating the Agency as an official agency was signed on August 1, 1978. Said designation also included an interim assignment of geographic area within which the official Agency will provide official inspection services.

Note.—Section 7(f)(2) of the Act provides that not more than one official agency shall be operative at one time for any geographic area as determined by the Administrator.

The geographic area assigned on an interim basis pending final determination in this matter is:

The entire State of South Carolina at other than export port locations.

A specified service point for the purpose of this notice is a city, town, or other location specified by an agency for the conduct of official inspections and where the agency or one or more of its licensed inspectors is located.

In addition to the specified service points within the geographic area, the Agency will provide official inspection services not requiring a licensed inspector to all other areas within its geographic area.

Interested persons may obtain a map of the proposed geographic area and a list of specified service points for the Agency from the Delegation and Designation Branch, Compliance Division, Federal Grain Inspection Service, United States Department of Agriculture, Washington, D.C. 20250, (202) 447–8525.

Publication of this notice does not preclude future amendment of this designation consistent with the provisions and objectives of the Act.

This agency has been performing official inspection services within the proposed geographic area since August 1978. The boundaries thereof are known by persons affected, do not impose significant new restrictions or obligations, and have limited public affect. Therefore, the comment period shall be limited to 45 days.

Interested persons are hereby given opportunity to submit written views or comments with respect to the geographic area proposed for assignment to this Agency. All views and comments should be submitted in writing to the Office of the Director, Compliance Division, Federal Grain Inspection Service, United States Department of Agriculture, Washington, D.C. 20250. All materials must be postmarked not later than October 26, 1979. All materials submitted pursuant to this notice will be made available for public inspection at the Office of the Director during regular business hours (7 CFR 1.27(b)). Consideration will be given to the views and comments so filed with the Director and to all other information available to the U.S. Department of Agriculture before final determination of the assignment of geographic area is made.

(Secs. 8, 9, 27, Pub. L. 94–582, 90 Stat. 2870, 2875, 2889 (7 U.S.C. 79, 79a, 74 note))

Done in Washington, D.C. on: September 6, 1979.

L. E. Bartelt,
Administrator.

BILLING CODE 3410–02–M

Rural Electrification Administration

Tri-State Generation and Transmission Association, Inc., Thornton, Colo.; Proposed Loan Guarantee

Under the authority of Public Law 93–32 (87 Stat. 65) and in conformance with applicable agency policies and procedures as set forth in REA Bulletin 20–22 (Guarantee of Loans for Bulk Power Supply Facilities), notice is hereby given that the Administrator of REA will consider providing a guarantee supported by the full faith and credit of the United States of America for a loan in the approximate amount of $23,300,000 to Tri-State Generation and Transmission Association, Inc., of Thornton, Colorado. These loan funds will be used to finance construction of an Energy Management System and accompanying associated microwave communications facilities.

Legally organized lending agencies capable of making, holding and servicing the loan proposed to be guaranteed may obtain information on the proposed project, including the engineering and economic feasibility studies and the proposed schedule for the advances of the guaranteed loan funds from Mr. William Mickey, Manager, Tri-State Generation and Transmission Association, Inc., 12076 Grant Street, Thornton, Colorado 80241.

In order to be considered, proposals must be submitted (within 30 days from the date of the **Federal Register** publication of this notice) to Mr. Mickey. The right is reserved to give such consideration and make such evaluation or other disposition of all proposals received, as Tri-State Generation and Transmission Association, Inc. and REA deem appropriate. Prospective lenders are advised that the guaranteed financing for this project is available from the Federal Financing Bank under a standing agreement with the Rural Electrification Administration.

Copies of REA Bulletin 20–22 are available from the Director, Office of Information and Public Affairs, Rural Electrification Administration, U.S. Department of Agriculture, Washington, D.C. 20250.

Dated at Washington, D.C., this 4th day of September, 1979.

Robert W. Feragen,
Administrator, Rural Electrification Administration.

BILLING CODE 3410–15–M

CIVIL AERONAUTICS BOARD

[Docket 29198; Order 79–9–11]

Alaska Fares Investigation; Order

Adopted by the Civil Aeronautics Board at its office in Washington, D.C. on the 5th day of September, 1979.

This proceeding is the outgrowth of a series of Board orders suspending proposed fare increases in the Mainland-Alaska markets and in the "nonbush" intra-Alaska markets. Prior to the enactment of the Airline Deregulation Act of 1978 (ADA), P.L. 95–504, Administrative Law Judge Stephen J. Gross issued a four-part initial decision [1] in which he costed the two major Mainland-Alaska markets individually and divided the remaining markets into two groups.[2] Judge Gross found that the coach fares in the Seattle-Anchorage and Chicago-Anchorage markets are unlawfully high, but that fares in other markets are lawful. The Board took review of all parts of the Initial Decision and ordered single briefs covering all markets.[3] After passage of the ADA, it ordered the parties to discuss the implications of that statute on this proceeding.[4]

Under the Act, the Board no longer has authority over the reasonableness of rate increases up to five percent above the "standard industry fare level" (SIFL) which are filed after July 2, 1979 by carriers with less than 70 percent of the traffic in the market at issue. The SIFL is defined in section 1002(d)(6)(A) as ". . . the fare level [as adjusted for inflation] in effect on July 1, 1977. . . ." In view of the fact that existing fares are only marginally higher (less than ten percent) than they were on July 1, 1977, and the intervening inflation has been relatively substantial, the Board, as a practical matter, no longer possesses the authority to find the prevailing fares unreasonably high in "competitive" markets (*i.e.*, where carriers have less than a 70 percent market share).

The Judge found the prevailing fares to be unreasonably high in both the Seattle-Anchorage and Chicago-Anchorage markets. At the present time, however, it does not appear that any carrier has a 70 percent or greater share of either market.[5] While the relative market shares of competing carriers will probably continue to remain fluid, the Board cannot, as of July 1, find the fares unreasonably high and require adjustments.

As regards any "noncompetitive" Mainland-Southeast Alaska and intra-Alaska markets which Judge Gross found to be marginally above cost,[6] we are prepared to accept his findings that these fares should not be adjusted downwards because of indications that a similar result is likely to be accomplished through increased competition in the near future.[7]

For these reasons we have decided to terminate this phase of the *Alaska Fares Investigation* with this order, and to issue concurrently a Notice of Proposed Rulemaking designed to extend our policy of increased fare flexibility to both U.S. Mainland-Alaska and intra-Alaska markets. We believe that this represents the best approach toward the alignment of fare policies in these markets with those in effect in the mainland U.S., as well as those proposed for Hawaii and Puerto Rico.[8] In addition, we believe that this rulemaking will provide an ultimate resolution to the numerous issues of pricing policies in the Alaska markets which have remained unresolved throughout this lengthy proceeding.

Accordingly, it is ordered that: 1. This proceeding be divided into two phases; the hearing phase, which consists of the record developed to date, and a rulemaking phase, to commence with the Notice of Proposed Rulemaking EDR–388/PSDR–63, which is being issued concurrently with this order;

2. The record thus far developed in this proceeding will be considered in the rulemaking phase;

3. The hearing phase of this proceeding is terminated.

By the Civil Aeronautics Board: This order shall be published in the **Federal Register.**[9]

Phyllis T. Kaylor,
Secretary.

[FR Doc. 79–28217 Filed 9–10–79; 8:45 am]
BILLING CODE 6320–01–M

[1] We adopt the findings and conclusions of the initial decision, except to the extent that they are inconsistent with our opinion. It is attached as Appendix A (filed as part of the original document).

[2] The Ifnitial Decision divided the markets into four separate groups: Part I—Seattle-Anchorage; Part II—Chicago-Anchorage; Part III—Anchorage-New York, Portland, Minneapolis/St. Paul; Fairbanks-New York, Portland; and Kodiak-Seattle; Part IV—Seattle-Southeast Alaska and Intra-Alaska markets.

[3] Orders 78–6–186; 78–7–146.

[4] Order 78–10–118.

[5] In establishing the amount of traffic carried by each carrier in these two markets, we have looked at both total origin and destination single-line passengers as a percentage of total city-pair traffic, as well as each carrier's relative share of total passenger miles. In either case, no single carrier has a 70 per cent or greater share of the traffic in either market.

[6] These markets include: Anchorage-Juneau, Seattle-Ketchikan and Seattle-Juneau.

[7] The Board has granted additional authority in Alaska markets in both the *Southeast Alaska Service Investigation* (Order 79–4–168) and the *West Coast-Alaska Investigation* (Order 79–4–36), and is presently considering the question of additional authority in the *Northwest Alaska Service Investigation* (Docket 31571).

[8] EDR–373, PDR–64, and PSDR–57, 44 FR 18688, March 29, 1979 (Hawaii markets) and EDR–366, PDR–58, and PSDR–52, 43 FR 51641, Nov. 6, 1978 (Puerto Rico markets).

[9] All Members concurred.

[Docket 35936]

Commuter Airlines, Inc., Enforcement Proceeding; Prehearing Conference

Notice is hereby given that a prehearing conference will be held in the above-entitled matter on October 4, 1979, at 9:45 a.m. (local time), in Room 1003, Hearing Room D, North Universal Building, 1875 Connecticut Avenue, N.W., Washington, D.C., before the undersignal judge.

Matters to be presented and discussed will include simplification of the issues, offers of proof and stipulations as to facts, authentication of documents, future procedural dates, and such other matters as will contribute to the orderly and prompt conduct of this proceeding.

Dated at Washington, D.C., September 5, 1979.

Elias C. Rodriguez,
Administrative Law Judge.

[Order 79-8-175]

National Airlines; Application for Various Route Authority

AGENCY: Civil Aeronautics Board.

ACTION: Notice of Order 79-8-175 (National Airlines Subpart) Q Proceeding, Docket 36495.

SUMMARY: The Board is issuing Order 79-8-175 to show cause why it should not make final its tentative findings with respect to National's six applications for various route authority filed under our expedited procedures (Subpart Q). Specifically, the Board tentatively finds that it is consistent with the public convenience and necessity to award National the authority it seeks. Furthermore, the tentative findings and conclusions will become final if no objections are filed. The complete text of this order is available as noted below.[1]

DATES: Objections: All interested persons having objections to the Board issuing the proposed authority shall file and serve upon all persons listed below, no later than October 9, 1979, a statement of objections, together with a summary of testimony, statistical data, and other material expected to be relied upon to support the stated objections.

ADDRESSES: Objections should be filed in Docket 36495, Docket Section, Civil Aeronautics Board, Washington, D.C. 20428.

FOR FURTHER INFORMATION CONTACT: Ava Kleinman, Bureau of Domestic Aviation, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428 (202) 673-5342.

SUPPLEMENTARY INFORMATION: Objections should be served upon all persons listed in the service list of Docket 36495.

[1] The markets requested in National's six applications are as follows: Las Vegas-New York; Dallas/Ft. Worth-Los Angeles; Albuquerque-Las Vegas/Los Angeles/Salt Lake City; Memphis-Denver/Houston; Dallas/Ft. Worth-Phoenix; Honolulu-San Diego/Denver.

By the Civil Aeronautics Board: August 31, 1979.

Phyllis T. Kaylor,

Secretary.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket No. 8-79]

Greater Cincinnati Foreign-Trade Zone Inc., Cincinnati, Ohio; Application for Expansion of Foreign-Trade Subzone No. 46-A at the General Electric Company Facility in Evendale, Ohio

Notice is hereby given that an application has been submitted to the Foreign-Trade Zones Board (the Board) by the Greater Cincinnati Foreign-Trade Zone Inc. (GCFTZ), a nonprofit corporation and grantee of Foreign-Trade Zones 46 and 47 in the Greater Cincinnati area, requesting authority for the expansion of Foreign-Trade Subzone No. 46-A at the General Electric aircraft engine and testing plant in Evendale, Ohio, within the Cincinnati Customs port of entry. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act of 1934, as amended (19 U.S.C. 81), and the regulations of the Board (15 CFR Part 400). It was formally filed on September 4, 1979. GCFTZ is authorized to make the application under House Bill 200 of the Laws of Ohio of 1977.

In January 1979 (44 FR 4003) the Board approved a 15-acre section within the General Electric plant for subzone activity.

The present proposal calls for the expansion of the subzone area to include the entire 279-acre plant.

The reason given for the expansion is that the aircraft engine parts for which zone procedures are needed move at various times throughout the entire plant. Also, GE manufactures marine and industrial gas turbine engines at this facility and the firm wishes to use zone procedures for this product line, which also is heavily exported.

In accordance with the Board's regulations, an Examiners Committee has been appointed to investigate the application and report to the Board. The committee consists of Hugh J. Dolan (Chairman), Office of the Secretary, U.S. Department of Commerce, Washington, D.C. 20230; Donald L. Cavanaugh, District Director, U.S. Customs Service, 55 Erieview Plaza, Cleveland, Ohio 44114; and Colonel Thomas P. Nack, District Engineer, U.S. Army Engineer District Louisville, P.O. Box 59, Louisville, Kentucky 40201.

Comments concerning the proposed expansion are invited in writing from interested persons and organizations. Comments should be addressed to the Board's Executive Secretary at the address below and be postmarked on or before September 25, 1979.

A copy of the application for expansion filed by GCFTZ is available for public inspection at each of the following locations:

Office of the Director, U.S. Department of Commerce District Office, 10504 Federal Office Building, 550 Main Street, Cincinnati, Ohio 45202.

Office of the Executive Secretary, Foreign-Trade Zones Board, U.S. Department of Commerce, Room 6886-B, Washington, D.C. 20230.

Dated: September 5, 1979.

John J. Da Ponte, Jr.,

Executive Secretary, Foreign-Trade Zones Board.

[FR Doc. 79-28131 Filed 9-10-79; 8:45 am]

BILLING CODE 3510-25-M

National Technical Information Service

Edwards Laboratories; Intent To Grant Limited Exclusive Patent License

Notice is hereby given that the National Technical Information Service (NTIS) proposes to grant to Edwards Laboratories (Edwards) of Santa Ana, California 92711, a division of American Hospital Supply Corporation of 1780 Ridge Avenue, Evanston, Illinois 60201, a limited exclusive right in the United States and in some or all of a group of foreign countries including Canada, France, Federal Republic of Germany, Great Britain, Japan and the

Netherlands for the manufacture, use and sale and for the granting of sublicenses for the manufacture, use and sale of the products embodied in the following two inventions disclosed in two U.S. patent applications and any foreign patents and patent application counterparts thereof in countries listed herein of:

(1) "Fiber Optic pH Probe," disclosed in U.S. Patent Application No. 855,384 filed November 28, 1977.

(2) "Dye Fixation by Copolymerization," disclosed in U.S. Patent Application No. 855,397, filed November 28, 1977.

Both patent applications have been assigned to the United States of America, as represented by the Secretary, Health Education and Welfare. Custody of the rights to each of these inventions have been transferred to the Secretary of Commerce.

Copies of the U.S. Patent Applications listed herein can be obtained from the Office of Government Inventions and Patents, National Technical Information Service, U.S. Department of Commerce, P.O. Box 1423, Springfield, Virginia 22151.

With respect to each U.S. Government-owned invention identified herein, a public announcement stating that the invention was available for licensing in the United States and perhaps also in foreign countries was published in the **Federal Register** (FR) and two other publications shortly after each U.S. Patent Application was issued. The announcement for each invention was made more than six months prior to this notice. The Patent Applications were announced in the **Federal Register** of June 8, 1978, p. 24887. In addition, with respect to each invention identified herein, NTIS has undertaken promotional efforts designed to encourage applications for licenses from U.S. companies to practice these inventions. To date, these promotional efforts have not resulted in the request for, or granting of any nonexclusive licenses under these patents.

It has been determined therefore, in accordance with the Federal Property Management Regulations for Licensing (41 CFR 101—4.103.3) that these inventions are available for limited exclusive license.

The proposed limited exclusive license to be granted by NTIS to Edwards will be a royalty-bearing license for a term of five years from the date of New Drug Approval in the United States as to the U.S. license and five years from first commercial sale in any licensed foreign country as to each foreign country licensed, but no longer than eight years from the effective date of the license agreement as to any country. The license may be revoked by NTIS in accordance with Title 41 CFR 101–4.1.

The proposed limited exclusive license granted to Edwards will be subject to an irrevocable, nonexclusive, nontransferable, royalty-free right in the U.S. Government to make, use or sell the licensed invention throughout the world by or through contract on behalf of the U.S. Government or any foreign government pursuant to a treaty or agreement with the United States.

The proposed limited exclusive license will be granted by NTIS to Edwards unless within sixty (60) days from the date of publication of this notice in the **Federal Register**, NTIS receives (1) an application for a nonexclusive license from a responsible U.S. applicant to practice the inventions identified herein in the United States or the foreign countries listed herein and NTIS determines that such applicant has already brought or is likely to bring the inventions to the point of practical application within a reasonable period under a nonexclusive license; or (2) written evidence and argument which establishes that it would not be in the public interest to grant the proposed limited exclusive license to Edwards.

Written data, inquiries comments or objections concerning this proposed limited exclusive license should be submitted to the Office of Government Inventions and Patents, National Technical Information Service, Springfield, VA 22161. NTIS shall maintain and make available for public inspection a record of all decisions made in this matter and the basis therefore. This record shall contain copies of all written data, inquiries, comments, or objections received by NTIS and pertaining to the proposed limited exclusive license.

Dated: August 15, 1979.

Melvin S. Day,

Director, National Technical Information Service.

Management-Labor Textile Advisory Committee; Public Meeting

Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App. (1976), notice is hereby given that a meeting of the Management-Labor Textile Advisory Committee will be held on September 26, 1979, at 1:30 p.m. in Room 6802, Department of Commerce, 14th & Constitution Avenue, N.W., Washington, D. C. 20230.

The Committee was established by the Secretary of Commerce on October 18, 1961 to advise U. S. Government officials on problems and conditions in the textile and apparel industry and furnish information on world trade in textiles and apparel.

The agenda for the meeting will be as follows:

1. Review of import trends.
2. Implementation of textile agreements.
3. Report on conditions in the domestic market.
4. Other business.

A limited number of seats will be available to the public on a first-come basis. The public may file written statements with the Committee before or after each meeting. Oral statements may be presented at the end of the meeting to the extent time is available.

Copies of the minutes of the meeting will be made available on written request addressed to the ITA Freedom of Information Officer, Industry and Trade Administration, Records Inspection Facility, Room 3012, U. S. Department of Commerce, Washington, D. C. 20230.

Further information concerning the Committee may be obtained from Arthur Garel, Director, Office of Textiles, U. S. Department of Commerce, Washington, D. C. 20230, telephone 202/377–5078.

Dated: September 6, 1979.

Edward Gottfried,

Acting Director, Office of Textiles.

BILLING CODE 3510–25–M

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Announcing Additional Import Controls on Certain Cotton, Wool and Man-Made Fiber Textile Products From the Republic of the Philippines

September 6, 1979.

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Controlling cotton gloves and mittens in Category 331; other wool apparel, such as mufflers, scarves or shawls, among others, in Category 459; knit shirts and blouses of man-made fibers in Category 638/639; and men's and boys' woven shirts of man-made fibers in Category 640 during the twelve-month period which began on January 1, 1979. (A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the **Federal Register** on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 3421), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773), September 5, 1978 (43 FR 39408), January 2, 1979 (44 FR 94), March 22, 1979 (44 FR 17545), and April 12, 1979 (44 FR 21843)).

SUMMARY: Under the terms of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of August 22 and 24, 1978, as amended, between the Governments of the United States and the Republic the Philippines, the United States Government has decided to control imports of cotton, wool and man-made fiber textile products in Categories 331, 459, 638/639, and 640, produced or manufactured in the Philippines and exported to the United States during the twelve-month period which began on January 1, 1979, in addition to those categories previously designated. (See 44 FR 92).

EFFECTIVE DATE: September 12, 1979.

FOR FURTHER INFORMATION CONTACT: Carl Ruths, International Trade Specialist, Office of Textiles, U.S. Department of Commerce, Washington, D.C. 20230 (202/377–5423).

SUPPLEMENTARY INFORMATION: On January 2, 1979, there was published in the **Federal Register** (44 FR 92) a letter dated December 27, 1978 from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs, which established levels of restraint for certain specified categories of cotton, wool and man-made fiber textile products, produced or manufactured in the Philippines, which may be entered into the United States for consumption or withdrawn from warehouse for consumption during the twelve-month period which began on January 1, 1979 and extends through December 31, 1979. Under the terms of the bilateral agreement, the United States Government has decided also to control imports of cotton, wool, and man-made fiber textile products in Cats. 331, 459, 638/639, and 640 during that same period.

Accordingly, in the letter published below the Chairman of the Committee for the Implementation of Textile Agreements directs the Commissioner of Customs to prohibit entry into the United States for consumption, or withdrawal from warehouse for consumption, of cotton, wool and man-made fiber textile products in Categories 331, 459, 638/639, and 640 in excess of the designated twelve-month levels of restraint. The levels of restraint have not been adjusted to account for any imports after December 31, 1978. The level for Category 459 is 74,425 dozen including 1978 overshipment charges. Imports in the four categories during the period which began on January 1, 1979 and extends through the effective date of this action will be charged.

Paul T. O'Day,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee For The Implementation of Textile Agreements

September 6, 1979.

Commissioner of Customs,
Department of the Treasury,
Washington, D.C. 20229.

Dear Mr. Commissioner: This directive amends, but does not cancel, the directive issued to you on December 27, 1978 by the Chairman, Committee for the Implementation of Textile Agreements, concerning imports into the United States of certain cotton, wool, and man-made fiber textile products, produced or manufactured in the Philippines.

Under the terms of the Arrangement Regarding International Trade in Textiles done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement on August 22 and 24, 1977, as amended, between the Governments of the United States and the Republic of the Philippines; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed to prohibit, effective on September 12, 1979 and for the twelve-month period beginning on January 1, 1979 and extending through December 31, 1979, entry into the United States for consumption and withdrawal from warehouse for consumption of cotton, wool an man-made fiber textile products in Categories 331, 459, 638/639 and 640, produced or manufactured in the Philippines, in excess of the following level of restraint:

Category	12-month level of restraint [1]
331	568,011 doz. prs.
459	74,425 lbs.
638/639	788,310 doz.
640	90,343 doz.

[1] The level of restraint has not been adjusted to reflect any imports after December 31, 1978.

Textile products in the foregoing categories which have been exported to the United States prior to January 1, 1979 shall not be subject to this directive.

Textile products in the foregoing categories which have been released from the custody of the U.S. Customs Service under the provisions of 19 U.S.C. 1448(b) or 1484(a)(1)(A) prior to the effective date of this directive shall not be denied entry under this directive.

A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the **Federal Register** on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 3421), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773), September 5, 1978 (43 FR 39408), January 2, 1979 (44 FR 94), March 22, 1979 (44 FR 17545), and April 12, 1979 (44 FR 21843).

In carrying out the above directions, entry into the United States for consumption shall be construed to include entry for consumption into the Commonwealth of Puerto Rico.

The actions taken with respect to the Government of the Republic of the Philippines and with respect to imports of cotton, wool and man-made fiber textile products from the Philippines have been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of Customs, which are necessary for the implementation of such actions, fall within the foreign affairs exception to the rule-making provisions of 5 U.S.C. 553. This letter will be published in the **Federal Register.**

Sincerely,

Paul T. O'Day,

Acting Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–25–M

CONSUMER PRODUCT SAFETY COMMISSION

[Petition No. CP 78–7]

Lawn Trimmers and Edgers

AGENCY: Consumer Product Safety Commission.

ACTION: Denial of petition.

SUMMARY: The Commission denies a petition requesting it to establish a consumer product safety rule for lawn trimmers and edgers in order to reduce the risk of injury from objects thrown by trimmers and edgers. The Commission denies the petition because it has insufficient data to conclude that a mandatory standard is necessary.

FOR FURTHER INFORMATION CONTACT: William F. Kitzes, Office of Program Management, Consumer Product Safety Commission, Washington, D.C. 20207 (301–492–6557).

SUPPLEMENTARY INFORMATION: Section 10 of the Consumer Product Safety Act (CPSA), 15 U.S.C. 2059, provides that any interested person may petition the Consumer Product Safety Commission (CPSC) to begin a proceeding to issue, amend, or revoke a consumer product safety standard or ban. Section 10 also provides that if the Commission denies such a petition, it shall publish its reasons for denial in the **Federal Register.**

On November 3, 1977, Gerald L. Price, Esq., petitioned the Commission to issue standards for gasoline and electric power lawn edgers which would reduce the risk of injury from objects thrown by these devices and would require warnings or instructions for the user to use a face mask or goggles when using a lawn trimmer or edger. Mr. Price had represented a man who was hit in the eye by a nail propelled by an edger. The

petition stated that the blade guard on the edger was inadequate and that the products are not provided with warnings or instructions for the user to wear a face mask or safety goggles when using the product.

In analyzing this petition, the Commission considered injury information, economic and engineering data, and applicable voluntary standards.

These products have a rotating metal blade. If the blade strikes a foreign object such as a stone, nail, or piece of wire, the object may be forcefully propelled by the impact of the blade. The Commission has 9 investigation reports, collected over the last five years, of injuries incurred when lawn trimmer/edgers threw foreign objects. Some of the involved edgers might be expected to have a reduced risk of throwing foreign objects if additional shielding were provided.

Also, the Commission receives daily reports of consumer product related injuries from a national sample of 119 hospital emergency rooms. Based on data from these hospitals, the Commission estimates that in 1977 about 175 thrown objects injuries associated with all powered lawn trimming and edging equipment were treated in hospital emergency rooms.

The Commission's information indicates that about 200,000 electric and gasoline powered trimmers, edgers and trimmer/edgers of the type for which the petitioner has sought Commission action are produced annually. This production has declined rapidly in the last few years as the direct result of the increased sales of electric filament line type trimmers.

The Commission notes that Underwriters Laboratories has a voluntary standard (UL 82) which incorporates blade guarding requirements for electric trimmers, edgers, and trimmer/edgers. This voluntary industry standard addresses the risk of injury alleged by the petitioner for electric devices, which are believed to represent about three-fourths of all lawn trimmers and edgers. Underwriters Laboratories and the Outdoor Power Equipment Institute have indicated their willingness to develop a voluntary standard applicable to gas powered trimmers and edgers.

Conclusion

Based on the relatively small number of injuries caused by thrown objects from trimmers and edgers and the declining production of these products, and after considering the Commission's resources available for rulemaking for all consumer products, the Commission concludes that the available information is insufficient to determine that mandatory requirements for lawn trimmers and edgers are resonably necessary. Therefore, the Commission has denied the petition.

However, the Commission's staff intends to monitor the Underwriters Laboratories and the Outdoor Power Equipment Institute effort to develop a voluntary standard for gasoline lawn trimmers and edgers.

Copies of the petition and the staff's briefing package to the Commission may be obtained from the Office of the Secretary, Consumer Product Safety Commission, 1111 18th Street, N.W. Washington, D.C. 20207.

Dated: September 5, 1979.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

DEPARTMENT OF DEFENSE

Department of the Army

Board of Visitors, United States Military Academy; Open Meeting

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (P.L. 92-463), announcement is made of the following meeting:

Name of Committee: Board of Visitors, United States

Dates of Meeting: 27—29 Sep 79

Place of Meeting: West Point, New York

Time: At West Point: 2030-2230, 27 Sep, Organizational Meeting, Hotel Thayer; 0830-1400, 28 Sep, Curriculum Review (Cadet Library); 1400-1700, 28 Sep, Board Discussions (Cadet Library); and 0800-1100, 29 Sep, Briefing by Commandant and Board Discussions (Commandant's Conference Room, Bldg. 745)

Proposed Agenda: Inquiry into the curriculum and other matters relating to the Military Academy that the Board decides to consider.

All proceedings are open. For further information, contact LTC Kermit M. Henninger, United States Military Academy, West Point, New York, telephone 914-938-2785/4723.

For the Board of Visitors.

Kermit M. Henninger,

LTC, GS, Executive Secretary 1979 Board of Visitors.

DEPARTMENT OF ENERGY

Economic Regulatory Administration

Analysis of Refiners' No. 2 Distillate Costs and Revenues: July 1976—December 1978; Postponment of Public Hearing

AGENCY: Economic Regulatory Administration; Department of Energy.

ACTION: Notice of Postponement of Public Hearing.

SUMMARY: The Economic Regulatory Administration of the Department of Energy hereby gives notice of the postponement of the public hearing previously set forth in a Notice of Public Hearing issued on July 22, 1979 (44 FR 43761, July 26, 1979).

The Economic Regulatory Administration has secured updated information from participating refiners for the period January 1979 through June 1979 and will shortly issue an analysis of refiners' No. 2 distillate costs and revenues since deregulation to include that period. The purpose of the postponement is to provide all participants in the proceeding with the opportunity to review the updated analysis prior to the conduct of the hearing. In addition to the issues set forth in the July 22 notice, the hearing will be expanded to include consideration of the methodolgy and conclusions of the updated analysis. The hearing originally scheduled for September 13, 1979, is hereby rescheduled for September 26, 1979.

DATES: Hearing Date: September 26, 1979, 9:30 a.m. Hearing Location: Room 2105, 2000 M Street NW., Washington, D.C. 20461.

FOR FURTHER INFORMATION CONTACT:

Mrs. Debra Kidwell (Public Hearing Management), 2000 M Street NW., Washington, D.C. 20461, (202) 254-5201.

William Gillespie, Economic Regulatory Administration, 2000 M Street NW., Washington, D.C. 20461, (202) 632-5140.

William Mayo Lee (Office of General Counsel), Department of Energy, 1000 Independence Avenue SW., Room 6A-127, Washington, D.C. 20585, (202) 252-6754.

Issued in Washington, D.C., September 7, 1979.

David J. Bardin,

Administrator, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Gas Engine and Compressor Service; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of Action taken and opportunity for comment on Consent Order.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) announces action taken to execute a Consent Order and provides an opportunity for public comment on the Consent Order and on potential claims against the refunds deposited in an escrow account established pursuant to the Consent Order.

DATES: Effective date: August 28, 1979. Comments by: October 10, 1979.

ADDRESS: Send comments to: Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235.

FOR FURTHER INFORMATION CONTACT: Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235 [phone] 214/767-7745.

SUPPLEMENTARY INFORMATION: On August 28, 1979, the Office of Enforcement of the ERA executed a Consent Order with Gas Engine and Compressor Service of Longview, Texas. Under 10 C.F.R. 205.199J(b), a Consent Order which involves a sum of less than $500,000 in the aggregate, excluding penalties and interest, becomes effective upon its execution.

Because the DOE and Gas Engine and Compressor Service wish to expeditiously resolve this matter as agreed and to avoid delay in the payment of refunds, the DOE has determined that it is in the public interest to make the Consent Order with Gas Engine and Compressor Service effective as of the date of its execution by the DOE and Gas Engine and Compressor Service.

I. The Consent Order

Gas Engine and Compressor Service, with its home office in Longview, Texas, is a firm engaged in the production of natural gas liquids, and is subject to the Mandatory Petroleum Price and Allocation Regulations at 10 C.F.R., Parts 210, 211, 212. To resolve certain civil actions which could be brought by the Office of Enforcement of the Economic Regulatory Administration as a result of its audit of sales of NGL's, the Office of Enforcement, ERA, and Gas Engine and Compressor Service entered into a Consent Order, the significant terms of which are as follows:

1. The period covered by the audit was September 1973 through December 1976, and it included all sales of a mixed NGL stream to Wanda Petroleum and Martin Gas Sales Company.

2. Gas Engine and Compressor Service improperly applied the provisions of 6 C.F.R., Part 150, Subpart L, and 10 C.F.R., Part 212, Subparts E and K, when determining the prices to be charged for its NGL's, and as a consequence the above firms were overcharged on some of their purchases.

3. Gas Engine and Compressor Service agrees to refund to the DOE $51,400, including interest and penalty, within 30 days of the effective date of this Consent Order, August 28, 1979.

4. The provisions of 10 C.F.R. 205.199J, including the publication of this Notice, are applicable to the Consent Order.

II. Disposition of Refunded Overcharges

In this Consent Order, Gas Engine and Compressor Service agrees to refund, in full settlement of any civil liability with respect to actions which might be brought by the Office of Enforcement, ERA, arising out of the transactions specified in I, 1, above, the sum of $51,400 within 30 days of the effective date of the Consent Order. Refunded overcharges will be in the form of a certified check made payable to the United States Department of Energy and will be delivered to the Assistant Administrator for Enforcement, ERA. These funds will remain in a suitable account pending the determination of their proper disposition.

The DOE intends to distribute the refund amounts in a just and equitable manner in accordance with applicable laws and regulations. Accordingly, distribution of such refunded overcharges requires that only those "persons" (as defined at 10 C.F.R. 205.2) who actually suffered a loss as a result of the transactions described in the Consent Order receive appropriate refunds. Because of the petroleum industry's complex marketing system, it is likely that overcharges have either been passed through as higher prices to subsequent purchasers or offset through devices such as the Old Oil Allocation (Entitlements) Program, 10 C.F.R. 211.67. In fact, the adverse effects of the overcharges may have become so diffused that it is a practical impossibility to identify specific, adversely affected persons, in which case disposition of the refunds will be made in the general public interest by an appropriate means such as payment to the Treasury of the United States pursuant to 10 C.F.R. 205.199I(a).

III. Submission of Written Comments

A. *Potential Claimants:* Interested persons who believe that they have a claim to all or a portion of the refund amount should provide written notification of the claim to the ERA at this time. Proof of claims is not now being required. Written notification to the ERA at this time is requested primarily for the purpose of identifying valid potential claims to the refund amount. After potential claims are identified, procedures for the making of proof of claims may be established. Failure by a person to provide written notification of a potential claims within the comment period for this Notice may result in the DOE irrevocably disbursing the funds to other claimants or to the general public interest.

B. *Other Comments:* The ERA invites interested persons to comment on the terms, conditions, or procedural aspects of this Consent Order.

You should send your comment or written notification of a claim to Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 34228, Dallas, Texas. You may obtain a free copy of this Consent Order by writing to the same address or by calling 214/767-7745.

You should identify your comments or written notification of a claim on the outside of your envelope and on the documents you submit with the designation, "Comments on Gas Engine and Compressor Service Consent Order." We will consider all comments we receive by 4:30 p.m. local time, on October 10, 1979. You should identify any information or data which, in your opinion, is confidential and submit it in accordance with the procedures in 10 C.F.R. 205.9(f).

Issued in Dallas, Texas on the 28th day of August 1979.

Wayne I. Tucker,

District Manager of Enforcement, Southwest District Office, Economic Regulatory Administration.

BILLING CODE 6450-01-M

[ERA Case No. 65003-9033-01-77; Docket No. ERA-FC-79-002]

Swift Creek Unit S/N 99726, Occidental Chemical Co.

AGENCY: Economic Regulatory Administration Department of Energy.

ACTION: Determination to Classify the Occidental Chemical Company Swift Creek Installation as an Existing Facility.

SUMMARY: On April 26, 1979, Occidental Chemical Company (Occidental) requested the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) to classify its Swift

Creek Chemical Complex boiler as an existing facility pursuant to § 515.13 of the Revised Interim Rule to Permit Classification of Certain Powerplants and Installations as Existing Facilities (Revised Interim Rule) issued by ERA on March 15, 1979, (44 FR 17464) and pursuant to the provisions of the Powerplant and Industrial Fuel Use Act of 1978, 42 U.S.C. 8301 et seq. (FUA).

ERA has completed its analysis of Occidental's request and has determined that Occidental has satisfactorily demonstrated that it would suffer a significant operational detriment under the criteria prescribed in § 515.13(b) of the Revised Interim Rule.

ERA has determined that Occidental's Swift Creek Unit S/N 99726 is an "existing" facility and is therefore subject to the provisions of Title III of FUA.

FOR FURTHER INFORMATION CONTACT:

William L. Webb (Office of Public Information), Economic Regulatory Administration, Department of Energy, 2000 M Street, NW., Room B-110, Washington, D.C. 20461, Telephone: (202) 634-2170.

Constance L. Buckley, Chief, New MFBI Branch, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, 2000 M Street, NW., Room 3128, Washington, D.C. 20461, Telephone: (202) 254-7814.

C. Randolph Comstock, Deputy Counsel for Coal Regulations, Office of General Counsel, Department of Energy, 1200 Pennsylvania Avenue, NW., Room 7134, Washington, D.C. 20461, Telephone: (202) 633-8820.

Robert L. Davies, Acting Assistant, Administrator, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, 2000 M Street, NW., Room 3128-L, Washington, D.C. 20461, Telephone: (202) 254-7442.

SUPPLEMENTARY INFORMATION:

(1) On April 26, 1979, pursuant to ERA's Revised Interim Rule to Permit Classification of Certain Powerplants and Installations as Existing Facilities issued by ERA on March 15, 1979, Occidental requested ERA to classify Occidental's Swift Creek boiler S/N 99726 as an "existing" facility. A conference was held on April 26, 1979, at Occidental's request. On July 20, 1979, ERA published a summary of Occidental's request for classification in the **Federal Register** (44 FR 42758) and requested comments by interested persons on or before August 13, 1979. No comments were received other than minor corrections of the notice information furnished by Occidental.

(2) A copy of ERA's Summary of Analysis relating to Significant Operational Detriment is available for examination in the Office of Public Information, at the above address.

Issued in Washington, D.C. September 4, 1979.

Robert L. Davies,

Acting Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Tom Davis and Charles Forbes, d.b.a. Davis & Forbes; Proposed Remedial Order

Pursuant to 10 C.F.R. § 205.192(c), the Economic Regulatory Administration (ERA) of the Department of Energy hereby gives notice of a Proposed Remedial Order which was issued to Tom Davis and Charles Forbes d/b/a—Davis & Forbes, P.O. Box 354, Hebbronville, Texas 78361. This Proposed Remedial Order charges Davis & Forbes with pricing violations in the amount of *$599,382.43*, connected with the *sale of domestic crude oil during the time period November 1, 1973, through April 30, 1978, in the State of Texas.*

A copy of the Proposed Remedial Order, with confidential information deleted, may be obtained from *Wayne I. Tucker*, District Manager of Enforcement, *P.O. Box 35228, Dallas, Texas 75235*, phone *[214/767-7745]*. Within 15 days of publication of this notice, any aggrieved person may file a Notice of Objection with the Office of Hearings and Appeals, 2000 M Street, NW., Washington, D.C. 20461, in accordance with 10 C.F.R. § 205.193.

Issued in Dallas, Texas, on the 27th day of August 1979.

Herbert F. Buchanan,

Deputy District Manager of Enforcement, Southwest District.

Liquid Products Recovery, Inc.; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of Action taken and opportunity for comment on Consent Order.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) announces action taken to execute a Consent Order and provides an opportunity for public comment on the Consent Order and on potential claims against the refunds deposited in an escrow account established pursuant to the Consent Order.

DATES: Effective date: August 28, 1979. Comments by: October 11, 1979.

ADDRESS: Send comments to: Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235.

FOR FURTHER INFORMATION CONTACT:

Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235 [phone] 214/767-7745.

SUPPLEMENTARY INFORMATION: On August 28, 1979, the Office of Enforcement of the ERA executed a Consent Order with Liquid Products Recovery, Inc. of Houston, Texas. Under 10 CFR 205.199J(b), a Consent Order which involves a sum of less than $500,000 in the aggregate, excluding penalties and interest, becomes effective upon its execution.

Because the DOE and Liquid Products Recovery, Inc. wish to expeditiously resolve this matter as agreed and to avoid delay in the payment of refunds, the DOE had determined that it is in the public interest to make the Consent Order with Liquid Products Recovery, Inc. effective as of the date of its execution by the DOE and Liquid Products Recovery, Inc.

I. The Consent Order

Liquid Products Recovery, Inc., with its home office in Houston, Texas, is a firm engaged in the production and sale of natural gas liquids and a natural gas liquid product, and is subject to the Mandatory Petroleum Price and Allocation Regulations at 10 CFR, Parts 210, 211, 212. To resolve certain civil actions which could be brought by the Office of Enforcement of the Economic Regulatory Administration as a result of its audit of sales of NGL's and the NGL product, the Office of Enforcement, ERA, and Liquid Products Recovery, Inc. entered into a Consent Order, the significant terms of which are as follows:

1. The period covered by the audit was September 1973 through July 1976, and it included all sales of a mixed NGL stream primarily to Wanda Petroleum and sales of a natural gas liquid product to various customers.

2. Liquid Products Recovery, Inc. improperly applied the provisions of 6 CFR Part 150, Subpart L, and 10 CFR Part 212, Subparts E and K, when determining the prices to be charged for its NGL and NGL product, and as a consequence overcharged certain of its customers on some of their purchases.

3. Liquid Products Recovery, Inc. agrees to refund to the DOE $62,500, including interest and penalty. Of this amount, $5,208.33 will be refunded on October 1, 1979. The remaining amount will be refunded as 11 payments of $5,208.33 each, due the first day of each month thereafter until the full amount is paid.

4. The provisions of 10 CFR 205.199J, including the publication of this Notice, are applicable to the Consent Order.

II. Disposition of Refunded Overcharges

In this Consent Order, Liquid Products Recovery, Inc. agrees to refund, in full settlement of any civil liability with respect to actions which might be brought by the Office of Enforcement, ERA, arising out of the transactions specified in I. 1. above, the sum of $62,500 in the manner specified in I. 3. above. Refunded ovecharges will be in the form of certified checks made payable to the United States Department of Energy and will be delivered to the Assistant Administrator for Enforcement, ERA. These funds will remain in a suitable account pending the determination of their proper disposition.

The DOE intends to distribute the refund amounts in a just and equitable manner in accordance with applicable laws and regulations. Accordingly, distribution of such refunded overcharges requires that only those "persons" (as defined at 10 CFR 205.2) who actually suffered a loss as a result of the transactions described in the Consent Order receive appropriate refunds. Because of the petroleum industry's complex marketing system, it is likely that overcharges have either been passed through as higher prices to subsequent purchasers or offset through devices such as the Old Oil Allocation (Entitlements) Program, 10 CFR 211.67. in fact, the adverse effects of the overcharges may have become so diffused that it is a practical impossibility to identify specific, adversely affected persons, in which case disposition of the refunds will be made in the general public interest by an appropriate means such as payment to the Treasury of the United States pursuant to 10 CFR 205.199I(a).

III. Submission of Written Comments

A. *Potential Claimants.* Interested persons who believe that they have a claim to all or a portion of the refund amount should provide written notification of the claim to the ERA at this time. Proof of claims is not now being required. Written notification to the ERA at this time is requested primarily for the purpose of identifying valid potential claims to the refund amount. After potential claims are identified, procedures for the making of claims may be established. Failure by a person to provide written notification of a potential claim within the comment period for this Notice may result in the DOE irrevocably disbursing the funds to other claimants or to the general public interest.

B. *Other Comments.* The ERA invites interested persons to comment on the terms, conditions, or procedural aspects of this Consent Order.

You should send your comments or written notification of a claim to Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas. You may obtain a free copy of this Consent Order by writing to the same address or by calling 214/767-7745.

You should identify your comments or written notification of a claim on the outside of your envelope and on the documents you submit with the designation, "Comments on Liquid Products Recovery, Inc., Consent Order." We will consider all comments we receive by 4:30 p.m. local time, on October 11, 1979. You should identfiy any information or data which, in your opinion, is confidential and submit it in accordance with the procedures in 10 C.F.R. 205.9(f).

Issued in Dallas, Texas on the 29th day of August 1979.

Wayne I. Tucker,

District Manager of Enforcement, Southwest District Office, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Perry Gas Processors, Inc.; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of Action taken and opportunity for comment on Consent Order.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) announces action taken to execute a Consent Order and provides an opportunity for public comment on the Consent Order and on potential claims against the refunds deposited in an escrow account established pursuant to the Consent Order.

DATES: Effective date: August 13, 1979. Comments by: October 11, 1979.

ADDRESS: Send comments to: Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235.

FOR FURTHER INFORMATION CONTACT:

Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas 75235-[phone] 214/767-7745.

SUPPLEMENTARY INFORMATION: On August 13, 1979, the Office of Enforcement of the ERA executed a Consent Order with Perry Gas Processors, Inc. of Odessa, Texas. Under 10 C.F.R 205.199J(b), a Consent Order which involves a sum of less than $500,000 in the aggregate, excluding penalties and interest, becomes effective upon its execution.

Because the DOE and Perry Gas Processors, Inc. wish to expeditiously resolve this matter as agreed and to avoid delay in the payment of refunds, the DOE has determined that it is in the public interest to make the Consent Order with Perry Gas Processors, Inc. effective as of the date of its execution by the DOE and Perry Gas Processors, Inc.

I. The Consent Order

Perry Gas Processors, Inc., with its home office in Odessa, Texas, is a firm engaged in the production and sale of natural gasoline and plant condensate, and is subject to the Mandatory Petroleum Price and Allocation Regulations at 10 CFR Parts 210, 211, 212. To resolve certain civil actions which could be brought by the Office of Enforcement, ERA, and Perry Gas Processors, Inc. entered into a Consent Order, the significant terms of which are as follows:

1. The period covered by the audit was September 1973 through August 1975, and it included all sales of the natural gas liquid product—natural gasoline, to Shell Oil Company and all sales of condensate to Tesoro Crude Oil Company, and the permian Corporation.

2. Perry Gas Processors, Inc. improperly applied the provisions of 6 CFR Part 150, Subpart L, and 10 C.F.R., Part 212, Subparts D, E, and K, when determining the prices to be charged for its NGL product and condensate and, as a consequence, the above firms were overcharged on some of their purchases.

3. Perry Gas Processors, Inc. agrees to refund to the DOE $38,000 within 30 days of the effective date of the Consent Order, August 13, 1979.

4. The provisions of 10 CFR 205.199J, including the publication of this Notice, are applicable to the Consent Order.

V 4 4 / 1 7 7 SEP 11 79 UMI

II. Disposition of Refunded Overcharges

In this Consent Order, Perry Gas Processors, Inc. agrees to refund, in full settlement of any civil liability with respect to actions which might be brought by the Office of enforcement, ERA, arising out of the transactions specified in I. 1 above, the sum of $38,000 within 30 days of the effective date of the Consent Order. Refunded overcharges will be in the form of a certified check made payable to the United States Department of Energy and will be delivered to the Assistant Administrator for Enforcement, ERA. These funds will remain in a suitable account pending the determination of their proper disposition.

The DOE intends to distribute the refund amounts in a just and equitable manner in accordance with applicable laws and regulations. Accordingly, distribution of such refunded overcharges requires that only those "persons" (as defined at 10 CFR 205.2) who actually suffered a loss as a result of the transactions described in the Consent Order receive appropriate refunds. Because of the petroleum industry's complex marketing system, it is likely that overcharges have either been passed through as higher prices to subsequent purchasers or offset through devices such as the Old Oil Allocation (entitlements) Program, 10 CFR 211.67. In fact, the adverse effects of the overcharges may have become so diffused that it is a practical impossibility to identify specific, adversely affected persons, in which case disposition of the refunds will be made in the general public interest by an appropriate means such as payment to the Treasury of the United States pursuant to 10 CFR 205.199l(a).

III. Submission of Written Comments

A. *Potential Claimants:* Interested persons who believe that they have a claim to all or a portion of the refunds amount should provide written notification of the claim to the ERA at this time. Proof of claims is not now being required. Written notification to the ERA at this time is requested primarily for the purpose of identifying valid potential claims to the refund amount. After potential claims are identified, procedures for the making of proof of claims may be established. Failure by a person to provide written notification of a potential claim within the comment period for this Notice may result in the DOE irrevocably disbursing the funds to other claimants or to the general public interest.

B. *Other Comments:* The ERA invites interested persons to comment on the terms, conditions, or procedural aspects of this Consent Order.

You should send your comments or written notification of a claim to Wayne I. Tucker, District Manager of Enforcement, Southwest District Office, Department of Energy, P.O. Box 35228, Dallas, Texas. You may obtain a free copy of this Consent Order by writing to the same address or by calling 214/767–7745.

You should identify your comments or written notification of a claim on the outside of your envelope and on the documents you submit with the designation, "Comments on Perry Gas Processors, Inc. Consent Order." We will consider all comments we receive by 4:30 p.m. local time, on October 11, 1979. You should identify any information or data which, in your opinion, is confidential and submit it in accordance with the procedures in 10 CFR 205.9(f).

Issued in Dallas, Texas on the 31st day of August 1979.

Wayne I. Tucker,

District Manager of Enforcement, Southwest District Office, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. ER79-619]

Arizona Public Service Co.; Filing of Service Schedule to Power Coordination Agreement

September 5, 1979

The filing Company submits the following:

Take notice that on August 24, 1979, Arizona Public Service Company (APS) tendered for filing a Service Schedule J of the Power Coordination Agreement between APS and Tucson Gas & Electric Company (TG&E). The Coordination Agreement is APS Rate Schedule FPC No. 32. The filing was made pursuant to § 35.12 since the filing represents a new service. Early approval and waiver of Section 35.3 is requested by TG&E as construction is required for performance of this Service Schedule.

Any person desiring to be heard or to protest said filing sould file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, DC 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). Protests will be September 25,1979, considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a Petition to Intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[Docket Nos. RP74-61 (PGA79-2); RP79-53 (LFUTA79-2)]

Arkansas Louisiana Gas Co.; Filing of Revised Tariff Sheet Reflecting Purchased Gas Cost Adjustment and Louisiana First Use Tax Adjustment

September 5, 1979.

Take notice that on August 29, 1979 Arkansas Louisiana Gas Company (Arkla) tendered for filing 20th Revised Sheet No. 4 to its FERC Gas Tariff First Revised Volume No. 1, Rate Schedule No. G–2, to become effective October 1, 1979.

Arkla states that the purpose of 20th Revised Sheet No. 4 is to track producer and pipeline supplier price changes as of October 1, 1979 and to recover the accumulated deferred purchased gas costs as of June 30, 1979, through unit rate adjustments computed pursuant to provisions of Arkla's purchased gas cost adjustment clause. Said tariff sheet also reflects a revision in the Louisiana First Use Tax for the six month period beginning October 1, 1979 computed in accordance with the provisions of Arkla's Louisiana First Use Tax Clause contained in its Rate Schedule No. G–2.

Arkla also states that copies of the revised tariff sheet and supporting data are being mailed to Arkla's jurisdictional customers and other interested parties affected by this tariff change.

Any person desiring to be heard or to protest said filing should file a Petition to Intervene or Protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a Petition to Intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Docket No. ER79-626]

Boston Edison Co.; Proposed Rate Schedule Change

September 5, 1979

The filing Company submits the following:

Take notice that on August 28, 1979 Boston Edison Company ("Edison") tendered for filing one revised Exhibit A and four supplemental Exhibit A's to a Service Agreement for the Town of Reading, Massachusetts, under its FERC Electric Tariff, Original Volume No. III, Non-Firm Transmission Service ("the Tariff"). The Exhibit A's specify the amount and duration of transmission service required by Reading under the Tariff.

Edison requests an effective date for the Exhibit A's of November 1, 1979, the date on which service commences.

Edison states that it has served the filing on the Town of Reading and the Massachusetts Department of Public Utilities.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. CP79-205]

Colorado Interstate Gas Co.; Amendment

August 31, 1979

Take notice that on August 14, 1979, Colorado Interstate Gas Company (CIG), P.O. Box 1087, Colorado Springs, Colorado 80944, filed in Docket No. CP79-205 an amendment to its pending application filed in said docket pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to provide for the exchange, on a gas-for-gas basis, of natural gas delivered by CIG to Natural Gas Pipeline Company of America (Natural) and gas delivered by Natural to CIG, all as more fully set forth in the amendment which is on file with the Commission and open to public inspection.

CIG requested authorization in the pending application in Docket No. CP79–205 for the transportation and exchange of gas with Natural pursuant to a twenty-year gas transportation and exchange agreement dated December 29, 1978. The transportation and exchange would initially be from certain sources of supply set forth in the agreement. CIG also requested authorization for the transportation of gas on a systemwide basis from any sources of supply the acquiring party may develop or acquire in proximity to the other party's existing or future pipeline system and that the parties mutually agree to connect by revision of Exhibit A of the agreement. Each party would pay the appropriate average system transportation fee for all gas transported.

By the instant filing, CIG proposes to amend its application to apply a transportation charge only to "Net Delivery Volumes;" that is, volumes of gas in excess of thermally equivalent exchange volumes between Natural's Amarillo system and CIG's system. The appropriate transportation charge would be assessed for any gas delivered by CIG to Natural's Gulf Coast system. Further, Natural's offshore facilities have been excluded from the agreement pursuant to this amendment.

Any person desiring to be heard or to make any protest with reference to said amendment should on or before September 18, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules. All persons who have heretofore filed need not file again.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. RP79-59]

Colorado Interstate Gas Co., Revised Changes in Rates

September 5, 1979

Take notice that Colorado Interstate Gas Company (CIG) on August 31, 1979, tendered for filing proposed changes in its FERC Gas Tariff, Original Volume Nos. 1 and 2.

The purpose of the filing is to comply with the directive stated in ordering Paragraph (E) of the Commission's Order of May 1, 1979, requiring CIG (1) to eliminate from Docket No. RP79–59 all costs associated with facilities which have not been certificated and placed in service by September 30, 1979, and (2) to reflect in Docket No. RP79–59 the actual balances of advance payments in Account 166 as of September 30, 1979. As a result of this filing, the jurisdictional cost of service in Docket No. RP79–59 will be reduced by approximately $.7 million.

Replacement Substitute Fourth Revised Sheet Nos. 7 and 8 are proposed to be substituted for and to replace Substitute Fourth Revised Sheet Nos. 7 and 8, as filed with the Commission on August 15, 1979, in Docket No. RP72–122 (PGA79–2). CIG requests that Replacement Substitute Fourth Revised Sheet Nos. 7 and 8 be made effective as of October 1, 1979, the date previously provided for in Docket No. RP79–59.

Replacement Second Revised Sheet Nos. 187, 251, and 330, reflecting the adjusted transportation rates contained in Rate Schedules X–14, X–19, and X–25, were also tendered for filing with a requested effective date of October 1, 1979.

Copies of this filing have been served upon the Company's jurisdictional customers and upon interested bodies.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to

the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. SA79-15]

Colorado Interstate Gas Co., Request for Adjustment of Final Regulations Implementing Section 401 of the Natural Gas Policy Act of 1978

August 28, 1979

Take notice that on August 8, 1979, Colorado Interstate Gas Company (CIG), filed in Docket No. SA79-15, an application pursuant to Section 1.41 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure (18 CFR 1.41) requesting that the Commission's Director, Office of Producer and Pipeline Regulation issue an order extending by one year the time in which CIG must file tariff sheets and supporting materials in accordance with Section 281.204 of the Commission's Regulations and also requests the Commission construe CIG's Motion For Extension of Time filed on July 24, 1979 in Docket No. RM79-15 as a part of the instant request, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Section 281.204 of the Commission's Regulations requires the filing of tariff sheets regarding curtailment plans, the filing of indices of entitlements regarding high-priority and essential agricultural users, the attribution of natural gas, and the establishment of a Data Verification Committee. CIG states it has diligently attempted to comply with Order No. 29. CIG also states that its present curtailment plan does not call for the collection of end-use data and that CIG's customers have responded saying they require more time to supply the data in response to Order No. 29. CIG further alleges that its April 1979 Form 16 projects no firm curtailment over the next winter heating season. If granted the one year extension CIG states it will continue to pursue the formulation of a curtailment plan which is acceptable to it, its customers and in compliance with Order No. 29. CIG states it believes such a plan would likely avoid the hearings or other formal proceedings which could result if CIG were required to file an Order No. 29 plan by October 1, 1979.

Any person desiring to participate in this adjustment proceeding shall file with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, a petition to intervene in accordance with the provisions of Section 1.41 of the Commission's Rules of Practice and Procedure (18 CFR 1.41). All petitions to intervene must be filed on or before September 26, 1979.

Kenneth F. Plumb,

Secretary.

[Docket Nos. CP71-68, et al.; RP79-73; RP79-72]

Columbia LNG Corp., et al., Consolidated Gas Supply Corp., Southern Natural Gas Co.; Tariff Sheet Filing

September 4, 1979

Take notice that Southern Natural Gas Company (Southern) on August 27, 1979, tendered for the filing a tariff sheet to its FPC Gas Tariff, Sixth Revised Volume No. 1 in compliance with the Federal Energy Regulatory Commission's (Commission) Suspension Order of June 29, 1979 in the above-captioned dockets.

Southern states that the rate change reflects an increase in the cost of purchasing regasified LNG from Southern Energy Company as a result of the Economic Regulatory Administration's Order of August 22, 1979 in ERA Docket No. 79-14-LNG Approving in Part an Application for Amendments to Import Authorization and for Interim Relief, and Granting Intervention.

Copies of the filing have been served upon Southern's jurisdictional customers and interested state public service commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 18, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-622]

The Connecticut Light and Power Co.; Amendment to Purchase Agreement

September 5, 1979

The filing Company submits the following:

Take notice that on August 27, 1979, The Connecticut Light and Power Company (CL&P) tendered for filing a proposed Amendment to Purchase Agreement With Respect to Various Gas Turbine Units (I) (Amendment) dated May 1, 1977 between (1) CL&P, The Hartford Electric Light Company (HELCO) and Western Massachusetts Electric Company (WMECO), and (2) Vermont Electric Cooperative, Inc. (VEC).

CL&P states that the Amendment provides for an increase in Purchase Percentages to be purchased by VEC for the periods from November 1, 1979 to October 31, 1982.

CL&P requests that, in order to permit VEC to receive the needed additional capacity and energy pursuant to the terms of the Amendment and to allow WMECO to receive payment for such capacity and energy permit the Amendment filed to become effective on November 1, 1979

HELCO and WMECO have filed certificates of concurrence in this docket.

CL&P states that copies of this rate schedule have been mailed or delivered to CL&P, Hartford, Connecticut, HELCO, Hartford, Connecticut, WMECO, West Springfield, Massachusetts and VEC, Johnson, Vermont.

CL&P also states that no facilities are to be installed or modified in order to supply the service to be furnished under the Amendment.

CL&P further states that the filing is in accordance with part 35 of the Commission's Regulations.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedures (18 CFR1.8, 1.10). All such petitions or protests should be filed on or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-620]

Consumers Power Co.; Filing

September 5, 1979

The filing Company submits the following:

Take notice that Consumers Power Company on August 27, 1979 tendered for filing a Service Agreement for Wholesale for Resale Electric Service, dated August 8, 1979, between Consumers Power Company ("Consumers Power") and the City of Charlevoix, Michigan ("Charlevoix"). The Service Agreement became effective on August 8, 1979 and on that date supplanted a prior contract between the two parties, dated September 30, 1975, designated Consumers Power Company Rate Schedule FERC Electric Tariff Original Volume No. 1. The initial term of the Service Agreement is three years from and after the effective date.

Consumers Power states that the new contract is necessitated by a request from Charlevoix to Consumers Power to provide a capacity reservation increase from 7,000 kW to 8,600 kW, which increase required modifications in Consumers Power's existing Charlevoix Substation.

Consumers Power states that the initial rates and charges under the Service Agreement are those presently in effect for service to its wholesale jurisdictional customer class.

Any person desiring to be heard or to protest said Agreement should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, DC 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed by or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of said Agreement are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28263 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP74-126]

El Paso Natural Gas Co.; Petition to Amend

August 31, 1979

Take notice that on July 19, 1979, El Paso Natural Gas Company (El Paso), P.O. Box 1492, El Paso, Texas 79978, filed in Docket No. CP74-126, a petition to amend the order of April 2, 1975 [1] issuing a certificate of public convenience and necessity in the instant docket pursuant to Section 7(c) of the Natural Gas Act by authorizing the establishment of certain new exchange and balancing points between El Paso and Natural Gas Pipeline Company of America (Natural), all as more fully set forth in the petition to amend which is on file with the Commission and open for public inspection.

El Paso and Natural are authorized to exchange natural gas in quantities of up to 65,000 Mcf per day, pursuant to the order of April 2, 1975.

El Paso states that it has been advised by Natural that Natural has acquired additional natural gas supplies in Lea and Eddy Counties, New Mexico, which Natural would cause to be delivered to El Paso under an existing exchange arrangement. Such additional natural gas supplies are situated in close proximity to El Paso's existing gathering systems located in Lea and Eddy Counties, New Mexico.

In addition, El Paso has advised Natural that El Paso has natural gas available in Roosevelt County, New Mexico, and Washita County, Oklahoma, which it would cause to be delivered to Natural under the existing exchange arrangement. Such natural gas is located in close proximity to Natural's existing gathering systems located in Roosevelt County, New Mexico, and Washita County, Oklahoma.

The petition further indicated that in order that Natural and El Paso may each obtain the additional volumes of natural gas available to them for use on their respective systems, El Paso and natural have executed amendatory agreement No. 12, dated June 22, 1979, amending the gas exchange agreement dated September 24, 1973, to provide for, *inter alia*, certain new exchange arrangement and balancing points under the authorized exchange arrangement and to establish on area of interest for future exchange deliveries. The proposed additional exchange points are identified as the Lea No. 5 Exchange Point, the Lea No. 6 Exchange Point, the Eddy No. 8 Exchange Point and the Eddy No. 9 Exchange Point. Deliveries of natural gas to El Paso for Natural's account at such exchange points would be commingled with natural gas purchased by El Paso and delivered into El Paso's existing gathering system through common measurement facilities installed, owned and operated by El Paso; therefore, no additional facilities would be required by Natural at such exchange points, the petition further asserts.

Further, Natural and El Paso have utilized an existing authorized point of interconnection between their respective pipeline systems located in Reeves County, Texas (Worsham Exchange Point), as an alternate exchange balancing point and as a point of delivery by Natural to El Paso of gas produced from the Warwink and Caprito fields. El Paso has advised Natural that the quantities of gas received at such point require treating and, as a result, a charge for such service has been porvided for in said amendatory agreement. Natural has agreed to pay El Paso 3.64 cents per Mcf for the cost of treating the volumes of natural gas delivered by natural at the Worsham Exchange Point. Natural would operate and maintain the existing measurement facilities at such point; and no additional facilities required.

Said amendatory agreement also provides that, subject to the mutual agreement of the parties, El Paso would cause the delivery of exchange gas for its account to Natural at a new exchange point at the inlet of Natural's existing delivery and measurement facilities located at the outlet of Cities Service Gas Company's Bluitt Gasoline Plant in Roosevelt County, New Mexico. The quantities delivered at that exchange point would be those quantities in excess of the natural gas delivered by El Paso to Natural under a gas transportation agreement dated August 25, 1975, between El Paso and Natural. The exchange point is identified as the Roosevelt Exchange Point.

An additional new exchange delivery point, where El Paso would deliver, or cause the delivery of exchange gas for its account to Natural, is the Enserch-Bragg No. 1 well located in Washita

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

County, Oklahoma (Washita Exchange Point).

The amendatory agreement provides for the deletion of the Worsham Exchange point as a balancing point. If balancing of exchange gas cannot be achieved between the parties at the existing and proposed exchange points, El Paso and Natural have agreed that deliveries of natural gas volumes necessary to achieve such balance would be made by the owing party to the other at either or both of the existing points of interconnection between the pipeline systems of El Paso and Natural located in Ward County, Texas (Lockridge Exchange Point) and in Lea County, New Mexico (Jal Exchange Point).

El Point further requests authorization for the exchange of natural gas from additional exchange points which may be attached to the respective gathering systems of each party as the natural gas at such exchange points becomes available to El Paso and Natural in the area of interest identified in said amendatory agreement and, further, the addition of such balancing points as may be required to keep the volumes of exchange gas in balance during the term of the arrangement. In addition, El Paso requests blanket authorization for the deletion of exchange points and/or balancing points from the exchange arrangement, as may be mutually agreed to from time to time by El Paso and Natural.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before September 18, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket Nos. RP72-155 and RP79-12]

El Paso Natural Gas Co.; Proposed Change in Rate Pursuant to Purchased Gas Cost Adjustments

September 5, 1979

Take notice that on August 31, 1979, El Paso Natural Gas Company ("El Paso") tendered for filing a notice of change in rates for jurisdictional gas service rendered to customers served by its interstate gas transmission system. Such service is rendered under rate schedules affected by and subject to Article 19, Purchased Gas Cost Adjustment Provision ("PGAC"), contained in the General Terms and Conditions applicable to El Paso's FERC Gas Tariff, Original Volume No. 1, Third Revised Volume No. 2 and Original Volume No. 2A, and under rate schedules affected by and subject to the PGAC—Clean High Pressure Gas Provision ("PGAC–CHPG") contained in El Paso's FERC Gas Tariff, Original Volume No. 2A.

El Paso states that the instant notice of change in rates occasioned by the PGAC and PGAC–CHPG provisions will compensate El Paso for (i) changes in the cost of purchased gas (including certain gas produced by El Paso which is priced for rate purposes on an area rate basis) to be in effect on or before October 1, 1979, applied to volume of natural gas purchased (or produced) during the calendar month of June 1979, adjusted and annualized, and (ii) changes in the surcharge adjustment resulting from the actual balance in El Paso's Account 191, Unrecovered Purchased Gas Cost, as of June 30, 1979, including the applicable carrying charges. El Paso further states that the instant notice of change in rates includes adjustments attributable to (i) advance payments, (ii) transportation costs and (iii) gas well royalty costs, pursuant to the adjustment mechanisms designed to track such costs provided for in El Paso's Stipulation and Agreement dated June 23, 1978, at Docket No. RP78–18, which were subsequently extended and modified by similar provisions contained in El Paso's Stipulation and Agreement dated May 31, 1979, at Docket No. RP79–12.[1] An adjustment necessary to track production tax costs, as provided for in the Stipulation and Agreement at Docket No. RP79–12 has also been included in the derivation in the change of rates provided for herein.

It is stated that the overall net increase in El Paso's rates for which notice is given is 3.76¢ per Mcf as to its east-of-California ("EOC") customers and 11.95¢ per Mcf as to its California customers.

The currrent net PGAC adjustment proposed for El Paso's EOC customers and the California customers are 9.63¢ per Mcf and 17.82¢ per Mcf, respectively. Such net PGAC adjustments are comprised of (i) a purchased gas cost adjustment, (ii) the unrecovered purchased gas cost balance in Account 191, as of June 30, 1979, applicable to each of said customer categories, and (iii) elimination of the PGAC surcharge adjustments applicable to the EOC and California customers, respectively, presently included in El Paso's rates.

El Paso states that the curent net PGAC–CHPG adjustment, for which notice is also given herein, aggregates an increase of 12.3339¢ per Mcf. Such current net adjustment is comprised of (i) an increase in the weighted average purchased cost of clean, high-pressure gas, (ii) a surcharge adjustment representing the unrecovered purchased gas cost balance in Account 191 as of June 30, 1979, and (iii) elimination of the PGAC–CHPG surcharge adjustments presently included in El Paso's clean high-pressure rates.

El Paso states that the adjustment mechanisms designed to track variations in its costs attributable to advance payments, transportation costs and gas well royalty and production tax costs, as approved at Docket Nos. RP78–18 and RP79–12, result in the net rate adjustments summarized below:

Adjustment	EOC and California Rates (cents)
Advance payment	0
Transportation	0.42
Gas well royalty and production tax	(6.29)

El Paso further states that the proposed current net adjustments reflect the elimination of the appropriate surcharges reflected in El Paso's PGAC filing effective April 1, 1979.

El Paso has requested that waiver be granted of all applicable rules, orders and regulations of the Commision, as may be deemed necessary, to permit the effectiveness on October 1, 1979, of the tariff sheets tendered as a part of the instant notice of change in rates.

El Paso states that copies of the filing and attachments have been served upon all parties of record in Docket Nos. RP72–155 and RP79–12, and, otherwise, upon all affected customers and interested state regulatory commissions.

[1] Said stipulation and Agreements were accepted and approved by the Commission's letter orders dated September 5, 1978, at Docket No. RP78–18 and July 20, 1979, at Docket No. RP79–12.

Any peson desiring to be heard or to make any protest with reference to said tariff filing should, on or before Sept. 21, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C., 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations Under the Natural Gas Act (18 CFR 157.10). Protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make any protestants parties to the proceeding. Any person wishing to become a party to a proceeding must file a petition to intervene in accordance with the Commission's Rules. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. RP78-18]

El Paso Natural Gas Co.; Payment of Refunds

September 4, 1979

Take notice that on August 29, 1979, El Paso Natural Gas Company ("El Paso") tendered for filing a Report of Refunds Made on August 27, 1979, to its interstate jurisdictional, and nonjuridictional keyed customers. El Paso states that such refunds were make in accordance with Article V and the procedures for disposition of refunds set forth in Article XVI of El Paso's Stipulation and Agreement dated and filed June 23, 1978, as approved by Commission letter order dated September 5, 1978, at Docket No. RP78–18. El Paso further states that the aggregate amount of refunds made by El Paso on August 27, 1979, is $12,246,280.96.

El Paso states that copies of the filing were served upon all of El Paso's affected interstate transmission system customers, all parties of record in Docket No. RP78–18, and interested state regulatory commissions.

Any person desiring to be heard or to make any protest with reference to said filing should, on or before September 19, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C., 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations Under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make any protestants parties to the proceeding. Any person wishing to become a party to a proceeding must file a petition to intervene in accordance with the Commission's Rules. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28245 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. RP79-37]

El Paso Natural Gas Co.; Proposed Change in Rate

September 4, 1979

Take notice that on August 29, 1979, El Paso Natural Gas Company ("El Paso") filed, pursuant to Part 154 of the Federal Energy Regulatory Commission's ("Commission") Regulations Under the Natural Gas Act, particularly Section 154.38(h) thereof, the following revised tariff sheets to its FERC Gas Tariff:

Tariff volume	Tariff sheet
Original Volume No. 1	Twenty-sixth Revised Sheet No. 3-B.
Third Revised Volume No. 2	Seventeenth Revised Sheet No. 1-D.
Original Volume No. 2A	Eighteenth Revised Sheet No 1-C.

El Paso states that such tendered sheets implement the instant notice of change in rate to be effective October 1, 1979, pursuant to the provisions of El Paso's Louisiana First-Use Tax Tracking Provision ("LFUT"), contained in Section 22 of the General Terms and Conditions of El Paso's Gas Tariff, Original Volume No. 1. El Paso further states that the net increase in rate attributable to the LFUT, for which notice is given herein, is 0.04¢ per Mcf, which will be applied as an adjustment to all rate schedules contained in El Paso's FERC Gas Tariff, Original Volume No. 1 and to certain special rate schedules contained in El Paso's FERC Gas Tariff, Third Revised Volume No. 2 and Original Volume No. 2A. Such net LFUT adjustment is comprised of (i) a LFUT Adjustment of 0.03¢ per Mcf to recover annualized increases in LFUT costs and (ii) a LFUT Surcharge Adjustment of 0.01¢ per Mcf based upon the unrecovered balance in the LFUT Deferred Cost Account, as of June 30, 1979. El Paso also states that in conformity with El Paso's selection of the corporate undertaking procedure pursuant to Commission Order No. 10–B, issued March 2, 1979, at Docket No. RM78–23, El Paso will collect the increase in LFUT, subject to refund.

El Paso has requested that waiver be granted of all applicable rules and regulations of the Commission, as may be deemed necessary to permit the effectiveness on October 1, 1979, of the tariff sheets tendered as part of the instant notice of proposed change in rates.

El Paso also states that copies of the filing have been served upon all parties of record in Docket No. RP79–37, and, otherwise, upon all of El Paso's interstate transmission system customers and all interested state regulatory commissions.

Any person desiring to be heard or to make any protest with reference to said tariff filing should, on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations Under the Natural Gas Act (18 CFR 157.10). Protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make any protestants parties to the proceeding. Any person wishing to become a party to a proceeding must file a petition to intervene in accordance with the Commission's Rules. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28246 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-435]

Equitable Gas Co.; Application

August 30, 1979

Take notice that on August 9, 1979, Equitable Gas Company (Equitable), 420 Boulevard of the Allies, Pittsburgh, Pennsylvania 15219, filed in Docket No. CP79–435 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Equitable to install one main-line tap at a cost of approximately $300.00 and to transport natural gas for service to Federal Supply Company (Federal), an industrial customer, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

Equitable states that on May 1, 1979, Federal applied to Equitable for natural

gas service exclusively for space heating its premises. The proposed service would be from Equitable's Field Line No. F-114, located in Greene County, Pennsylvania, which line transports natural gas in interstate commerce from various production facilities to Equitable's transmission lines.

Federal has informed Equitable that its premises are now heated by means of propane and that it desires to convert to natural gas. Equitable asserts that it is ready, willing and able to provide the requested service.

Equitable proposes to install a main-line tap and regulators on its Field Line No. F-114 as soon as reasonably possible at an estimated cost of $300.00, with construction estimated to be completed within one day. The gas line from the tap to the premises is to be provided by the customer at customer's expense.

The proposed service would require the transportation in interstate commerce of approximately 3,000 Mcf of natural gas per year, the application indicates.

Any person desiring to be heard or to make any protest with reference to said petition should on or before September 18, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Equitable to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28247 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket Nos. RP72-136 (PGA 79-2) and RM78-23]

Florida Gas Transmission Co.; Proposed Changes in Rates and Charges Under Purchased Gas Adjustment Provisions

September 5, 1979

Take notice that on August 31, 1979, Florida Gas Transmission Company (FGT), P.O. Box 44, Winter Park, Florida 32790, tendered for filing 22nd Revised Sheet No. 3-A to its FERC Gas Tariff, Original Volume No. 1, containing changes in its resale rates in Rate Schedules G and I to be effective on October 1, 1979.

According to FGT, the changes in rates contained on 22nd Revised Sheet No. 3-A are in accordance with the purchased gas cost adjustment provision in its Tariff (Section 15, General Terms and Conditions) and the Louisiana First Use Tax Provision (Section 20, General Terms and Conditions). FGT states that the rates contained on 22nd Revised Sheet No. 3-A are proposed to supersede those on Substitute Alternate 21st Revised Sheet No. 3-A.

FGT further states that the following shows a comparison between the rates in effect pursuant to Substitute Alternate 21st Revised Sheet No. 3-A and those to be made effective on October 1, 1979 under this filing:

	¢/Therm	
	Effective Prior to October 1, 1979	Effective October 1, 1979
Rate Schedule G	15.187	22.039
Rate Schedule I	15.187	22.039

According to FGT, the annual effect of the proposed rate changes is an increase of $56,993,030, of which $54,358,449 is attributable to the purchased gas cost provision and $2,364,581 results from the Louisiana First Use Tax Provision based on sales under Rates Schedules G and I for the twelve months ended June 30, 1979.

FGT states that a copy of its filing has been served on all customers purchasing gas under its FERC Gas Tariff, Original Volume No. 1 and the Florida Public Service Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Section 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. ER79-624]

Gulf Power Co.; Supplement

September 5, 1979

The filing Company submits the following:

Take notice that on August 28, 1979, Gulf Power Company (Gulf) filed herein Supplement to its FERC Electric Tariffs providing for changes in loads for service by Gulf to Florida Public Utilities Company at Altha (Calhoun County), Chipola (Jackson County) and Marianna (Jackson County), Florida. This tariff supplement is proposed to be effective for service commencing on August 1, 1979. and Gulf therefore requests waiver of the Commission's notice requirements to allow such effective dates

Any person desiring to be heard or to protest said filing should file a petition to intervene or protests with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1, 8, 1.10). All such petitions or protests should be filed on or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file

with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-621]

The Hartford Electric Light Co.; Purchase Agreement

September 5, 1979

The filing company submits the following:

Take notice that on August 27, 1979 The Hartford Electric Company (HELCO) tendered for filing a proposed Purchase Agreement with Respect to System Power (Purchase Agreement), dated May 1, 1978 between HELCO, The Connecticut Light and Power Company, and Western Massachusetts Electric Company (together the NU Companies) and New York State Electric and Gas Corporation (NYSE&G).

HELCO states that the Purchase Agreement provides for a sale to NYSE&G of specified amounts of capacity and related energy from the HELCO System during the period from November 1, 1979 to April 30, 1982, together with related transmission service provided by the NU Companies.

HELCO requests that the Commission permit the rate schedule to become effective on November 1, 1979.

HELCO states that the capacity charge rate for the proposed service is a negotiated amount, approximately equal to the costs associated with Middletown Unit No. 4, located at Middletown Generating Station in Middletown, Connecticut. The monthly transmission charge is equal to one-twelfth of the annual average unit cost of transmission service on the system of the NU Companies determined in accordance with Section 13.9 of the New England Power Pool (NEPOOL) Agreement and the uniform rules adopted by the NEPOOL Executive Committee, multiplied by the number of kilowatts of winter capability which NYSE&G is entitled to receive. The energy charge is based on NYSE&G's portion of the applicable fuel expenses for Middletown Unit No. 4 and no special cost-of-service studies were made to derive this charge.

HELCO states that the services to be provided under the Purchase Agreement are not similar to services provided by HELCO under any other rate shedule.

HELCO states that copies of this rate schedule have been mailed or delivered to HELCO, Hartford, Connecticut, The Connecticut Light and Power Company (CL&P), Hartford, Connecticut, Western Massachusetts Electric Company (WMECO), West Springfield, Massachusetts and NYSE&G, Binghampton, New York.

CL&P and WMECO have filed certificates of concurrence in this docket.

HELCO further states that the filing is in accordance with Part 35 of the Commission's Regulations.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedures (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28268 filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. ER79-631]

The Hartford Electric Light Co.; Purchase Agreement

September 6, 1979

The filing Company submits the following:

Take notice that on August 31, 1979, The Hartford Electric Light Company (HELCO) tendered for filing a proposed rate schedule pertaining to a Purchase Agreement with Respect to Middletown Unit No. 4 between HELCO and Green Mountain Power Corporation (GMP) dated as of April 1, 1977.

HELCO states that the Purchase Agreement provides for a sale to GMP of a specified percentage of capacity and energy from HELCO's Middletown Unit No. 4 generating unit during the period November 1, 1979 through October 31, 1985.

HELCO requests that the Commission permit the rate schedule filed to become effective on November 1, 1979.

HELCO states that the Capacity Charge rate for the proposed service is a rate determined on a cost-of-service basis. The monthy transmission charge rate is equal to one-twelfth of the annual average unit cost of transmission service on the Northeast Utilities (NU) system determined in accordance with Section 13.9 of the New England Power Pool (NEPOOL) Agreement and the uniform rules adopted by the NEPOOL Executive Committee.

The monthly Transmission Charge is determined by the product of (i) the transmission charge rate ($/KW-month), and (ii) the number of kilowatts of winter capability which GMP is entitled to receive. The Energy Charge is based on GMP's portion of the applicable fuel expenses and no special cost-of-service studies were made to derive this charge.

HELCO states that the services to be provided under the Purchase Agreement are similar to service provided by HELCO relating to an agreement between HELCO and North Attleborough Electric Department (Rate Schedule FERC No. 155).

HELCO states that a copy of the rate schedule has been mailed or delivered to HELCO, Hartford, Connecticut, GMP, Burlington, Vermont.

HELCO further states that the filing is in accordance with Part 35 of the Commission's Regulations.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street, N.E., Washington, D.C. 20426, in accordance with Section 1.8 and 1.10 of the Commission's Rules of Practice and Procedures (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 26, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. RP73-66 (PGA79-1)]

Inter-City Minnesota Pipelines Ltd., Inc.; Proposed Rate Change Pursuant to Purchased Gas Cost Adjustment Provisions

September 4, 1979

Take notice that Inter-City Minnesota Pipelines Ltd., Inc. (Inter-City) on August 17, 1979, tendered for filing Eleventh Revised Sheet No. 4 to its F.E.R.C. Gas Tariff, Original Volume No. 1, proposed to be effective September 1, 1979. On August 24, 1979, Inter-City supplemented

its filing with materials in support of this tariff sheet.

Inter-City states that the filing reflects a request for a purchased gas adjustment cost pursuant to § 154.38(d)(4) of the Commission's regulations. Inter-City further states that the instant filing is a result of recent increases in the border price of Canadian gas. In order to effect this increase Inter-City requests waiver of the provisions of Order No. 13 to the extent necesary to allow this filing to become effective September 1, 1979, or in the alternative, that the request be permitted to become effective following a one-day suspension.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 C.F.R. 1.8, 1.10). All such petitions or protests should be filed on or before September 19, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants party to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. ER79-628]

Iowa Power & Light Co., Rate Schedule Filing

September 6, 1979

The filing Company submits the following:

Take notice that Iowa Power and Light Company ("Iowa Power"), on August 28, 1979, tendered for filing proposed changes in Iowa Power and Light Company FPC Rate Schedule No. 39, which sets forth rates for wholesale electric service to the City of Ames, Iowa.

Proposed Supplement No. 6 to Rate Schedule No. 39 provides for an additional service schedule for the sale of short term power and energy. This change is needed in order to allow the parties to carry out the transactions of power desired.

Iowa Power requests that the Commission waive its prior notice requirements and accept proposed Supplement No. 6 for filing with a retroactive effective date of August 1, 1979. Iowa Power states that copies of the filing have been served upon the City and the Iowa State Commerce Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 26, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to be proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. ER79-629]

Iowa Power & Light Co.; Filing of Participation Power Agreements

September 6, 1979

The filing Company submits the following:

Take notice that Iowa Power and Light Company, Des Moines, Iowa (Iowa Power), on August 29, 1979, tendered for filing four Participation Power Agreements with Iowa Electric Light and Power Company, Cedar Rapids, Iowa (Iowa Electric).

Relating to Iowa Electric's purchase of 100 mW from May 1, 1979 through April 30, 1980; 148 mW from May 1, 1980 through April 30, 1981; and 76 mW from May 1, 1981 through April 30, 1982 of participation power according to Service Schedule A of the Mid-Continent Area Power Pool Agreement dated May 31, 1972, as amended. This Participation Power Pool Agreement establishes demand, energy, and transmission charges for such services and is to run from May 1, 1979 through April 30, 1982. Iowa Power requests waiver of the Commission's notice requirements and proposes an effective date of May 1, 1979.

Iowa Power states the purpose of the proposed rates is to recover reflected costs of the facilities to be provided as the scheduling path and for demand and energy power provided.

Iowa Power states copies of the filing have been mailed to Iowa Electric and to the Iowa State Commerce Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 26, 1979.

Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kansas Gas & Electric Co.; Filing of Service Agreements

September 5, 1979

The filing Company submits the following:

Take notice that Kansas Gas & Electric Company, on August 28, 1979 tendered for filing Agreements for Electric Service with its eight (8) rural electric cooperative customers.

The filing is necessary because the previous Agreements expired December 31, 1978.

Copies of the filing were served upon each of the cooperatives involved as well as the Kansas State Corporation Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Para. 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before September 25, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the

Commission and are available for public inspection.

BILLING CODE 6450-01-M

[Docket No. CP75-57]

Kansas-Nebraska Natural Gas Co., Inc.; Petition To Amend

August 31, 1979

Take notice that on August 8, 1979, Kansas-Nebraska Natural Gas Company, Inc. (Petitioner), P.O. Box 608, Hastings, Nebraska 68901, filed in Docket No. CP75-57 a petition to amend the order of May 11, 1977,[1] issued in the instant docket pursuant to Section 7(c) of the Natural Gas Act so as to authorize Petitioner to exchange, transport and sell natural gas to and with Montana-Dakota Utilities Co. (MDU) in accordance with three amendatory agreements dated July 9, 1977, October 9, 1978, and March 6, 1979, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

Pursuant to the May 11, 1977, order Petitioner and MDU were authorized, *inter alia,* to exchange, transport and sell natural gas in accordance with a gas sales, transportation and exchange agreement dated May 10, 1974, between the two companies. It is indicated that the agreement provided that Petitioner would connect the wells covered by the agreement either to MDU's gathering system or to its own gathering system with delivery from the gathering system to be made at MDU's Bowdoin Compressor Station, Phillips and Valley Counties, Montana. Although the agreement contemplated the connection of wells to MDU's gathering system, Petitioner indicates, when it came time to connect wells which, because of their location, could be more economically connected to the gathering system of MDU, it was discovered that revision of the agreement was necessary.

Therefore, by amendatory agreements dated July 19, 1977, October 9, 1978, and March 6, 1979, Petitioner and MDU amended the May 10, 1974, agreement to provide for the connection of such wells to MDU's gathering system and the deletion of said wells from Petitioner's system. Said amendments, *inter alia,* exclude the volumes associated with these wells from the gathering and delivery charge MDU is required to pay Petitioner since they are not connected to Petitioner's facilities, specify the formula by which each party's share of the cost of facilities to connect the wells is to be determined, and provide for the proportion of gas to be received from these wells by each party. Consequently, Petitioner requests that the Commission amend the order in the instant docket to provide for such changes. Petitioner also requests authorization to add and delete wells/acreage under the terms of the agreement as required from time to time.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Lawrenceburg Gas Transmission Corp.; Proposed Change in FERC Gas Tariff

September 5, 1979

Take notice that on August 27, 1979 Lawrenceburg Gas Transmission Corporation (Lawrenceburg) tendered for filing two (2) substitute revised gas tariff sheets to its FERC Gas Tariff, First Revised Volume No. 1, both of which are dated as issued on August 24, 1979, proposed to become effective August 1, 1979, and identified as follows:

Substitute Eighteenth Revised Sheet No. 4, and Substitute Seventeenth Revised Sheet No. 18.

Lawrenceburg states that its substitute tariff sheets were filed to reflect a reduction in its cost of gas purchased from Texas Gas Transmission Corporation which occurred subsequent to its PGA filing made on June 28, 1979. The Commission by letter order issued August 2, 1979 had accepted Lawrenceburg's PGA filing subject to revisions to reflect decreases in its cost of gas purchased from Texas Gas.

Copies of this filing were served upon Lawrenceburg's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Secretary.

[FR Doc. 79-28234 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. ER79-482]

Mississippi Power Co.; Order Accepting for Filing and Suspending Proposed Increased Electric Tariff Rates, Granting Intervention and Establishing Procedures

Issued August 24, 1979

On June 29, 1979, Mississippi Power Company (Mississippi) tendered for filing a revision of the rates included in its Seventh Revised Sheet No. 3 and its Eighth Revised Sheet No. 4 (designated as Rate Schedule MRA-14) to its FERC Electric Tariff, Original Volume No. 1, to become effective September 1, 1979.[1] Mississippi states that the proposed rates would increase revenues from jurisdictional sales under the revised tariff by $1,760,960 (4.89%) based upon a projected twelve-month test period ending August 31, 1980.

Public notice of this filing was issued on July 5, 1979. Comments, protests and petitions to intervene were due on or before July 30, 1979.

On July 30, 1979, three electric power associations (Associations) [2] jointly filed a protest and petition to intervene in the proceeding in which they also request a five-month suspension and hearing. In support of their request for a maximum suspension period, Associations allege that Mississippi's proposed increased rates would result in returns substantially greater than those shown by Mississippi due to cost-of-service errors in computing wholesale costs. Associations also allege that the filing is deficient in form in that it is impossible to determine precisely Mississippi's cost-of-service treatment of various elements of alleged wholesale cost.

Participation by Associations in this proceeding may be in the public interest. Pursuant to our policy set forth in Section 2.17 of our General Policy and Interpretations, we find it is appropriate that price squeeze procedures be initiated in this docket. However, as we stated recently,[3] we believe that decisions on cost-of-service, capitalization and rate of return issues in rate proceedings may reduce proposed wholesale rates to the point where price squeeze concerns are eliminated, or at least substantially diminished by resulting refunds. Hence, we shall order that the price squeeze portion of this proceeding be held in abeyance until after issuance of a Commission opinion establishing the rate which, but for a consideration of price squeeze, would be just and reasonable. If, in the view of the alleging party, the price squeeze persists at that time, a second phase of the proceeding will follow for the hearing and adjudication of price squeeze under Section 2.17 (*supra*).

There may be situations in which price squeeze issues should not be deferred. We leave it to the discretion of the presiding judge in this proceeding to determine whether this case is one. The presiding judge may act on his or her own motion or upon the request of a party to accelerate the price squeeze phase; however, such rulings are discretionary rulings which shall not be appealable to the Commission under Section 1.28 of our Rules of Practice and Procedure, 18 CFR 1.28.

Our review of Mississippi's filing indicates that the proposed rates have not been shown to be just and reasonable and may be unjust, unreasonable, unduly discriminatory or otherwise unlawful. Therefore, we shall accept Mississippi's proposed rates for filing and suspend them for one month, to become effective October 1, 1979, subject to refund.

The Commission Orders: (A) Mississippi's proposed rates hereby are accepted for filing and suspended for one month, until October 1, 1979, when they shall become effective, subject to refund.

(B) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy regulatory Commission by Section 402(a) of the Department of Energy Organization Act and by the Federal Power Act (18 CFR, Chapter I), a public hearing shall be held concerning the justness and reasonableness of the rates proposed in this docket by Mississippi.

(C) Associations hereby are permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission; *provided, however,* that participation by the intervenor shall be limited to matters set forth in its petition to intervene; and *provided further,* that the admission of the intervenor shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders by the Commission entered in this proceeding.

(D) An Administrative Law Judge shall be designated by the Chief Administrative Law Judge for purposes of convening a conference in ths proceeding. The conference shall be held within the (10) days after the service of top sheets in a hearing room of the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C., 20426. The Presiding Law Judge is authorized to establish all procedural dates and to rule upon all motions (except motions to consolidate and sever and motions to dismiss) as provided for in the Commission's Rules of Practice and Procedure.

(E) We hereby order initiation of price squeeze procedures and further order that this proceeding be phased so that the price squeeze procedures begin after issuance of a Commissin opinion establishing the rate which, but for a consideration of price squeeze, would be just and reasonable. The Presiding Judge may order a change in this schedule for good cause. The price squeeze portion of this case shall be governed by the procedures set forth in Section 2.17 of the Commission's regulations, as they may be modified prior to the initiation of the price squeeze phase of this proceeding.

(F) The Staff shall prepare and serve top sheets on all parties for settlement purposes on or before November 30, 1979.

(G) The Secretary shall cause prompt publication of this order to be made in the **Federal Register.**

By the Commission.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket Nos. RP76-96, RP77-14 and RP77-57]

National Fuel Gas Supply Corp.; Proposed Changes in FERC Gas Tariff

September 4, 1979

Take notice that on August 29, 1979 National Fuel Gas Supply Corporation (National) tendered for filing as part of its FERC Gas Tariff, Original Volume No. 1, Second Substitute Eighth Revised Sheet No. 4 proposed to be effective November 1, 1976, Substitute Third Revised Sheet No. 35 proposed to be effective November 1, 1976, Substitute Third Revised Sheet No. 36 proposed to be effective November 1, 1976, Second Substitute Tenth Revised Sheet No. 4 proposed to be effective February 1, 1977, Third Substitute Thirteenth Revised Sheet No. 4 proposed to be effective November 1, 1977, Substitute Twenty-Fourth Revised Sheet No. 4 proposed to be effective Janaury 1, 1979, and Twenty-Eighth Revised Sheet No. 4 proposed to be effective September 1, 1979.

National states that these sheets are being filed pursuant to the Commission's Opinion No. 58, issued August 6, 1979 in Docket Nos. RP76-96, RP77-14, and RP77-57, and to reflect the property transfer approved in Docket No. CP78-334.

National requests that the Commission grant such waivers of its regulations as it deems necessary to permit the revised tariff sheets to become effective on the dates requested.

It is stated that copies of the filing have been mailed to all of its jurisdictional customers, interested state regulatory commissions and parties to the proceeding in Docket Nos. RP76-96, RP77-14 and RP77-57.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before September 19, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants party to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

As more fully explained in the instant filing, the tariff sheets incorporate the current gathering and transportation rates for each related rate schedule as determined by Northwest and supported by its Motion to Place Rates into Effect ("Motion") at Docket No. RP79–57 filed concurrently herewith. Said Motion also reflects the estimated revenue impact of the new rates.

The proposed effective date for the tendered tariff sheets is October 1, 1979.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before Sept. 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79–28238 filed 9–10–79; 8:45 am]

BILLING CODE 6450–01–M

Docket No. GP79–35]

State of Louisiana, 103 NGPA Determination, Florida Gas Exploration Co., 7900 RA SUA L&N RR Co., No. 6 Well, JD79–3495, Louisiana NGPA No. 79–745; Final Order on Well Category Determination

Issued August 27, 1979

On June 15, 1979, the Commission issued a notice of preliminary finding that the determination by the State of Louisiana Office of Conservation (Louisiana), Florida Gas Exploration Company 7900 RA SUA L&N RR Co. No. 6 well qualifies as a new, onshore production well under Section 103 of the Natural Gas Policy Act of 1978 (NGPA), was not supported by substantial evidence in the record on which the determination was based.

A well qualifies as a new, onshore production well under Section 103 of the NGPA only if, among other requirements, the surface drilling of the well began on or after February 19, 1977. The Basis for the Commission's preliminary finding was that the record accompanying Louisiana's determination indicated that the subject well was a reentry to an old well which had been spudded prior to February 19, 1977.

On July 6, 1979, Louisiana submitted a supplement to its original determination which included additional evidence demonstrating that the subject well is actually located twenty feet from the old well and is a new well having been spudded after February 19, 1977. Louisiana also states that the subject well was drilled within a proration unit in existence at the time the surface drilling of such well began, and that natural gas had been produced in commercial quantities from another well in the proration unit. In accordance with § 271.305(c) of the regulations, Louisiana made an implicit finding that the subject well was necesaary to effectively and efficiently drain the portion of the reservoir covered by the proration unit which could not be effectively and efficiently drained by any existing well within the proration unit, and the record developed by Louisiana prior to the commencement of drilling would support an explicit finding to this effect.

Thus, pursuant to 18 CFR § 275.202(e), the Commission orders that Louisiana's determination—that the Florida Gas Exploration Company 7900 RA SUA L&N RR Co. No. 6 well qualifies as a new, onshore production well under Section 103 ofthe NGPA—be affirmed.

By direction of the Commission.

BILLING CODE 6450–01–M

[Docket No. GP79–88]

South Texas Natural Gas Gathering Co., Petition for Declaratory Order

September 5, 1979

Take notice that on August 15, 1979, South Texas Natural Gas Gathering Company (South Texas), Five Greenway Plaza East, Houston, Texas 77046, filed a petition for declaratory order pursuant to section 1.7(c) of the Commission's Rules of Practice and Procedure, 18 C.F.R. § 1.7(c). The petition requests that the Commission determine the proper vintage classification for a well from which South Texas purchases gas for resale in interstate commerce, i.e., the A.A. McAllen Well No. 34, Texas Railroad Commission I.D. No. 54803 (Well No. 34).

South Texas states that it is a natural gas company engaged in the gathering, transmission, sale, and transportation of natural gas through company owned and operated lines in Texas. South Texas further states that it purchases natural gas produced from Well No. 34 from Shell Oil Company (Shell) under FERC Rate Schedule 297, previously authorized in Docket No. CI63–1509.

It is alleged by South Texas that Shell has improperly classified the gas sold from Well No. 34 as subject to the "recompletion" rate approved by the Commission in Opinion No. 770–A (*see* 18 C.F.R. § 2.56a(a)(5)) and incorporated by reference in section 104 of the Natural Gas Policy Act of 1978 (*see* 18 C.F.R. § 271.402). Instead of the recompletion rate, South Texas alleges that production from Well No. 34 should receive the "flowing gas" rate (*see* 18 C.F.R. § 271402] for deliveries on or after December 1, 1978; the rate under Opinion No. 749 (*see* 18 C.F.R. § 2.56b(a)(2)) for deliveries prior to December 1, 1979; and the rate under Opinion No. 595 (*see* 18 C.F.R. § 154.109) for deliveries prior to January 1, 1976. According to its view of the applicable rate for deliveries from Well No. 34, South Texas estimates that its overpayments have approximated $400,000.

South Texas argues that there must be production from an "initial" completion before there can be a "recompletion" within the meaning of the Commission's regulations. South Texas asserts that there has never been more than an "initial" completion and cites records of the Texas Railroad Commission in support of its assertion. South Texas states that the Commission's regulations do not explicitly define either "completion" or "recompletion," so that a declaratory order is necessary to resolve the pricing issue. In the event the Commission determines that the rate charged by Shell is in excess of the lawful rate, South Texas requests that the Commission order Shell to make a prompt refund with interest, and grant such other relief as may be appropriate.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 C.F.R. §§ 1.8 and 1.10). All such petitions or protests should be filed on or before September 28, 1979. Protests will be considerd by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79–28241 Filed 9–10–79; 8:45 am]

BILLING CODE 6450–01–M

[Docket No. CP79–425]

Southern Natural Gas Co.; Application

August 31, 1979

Take notice that on August 1, 1979, Sothern Natural Gas Company (Southern), P.O. Box 2563, Birmingham, Alabama 35303, filed in Docket No. CP79–425 an application pursuant to Section 7 of the Natural Gas Act and Sections 157.7(b), 157.7(c), 157.7(e) and 157.7(g) of the Regulations thereunder (18 CFR 157.7(b), 157.7(c), 157.7(e), and 157.7(g)), for a certificate of public convenience and necessity authorizing the construction during the period commencing October 21, 1979, through December 31, 1980, and operation of gas-purchase facilities; authorizing the construction, for the same time period, and operation of facilities to make miscellaneous rearrangements on its system; for permission and approval to abandon, during the same time period, direct sale service and facilities no longer required for deliveries of natural gas to Southern's customers; and for a certificate authorizing the construction and for permission for and approval of the abandonment, during the same time period, and operation of field gas compression and related metering and appurtenant facilities, all as more fully set forth in the application on file with the Commission and open to public inspection.

The stated purpose of this budget-type application is to enable Southern to act with reasonable dispatch in contracting for and connecting to its pipeline system, and to the system of other natural gas companies authorized to transport for or exchange with Southern, supplies of natural gas in areas generally coextensive with such systems; to augment Southern's ability to act with reasonable dispatch in making miscellaneous rearrangements which would not result in any material change in the service presently rendered by Southern; to augment Southern's ability to act with reasonable dispatch in abandoning service and removing direct sale measuring, regulating, and related facilities[1] and to augment Southern's ability to act with reasonable dispatch in the construction, relocation, and operation and abandonment of facilities which will not result in changing Southern's system salable capacity or service from that authorized prior to the filing of the instant application.

Southern requests waiver of the maximum term limitations of Sections 157.7(b), 157.7(c), 157.7(e) and 157.7(g) of the Regulations to permit the issuance of budget-type authorizations for the lengthened period October 21, 1979, through December 31, 1980, instead of the traditional 12-month period. Southern contends that the purpose of requesting this waiver is to assist in the implementation of the Commission's proposal in its Notice of Proposed Rulemaking in Docket No. RM79–37 to establish budget-type certificates for gas-purchase facilities on a calendar-year basis. Granting this requested waiver of the aforementioned Sections requested would enhance the efficient administration of these authorizations by both Southern and the Commission, it it is stated.

Additionally, Southern requests waiver of Section 157.7(b)(4) in order to permit it to expand the definition of "gas-purchase facilities to include the construction and operation of the following:

(1) Facilities necessary to connect the facilities of a producer or other similar seller allowed by the Natural Gas Policy Act of 1978 (NGPA) to make a sale of gas to Southern for resale in interstate commerce without specific Commisison authorization, with Southern's interstate pipeline system, the system of another natural gas company authorized to transport or exchange such gas with Southern, or with the facilities of an intrastate pipeline authorized by Commission order or pursuant to Section 311(a) of the NGPA to transport such gas for the account of, or for the exchange of such gas with Southern, and

(2) Facilities necessary to connect the facilities of an interstate or intrastate pipeline transporting gas to or for the account of Southern with Southern's Interstate pipeline system or with that of another interstate or intrastate pipeline authorized by Commission order or by Section 311(a) of the NGPA to transport or exchange such gas with Southern.

Southern also requests waiver of the cost ceilings contained in Sections 157.7(b)(1)(i) and (ii), 157.7(c)(3)(i), and 157.7(g)(3), respectively, to permit the total estimated cost of construction of gas-purchase facilities for the lengthened period to be $24,000,000 with no single onshore project to exceed $2,400,000 and no single offshore project to exceed $4,500,000; to permit the total estimated cost of construction of facilities to be constructed to make miscellaneous rearrangements on its system to be $644,400; and to permit the total cost of construction, relocation, removal or abandonment of field compression facilities not to exceed $6,620,000, with no single project to exceed $920,000. Southern states that these increased cost ceilings are necessary to offset the effect of inflation and real increases in construction costs since the present cost ceilings were established. Southern further states that the cost of all facilities proposed to be constructed herein would be financed with cash on hand or with cash available from current operations.

The application states that Southern would not abandon any direct service unless it would have received a written request or written permission from the customer to terminate service. In the event such request or permission could not be obtained, a statement certifying that the customer has no further need for service would be filed with the Commission, it is said.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate and permission and approval for the proposed abandonment are required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further

[1] Southern states that it would abandon service and facilities only when deliveries to any one direct sale customer would not exceed 100,000 Mcf of natural gas during the last year of service.

notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Southern to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No RP72-121 PGA79]

Southwest Gas Corp.; Change in Rates Pursuant to Purchased Gas Cost Adjustment

September 5, 1979

Take notice that on August 27, 1979, Southwest Gas Corporation ("Southwest") tendered for filing Fourth Revised Sheet No. 10 constituting the Statement of Rates of its FERC Gas Tariff, Original Volume No. 1. According to Southwest, the purpose of this filing is to adjust rates of Southwest under its Purchased Gas Adjustment Clause in Section 9 of the General Terms and Conditions contained in said tariff, as a result of changes in rates from its supplier, Northwest Pipeline Corporation ("Northwest"), effective October 1, 1979. The proposed effective date for Southwest's proposed change in rates is October 1, 1979.

Southwest states that copies of the filing have been mailed to the Public Service Commission of Nevada, the California Public Utilities Commission, Sierra Pacific Power Company and CP National (formerly California-Pacific Utilities Company).

Any person desiring to be heard, or to protest said filing, should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 21, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. CP77-297]

Tennessee Gas Pipeline Co., a Division of Tenneco Inc.; East Tennessee Natural Gas Co.; Petition To Amend

August 31, 1979

Take notice that on August 8, 1979, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), P.O. Box 2511, Houston, Texas 77001, and East Tennessee Natural Gas Company (East Tennessee), P.O. Box 10245, Knoxville, Tennessee 37919, filed in Docket No. CP77-297 a petition to amend further the order issued April 29, 1977,[1] as amended, issuing a certificate of public convenience and necessity in the instant docket pursuant to Section 7(c) of the Natural Gas Act and Section 2.79 of the Commission's General Policy and Interpretations (18 CFR 2.79) by authorizing an extension for an additional two years of the transportation service for William L. Bonnell Company (Bonnell), all as more fully set forth in the petition to amend which is on file with the Commission and open for public inspection.

Tennessee and East Tennessee were authorized to transport up to 1,200 Mcf per day for Bonnell. The volumes transported were produced by Forman Exploration Company, *et al.* (Forman), from the Cadeville Field, Ouachita Parish, Louisiana, and were received by Tennessee for Bonnell's account at Tennessee's Greenbrier Sales No. 2 delivery point to East Tennessee located in Robertson County, Tennessee. Also, pursuant to the authorization and East Tennessee's Rate Schedule T-5, East Tennessee transported the gas delivered to it by Tennessee to Middle Tennessee Natural Gas Utility District for redelivery to Bonnell.

On March 24, 1978, Tennessee and East Tennessee were authorized to receive gas for the account of Bonnell from an additional source, Texas Pacific Oil Company (UK), Inc. (Texas Pacific).

The authorization, as amended, expired on May 31, 1979 and the purchase contracts between Bonnell and Forman and Bonnell and Texas Pacific are terminated.

The petition asserts that Bonnell has a continuing need for a supplemental supply for natural gas. Accordingly, Bonnell entered into a new gas purchase contract with Forman dated May 31, 1979. Tennessee and East Tennessee request authorization for the continuation of the transportation service for Bonnell for an additional two-year period of volumes of natural gas produced by Forman from the Cadeville Field, Ouachita Parish, Louisiana, with maximum daily volumes not to exceed 600 Mcf per day for the first year and not to exceed 300 Mcf per day for the second year as set out in said new contract between Bonnell and Forman. The proposed service does not contemplate further deliveries from Texas Pacific.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before Sept. 21, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28251 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

[Docket Nos. CP77-286; CP77-316]

Transcontinental Gas Pipe Line Corp., United Gas Pipe Line Co.; Petition to Amend

August 31, 1979

Take notice that on August 8, 1979, Transcontinental Gas Pipe Line Corporation (Transco), P.O. Box 1396, Houston, Texas 77001, and United Gas Pipe Line Company (United), P.O. Box 1478, Houston, Texas 77001, filed in Docket No. CP77-286 and CP77-316, respectively, a petition to amend the order issued May 20, 1977 [1] issuing certificates of public convenience and necessity in the instant dockets pursuant to Section 7(c) of the Natural Gas Act and Section 2.79 of the Commission's General policy and Interpretations (18 CFR 2.79) by authorizing an extension of the term of the transportation service rendered for Dan River, Inc. (Dan River), for an additional two years, all as more fully set forth in the petition to amend which is on file with the Commission and open for public inspection.

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

Transco and United are authorized to transport on an interruptible basis up to 1,300 Mcf per day of gas for Dan River, an existing industrial customer of the City of Danville, Virginia, (Danville) and Piedmont Natural Gas Company, Inc. (Piedmont), two of Transco's resale customers served under Rate Schedule CD-2.

Dan River causes such gas to be delivered to United in St. John the Baptist Parish, Louisiana, and United, in turn, delivers the gas to Transco at mutually agreeable existing authorized points of exchange. Transco redelivers the subject gas to Danville and Piedmont for the account of Dan River.

The petition indicates that Dan River has entered into a new gas purchase agreement dated June 6, 1979, with Jar Timber Corporation, Vermilion Bay Land Company, John Stuart Hunt, Jean Gannon Hunt, Sherman M. Hunt, and Mary Andrews Hunt, to continue the sale of gas from the No. 1 Lutcher Moore Cypress well for an additional two-year term. Additionally, Dan River has entered into new transportation agreements with Transco and United, to continue the transportation of the subject gas.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before September 21, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28252 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-230]

Transcontinental Gas Pipe Line Corp.; Petition To Amend

August 30, 1979

Take notice that on August 3, 1979, Transcontinental Gas Pipe Line Corporation (Transco), P.O. Box 1396, Houston, Texas 77001, filed in Docket No. CP79-230 a petition to amend the Commission's order of June 7, 1979, issued in the instant docket pursuant to Section 7(c) of the Natural Gas Act so as to authorize an increase in the maximum daily quantities of gas which Transco is authorized to transport for El Paso Natural Gas Company (El Paso), all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

Pursuant to the Commission's order of June 7, 1979, issued in the instant docket, Transco is presently authorized to transport up to 30,000 Mcf of natural gas per day for El Paso. Transco indicates that it is presently transporting such quantities of gas for El Paso from a point of interconnection of its Southwest Louisiana Gathering System (SW System) and the tailgate of the separation plant of U-T Offshore System at Johnson's Bayou, Cameron Parish, Louisiana, to a point of connection between the facilities of Transco and the Katy Plant of Exxon Company, U.S.A., in Waller County, Texas, and the point of connection between the facilities of Transco and Houston Pipe Line Company near Fulshear, Fort Bend County, Texas.

El Paso now desires to increase the maximum daily transportation quantities from 30,000 Mcf per day to 60,000 Mcf per day and Transco requests that the Commission amend the order in the instant docket to provide for such increase daily transportation quantities.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before September 20, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. RP77-19]

Transwestern Pipeline Co.; Proposed Changes in FERC Gas Tariff

September 4, 1979

Take notice that Transwestern Pipeline Company (Transwestern) on August 28, 1979, tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, various tariff sheets reflecting interim rates for the period June 1, 1977 through February 28, 1979. These sheets are being issued pursuant to the Commission's Order Approving Stipulation and Agreement Subject To Conditions And Setting Reserved Issues For Hearing issued July 9, 1979 in Docket No. RP77-19. These sheets reflect interim base tariff rates as set forth in Appendix B of the Stipulation and Agreement approved by the Commission for the locked-in period June 1, 1977 thru February 28, 1979 in accordance with the terms of the Stipulation and Agreement.

The interim rates are pending determination of the final rates subject to the resolution of certain unresolved issues in RP75-74 and RP77-19 as set forth in the Commission's July 9, 1979 order.

Copies of the filing were served upon the company's jurisdictional customers and interested state commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, DC 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before September 20, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-28254 Filed 9-10-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket No. CP79-404]

Washington National Gas Company, as Project Operator; Application

August 30, 1979

Take notice that on July 9, 1979, Washington Natural Gas Company, as Project Operator (Washington), 815 Mercer Street, Seattle, Washington

V 4 4 / 1 7 7

98111, filed in Docket No. CP79-404 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of the Jackson Prairie Storage Project located in Lewis County, Washington, in such a manner as necessary to increase deliveries to Northwest Pipeline Corporation (Northwest), all as more fully set forth in the application which is on file with the Commission and open for public inspection.

The application indicates that the Jackson Prairie Storage Project [1] is an aquifer type storage area which provides storage capacity for the rendition of a special winter peaking service by Northwest pursuant to its Rate Schedule SGS-1 in its FERC Tariff Original Volume No. 1.

The project is authorized to deliver up to 300,000 Mcf daily, with an additional best efforts increment of 71,800 Mcf, for a combined daily capability of 371,800 Mcf, including both firm and best efforts gas. The project is further authorized on a temporary basis to deliver up to 10,800,000 Mcf during a seasonal period, commencing October 1 of each year and continuing through the succeeding April 30.

Washington asserts that Northwest also purchases storage capacity from Mountain Fuel Resources Inc. in the Clay Basin Storage Field. Washington has been informed that Mountain Fuel Resources Inc. and Northwest are presently authorized to utilize Clay Basin for the withdrawal of up to 150,000 Mcf per day and 20,000,000 Mcf seasonally. As a result of improved Canadian gas deliveries, Northwest determined that it could fulfill the request of a number of its customers for additional gas volumes in the winter months. In order to provide such volumes Northwest proposed to convert a portion of the Clay Basin storage capability and to provide such volumes under a Winter Service Rate Schedule. To assure that Northwest has sufficient storage capability to protect its firm contract demands, Northwest determined that with 75,000 Mcf of daily deliverability and a seasonal capability of 2,000,000 Mcf it could effectively protect its firm peak day requirements. Therefore, Northwest has made the necessary arrangements to utilize the Jackson Prairie Storage Project for this purpose as well as for the purpose of providing storage service pursuant to Northwest's SGS-1 Rate Schedule.

[1] Washington, Northwest and The Washington Water Power Company are joint and equal undivided owners in the Jackson Prairie Project and Washington acts as operator of the project.

The utilization of Jackson Prairie by Northwest for its account would require that Washington store and deliver to Northwest up to 2,000,000 Mcf on a seasonal basis. At least 1,000,000 Mcf of this is to be in place prior to the commencement of the heating season, with the 1,000,000 Mcf to be injected by Northwest during off peak periods of the winter season as space is provided. Winter service would require an increase in firm deliverability of 25,000 Mcf per day, increasing the presently authorized level of 300,000 Mcf per day to 325,000 Mcf per day.

Washington requests authorization to operate the Jackson Prairie Storage Project so as to be able to increase deliveries to Northwest of seasonal working gas quantities, beginning with 1979/80 heating season until April 30, 1982, from the present authorized level of 10,800,000 Mcf to 12,800,000 Mcf and to increase the authorized maximum daily delivery rate from 300,000 Mcf, with an additional best efforts increment of 71,800 Mcf to 325,000 Mcf, with an additional best efforts increment of 71,800 Mcf.

No additional facilities are required and there are no costs associated with this operation.

In order to increase the capability of the Storage Project to achieve the expanded seasonal quantities as proposed, it is indicated that the total storage inventory would increase to not less than 29,900,000 Mcf, comprised of the cushion gas in the storage of not less than 18,100,000 Mcf. The seasonal working gas quantity would be established at 12,800,000 Mcf.

Any person desiring to be heard or to make any protest with reference to said application should on or before September 18, 1979, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Washington to appear or be represented at the hearing.

Kenneth F. Plumb,
Secretary.

BILLING CODE 6450-01-M

[Docket No ER79-630]

The Washington Water Power Co.; Filing

September 6, 1979

The filing company submits the following:

Take notice that on August 31, 1979, The Washington Water Power Company (Washington) tendered for filing a transmission rate for power transfers through its system. This transmission rate is to apply to those wheeling transactions that are not provided for under existing tariffs.

Washington further states that the rate for power transfers is 0.75 mill per kilowatt-hour plus losses.

Washington proposes an effective date of November 1, 1979.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10) should be filed on or before September 26, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 4110-92-M

FEDERAL RESERVE SYSTEM

American Security Corp.; Proposed Acquisition of American Security Financial Services

American Security Corporation, Washington, D.C., has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 18432(c)(8)) and

§ 225.4(b)(2) of the Board's Regulation Y (12 CFR § 225.4(b)(2)), for permission to acquire voting shares of American Security Financial Services, Bethesda, Maryland.

Applicant states that the proposed subsidiary would engage in the activities of a consumer finance company, make first mortgage loans, sell credit life, accident and health insurance directly related to its extensions of credit, and sell travelers checks, money orders and savings bonds. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b). Applicant also states that the proposed subsidiary would offer Applicant's debentures for sale to the public and cash checks for its customers. These activities would be performed from offices of Applicant's subsidiary to be located in Bethesda, Maryland and Arlington County, Virginia, and the geographic areas to be served are the Maryland and Virginia suburbs of Washington, D.C.

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for as hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Richmond.

Any views or requests for hearing should be submitted in writting and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than October 1, 1979.

Board of Governors of the Federal Reserve System, August 31, 1979.

Griffith L. Garwood,

Deputy Secretary of the Board.

[FR Doc. 79-28169 Filed 9-10-79; 8:45 am]

BILLING CODE 6210-01-M

Bank Holding Companies; Proposed De Novo Nonbank Activities

The bank holding companies listed in this notice have applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(1) of the Board's Regulation Y (12 CFR 225.4(b)(1)), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirecly, solely in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to each application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." Any comment on an application that requests a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of that proposal.

Each application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated for that application. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writing and received by the appropriate Federal Reserve Bank not later than October 5, 1979.

A. *Federal Reserve Bank of Chicago*, 230 South LaSalle Street, Chicago, Illinois 60690:

Security Agency, Inc., Decorah, Iowa (personal property leasing activities; Iowa): to engage, through its subsidiary, Security Leasing Company, Inc., in making leases of personal property in accordance with the Board's Regulation Y. This activity would be conducted from an office in Decorah, Iowa, serving Winneshiek County, Iowa.

B. *Other Federal Reserve Banks:* None.

Board of Governors of the Federal Reserve System, September 5, 1979.

Theodore E. Allison,

Secretary of the Board.

BILLING CODE 6210-01-M

Town Financial Corp.; Proposed Retention of Town Finance Co., Inc.

Town Financial Corporation, Hartford City, Indiana, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. § 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR § 225.4(b)(2)), for permission to retain voting shares of Town Finance Company, Inc., Hartford City, Indiana.

Applicant states that the subsidiary engages in making consumer loans, financing retail installment sales contracts, and issuing credit life and credit accident and health insurance in connection with extensions of credit. These activities are performed from offices of Applicant's subsidiary in Hartford City, Logansport, Muncie, Tell City, Auburn, Bluffton, and Columbia City, Indiana; and Albion, Big Rapids, Charlotte, Dowagiac, Grand Ledge, Holland, and Monroe, Michigan. The geographic areas to be served are the counties in Indiana and Michigan in which the offices listed above are located. Such activities have been specified by the Board in section 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of section 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank or Chicago.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than October 4, 1979.

Board of Governors of the Federal Reserve System, September 4, 1979.

BILLING CODE 6210-01-M

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of Education

Title I, Elementary and Secondary Education Act; Intent of Waive Certain Title I, ESEA, Statutory Requirements for American Samoa Beginning on July 1, 1979.

AGENCY: Office of Education, HEW.

ACTION: Notice of intent.

EFFECTIVE DATE: The effective date of this notice is October 11, 1979.

ADDRESSES: Division of Education for the Disadvantaged, U.S. Office of Education, 400 Maryland Avenue, S.W., (Room 3642–E, ROB–3), Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Mrs. Genevieve Dane, (202) 245–2506.

SUMMARY: Notice is given that, under section 1004(a) of the Elementary and Secondary Education Act of 1965 (as amended by the Education Amendments of 1978), the Commissioner intends to waive the applicability of certain title I, ESEA, requirements to the American Samoa Department of Education beginning July 1, 1979. In addition to identifying the title I requirements that the Commissioner intends to waive, this notice sets forth the terms and conditions upon which the Commissioner intends to grant the waiver.

SUPPLEMENTARY INFORMATION:

A. Authority for Granting a Waiver

The Elementary and Secondary Education Act of 1965 was recently amended by the Education Amendments of 1978, to authorize the Commissioner to waive certain title I, ESEA, requirements for American Samoa. In particular, section 1004(a)(1) of the Act states the "(i)f the Commissioner determines that compliance with any of the requirements of this Act by . . . American Samoa, . . . is impractical or inappropriate because of conditions or circumstances particular to that jurisdiction, he may waive any of those requirements upon the request of the State educational agency."

B. Waiver Request

On May 18, 1979, the American Samoa Department of Education requested the Commissioner to waive the applicability of certain title I requirements to all title I funds obligated by the Department beginning on July 1, 1979. This waiver request identifies the requirements contained in, or based upon, the following sections of the title I statutes as those for which it is seeking a waiver:

Section 123(a)
Section 124(a)
Section 124(b)
Section 124(g)(1)
Section 183(f)
Section 124(j)
Section 125
Section 128
Section 168
Section 171(a)(5)

The May 18, 1979, waiver request clearly describes why the title I requirements listed above are impractical or inappropriate in light of conditions in American Samoa. In general, the request is based upon the widespread poverty and educational deprivation that exists throughout the Island. By seeking a waiver for some of the "categorical" requirements of title I, the American Samoa Department of Education hopes to be permitted to use title I funds for activities that are designated to upgrade the entire system.

C. Management Plan

Section 1004(a)(2) of the Elementary and Secondary Education Act of 1965 provides that any waiver of title I requirements for American Samoa must ". . . be subject to such terms and conditions as the Commissioner deems necessary to carry out the purposes of this Act, including the submission by the jurisdiction concerned of a plan for the management of the funds provided under this Act, in order to insure that those funds are used in a manner designed to achieve the purposes of this Act."

In accordance with section 1004(a)(2), the American Samoa Department of Education submitted a management plan in conjunction with its May 18, 1979, waiver request. The management plan indicates how the total title I funds (approximately $1,785,150) will be obligated by the American Samoa Department of Education during the period covered by the waiver. Title I funds will be used to combine a variety of federally-funded English development programs into a comprehensive program for English-as-a-Second Language for all children in grades 1–12. Because virtually all Samoan children experience difficulty with the basic skills of English communication they are at a serious educational disadvantage when asked to function in the totally English curriculum. The American Samoa Department of Education has made a convincing case that since the vast majority of elementary and secondary school students in American Samoa are eligible for title I services, the improvements resulting from the consolidated and expanded English language program will be of significant benefit to title I children.

D. Notice of the Commissioner's Intent to Grant a Waiver

Section 1004(a)(1) of the Elementary and Secondary Education Act of 1965 requires that at least 30 days prior to approving any such request for a waiver, the Commissioner shall ". . . publish in the **Federal Register** a notice of his intent to grant such waiver and the terms and conditions upon which such a waiver will be granted."

In accordance with the above requirement, notice is hereby given that, subject to the terms and conditions described below, the Commissioner intends to waive the requirements contained in the following sections of the title I statute beginning July 1, 1979: 123(a), 124(a), 124(b), 124(g)(1), 183(f), 124(j), 125, 128, 168, and 171(a)(5). As requested by the American Samoa Department of Education, the Commissioner also intends to exempt American Samoa from any regulations or guidelines that are promulgated to implement or interpret those sections.

In addition, the American Samoa Department of Education's obligation to monitor and enforce compliance with title I requirements will be limited to those requirements that are not waived. Unless the Commissioner publishes further notice in the **Federal Register**, his approval of American Samoa's May 18, 1979, waiver request will be granted on the thirtieth day after publication of this notice of intent to waive.

E. Terms and Conditions Upon Which the Commissioner Intends to Grant a Waiver

The Commissioner intends to approve the request for a waiver only if the American Samoa Department of Education formally agrees to comply with the following terms and conditions:

(1) All title I funds that are obligated by the American Samoa Department of Education during the period covered by the waiver must be spent in accordance with—

(a) All applicable statutory and regulatory requirements, except those title I requirements that are specifically identified in the waiver;

(b) These terms and conditions;

(c) The management plan that was submitted in conjunction with the May 18, 1979 waiver request, or amendments to that plan have been approved by the Commissioner; and

(d) Annual title I budgets which have been submitted to and approved by the Commissioner on such dates as the Commissioner may determine.

(2) The American Samoa Department of Education must, on or before September 30 of each year—beginning on September 30, 1980—submit an annual report to the Commissioner which—

(a) Indicates how all title I funds have been spent during that fiscal year;

(b) Describes the results and effectiveness of the title I program during that fiscal year;

(c) Identifies which, if any, title I requirements the Commissioner should continue to waive; and

(d) Indicates why the title I requirements which the Commissioner is requested to continue to waive are impractical or inappropriate.

F. Opportunity for Public Comment

The Commissiner invites public comments on this notice of intent to waive certain title I requirements for American Samoa. Interested persons may send written comments to Mrs. Genevieve Dane, at the address at the beginning of this notice. All comments must be received on or before October 11, 1979.

Ramapough Mountain Indians, Inc.; Receipt of Petition for Federal Acknowledgment of Existence as an Indian Tribe

August 30, 1979

This notice is published in the exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 DM 8.

Pursuant to 25 CFR 54.8(a) notice is hereby given that the Ramapough Mountain Indians, Inc. (40 Malcolm Road, Mahwah, New Jersey 07430) has filed a petition for acknowledgment by the Secretary of the Interior that the group exists as an Indian tribe. The petition was received by the Bureau of Indian Affairs on August 14, 1979. The petition was forwarded and signed by Mr. Otto Mann, Jr.

This is a notice of receipt of petition and does not constitute notice that the petition is under active consideration. Notice of active consideration will be by mail to the petitioner and other interested parties at the appropriate time.

Under Section 54.8(d) of the Federal regulations, interested parties may submit factual or legal arguments in support of or in opposition to the group's petition. Any information submitted will be made available on the same basis as other information in the Bureau of Indian Affairs files.

The petition may be examined by appointment in the Division of Tribal Government Services, Bureau of Indian Affairs, Department of the Interior, 18th and C Streets, NW., Washington, D.C. 20242.

Forrest J. Gerard,

Assistant Secretary—Indian Affairs.

[AA–14015]

Alaska Native Claims Selection

On December 12, 1974, Sealaska Corporation filed selection application AA–14015, later amended, under the provisions of sec. 14(h)(8) of the Alaska Native Claims Settlement Act (ANCSA) of December 18, 1971, as amended (85 Stat. 688, 705; 43 U.S.C. 1601, 1613(h)(8) (1976)), for the surface and subsurface estates of certain lands that were withdrawn pursuant to sec. 16(a) for the Native villages in southeast Alaska.

As to the lands described below, the application, as amended, is properly filed and meets the requirements of the Alaska Native Claims Settlement Act and of the regulations issued pursuant thereto. These lands do not include any lawful entry perfected under or being maintained in compliance with laws leading to acquisition of title.

In view of the foregoing, the surface and subsurface estates of the following described lands, selected pursuant to sec. 14(h)(8) of ANCSA, as amended, aggregating approximately 1,286 acres, are considered proper for acquisition by Sealaska Corporation and are hereby approved for conveyance pursuant to sec. 14(h)(8) of ANCSA:

The Following Lands May Be Conveyed By Patent

That portion of Mineral Survey 419B, Alaska, known as the Washington, Indiana, New York, Geo. W., High Ore, Green Mountain, Brooklyn, Oregon, Alabama, Sola, Iowa, Ohio and New Jersey mill sites, situate in the Copper Mountain Mining District.

Continuing 52.05 acres.

That portion of Mineral Survey 562B, Alaska, known as the Jumbo Nos. 3, 6, 7, 8-Scott, 10 and 11 mill sites, situate in the Copper Mountain Mining District.

Containing 33.267 acres.

Mineral Survey 1599, Alaska, known as the Goshen Nos. 5 and 10 mill sites, situate in the Ketchikan Mining District.

Containing 8.914 acres.

That portion of Mineral Survey 2208, Alaska, known as the Tim Nos. 6 through 14, 16 through 25, 27 through 39, 41 through 52, 55 through 57 and 59 through 62 placer claims, situate in the Ketchikan Mining District.

Containing 986.756 acres.

Aggregating 1,080.987 acres.

The Following Lands May Be Conveyed By Interim Conveyance

That portion of Mineral Survey 419B, Alaska, known as the Chicago and Dakota mill sites, situate in the Copper Mountain Mining District, excluding that portion within five hundred (500) feet of the center of Reynolds Creek (Power Project Nos. 132, 186 and 664).

Containing approximately 2.5 acres.

That portion of Mineral Survey 562B, Alaska, known as the Jumbo Nos. 1, 2, 4 and 5 mill sites, situate in the Copper Mountain Mining District, excluding those portions lying within patented homestead entry No. 98 (U.S. Survey 1191).

Containing approximately 7 acres.

That portion of Mineral Survey 886, Alaska, known as the Wright Nos. 3, 4, 5, 6, 7 and 8 lode claims, situate in the Ketchikan Mining District, which lies within T. 77 S., R. 85 E., Copper River Meridian.

Containing approximately 73 acres.

Mineral Survey 1522B, Alaska, known as the Hetta Mill Site No. 1, situate in the Ketchikan Mining District, excluding that portion which lies within Mineral Survey 419B.

Containing approximately 0.5 acre.

Mineral Survey 1523B, Alaska, known as Hetta Mill Sites Nos. 2 and 3, situate in the Ketchikan Mining District, excluding those portions which lie within Mineral Survey 419B and that portion of the Hetta Mill Site No. 3, which lies within five hundred (500) feet of the center of Reynolds Creek (Power Project Nos. 132, 186 and 664).

Containing approximately 2 acres.

That portion of Mineral Survey 1596, Alaska, known as the Goshen Nos. 4, 5, 9 and 10 lode claims, situate in the Ketchikan Mining District, which lies within Secs. 28 and 33, T. 76 S., R. 84 E., Copper River Meridian.

Containing approximately 40 acres.

That portion of Mineral Survey 2208, Alaska, known as the Tim Nos. 1 through 5, 15 and 58 placer claims, situate in the Ketchikan Mining District, excluding all portions below the mean high tide line.

Containing approximately 80 acres.

Aggregating approximately 205 acres.

The conveyance issued for the surface and subsurface estates of the lands described above shall contain the following reservations to the United States:

1. Pursuant to sec. 17(b) of the Alaska Native Claims Settlement Act of December 18, 1971 (85 Stat. 688, 708; 43 U.S.C. 1601, 1616(b) (1976)), the following public easements, referenced by easement identification number (EIN) on the easement maps attached to this document, copies of which will be found in casefile AA–18968, are reserved to the United States. All easements are subject to applicable Federal, State, or municipal corporation regulation. The following is a listing of uses allowed for each type of easement. Any uses which are not specifically listed are prohibited.

60 Foot Road—The uses allowed on a sixty (60) foot wide road easement are: travel by foot, dogsleds, animals, snowmobiles, two and three-wheel vehicles, small and large all-terrain vehicles, track vehicles, four-wheel drive vehicles, automobiles, and trucks.

One Acre Site—The uses allowed for a site easement are: vehicle parking (e.g., aircraft, boats, ATV's, snowmobiles, cars, trucks), temporary camping, and loading or unloading. Temporary camping, loading, or unloading shall be limited to 24 hours.

a. (EIN 48 G) easement sixty (60) feet in width for an existing road from the shore of Hetta Inlet in MS 562B, Sec. 33, T. 76 S., R. 84 E., Copper River Meridian, easterly to public lands. The uses allowed are those listed above for a sixty (60) foot wide road easement.

b. (EIN 68 C5) A one (1) acre site easement upland of the mean high tide line in MS 562B, Sec. 33, T. 76 S., R. 84 E., Copper River Meridian, on the east shore of Hetta Inlet. The uses allowed are those listed above for a one (1) acre site.

The grant of the above-described lands shall be subject to:

1. Issuance of a patent confirming the boundary description of the unsurveyed lands hereinabove granted after approval and filing by the Bureau of Land Management of the official plat of survey covering such lands;

2. Valid existing rights therein, if any, including but not limited to those created by any lease (including a lease issued under Sec. 6(g) of the Alaska Statehood Act of July 7, 1958 (72 Stat. 339, 341; 48 U.S.C. Ch. 2, Sec. 6(g) (1976))), contract, permit, right-of-way, or easement, and the right of the lessee, contractee, permittee, or grantee to the complete enjoyment of all rights, privileges, and benefits thereby granted to him.

Further, pursuant to sec. 17(b)(2) of the Alaska Native Claims Settlement Act of December 18, 1971 (85 Stat. 688, 708; 43 U.S.C. 1601, 1616(b)(2) (1976)) (ANCSA), and valid existing right recognized by ANCSA shall continue to have whatever right of access as is now provided for under existing law; and

3. Requirements of sec. 22(k) of the Alaska Native Claims Settlement Act of December 18, 1971 (85 Stat. 688, 715; 43 U.S.C. 1601, 1621(k) (1976)), that, until December 18, 1983, the portion of the above-described lands located within the boundaries of a national forest shall be managed under the principles of sustained yield and under management practices for protection and enhancement of environmental quality no less stringent than such management practices on adjacent national forest lands.

Sealaska Corporation is entitled to conveyance of a minimum of 220,201 acres of land selected pursuant to sec. 14(h)(8) of ANCSA. Together with the lands herein approved, approximately 161,635 acres of this entitlement have been approved for conveyance; the remaining entitlement will be conveyed at a later date.

There are no inland water bodies considered to be navigable within the above described lands.

In accordance with Departmental regulation 43 CFR 2650.7(d), notice of this decision is being published once in the **Federal Register** and once a week, for four (4) consecutive weeks, in the SOUTHEAST ALASKA EMPIRE (Juneau). Any party claiming a property interest in lands affected by this decision may appeal the decision to the Alaska Native Claims Appeal Board, P.O. Box 2433, Anchorage, Alaska 99510 with a copy served upon both the Bureau of Land Management, Alaska State Office, 701 C Street, Box 13, Anchorage, Alaska 99513 and the Regional Solicitor, Office of the Solicitor, 510 L Street, Suite 408, Anchorage, Alaska 99501, also:

1. Any party receiving service of this decision shall have 30 days from the receipt of this decision to file an appeal.

2. Any unknown parties, any parties unable to be located after reasonable efforts have been expended to locate, and any parties who failed or refused to sign the return receipt shall have until October 11, 1979 to file an appeal.

3. Any party or unknown who may claim a property interest which is adversely affected by this decision shall be deemed to have waived those rights which were adversely affected unless an appeal is timely filed with the Alaska Native Claims Appeal Board.

To avoid summary dismissal of the appeal, there must be strict compliance with the regulations governing such appeals. Further information on the manner of and requirements for filing an appeal may be obtained from the Bureau of Land Management, 701 C Street, Box 13, Anchorage, Alaska 99513.

If an appeal is taken, the party to be served with a copy of the notice of appeal is: Sealaska Corporation, One Sealaska Plaza, Juneau, Alaska 99801.

Sue Wolf,

Chief, Branch of Adjudication.

Scientific Committee of the Outer Continental Shelf (OCS) Advisory Board; Notice and Agenda for Meeting

This notice is issued in accordance with the provisions of the Federal Advisory Committee Act, Public Law 92–463, 5 U.S.C. App. I and the Office of Management and Budget's Circular A–63, Revised.

The Scientific Committee of the Outer Continental Shelf Advisory Board will meet on October 11, 1979, from 10:00 a.m.–4:00 p.m., and on October 12, 1979, from 9:00 a.m.–1:00 p.m. in Rooms 7000A & B, Department of the Interior, 18th & C Streets, NW., Washington, D.C.

The agenda for the meeting will include the following subjects:

Committee Organization
Introduction to the Environmental Studies Program
Status Report on the FY 1980 Environmental Studies Program
Report from the Director's (Bureau of Land Management) Ad-Hoc Committee on Environmental Studies

The meeting of this Committee is open to the public. Approximately 75 visitors can be accommodated on a first-come/first-served basis. All inquiries concerning this meeting should be addressed to: Piet deWitt, Chief, Branch of Offshore Studies (543), Bureau of Land Management, Washington, D.C. 20240, Telephone: (202) 343–7744.

Ed Hastey,

Associate Director, Bureau of Land Management.

Approved: September 6, 1979.

Guy R. Martin,

Assistant Secretary of the Interior.

Proposed Range Management Program for the Little Lost-Birch Creek Planning Area, Idaho; Availability of Final Environmental Statement

Pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969, the Department of the Interior has prepared a final environmental statement for a proposed grazing management program for the Little Lost-Birch Creek Planning Unit of the Idaho Falls District located in southeastern Idaho.

The proposal involves changes in initial stocking rates, implementing improved grazing systems and installation of certain range improvements. Approximately 332,000 acres of public lands and 65,000 acres of withdrawn lands (Department of Energy) are involved.

Copies of the Final environmental statement are available for inspection at the following locations:

Idaho Falls District Office, Bureau of Land Management, 940 Lincoln Road, Idaho Falls, Idaho 83401, Telephone: (208) 529-1020.

Idaho State Office, Bureau of Land Management, Federal Building, 500 W. Fort Street, Boise, Idaho 83724, Telephone: (208) 384-1770.

Public Affairs, Bureau of Land Management, Interior Building, 18th and C Streets, NW, Washington, D.C. 20240.

A limited number of single copies may be obtained from the Idaho State Director, and the Idaho Falls District Manager, Bureau of Land Management at the above addresses.

This final statement was prepared using the comments received through the public review process on the draft statement. All comments on the draft statement and our responses to these comments are included in Chapter 9 of the final statement.

The final statement itself is not the decision document; however, management decisions can be made 30 days following filing of the final statement with the Environmental Protection Agency and distribution to the public. A range management decision document will be prepared by the District Manager and will be available for review by livestock operators and special interest groups. These decisions will be based upon the proposed grazing management plan, one of the four alternatives, or a combination of the best features of the proposal and alternatives. More specific decisions will subsequently be developed on an allotment by allotment basis.

Dated: September 5, 1979.

Heather L. Ross,

Deputy Assistant Secretary of the Interior.

[FR Doc. 79-28137 Filed 9-10-79; 8:45 am]

BILLING CODE 4310-84-M

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Controlled Substances in Schedules I and II; Establishment of 1980 Aggregate Production Quotas

Section 306 of the Controlled Substances Act of 1970 (21 U.S.C. 826) requires the Attorney General to establish aggregate production quotas for all controlled substances in Schedules I and II each year. This responsibility has been delegated to the Administrator of the Drug Enforcement Administration pursuant to § 0.100 of Title 28 of the Code of Federal Regulations.

On July 6, 1979, a notice of the proposed aggregate production quotas for Schedule I and II controlled substances for 1980 was published in the **Federal Register** (44 FR 39626-7). All interested parties were invited to comment on or object to the proposed aggregate production quotas on or before August 6, 1979. Ciba-Geigy Corporation of Summit, New Jersey and Hoffmann-LaRoche, Inc. of Nutley, New Jersey each submitted comments relative to the proposed quotas.

Relative to levorphanol, Hoffmann-LaRoche, Inc. commented that this proposed quota was inadequate to meet their expected 1980 needs. In light of a trend of increasing sales and the company's experience in 1979 of a low beginning year inventory, Hoffmann-LaRoche requested that the aggregate production quota for levorphanol be increased.

Relative to methylphenidate, Ciba-Geigy Corporation commented that, based on expected 1979 and 1980 needs, the proposed quota will be insufficient to meet 1980 needs. In order not to waive its rights to a hearing, Ciba-Geigy requested a hearing on the proposed quota.

However, the company suggested that this hearing be deferred pending DEA's review of actual 1979 sales and year-end inventories for Schedule I and II substances which will take place in early 1980. Ciba-Geigy expects that this review will lead to a satisfactory resolution to the issue of the 1980 quota for methylphenidate and that no hearing will be necessary.

Pursuant to § 1308.11(c) of Title 21 Code of Federal Regulations, the Administrator of the Drug Enforcement Administration has deemed, in his sole discretion, that hearings relative to any of the above mentioned comments are not necessary at this time.

Therefore, under the authority vested in the Attorney General by Section 306 of the Controlled Substances Act of 1970 (21 U.S.C. 826), and delegated to the Administrator of the Drug Enforcement Administration by § 0.100 of Title 28 of the Code of Federal Regulations, the Administrator of the Drug Enforcement Administration hereby orders that final aggregate production quotas for Schedule I and II controlled substances, expressed in grams of anhydrous acid or base, be established as follows:

Basic class	Established 1980 quota
SCHEDULE I	
2,5-Dimethoxyamphetamine	32,000,000
SCHEDULE II	
Alphaprodine	80,000
Amobarbital	6,089,000
Amphetamine	2,681,000
Anileridine	251,500
Cocaine	1,800,000
Codeine (for sale)	55,712,000
Codeine (for conversion)	2,902,000
Desoxyephedrine (1,644,000 grams for the sproduction of levodesoxyephedrine for use in a non-controlled, non-prescription product, and 301,000 grams for the production of methamphetamine)	1,945,000
Dihydrocodeine	1,045,000
Diphenoxylate	1,220,000
Ecgonine (for conversion)	1,200,000
Ethylmorphine	25,000
Fentanyl	3,000
Hydrocodone	915,000
Levorphanol	11,000
Meperidine	10,500,000
Methadone	1,382,000
Methadone Intermediate (4-cyano-2-dimethylamino-4,4-diphenylbutane)	1,710,000
Methaqualone	11,476,000
Methylphenidate	1,202,000
Mixed Alkaloids of Opium	17,000
Morphine (for sale)	868,000
Morphine (for conversion)	67,556,000
Opium, (tinctures, extracts, etc. expressed in terms of USP powdered opium)	2,284,000
Oxycodone (for sale)	1,800,000
Oxycodone (for conversion)	8,000
Oxymorphone	4,000
Pentobarbital	14,000,000
Phenmetrazine	2,073,000
Secobarbital	7,508,000
Thebaine (for sale)	2,368,000
Thebaine (for conversion)	1,579,000

DEA will review the above established quotas early in 1980 to take into consideration actual 1979 sales and actual December 31, 1979 inventories as well as other information which might be available to DEA. At that time, DEA will again consider those comments received in response to the proposal of July 6, 1979.

This order is effective September 11, 1979.

Dated: August 17, 1979.

Peter B. Bensinger,

Administrator, Drug Enforcement Administration.

BILLING CODE 4410-09-M

DEPARTMENT OF LABOR

Employment and Training Administration

Employment Transfer and Business Competition Determinations Under the Rural Development Act; Applications

The organizations listed in the attachment have applied to the Secretary of Agriculture for financial assistance in the form of grants, loans, or loan guarantees in order to establish or improve facilities at the locations listed for the purposes given in the attached list. The financial assistance would be authorized by the Consolidated Farm and Rural Development Act, as amended, 7 U.S.C. 1924(b), 1932, or 1942(b).

The Act requires the Secretary of Labor to determine whether such Federal assistance is calculated to or is likely to result in the transfer from one area to another of any employment or business activity provided by operations of the applicant. It is permissible to assist the establishment of a new branch, affiliate or subsidiary, only if this will not result in increased unemployment in the place of present operations and there is no reason to believe the new facility is being established with the intention of closing down an operating facility.

The Act also prohibits such assistance if the Secretary of Labor determines that it is calculated to or is likely to result in an increase in the production of goods, materials, or commodities, or the availability of services or facilities in the area, when there is not sufficient demand for such goods, materials, commodities, services, or facilities to employ the efficient capacity of existing competitive commercial or industrial enterprises, unless such financial or other assistance will not have an adverse effect upon existing competitive enterprises in the area.

The Secretary of Labor's review and certification procedures are set forth at 29 CFR Part 75. In determining whether the applications should be approved or denied, the Secretary will take into consideration the following factors:

1. The overall employment and unemployment situation in the local area in which the proposed facility will be located.

2. Employment trends in the same industry in the local area.

3. The potential effect of the new facility upon the local labor market, with particular emphasis upon its potential impact upon competitive enterprises in the same area.

4. The competitive effect upon other facilities in the same industry located in other areas (whether such competition is a factor).

5. In the case of applications involving the establishment of branch plants or facilities, the potential effect of such new facilities on other existing plants or facilities operated by the applicant.

All persons wishing to bring to the attention of the Secretary of Labor any information pertinent to the determinations which must be made regarding these applications are invited to submit such information in writing within two weeks of publication of this notice. Comments received after the two-week period may not be considered. Send comments to: Administrator, Employment and Training Administration, 601 D Street, N.W., Washington, D.C. 20013.

Signed at Washington, D.C. this 5th day of September 1979.

Earl T. Klein,

Director, Office of Program Services.

Applications Received During the Week Ending Sept. 8, 1979

Name of applicant and location of enterprise	Principal product or activity
J. J. Ferguson Sand and Gravel, Carroll, Leflore, Grenada, and Holmes Counties, Miss.	Production and transportation of sand, gravel and asphalt.

BILLING CODE 4510-30-M

Mine Safety and Health Administration

[Docket No. M-79-112-C]

Forman-Lose Mining Inc.; Petition for Modification of Application of Mandatory Safety Standard

Forman-Lose Mining Inc., Route 2, Box 229, Albright, West Virginia 26519 has filed a petition to modify the application of 30 CFR 75.1710 (canopies) to its No. 1 Mine located in Preston County, West Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 95-164.

The substance of the petition follows:

1. The petition concerns the use of cabs or canopies on electric face equipment in the petitioner's mine.

2. The petitioner is mining coal seams ranging 43 to 55 inches in height. This roof to pavement height is reduced about two and three fourths inches if measured from the roof bolts or about five inches if measured from the cross supports.

3. At times, undulations in the roof reduce roof to pavement clearances to 40 inches.

4. The petitioner believes cabs or canopies in the heights encountered in its mine would result in a diminution of safety for the following reasons:

(a) Cabs or canopies would not allow the equipment oprator proper visibility of surrounding conditions to insure safe operation of the equipment while remaining under the cab or canopy.

(b) Cabs or canopies could dislodge roof support in areas of uneven roof.

(c) The cramped and confined space under a cab or canopy would impair the equipment operator's ability to properly control the equipment.

Request for Comments

Persons interested in this petition may furnish written comments on or before October 11, 1979. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Robert B. Lagather,

Assistant Secretary, Mine Safety and Health.

September 4, 1979.

[FR Doc. 79-28227 Filed 9-10-79; 8:45 am]

BILLING CODE 28227-M

[Docket No. M-79-136-C]

Old Ben Coal Co.; Petition for Modification of Application of Mandatory Safety Standard

Old Ben Coal Company, 125 South Wacker Drive #2400, Chicago, Illinois

60606, has filed a petition to modify the application of 30 CFR 75.902 (cable couplers) to its Nos. 21, 24, 25, 26, and 27 Mines, its Central Shop, and its John Ross Preparation Plant, all located in Franklin County, Illinois. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 95–164.

The substance of the petition follows:

1. The standard states in part that cable couplers must be constructed so that during uncoupling the ground check continuity conductor must be broken (opened) first and the ground conductors broken last.

2. The petitioner uses primarily a pilotless ground monitoring system in conjunction with its cable couplers. This system does not have a separate ground check continuity conductor.

3. The petitioner's couplers are used with an external ground pin to insure that the coupler housing remains grounded to the receptacle until the phase pins disengage.

4. During uncoupling, the couplers hinge at the top so that the coupler interlock switch breaks first, the ground pin and one phase pin break next, followed by the other two phase pins, and the external ground pin breaks last.

5. The coupler interlock switch connects directly to the circuit breaker trip circuit, tripping the circuit breaker when the coupler is uncoupled. If the coupler interlock fails, the ground monitor trips the circuit breaker when the ground pin breaks.

6. The petitioner believes that its couplers and ground monitoring system provide the same measure of protection as the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before October 11, 1979. Comments must be filed with the Office of Standards, regulations and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Robert B. Lagather,

Assistant Secretary, Mine Safety and Health.

BILLING CODE 4510-43-M

[Docket No. M-79-26-M]

Sunshine Mining Co.; Petition for Modification of Application of Mandatory Safety Standard

Sunshine Mining Company, P.O. Box 1080, Kellogg, Idaho 83837, has filed a petition to modify the application of 30 CFR 57.19-40 (sheave grooves) to its Sunshine Mine located in Shoshone County, Idaho. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977, Pub. Law 95–164.

The substance of the petition follows:

1. The standard states in part that sheaves must have grooves properly contoured for the rope diameter used.

2. During shaft operations at its mine, the petitioner proposes to use a ⅞" rope with a sheave grooved for 1⅛" diameter rope.

3. The service life of the rope will be shortened with this combination; however, the petitioner believes there will be no diminution of safety to its workers because the very nature of shaft sinking, i.e., increasing depth, will necessitate replacing the hoisting rope long before it is worn out.

4. As part of its alternative method, the petitioner proposes frequent and thorough cable inspections involving periodic cable cuts to ensure the integrity of its hoisting rope.

5. The petitioner believes that its alternative method will achieve no less protection for its miners than that provided by the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before October 11, 1979. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

BILLING CODE 4510-43-M

Office of the Secretary

[TA-W-5724-5]

Eastern Associated Coal Corp., Keystone, W. Va., Herndon, W. Va. Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an invetigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on July 10, 1979 in response to a worker petition received on June 15, 1979 which was filed by the United Mine Workers of America on behalf of workers and former workers producing metallurigical coal at Keystone 1 Mine (TA–W–5724) and Keystone 2 & 3 Mines (TA–W–5725) of Eastern Associated Coal Corporation, Beckley, West Virginia. The investigation revealed that there is a preparation plant attached to Keystone 1 Mine and a preparation plant attached to Keystone 2 & 3 Mines. Keystone 1 Mine and Preparation Plant are located in Keystone, West Virginia, and Keystone 2 & 3 Mines and Preparation Plant are located in herndon, West Virginia. In the following determination, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

The Department of Labor conducted a survey of the customers of Eastern Associated Coal Corporation. None of the customers purchased imported metallurgical coal. Some customers did not purchase any imported coke and the remainder decreased their reliance on imported coke in the January–May period of 1979, compared with the same period in 1978.

In a previous determination issued on March 9, 1979 workers at Keystone 1 Mine and Preparation Plant (TA–W–4586, 4586a) were denied eligibility to apply for adjustment assistance on the basis that any decreases in sales or production at the mine in 1978 were caused by either the Untied Mine Workers of America strike or a strike at the Norfolk and Western Railroad, which transports all the coal produced at the mine. In the same determination, workers at Keystone 2 & 3 Mines and Preaparation Plant (TA–W–4587, 4588, 4587a) were denied on the basis that sales or production did not decrease.

Conclusion

After careful review, I determine that all workers of Eastern Associated Coal Corporation, Keystone 1 Mine and Preparation Plant, Keystone, West Virginia, and Keystone 2 & 3 Mines and Preparation Plant, Herndon, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of September 1979.

James F. Taylor,

Director, Office of Mangement, Administration and Planning.

BILLING CODE 4510-28-M

[TA-W-5723 and 5723A]

H. Freeman and Son, Inc., Philadelphia, Pa., Norristown, Pa., Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on July 10, 1979 in response to a worker petition received on June 26, 1979 which was filed by the Amalgamated Clothing and Textile Worker's Union on behalf of workers and former workers producing men's suits, slacks and sportcoats at H. Freeman, Philadelphia, Pennsylvania. The investigation revealed that the Philadelphia plant of H. Freeman and Son, Incorporated, along with a Norristown, Pennsylvania plant, is part of an integrated production process. The investigation was expanded to include the Norristown plant. It is concluded that all of the requirements have been met.

Evidence developed in the course of the investigation revealed that U.S. imports of men's and boys' tailored dress coats and that U.S. imports of men's and boys' tailored dress coats and sportcoats decreased absolutely and increased relative to domestic production in 1978 compared to 1977 and decreased absolutely in the first half of 1979 compared to the same period in 1978.

U.S. imports of men's and boys' tailored suits decreased absolutely and increased relative to domestic production in 1978 compared to 1977 and decreased absolutely in the first half of 1979 compared to the same period in 1978.

U.S. imports of men's and boys' dress and sport trousers and shorts increased absolutely and relative to domestic production in 1978 compared to 1977 and decreased absolutely in the first half of 1979 compared to the same period in 1978.

In a survey conducted by the Department of Commerce, customers accounting for a significant proportion of H. Freeman and Son, Incorporated's sales decline indicated that they had decreased purchaases from H. Freeman and Son, Incorporated and had increased purchases of imported men's suits, slacks and sportcoats. The U.S. Department of Commerce certified H. Freeman and Son, Incorporated as eligible to apply for firm adjustment assistance on August 2, 1979.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with men's suits, slacks and sportcoats produced at H. Freeman and Son, Incorporated plants in Philadelphia, Pennsylvania and Norristown, Pennsylvania contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of the Philadelphia, Pennsylvania and Norristown, Pennsylvania plants of H. Freeman and Son, Incorporated who became totally or partially separated from employment on or after June 22, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 4th day of September 1979.

James F. Taylor,

Director, Office of Management, Administration and Planning.

BILLING CODE 4510-28-M

[TA-W-5856]

Philip Gurian Sons, Inc., Tamaqua, Pa., Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, an investigation was initiated on August 13, 1979 in response to a worker petition received on August 7, 1979 which was filed on behalf of workers and former workers producing ladies' sportswear at the Hometown plant of Philip Gurian Sons, Incorporated, Tamaqua, Pennsylvania.

The Notice of Investigation was published in the **Federal Register** on August 17, 1979 (44 FR 48386). No public hearing was requested and none was held.

The petitioning group of workers in this case was included in a determination (TA–W–5713) issued on August 28, 1979. In that determination, all workers of the Hometown plant of Philip Gurian Sons, Incorporated, Tamaqua, Pennsylvania who became totally or partially separated from employment on or after August 26, 1978 were certified as eligible to apply for worker adjustment assistance.

Since all workers are covered by an existing certification, a new investigation would serve no purpose. Therefore, this investigation is terminated.

Signed at Washington, D.C. this 31st day of August 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

BILLING CODE 4510-28-M

[TA-W-5711, 5740]

M. Jensen, Inc., Just Mort, Inc., Secaucus, N.J., Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigations were initiated on July 5, 1979 and July 11, 1979 in response to worker petitions received on July 5, 1979 which were filed by the International Ladies' Garment Workers' Union on behalf of workers and former workers producing ladies' sportswear at M. Jensen, Incorporated, New York, New York and producing ladies' dresses at Just Mort, Incorporated, New York, New York. The investigation revealed that the plants of M. Jensen, Incorporated and Just Mort, Incorporated are located in Secaucus, New Jersey. It is concluded that all of the requirements have been met.

U.S. imports of women's, misses' and children's slacks and shorts increased absolutely and relative to domestic production from 1976 to 1977 and from 1977 to 1978.

U.S. imports of women's, misses' and children's blouses and shirts increased absolutely from 1976 to 1977 and from 1977 to 1978.

U.S. imports of women's, misses' and children's skirts increased absolutely and relative to domestic production from 1977 to 1978.

U.S. imports of women's, misses' dresses increased absolutely and

relative to domestic production from 1977 to 1978.

Evidence developed during the course of the investigation revealed that Tucker Knits, Incorporated is the parent company of M. Jensen, Incorporated and Raoul, Incorporated and manages Just Mort, Incorporated. Each company produces a separate product line under the label of the company's name but all workers, excluding the salaried workers, work on all product lines. All workers, except designers and salesmen, are employed by Tucker Knits, Incorporated. The designers and salesmen are employed by each respective company.

The Office of Trade Adjustment Assistance conducted a survey of customers of the sportwear products (pants, skirts, and blouses) of M. Jensen and the dresses of Just Mort.

Customers accounting for a significant proportion of the sales of M. Jensen in 1977 reduced purchases from M. Jensen and increased purchases of imported pants, skirts and blouses in 1978 compared to 1977 and in the first half of 1979 compared to the first half of 1978.

Customers accounting for a significant proportion of the sales of Just Mort in 1977 reduced purchases from Just Mort and increased purchases of imported dresses in 1978 compared to 1977.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with ladies' sportswear produced at M. Jensen, Incorporated, Secaucus, New Jersey, and ladies' dresses at Just Mort, Incorporated, Secaucus, New Jersey contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of Tucker Knits, Incorporated, Secaucus, New Jersey engaged in employment related to the production of ladies' sportwear at M. Jensen, Incorporated, and to the production of ladies' dresses at Just Morton, Incorporated and all workers of M. Jensen, Incorporated and of Just Mort, Incorporated, Secaucus, New Jersey who became totally or partially separated from employment on or after November 1, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of September 1979.

James F. Taylor,

Director, Office of Management, Administration and Planning.

BILLING CODE 4510-28-M

[TA-W-5741]

Raoul, Inc., Secaucus, N.J.; Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, an investigation was initiated on July 11, 1979 in response to a worker petition received on July 5, 1979 which was filed by the International Ladies' Garment Workers' Union on behalf of workers and former workers producing ladies' dresses at Raoul, Incorporated, New York, New York. The investigation revealed that Raoul, Incorporated produced ladies' combination suits, such as jumpsuits, dresses and pantsuits and that the Raoul plant is located in Secaucus, New Jersey.

Due to the short term of operation of Raoul, Incorporated and the seasonality of the ladies' apparel industry, there is not sufficient information in this case upon which to base a determination. In addition, worker qualifying requirements in Section 231 of the Act may not be met at this time. Consequently, the investigation has been terminated.

Signed at Washington, D.C. this 31st day of August 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

BILLING CODE 7545-01-M

NUCLEAR REGULATORY COMMISSION

Classification, Downgrading, and Declassification of Information and Systematic Declassification Review Guidelines

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice.

SUMMARY: Section 5-402 of Executive Order 12065, relating to national security information, requires that regulations establishing agency information security policy and guidelines for systematic declassification review shall be published in the Federal Register. This notice contains the Nuclear Regulatory Commission's (NRC) revised NRC Manual Chapter Appendix 2101 Part XIV "Classification, Downgrading and Declassification" of its management directives and NRC's Systematic Review Guidelines and thus fulfills the requirements of the Executive Order as they apply to the Commission.

DATE: Effective date of Part XIV: August 23, 1979. Effective date of Systematic Review Guidelines: July 5, 1979.

ADDRESS: Communications in response to this notice should be sent to the U.S. Nuclear Regulatory Commission; Chief, Security Policy Branch, Division of Security, Washington, DC 20555. Copies of Part XIV, as well as other parts to NRC's Manual Chapter and Appendix 2101, "NRC Security Program," in accordance with 10 CFR Part 9, "Public Records" are available for review at NRC's Public Document Room, 1717 H Street, NW., Washington, DC 20555, 301-427-4472.

Dated at Bethesda, Maryland this 31st day of August 1979.

For the Nuclear Regulatory Commission.

William J. Dircks,

Acting Executive Director for Operations.

U.S. Nuclear Regulatory Commission Manual Chapter and Appendix 2101—Part XIV—Classification, Downgrading and Declassification

A. General Provisions

1. *Purpose and Scope.* This part sets forth procedures for conducting the classification, downgrading and declassification program of the Nuclear Regulatory Commission (NRC).

2. *Basis for Classification, Downgrading and Declassification Program.* Executive Order 12065, "National Security Information," its Information Security Oversight Office implementing directives, the Atomic Energy Act of 1954, as amended, and the Energy Reorganization Act of 1974, as amended, form the basis for the NRC classification, downgrading and declassification program.

3. *Classified Information.* "Classified Information" is a term used to include National Security Information (NSI), Restricted Data (RD) and Formerly Restricted Data (FRD). See Appendix 2101 Part I for definitions.

4. *Policy.* Classification, downgrading and declassification of classified information under the jurisdiction of the NRC is to be performed in a manner to increase the openness of Government operations by limiting classification of information and accelerating declassification, and to improve the protection for information that needs to be classified. Declassification of information shall be given emphasis comparable to that afforded classification. The classification, downgrading and declassification process assesses: the possible threat to the national security from access to the information by unauthorized persons or foreign nations; advantages resulting from declassification to the advancement of science, technology and the general welfare; and the effect of controls on accomplishment of national goals. Classification guidance (guides, bulletins and correspondence) assist in implementing this policy.

Classification and declassification of Restricted Data and Formerly Restricted Data takes place in accordance with the provisions of the Atomic Energy Act of 1954, as amended, and regulations issued thereunder.

5. *Role of Director, Division of Security.* The Director, Division of Security, (1) determines that the classification, change of classification and declassification of National Security Information within the NRC, NRC contractors and other organizations takes place in accordance with E.O. 12065, Information Security Oversight Office (ISOO) directives and other implementing directives including Commission regulations, and (2) provides classification, declassification and change of classification assistance as required to NRC, NRC contractor and other personnel.

B. Classification

1. *Classification Process.* Classification is the process of identifying the information the NRC needs to protect in the interest of the national security or because it is Restricted Data or Formerly Restricted Data, and determining the level of protection needed.

The classification of information, a document or material requires a determination of the:

a. Sensitivity to the national security of the information involved.

b. Assignment of the level of protection (Top Secret (TS), Secret (S) or Confidential (C)) required for the information.

c. Category of classified information (e.g., National Security Information (NSI) or Restricted Data (RD)).

d. Applicability to NSI of the criteria outlined in Section 1-301, E.O. 12065, and the determination that its unauthorized disclosure reasonably could be expected to cause at least identifiable damage to the national security. This provision does not apply to Restricted Data or Formerly Restricted Data which are classified by the Atomic Energy Act and not in accordance with Executive Order 12065.

In the course of classification, and incidental thereto, the authorized classifier:

a. Determines the date or event on which automatic declassification of NSI may take place or the date on which the matter should be reviewed for declassification (e.g., in six years, at the end of twenty years or, in the case of foreign government information, at the end of thirty years).

Restricted Data and Formerly Restricted Data are not subject to automatic declassification and should be declassified by referral to the Division of Security, which will coordinate the matter with the Department of Energy as necessary.

b. Ensures the placement of markings on the document or item of material to indicate the determinations made and to convey the additional information required under Part III of this Appendix.

2. *Importance of Classificction.* Security afforded to information, a document or material is based on the classification assigned to it. Classification markings, security clearances, guards, security repositories and other such security measures are used as appropriate to protect classified matter.

The disclosure of classified information either to unauthorized persons or foreign governments without authorization is likely to result in damage to the national security or foreign relations of the United States. Therefore, it must be restricted to only those authorized individuals who need the information to perform their official duties.

3. *Who Can Classify.* a. *Authorized Classifiers.* (1) Authorized classifiers within the NRC are the Chairman, NRC, and NRC contractor employees and others who occupy a specific position that has been designated in writing by the Chairman, Commissioners or Executive Director for Operations to classify, downgrade and declassify information, documents or material.

(2) Authorized classifiers are designated as either original or as derivative classifiers.

(a) An authorized classifier of NSI with orginal classification authority may determine, based on his own knowledge, authority and expertise, the classification level necessary to protect information or matter in those cases where the information is not covered by classification guidance or in which classification has not otherwise been previously determined.

(b) An authorized classifier with derivative classification authority may classify only that information which is based on a classification determination made by an individual with original classification authority, a source document or in classification guidance (e.g., guide or bulletin). Each official with original classification authority also has derivative classification authority. NRC contractor employees and others may be designated as derivative classifiers.

(c) Each authorized classifier is responsible for assuring that the classification he/she assigns to NSI is strictly in accordance with the classification requirements of the Executive Order and policies established by the NRC and that the classification assigned to Restricted Data or Formerly Restricted Data is in accordance with the classification requirements of the Atomic Energy Act and applicable classification guidance.

b. *Top Secret Classifying Officials.* E.O. 12065 designates the Chairman of the NRC as a Top Secret authorized classifier. By authority of the Order, he may delegate this authority to only the four Commissioners and the Executive Director for Operations. Secret and Confidential original and derivative classifying officials for the NRC are designated by the Commission or Executive Director for Operations on the basis of a request in writing submitted to the Director, Division of Security by the appropriate Office Director or Regional Office Director. Such request shall include:

(1) the designation of the position or positions for which authority is sought,

(2) the level of classification authority requested, and

(3) the justification for such request, including a description of the type of information that is anticipated to require classification and the frequency of the need to exercise such authority.

4. *Classification Guides.* a. Classification Guides for NSI are required under Section 5–403 of Executive Order 12065. Such guides shall:

(1) Identify the information to be protected, using categorization to the extent necessary to insure that the information involved can be identified readily and uniformly;

(2) State which of the classification designations (i.e., Top Secret, or Confidential) applies to the information;

(3) State the duration of classification in terms of a period of time or future event. When such duration is to exceed six years, the reason for such extension shall be provided in the guide. However, if the inclusion of classified reasons would result in a level of classification for a guide that would inhibit its desirable and required dissemination, those reasons need be recorded only on or with the record copy of the guide; and

(4) Indicate how the designations, time limits, markings, and other requirements of the order and this directive are to be applied, or make specific reference to agency regulations that provide for such application.

b. Each classification guide will be kept current and will be reviewed at least once every two years. The Division of Security will maintain a list of all classification guides in use within the NRC and will schedule the reviews.

c. Each classification guide will be approved in writing by the Executive Director for Operations and reviewed by the Commission prior to issuance.

Within NRC, classification guides are grouped in the following categories:

(1) Program Classification Guides. These guides through specific topical terms apply classification policy to a particular aspect of the NRC program. They frequently involve the mission of more than one office or division. Their issuance and revision is the responsibility of the Director, Division of Security, who coordinates with other agencies as required. A program guide establishes an authoritative frame of reference within which more detailed local classification guides may be prepared.

The Division of Security (in conjunction with appropriate Offices and Divisions concerned) determines that a program classification guide is needed to implement policy in a field of work, or that an existing program guide requires revision. The preparation of program classification guides will be coordinated with appropriate offices and divisions including the program office(s) by the Division of Security. Upon approval of the guide by the Executive Director for Operations and review by the Commission, the Director, Division of Security issues it to appropriate NRC, NRC contractor and other personnel for their use.

(2) Local Classification Guides. These guides are based on program classification guides. They provide detailed classification guidance for the programs or segments of programs carried out wholly within the jurisdiction of a single organization. Local classification guides shall be submitted to the Director, Division of Security, for approval prior to use and publication.

5. *Executive Order 12065.* The provisions of Executive Order 12065 apply only to NSI and not to Restricted Data or Formerly Restricted Data.

a. System of Classification, Downgrading and Declassification. E.O. 12065 states that National Security Information must be classified as Top Secret, Secret or Confidential. The definitions of Top Secret, Secret and Confidential information are set forth therein. Authority to originally classify is restricted to agencies concerned with national security matters and limited to the minimum number of persons required for efficient administration. Heads of agencies and other personnel of agencies authorized to originally classify information as Top Secret, Secret or Confidential are specified and limited by the order.

b. Duration of Classification. The E.O. provides that at the time of original classification, each original classification authority must set a date or event for declassification no more than six years later unless:

(1) An original Top Secret authorized classifier determines that information must be classified for a longer period. In such cases a declassification date or event, or a date for review to determine whether declassification is appropriate, must be set. The date or event for declassification shall be as early as national security permits. In any event, this longer period, except for foreign government information, can be for no more than twenty years. (At the end of this twenty years, the Chairman, NRC, may extend the classification for an additional 10-year period provided: a) the category of information has been included in a systematic review guideline; and b) it is reviewed item-by-item at the 20-year mark to determine whether continued protection beyond 20 years is needed.

(2) The information was originated by a foreign government and provided to the United States Government under the condition that it be held in confidence, or the information was produced by the United States, in accordance with a written joint arrangement with a foreign government or international organization of governments, requiring that either the information or the arrangement, or both, be kept in confidence. Foreign government information must not be assigned a date or event for automatic declassification unless the date or event is specified or agreed to by the originating foreign government or originating international organization of governments. Foreign government information classified after the effective date of the order must be assigned a date for declassification or review for declassification which may be up to thirty years from the time the information was classified or acquired.

c. Method of Indication of Extension of Classification Beyond Six Years. The extension authority is to be used sparingly.

(1) National Security Information. Documents and material may be classified for longer than six years by:

(a) A case-by-case determination by an official with original Top Secret classification authority (which must be noted on the face of the document). If possible, a date or event for declassification or review for declassification sooner than twenty years should be used.

(b) A determination by an authorized classifier other than an original Top Secret classification authority based on classification guidance, or a source document approved by an original Top Secret classification authority. Classified documents originated or items of material produced may retain their classification for more than six years, if they contain information which an original Top Secret classification authority requires to be classified beyond that date.

(c) In each case, covered by (a) or (b), the document or item of material will show on its face the reason for extended classification. The annotation may be accomplished either by reference to an agency regulation, a classification guide or other NRC classification guidance that states the reason for extension in narrative form or by a narrative statement on the face of the document. The authorized classifier must sign his name to such document and note on the document the guide item, or source document which authorized the extension.

(2) Restricted Data and Formerly Restricted Data are specifically exempted from all automatic downgrading and declassification procedures of the Executive Order. No indication of exemption other than the "Restricted Data" or "Formerly Restricted Data" marking is necessary.

d. Citation of Extension Authority:

(1) Information covered by a Classification Guide. In classifying information, a document or material containing National Security Information when an approved guide indicates that the contents are subject to extended classification pursuant to E.O. 12065, the document or material should be marked with the declassification or review date or event indicated in the guide.

The citation of the guide in the "Classified by" line, the signature of the authorized classifier in the "Derivative Classifier" line, the name of the approving official for the guide in the "Extended By" line, and the reason given in the guide for the extended classification in the "Reason for Extension" line are required for all extended classification actions. In the case of material, where it is not feasible to place the data on the item, a record maintained by the classifier and information furnished by memorandum to holders should set forth this information.

(2) Information Not Covered by a Guide. If information not covered by an approved classification guide is involved, an NRC regulation or original Top Secret classification authority may specifically sanction extended classification of a particular document or item of material. If an individual document or item of material is involved, the signature of the Top Secret authorized classifier must be obtained as authority for extended classification.

e. Prohibitions on Classification. The order prohibits classification to conceal violations of law, inefficiency or administrative error, to prevent embarrassment to a person, organization or agency, to restrain competition, to limit the dissemination of information that is not classifiable under the order, or to prevent or delay the public release of such information.

f. Administrative Sanctions:

(1) Officers and employees of the United States Government shall be subject to appropriate administrative sanctions if they knowingly and willfully classify or continue the classification of information in violation of E.O. 12065 or any implementing directives, or knowingly, willfully and without authorization disclose information properly classified under E.O. 12065 or prior E.O.s or compromise properly classified information through negligence, or knowingly and willfully violate any other provision of E.O. 12065 or an implementing directive. Any such conduct is to be considered a violation of 10 CFR Part 0 and handled accordingly.

(2) Sanctions may include reprimand, suspension without pay, removal, termination of classification authority, or other sanction in accordance with applicable law and agency regulations.

6. *Atomic Energy Act and Energy Reorganization Act.* The Atomic Energy Act of 1954, as amended, in Subsection 11 defines Restricted Data, and in Subsection 142d establishes the basis for the concept of Formerly Restricted Data. The Act is the basis for the determination that all Restricted Data and Formerly Restricted Data are classified.

The Atomic Energy Act contains, in Sections 141 and 142, a statement of policy in regard to declassification of Restricted Data, requirements for the review of Restricted Data, and removal of information from the Restricted Data category. The Energy Reorganization Act, which created the Energy Research and Development Administration (since merged into the Department of Energy) and the NRC, leaves these provisions in effect.

The U.S. Atomic Energy Commission determined that Restricted Data and Formerly Restricted Data would be classified Top Secret, Secret or Confidential. Classification guidance presently in existence conveys to

authorized classifiers the proper classification level to be assigned to Restricted Data and Formerly Restricted Data.

7. *Determination of Proper Classification.* a. Levels and Special Markings. Classification of information includes the determination and assignment of the level of sensitivity (TS, S, or C), the category of information (NSI, RD, FRD) and any special control markings which may apply [e.g., Warning Notice—Intelligence Sources and Methods Involved (WNINTEL)].

b. Reason for Classification. Among other considerations, the determination of whether information is classified and the level of classification must be based on: (1) the information contained in the document, or the information which may be revealed by study, analysis, observation or use of material; and (2) the information the document or material may reveal when associated with other information, including that which the classifier knows is in the public domain.

The determination is based on the assumption that any person who has access to the document is: (1) highly qualified in the particular field, and (2) thoroughly familiar with the data that have been treated as unclassified in the general subject area.

8. *Responsibilities of Authorized Classifiers.* Each person possessing classification authority, either original or derivative, shall be held accountable for the propriety of his classification actions. Unnecessary classification, overclassification, and underclassification shall be avoided.

The responsibilities of authorized classifiers are set forth in E.O. 12065, "National Security Information," approved June 28, 1978, and its implementing directive of October 2, 1978. Additional policies and procedures are also set forth in this Part.

a. Responsibility for Classification. Authorized original classifiers may classify information, only up to the classification levels for which they have been given classification authority. A derivative classification authority may classify only that information which is based on guidance provided by source documents or previously issued classification guidance. An original classification authority may, in addition to the above, determine classification in cases where no guidance exists, basing his decision on experience and program knowledge. In both cases, it is the responsibility of the authorized classifier to determine the level of classification which is to be applied to official information and to verify, insofar as is practical, the currency of classification guidance or classification level of source documents before applying derivative classification.

b. Responsibility for Unclassified Determination. Any authorized classifier may determine that an unmarked document is, in fact, unclassified. This determination is distinctly different from a declassification determination concerning currently classified information (see D. below). He may use as guidance the information contained in:

(1) The topics of a local guide or other guidance authorized for his/her use;

(2) Previously declassified documents; or

(3) Documents determined to be unclassified by the Division of Security.

c. Referral to Higher Authority. When an authorized classifier is in doubt as to whether information is classified, or as to the proper level of classification or the interpretation of a guide topic or as to which topic applies, or is unable to resolve the classification or failure to classify, he/she should refer the matter promptly to the next higher classification authority or the Division of Security. In cases of unresolvable differences of opinion as to classification, the Division of Security will refer the matter to the NRC Classification Review Committee (see d. below). During the process of determining the proper classification, the document shall be marked and safeguarded in accordance with the procedure for the highest classification under consideration.

d. The NRC Classification Review Committee appointed in accordance with Section 5-404(b) of E.O. 12065 is composed of the following members:

(1) Deputy Executive Director for Operations, Chairman (voting).

(2) Director, Office of Policy Evaluation (voting).

(3) Director of the Office responsible for the matter under review (voting).

(4) Director, Division of Security (voting).

(5) Director, Office of Management and Program Analysis (voting).

(6) Director, Division of Rules and Records (voting).

(7) Executive Legal Director (voting).

(8) Chief, Information Security Branch, Division of Security, Secretary (nonvoting).

A quorum of three voting members shall be necessary to transact the business of the Committee. A majority vote of those members present will reflect the views and determinations of the Committee on the matters under consideration.

e. The functions of the NRC Classification Review Committee are as follows:

(1) The Committee shall act on written suggestions and complaints from persons with or outside the NRC with respect to the administration of the classification-declassification and downgrading aspects of E.O. 12065 and its implementing directive within NRC. Such suggestions and complaints may include those regarding overclassification, failure to classify, or unusual delays in declassifying information and material.

(2) The Committee will consider cases referred to it in writing. Where it finds that unnecessary classification or overclassification has repeatedly ocurred, or in cases of violation of the provisions of E.O. 12065 or the implementing directive, the Committee will report to the Executive Director for Operations, as required, with recommendations for corrective steps to be taken.

(3) The Committee shall exercise the authorities and responsibilities delegated to it under Appendix A of 10 CFR Part 9.

(4) The Committee shall consider any other matters that may be referred to it.

(5) See D.9a. and b and D.10f. through i. below for other functions.

f. In addition to participating as a member of the Classification Review Committee, the Director, Division of Security, is responsible for carrying out decisions of the Executive Director for Operations on recommendations submitted by the Committee under paragraphs e(2), (3), and (5) above.

9. *Responsibilities of Originators of Documents.* a. Originator who is not an authorized classifier. If the originator believes that a document originated by him/her requires classification or has any doubt of the need for classification, he/she shall refer the document to an authorized classifier for decision.

If the originator is certain that a document is unclassified, he/she need not refer it to an authorized classifier but will handle it accordingly.

b. Originator who is an authorized classifier.

(1) Derivative Classification Authority. If the document contains information covered in classification guides or other NRC approved classification guidance or is extracted from a previously classified document, an authorized classifier with derivative classification authority may classify the document. The derivative classifier must, where practicable, verify the information's current level of classification. If the document contains other matter which may require

classification, it must be referred to an authorized original classifier.

(2) Original Classification Authority. Originator may classify his/her own documents and those referred to him/her provided that such action is within the authority delegated to him/her.

10. *Identification of Classification Authority.* Executive Order 12065 requires classified documents to indicate on their face the identity of the authorized classifier.

a. Original Classification Authority. An original classifier may assign classification to information based on classification guidance, extraction or derivation of the information from previously classified information. Additionally, he is authorized to make an initial determination that information requires classification to protect against unauthorized disclosure in the interest of national security, and he is required to designate the level of classification if it is within his delegated authority, or his own experience and detailed program knowledge. When a classified document is originated, the signature of the authorized classifier shall be placed on the face of the document.

b. Derivative Classification Authority. When a document is classified by a derivative classifier, the signature of the derivative classifier shall be placed on the face of the document.

c. Classification Determination. The authorized classifier assumes full responsibility for the classification assigned to the document regardless of the source of the information. The authorized classifier's signature on the face of the document indicates acceptance of this responsibility.

(1) For a document containing only classified information extracted or drawn from other documents or other sources, an authorized classifier, in this case either an original or a derivative classifier, must assume responsibility for the classification of the entire document. However, he should assure himself that the classification assigned to the derivative information is accurate.

If a document contains only classified information extracted or drawn from one other document or source, the identity of the original classifier as shown on the other document or identified with the other source may be cited in the new document.

In the case of classified information extracted or drawn from more than one document, one of which has a higher classification than any of the others, the new document should be assigned the highest classification of the information extracted or drawn. This may be the classification of the more highly classified document unless the new document, as a result of the incorporation of information from a number of sources, requires a still higher classification. If the new document, due to the sensitivity of the compilation, requires a higher classification than any of the source documents, this would be considered to be an original classification determination and must be made by an original classifier. If the new document does not require a level of classification higher than any of the source documents a derivative classifier may authorize the classification at a level equal to the classification of the most highly classified source.

(2) For a document containing classified information extracted or drawn from other documents and additional classified information supplied by the originator, classification would be accomplished by a derivative classifier if the additional information is covered in issued classification guidance. If it is not covered by such guidance, the determination must be made by an original classifier. In either event, the authorized classifier must assume responsibility for the classification of the entire document. His/her identity should be appropriately placed on the document as the authorized classifier.

11. *Specified Instances.* a. *Notices of Classification and Upgrading:*

(1) A notice that a document mistakenly issued as unclassified is in fact, classified, or notice that a document has been mistakenly declassified, must be classified at least at the Confidential National Security Information level, and must be marked to show eligibility for declassification six years from origin or sooner, unless the notice contains information requiring a higher classification, contains information that must remain classified longer than six years, or contains RD or FRD.

(2) If all copies of a document which had been mistakenly issued as unclassified or mistakenly declassified have been classified or destroyed before the declassification date on the notice, the notice (unless the content is otherwise classified) set forth in (1) above shall be declassified immediately and action taken to notify holders of the notice to this effect.

(3) Notice that a classified document has been upgraded to a more restrictive classification may be unclassified provided no classified information is included in the upgrading notice.

(4) The fact that a document issued as unclassified actually contains classified information may not be disclosed over unsecured telecommunication circuits (e.g., by regular telephone conversations).

b. *Downgrading and Declassification Notices.* Notices that a classified document has been declassified or downgraded are unclassified unless the notices otherwise contain classified information.

c. *ADP Matter.* Generally, ADP matter (e.g., cards, tapes and disk packs) is prepared on the basis of a request, or on the basis of information supplied, from sources outside the Automatic Data Processing (ADP) Center. It is the responsibility of the person transmitting data to the ADP Center to advise the Center as to the classification and category of information (NSI, RD or FRD) involved, and also to advise as to the identify of the classifying official. This will guide the Center in protecting and marking the data and any derivative data such as printouts. If extended classification is involved, the person transmitting the data to the Center must also provide the identify of the extending authority and the basis for extension. The ADP matter, when produced, will be marked, documented and controlled consistent with the provisions of Parts III and XII of this Appendix.

d. *Subjects or Titles.* Classified subjects or titles may be used on documents only when it is not feasible to use unclassified titles. Top Secret information shall not be included in a subject or title.

e. *Classified Documents Furnished to other Government Agencies.* Classified documents furnished by NRC, NRC contractors or other personnel associated with the NRC program to other government agencies, their contractors or members of the Armed Forces shall be downgraded, declassified or transclassified only with NRC consent.

f. *Outside Agency Documents.* Classified outside agency documents shall be downgraded, declassified or transclassified only after the consent of the originating agency or government has been obtained.

g. *Information Received from Foreign Governments or International Organizations.* (1) Foreign government information shall either retain its original classification designation or be assigned a United States classification designation that shall assure a degree of protection equivalent to that required by the originating government or international organization.

(2) Any such classified documents shall not be declassified or downgraded without the consent of the originating government or international organization.

V 4 4 / 1 7 7 SEP 11 79 UMI

(3) If the foreign classification on such documents is in English, no additional U.S. classification designation is required to be placed on the documents. If the classification is in a foreign language, an equivalent U.S. classification designation will be added.

h. *Documents Where Classification or Lack of Classification is Questioned.*

(1) When a recipient of a document questions its classification or lack of classification, he shall immediately contact the originator to resolve the matter. Pending determination of its proper classification, the document, together with all copies, drafts, reproductions, extracts, work sheets and the information itself, will be safeguarded in accordance with the highest classification and category which might reasonably be assigned to it.

(2) When such document has been distributed outside the originator's function (i.e., outside an originating Headquarters Office or Division, an originating Regional Office, or an originating contractor facility), the originator shall give immediate notice of the matter to the Division of Security.

(3) When such document has not been distributed outside the originator's function, but the recipient and the originator cannot agree as to the classification of the document within five working days of the questioning of same, the originator shall give immediate written notice of the matter to the Division of Security.

(4) The notices to the Division of Security will be accompanied by a copy of the questioned document, or by advice as to where in NRC Headquarters a copy can be obtained. Any such document transmitted will be safeguarded consistent with (1) above. Notices will include any pertinent information then known to the originating office, including any available information as to the distribution of the document or information. However, unless authorized by the Division of Security, the originating office should not go outside its own boundaries to acquire information for the report.

(5) The Division of Security will determine whether any physically-unclassfied document actually is classified, or whether a physically-classified document is improperly classified, and, if so, will effect appropriate follow-up action, either directly, or through the originating office or function. Division of Security follow-up will include, among other items, determination of the cause of failure to properly classify a document, the applicability of infraction procedures to individuals involved, and the desirability from the standpoint of residual security of the information involved, and recovering copies of the documents.

(6) The originating office or function and any other functions involved shall furnish the Division of Security all possible cooperation in these matters, but will take no action or make no inquiries (such as ascertaining the identity of outside recipients of a document) beyond the confines of their own offices, except as approved by the Division of Security.

12. *Conferences and Symposia.* A times, NRC, NRC contractors, and others affiliated with NRC, sponsor or participate in conferences and symposia which are intended to be unclassified, but which relate to sensitive programs or installations. To minimize the risk of inadvertently revealing classified information at such meetings, the procedures in a. and b., below, have been established.

a. Review of Papers. Papers involving sensitive programs or installations are to be submitted to an NRC authorized classifier (see B.3. above) or the Division of Security for review prior to unclassified use.

b. Briefings. All NRC and NRC contractor personnel, who are to deliver briefings which involve sensitive programs or installations, shall have the text of such briefings reviewed for classification by an authorized classifier or the Division of Security before they are presented.

13. *Publication or Release of Documents.* Where there is any doubt as to whether a document contains NSI, RD, or FRD, the author will refer the document to the Director, Division of Security, or to an NRC authorized classifier for classification review.

a. Review of Documents Prepared by NRC Employees. NRC Contractor Employees or Other NRC Affiliated Personnel. An NRC or NRC Contractor employee, or other person associated with the NRC program may desire to release, as unclassified, information relating to his activity. Contracts for classified work contain clauses that require safeguarding of NSI, RD or FRD. These contracts require that proposed disclosures, whether in the form of documents, visual materials, speeches or otherwise, be reviewed by an authorized classifier to prevent the release of classified information, as well as to obtain appropriate review for patent clearance. NRC employees and other personnel associated with the NRC program are under similar obligation to protect against the unintentional disclosure of classified information in conjunction with the release of unclassified information.

b. Review of Documents Submitted by Uncleared Authors. Documents voluntarily submitted for review by an uncleared author who, to the best of the reviewer's knowledge, has never had access to classified data should be forwarded to the Division of Security for review. If, after review, it is determined that the article contains information which should be classified, the Division of Security shall advise the author, to the extent possible within the bounds of security, of the reason for the necessity for classification and, if possible, take action to have the author delete any classified information contained in the document. In the course of such a review, the Division of Security will refer the documents to other Headquarters Offices and Divisions and other Government agencies, as appropriate.

c. Review of Documents Submitted by Formerly Cleared Persons or by Authors with Active Clearances. Documents submitted by formerly "Q" or "L" cleared persons, by persons with active NRC clearances other than those set forth in a. above or by persons formerly or presently cleared by other Government agencies, shall be reviewed by an NRC authorized classifier or the Division of Security, and the author will be required to delete any classified information contained in the document prior to unclassified publication.

C. Change of Classification

Change of classification is the determination that higher or lower classification applies to a classified item. It does not include declassification. (See D. for information concerning declassification.)

1. *Authority to Change Classification.* An authorized classifier may change the classification of information which he, or his predecessors in that position, have classified to make it consistent with current classification guidance. A supervisor of the above official, if he has classification authority, may also make such changes in such classification.

2. *Automatic Downgrading of Documents.* Documents containing RD or FRD, are exempt from automatic downgrading. Documents, other than RD or FRD may be determined to be subject to automatic downgrading at some date prior to their declassification date or event if the original authorized classifier determines their sensitivity will decrease with the passage of time. When automatic downgrading instructions are placed on the document at the time of origin, the document will be downgraded at the assigned date with no notice to holders required.

The custodian shall either downgrade his/her copies of the document on or after the date specified or assure that the documents will be downgraded when withdrawn from files. However, if the custodian believes that the downgrading is inappropriate, he/she will refer the matter to the Director, Division of Security.

3. *Restricted Data and Formerly Restricted Data.* Downgrading of Restricted Data and Formerly Restricted Data may take place only in accordance with approved classification guidance, e.g., classification guides or bulletins.

4. *Notification of Changes.* a. Top Secret (TS) Documents. The person authorizing the change in classification of a TS document (i.e., the TS classifying official, his/her successor, or higher authority with TS classification authority) must notify the Division of Security, which in turn will notify custodians of all copies.

b. Secret (S) and Confidential (C) Documents. The person (i.e., TS, S or C classification authority) authorizing the change of classification of a Secret or Confidential document must notify all holders of other copies of the document of the change.

c. Forwarding of Notices. If the recipient of a classification change notice has forwarded the document to another custodian, the change notice should be forwarded to the new custodian.

d. Content of Notices. Notices of change of classification should identify the document as fully as possible, stating the title (or a brief description of the document), the document number, if any, the author, the date of the document, the person authorizing the change, and the nature and date of the change.

5. *Effecting Change of Classification.* See Appendix 2101, Part III, for information to be placed on documents on change of classification.

6. *Markings for Transclassification.* On receipt of notice of transclassification (change from RD to FRD or to National Security Information (NSI) without declassification), custodians shall take the following action. They shall line out the RD marking and replace it with the FRD marking, if transclassified in accordance with Subsection 142d of the Atomic Energy Act of 1954. If transclassified in accordance with Subsection 142e of the Act, custodians shall replace the RD stamp with the NSI stamp and, in addition, the appropriate review or declassification marking shall be placed on the document.

D. Declassification

1. *Request for Declassification Review.* Request for declassification review may be sent to the Director, Division of Security, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

2. *National Security Information.* E.O. 12065 provides for the declassification of NSI as early as national security considerations permit, and contains further guidance on the subject.

3. *Restricted Data and Formerly Restricted Data.* Section 142 of the Atomic Energy Act describes the ways in which information can be removed from the RD and FRD categories.

Any proposed declassification or transclassification action in regard to RD or FRD documents shall be forwarded to the Director, Division of Security, who will coordinate the matter as necessary with the Department of Energy. Declassification of Restricted Data and Formerly Restricted Data may only take place in accordance with approved classification guidance and in accordance with the Atomic Energy Act.

4. *Authority to Declassify Documents and Material.* a. NRC original authorized classifiers may declassify documents containing National Security Information if they made the original classification decision and are still in the same position, by a successor or by a supervising official or either, who is an authorized classifier in the same area of information.

b. The Director, Division of Security, and the Chief, Information Security Branch, of that division are authorized to declassify National Security Information, in accordance with NRC approved policies and guides.

5. *Declassification Notices.* When a Top Secret document is declassified, the person authorizing the declassification must notify the Division of Security, which in turn will notify custodians of all copies.

When a Secret or Confidential document is declassified, the individual authorizing the declassification shall send a notice of declassification to all known holders of the document. These notices will normally be unclassified unless unusual circumstances require the inclusion of classified information in the declassification notice.

6. *Method Used in Declassification Review.* Declassification review may be a:

a. Standard declassification review.

b. Systematic review under E.O. 12065.

c. Review under Freedom of Information Act or Privacy Act.

d. Mandatory review under E.O. 12065.

7. *Standard Declassification Review.* The following procedure will be used for declassification review of documents produced as a result of work for the NRC, its contractors or other organizations associated with the NRC program.

The initiator of a request for declassification review of a document, which contains NSI, shall transmit two copies of the document to be reviewed to the authorized classifier responsible for the classification, his successor, or to a supervisory official of the authorized classifier or his successor with authority for classification of the level of information involved or to the Director, Division of Security. All documents containing RD or FRD must be forwarded to the Director, Division of Security, who will be responsible to assure that necessary action is taken. The authorized classifier, his successor, or supervisory official, or Division of Security, will forward one copy of any document containing patented or patentable information to the Executive Legal Director, who will reply directly to the sender concerning its release from a patent viewpoint. The second copy may be used, when necessary, to obtain the views of other organizations, including other Government agencies or other governments. If the views of other organizations, including other Government agencies or other governments, and the evaluation of the reviewer(s) are in agreement that the document may be declassified, the authorized classifier, his successor, or supervisory official, or Division of Security, will declassify the document and, after receipt of patent clearance, if applicable, will transmit a memorandum reflecting the results of such review to the initiator. In all cases in which unresolved differences of opinion exist as to the declassifiability of a document originated by NRC or its contractors or other personnel associated with the NRC program, the final determination will be made by the NRC Classification Review Committee. Declassification of a document containing patented or patentable information does not permit its release until clearance has been obtained from the Executive Legal Director by the office proposing the release.

8. *Systematic Review Under E.O. 12065.* Classified information constituting permanently valuable records of the government, as defined by 44 U.S.C. 2103, and information in the possession and control of the Administrator of General Services,

V 4 4 / 1 7 7 SE 1 1 7 9 UMI

pursuant to 44 U.S.C. 2107 or 2107 note, shall be reviewed for declassification as it becomes twenty years old. The review will be conducted in accordance with NRC guidelines established and maintained for such purposes. The guidelines shall be kept current through a review at least every two years unless earlier review for revision is requested by the Archivist of the United States. These guidelines will state specific, limited categories of information which, because of their national security sensitivity should not be declassified automatically, but must be reviewed item by item to determine whether continued protection beyond twenty years is needed. All categories of information not covered by the guidelines shall be declassified by the Archivist or any authorized classifier automatically at the end of twenty years from the date of original declassification. RD, FRD and information provided to the United States Government by a foreign government, or international organization of foreign governments, with an understanding of confidentiality, or information produced by the United States, in accordance with a written joint arrangement with a foreign government or international organization of governments requiring that the information or arrangement or both kept in confidence must be reviewed by authorized classifiers on a case-by-case basis. RD and FRD must be removed from the RD or FRD category before it can be declassified. Foreign government information shall be reviewed by authorized classifiers to declassification at the end of thirty years but not automatically declassified. See D.3. above regarding Restricted Data and Formerly Restricted Data.

9. *Review Under Freedom of Information Act or Privacy Act.* Classification review and other actions regarding review of classified documents and material, in accordance with the Freedom of Information Act (5 U.S.C. 552) or the Privacy Act (5 U.S.C. 552a), must be conducted in accordance with the provisions of this Part and Chapter 0211.

a. The Director, Division of Security, will attempt to resolve disagreements on the releasability of information requested under the Freedom of Information Act or withheld under the Privacy Act.

b. The NRC Classification Review Committee will review all appeals for records under the Freedom of Information or the Privacy Act when a proposed denial is based on E.O. 12065, and the Division of Security is unable to resolve the disagreement.

c. The Committee will review and act within ten working days (twenty working days for PA requests) upon all appeals regarding requests for declassification of information and material under the FOIA or PA which are referred to it. The Committee will forward its recommendations to the Executive Director for Operations. When documents under review are Commission documents as opposed to Staff documents, the Committee will make its recommendations to the Commission.

d. If there is an FOIA request for information originated on or after December 1, 1978, which carried no classification marking (Top Secret, Secret or Confidential) at the time the request was received, but was determined to be classified information during the course of FOIA processing, that information must be forwarded through FOIA channels to the Chairman, NRC, for his personal review and certification that retroactive classification is warranted. In the case of an FOIA request for information originated prior to December 1, 1978, the Executive Director for Operations may perform this review and certification.

e. If the NRC receives a request for a classified document in its custody which was originated by another federal agency, it will forward the request to that agency for a disclosure determination and notify the requester of the referral. The originating agency should then respond directly to the requester.

f. When a classified document requested was originated by NRC but contains information provided or classified by another federal agency, the part of the document provided or classified by that agency will be referred to that agency for a disclosure determination. The other agency should respond to NRC which will then notify the requester of the resulting determinations.

10. *Mandatory Review of Information Under Executive Order 12065.* a. Information classified under E.O. 12065, or previous orders which is requested by a member of the public, a Government employee, or a Government agency• under the provisions of Section 3–501 of E.O. 12065, is subject to a mandatory declassification review provided the request reasonably describes the information.

(1) Whenever a request does not reasonably describe the information sought, the requester shall be notified that unless additional information is provided or the scope of the request is narrowed, no further action will be undertaken.

(2) If there is a mandatory review request for information which was not marked as classified at the time the request was received, but was determined to be classified in the course of the mandatory review processing, the procedures for review and certification by the NRC Chairman or Executive Director for Operations outlined in D.9.d. above apply.

(3) If the NRC receives a request for a document in its custody which was classified by another agency, it shall forward the request to that agency and notify the requester of the referral. Upon the other agency's determination of the current status of the information, NRC will advise the requester of the result.

(4) If the NRC receives a request for a document in its possession which contains foreign government information, it shall be processed in accordance with the provisions of this section except that, where applicable, coordination with the government or international organization concerned will be made.

b. Any person desiring mandatory declassification review of NRC documents containing NSI, RD or FRD should address such requests to the Director, Division of Security, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555. Requests need not be made on any special form but shall, as specified in the E.O., describe the documents with sufficient particularity to enable NRC personnel to identify and obtain the documents from NRC records without expending more than a reasonable amount of effort. Charges for services (e.g., locating and reproducing copies of records) will be made, when deemed applicable, in accordance with NRC regulations and will be consistent with charges for information requested under the Privacy Act, NRC Manual Chapter 0204 or Freedom of Information Act, NRC Bulletin 0211–4.

c. The Director, Division of Security, will acknowledge receipt of the request.

d. Every effort will be made to complete action on each request within thirty days of receipt of the request. If action cannot be completed within thirty days, the requester shall be so advised by the Director, Division of Security, along with the reasons for the need for additional time. Requests must be acted upon within 60 days after receipt. The requester will be advised that in exceptional circumstances if a decision from NRC on his request is not received within 60 days from the date of receipt of his request by NRC, or from the date of the most recent receipt of response to an NRC request for more particulars, he/she may apply to the Chairman of the NRC Classification Review Committee for a decision on his request.

e. The Director, Division of Security, shall determine whether the information may be declassified and, if so, make the information available to the requester unless withholding is warranted for some other reason under the provisions of applicable law.

f. In the event the Director, Division of Security, determines that requested information or matter must remain classified under the provisions of E.O. 12065, or the Atomic Energy Act,[1] the requester shall be given prompt notification of that decision and shall be provided a statement as to why the information cannot be declassified. If appropriate, classified sections of the document will be identified and the requester advised that a "sanitized" document can be provided with an appropriate unclassified description of the deleted information. The requester shall be advised that he may appeal that determination to the NRC Classification Review Committee by submitting a request for review in writing to the Chairman of the Committee in care of the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, within thirty days after the date of the correspondence advising him of the denial. Any such requests shall specify the reasons why the requester believes that the information or material does not warrant classification under provisions of E.O. 12065.

g. The NRC Classification Review Committee will normally render a decision on the matter within thirty days of the receipt of a request. If a longer period is likely to be required because of the need for consultations with other agencies or the requester, the requester will be advised of the time needed to complete review of the matter. The Committee shall determine whether continued classification is required in whole or in part, notify the requester of the determination, and make available any information that is declassified and is otherwise releasable. If continued classification is required, the requester shall be notified of the reasons. The Committee shall also communicate the determination on the appeal to any government agency which was asked to participate in the review.

h. In the event the Director, Division of Security, or the NRC Classification Review Committee, determines that the information is unclassified, but the information appears to be of the type exempt from public disclosure as set forth in 10 CFR Part 9, the requester shall be so notified in writing.

i. Whenever the NRC Classification Review Committee determines that information must remain classified, it shall notify the requester that, except in the case of information subject to the provisions of the Atomic Energy Act, he may be entitled to appeal that action to the Commission.

11. *Privileged Information.* Declassification of information in documentary or other form does not necessarily result in publication or unlimited dissemination of the information involved if it is within the exemptions of the Freedom of Information Act, within the scope of the Privacy Act or otherwise not releasable under the provisions of Chapter 0211, Parts IV or XVI of this appendix.

E. Data Index System

1. *Purpose.* The Data Index System has been designed by the NRC to ensure current and accurate information is readily available for use by the NRC in its reporting responsibility to the Information Security Oversight Office (ISOO) and in its initial responsibilities of conducting an effective classification/declassification program.

2. *Operation of System.* Whenever an NRC authorized classifier (original or derivative) completes a classification action, whether it be at the Top Secret, Secret, or Confidential level, an NRC Form 790, "Classification Record," must be filled out and submitted to the Division of Security.

Each authorized classifier completes one Form 790 for each classification action taken.

The authorized classifier submits two copies of the Form 790 to the Division of Security and retains one copy for his/her files. The Division of Security will monitor all Data Index input and maintain the system's records.

3. *Data Index System Reports.* The Division of Security is responsible, for preparing specific reports which are based on the information provided by the Data Index System and are submitted to the ISOO on predetermined due dates. Additionally, the Division of Security is required to maintain a current listing of positions, by classification designation, to which original classification authority has been granted. The reports enable the Division of Security to administer the NRC Security Program. The Division of Security will forward to each Office a listing of classified documents not subject to automatic declassification so that they may be reviewed.

F. Classification Education

1. *Initial Classification Indoctrination for Authorized Classifiers.* Each new NRC authorized classifier must understand his/her classification responsibilities before being given authority to classify, declassify and downgrade information. Each employee who obtains classification authority by filling a designated position shall be familiarized with the responsibilities of his position by another authorized classifier or other appropriate personnel designated by the Director, Division of Security. The indoctrination shall include:

a. a review of Executive Order 12065 "National Security Information," the implementing directive of October 2, 1978 and the Atomic Energy Act;

b. an explanation of classification and classified information, including the difference between NSI, RD, and FRD and the levels of classification;

c. an explanation of the NRC classification organizational structure and the channels through which the new authorized classifier should refer classification questions;

d. stress of the authorized classifier's responsibility for assuring that documents are reviewed for classification and declassification;

e. a review of applicable classification guidance.

If a briefing is conducted, a report by the person who conducts it shall be forwarded to the Director, Management Development and Training Staff, NRC, by completion of NRC Form 121, "Training Control and Input."

2. *Follow-up Indoctrination.* Within a suitable period after entry on duty (not to exceed three months), a representative of the Division of Security or an authorized classifier or appropriate personnel designated by the Director, Division of Security, will communicate with newly authorized classifiers to reemphasize the above points, expand on them, as appropriate, and explain in detail classification guidance covering the employee's work. What constitutes a suitable period will depend on the nature of an individual's employment. For example, a newly authorized classifier in the safeguards field may require such a follow-up almost immediately to assure that classified information is not inadvertently disclosed by him or other person under his jurisdiction in writing or discussions.

A report of follow-up indoctrination shall be submitted to the Director, Management Development and Training staff, NRC, as set forth above.

[1] Declassification of Restricted Data and Formerly Restricted Data may take place only in accordance with D.3. above.

V 4 4 / 1 7 7

3. *Continuing Classification Education.* It is essential that classification awareness be maintained at a high level. Accordingly, Office and Regional Directors shall conduct a program to assure continuing awareness by authorized classifiers of their classification responsibilities and the appropriate exercise of these responsibilities.

G. Classification Appraisals

1. *Requirements.* The Director, Division of Security, is required to keep informed of the classification practices and procedures of Headquarters Offices and Divisions, Regional Offices and contractors. This is accomplished through the appraisal (see Appendix 2101, Part I for definition of "appraisal") process.

2. *Scope of Appraisals.* Classification practices and procedures of NRC and NRC contractor organizations shall be reviewed during an appraisal to determine the correctness and uniformity of interpretation and implementation of NRC classification policy and standards.

3. *Content of Appraisals.* An appraisal should provide data in regard to all of the following items which are applicable:

a. Data Regarding Appraiser and Sites Appraised. Name and position, title(s) of the appraiser(s), facility (organization) visited, persons interviewed, and dates involved in the appraisal.

b. Activity of Management. Activity of management in keeping informed of current NRC classification policy, as it applies to information, projects, documents, and material affecting its operations.

c. Educational Program. Activity and effectiveness of the educational program in the indoctrination and instruction of authorized classifiers and other individuals in classification standards and procedures. The appraisal will conform the conduct of classification education as specified in F.1, 2 and 3 above.

d. Work or Project Classification. Stress placed on the necessity for establishing the appropriate classification of new work or projects in the earliest stages of their conception.

e. Conformity with NRC Classification Practices. Conformity of classification practices, in the activity appraised, with NRC procedures (the data should be based on a review of classified and unclassified correspondence, records, procurement forms, financial reports, etc.).

f. Authorized Classifiers. Appointment of appropriate authorized classifiers to fill requirements of the activity appraised.

g. Declassification. Appointment of appropriate personnel to review documents to ensure continued classification is warranted and initiate declassification action where appropriate.

h. Guidance. Completeness and effectiveness of guidance developed for classification (appraisal of a prime contractor should include the review of classification guidance furnished by the contractor to subcontractors and of the classification practices of the subcontractors).

i. Special Problems. Any special classification problems existing in the activity appraised.

j. Recommended Revisions of Classification Practices. Statement of classification practices not essential or contributing to classification programs, objectives or simplication of classification practices and procedures.

4. *Frequency of Appraisal.* a. Factors To Be Considered. The activity and past performance of the organization to be appraised, problem areas and functions representing potential trouble spots, and the need for information by management of the appraising organization should determine the frequency of appraisals.

b. Intervals. Every function originating classified documents frequently should be appraised at least once every three years unless particular circumstances indicate otherwise. Activities originating classified documents occasionally may be appraised once every five years or at longer intervals at the discretion of the Director, Division of Security.

5. *Report.* a. Content. A written report must be prepared following each appraisal containing a clear picture of classification practices of the organization appraised.

b. Information to Management. As a general practice, management of an appraised organization should be informed of the results of an appraisal prior to the preparation of the report. Where this is considered inappropriate, the discussion will be held with the Director of the Headquarters Office or Regional Office concerned.

c. Distribution. Copies of appraisal reports of Regional Offices, or Headquarters Offices or Divisions or their contractors shall be furnished to the Director of the Regional Office, Headquarters Office or Division involved, and to the senior NRC official charged with oversight of the Information Security Program (EDO).

6. *Follow-up.* NRC Offices or Divisions or contractors shall take prompt action to assure that necessary corrective measures are introduced based on recommendations contained in the report.

U.S. Nuclear Regulatory Commission; Systematic Review Guidelines for National Security Information

Preface

Restricted Data and Formerly Restricted Data (as defined in Sections 11y and 142d of the Atomic Energy Act, as amended) are exempt from the provisions of Executive Order 12065 calling for systematic review and automatic declassification.

The marking "Restricted Data" was first introduced in 1947 and the marking "Formerly Restricted Data" in 1954. Even after those dates, due to incorrect markings or failure to properly mark them, documents containing Restricted Data (abbreviated RD) or Formerly Restricted Data (FRD) may not be properly marked to clearly signify the presence of such information.

Any document containing information falling within the definitions of Restricted Data or Formerly Restricted Data (see Appendix C, attached) identified during the systematic review process as originated by regulatory personnel of the Atomic Energy Commission (AEC) or of concern to the AEC's regulatory functions and not appropriately marked, will be reviewed by the Nuclear Regulatory Commission (NRC) Division of Security. The Division of Security will coordinate with the Department of Energy and apply the appropriate markings.

Foreign government information is not included in the guidelines. Information of concurrent jurisdiction with or of interest to other agencies will be coordinated by NRC with those agencies prior to declassification.

A. *Authorization*

Under the provisions of Section 3-402 of Executive Order 12065, the U.S. Nuclear Regulatory Commission (NRC) authorizes the Archivist of the United States to apply these guidelines to the review of information classified for more than 20 years. These guidelines apply only to National Security Information (i.e., not to Restricted Data nor Formerly Restricted Data) over which this agency has jurisdiction and which has been transferred to the General Services Administration and accessioned into the National Archives of the United States.

These guidelines consequently apply only to classified information pertaining to the licensing and related regulatory activities of the Atomic Energy Commission. Appendix A contains a chronology and organization of the licensing and regulatory activities of the AEC which preceded the NRC. Appendix B is a brief functional statement of the NRC's responsibilities and jurisdiction to further assist in identifying information over which the NRC exercises jurisdiction. Appendix C contains definitions of terms used in these guidelines.

These guidelines will be reviewed biennially to assure they remain current. The inclusion of any category in these guidelines does not indicate that it will remain classified, but only that such information must be examined item-by-item by specifically designated personnel of the NRC prior to declassification.

B. *Categories of Information Excepted From Automatic Declassification*

Information classified for over 20 years in any of the following categories, which is under the jurisdiction of this agency and which has become part of the National Archives of the United States, unless marked with instructions authorizing automatic declassification within 20 years after origination, may not be automatically declassified but must be reviewed by the NRC.

1. Intelligence information, whether dealing with foreign countries or the United States, relating to atomic energy matters.

2. Nuclear non-proliferation information (such as programs and studies related to the proliferation of SNM to nonweapon states or subnational groups) and programs for the control of exports of nuclear materials and equipment and transfer of nuclear technology.

3. Information regarding foreign relations.

4. Information relating to safety or safeguarding of foreign government reactors or nuclear facilities.

5. SSNM Measurement Data: The Limit of Error on Inventory Differences involving Strategic Special Nuclear Material (SSNM) which would enable the development of current data as to throuhput or unaccounted for SSNM at any facility for an individual material balance or on a cumulative period basis.

1. Physical protection at facilities (production, utilization, research, or fuel cycle) including, but not limited to:

a. The physical security plan for a nuclear facility or site.

b. Specific site "as built" drawings, diagrams, sketches, maps, etc., showing the identity, together with the location, and/or description, of facility features or special interest because of their relationship to the physical security system that, if revealed, could facilitate theft or diversion of special nuclear materials or sabotage of a facility.

c. Government sponsored or required evaluation of specific site construction features of physical security barriers revealing vulnerabilities or limitations which could facilitate penetration or by-passing physical security barriers or systems.

d. Scope, conceputal design, and construction plan of intrusion and detection alarm systems for a nuclear facility or site.

e. Details of alarm systems installed: layout, location and electrical design which, if disclosed, could facilitate gaining unauthorized access to SSNM, nuclear facilities or classified information.

f. Information, including the effect of specific modifications of alarm systems, revealing in-place operating capability which, if disclosed, would facilitate bypassing such systems.

g. Security-related vulnerability or weakness of alarm systems: layout, location, and electrical design.

h. Total quantities of SSNM by designated vault and vault type storage areas.

i. Contigency plans for response to a specific threat, e.g., disposition, armament or planned response of security forces, including number of personnel responding to specific incidents.

j. Government-sponsored or required evaluations of security systems revealing vulnerabilities or limitations in physical security measures, operating procedures, or personnel capabilities.

k. Detailed reports of attempted or successful penetrations of nuclear facilities and attempted or successful diversion or theft of special nuclear material within or from a nuclear facility or sabotage within a nuclear facility or in connection with SNM shipments.

7. Diversion or sabotage vulnerability studies:

a. Scenarios involving thefts, diversion, or sabotage at specific sites or on specific routes used in the shipment of formula or greater quantities of SSNM.

b. Evaluation of scenarios involving theft, diversion, or sabotage in such cases.

c. Diversion path or vulnerability analysis of specific sites or routes in such cases.

8. Plans for response to threats:

a. Vulnerabilities of specific facilities.

b. Specific threat levels against which licensees can or cannot protect.

c. External and internal threat levels which are used as a part of a sensitivity analysis of a security system to threats in that system.

9. Specific performance capabilities or vulnerabilities of systems, subsystems, materials, equipment or processes in Research, Development, Testing and Evaluation for new or improved safeguards:

a. Information revealing a vulnerability which would significantly assist the by-pass or defeat of the integrated safeguards system actually installed (or planned to be installed) at a specific facility or in the transportation system.

b. Information about a characteristic or feature that meets all of the following criteria: (1) it would significantly delay the by-pass or defeat or an operational application, and (2) its presence in an operational configurement and application would not be reasonably expected or predicted.

C. *Agency Assistance to the National Archives*

This agency has designated experienced personnel to guide and assist National Archives personnel in identifying and separating documents and specific information contained in documents that require continued protection. These NRC personnel are also authorized to declassify categories of information exempt from automatic declassification (listed in the preceding section), if it is determined that they no longer require protection and to make recommendations for maintaining protection of information requiring continued classification. Questions regarding classification or declassification of documents should be referred to Raymond J. Brady, Director, Division of Security, on (301) 427-4472.

Appendices

A. Chronology & Organization of Regulatory Process of the AEC
B. NRC Functional Statement
C. Definitions

Appendix A—Chronology and Organization of Regulatory Process of the U.S. Atomic Energy Commission

The purpose of this Appendix is to furnish a brief chronology of the regulatory process and regulatory organization of the U.S. Atomic Energy Commission (AEC) and the jurisdiction of the U.S. Nuclear Regulatory Commission (NRC), as provided by statute, to provide a better understanding and more meaningful review by the National Archives of information at least 20 years old.

The AEC existed from January 1, 1947, to January 19, 1975. On that date, in accordance with the Energy Reorganization Act of 1974, the licensing and related regulatory functions were divorced from the developmental functions (e.g., research and development, military and production activities) and promotional functions. NRC was established by the Act to handle the licensing and regulatory functions which were formerly part of the activities of the Atomic Energy Commission. The Energy Research and Development Administration (ERDA), since integrated into the Department of Energy (DOE), was given responsibility for the performance of the other functions.

NRC derives its powers from, among other sources, statutes (e.g., the Energy Reorganization Act of 1974 and the Atomic Energy Act of 1954, as amended) and from executive orders (e.g., Executive Orders 10450, 10865 and 12065) and related directives.

The chronology of the principal AEC organizational developments relating to the regulatory program is as follows:

August 1, 1946. Atomic Energy Act authorized AEC to issue regulations and licenses for the control of specified atomic energy materials and facilities.

December 13, 1946. Atomic Energy Commission assumed responsibility for the Atomic Energy Program.

March 1947. AEC's New York Operations Office was designated to administer source material licensing regulations.

Fall 1947. Reactor Safeguard Committee was established by the Commission to advise on the hazards of reactor operations.

November 1947. AEC established Production Facilities Control Branch in Headquarters to administer new 10 CFR Part 50 (production and utilization facility licenses).

January 1948. Permanent Advisory Committee on Isotope Distribution (replacing interim Manhattan Engineering District Committee) was formed.

Winter 1951. AEC appointed Industrial Committee on Reactor Location Problems.

November 1952. AEC's Production Facilities Control Branch was renamed Licensing Controls Branch and assumed responsibility from the New York Operations Office for the administration of source material licensing regulations.

August 9, 1953. Advisory Committee on Reactor Safeguards was established by merging the Reactor Safeguards Committee and the Advisory Committee on Reactor Location Problems.

October 1, 1954. Division of Inspection was activated pursuant to the Atomic Energy Act of 1954.

SEP 11 1979
UMI

V 4 4 / 1 7 7 SEP 11 1979 UMI

March 22, 1955. Division of Licensing (renamed the Division of Civilian Application in June 1955) was established to administer licensing and related responsibilities under the 1954 act.

April 8, 1955. Reactor Hazards Evaluation Staff was organized in the Office of the General Manager.

August 1956 to February 1957. AEC Operations Offices (including Albuquerque, Chicago, Hanford, Idaho, New York, Oak Ridge, San Francisco and Savannah River Operations Offices) assumed delegated authority to perform compliance inspection of byproduct and source material licensees.

December 26, 1957. Regulatory functions of the Division of Civilian Application was transferred to the Division of Licensing and Regulation.

August 1, 1958. AEC established Office of Hearing Examiner.

September 12, 1959. Office of Health and Safety was established.

November 13, 1959. Position of Assistant General Manager for Regulation and Safety was established.

May 26, 1960. Division of Compliance was activated, assuming on August 1, 1960, responsibility for inspection of licensed materials and reactors.

The regulatory function in the AEC was exercised under the policy direction of the Commission (five Commissioners) and operational direction of the General Manager and Assistant General Manager for Regulation and Safety. The Office of General Counsel, Divisions of Civilian Application, Compliance, Licensing, Licensing and Regulation, and Inspection and the AEC field offices were the principal additional organizations involved in the execution of the regulatory function. A number of these organizations, although they had functions related to the regulatory program, also had functions subsequently assumed by DOE. Records held by these organizations, when they were part of the AEC, in certain cases were destroyed, but in various instances were retained and their custody transferred to NRC or DOE. Since the creation of the NRC, the NRC Division of Security has exercised the classification function of the regulatory aspects of the atomic energy program, previously performed by the AEC Division of Classification.

The Atomic Energy Act provides the legal basis for the AEC regulatory program, i.e., the Commission regulation of civilian atomic energy activity. The Act establishes a comprehensive system of licensing controls. The facility (e.g., reactor) licensing provisions of the statute are, for the most part, contained in Sections 101–110. The Commission authority to issue a license for the use and transfer of special nuclear material, source material, byproduct material, production or utilization facilities, as set forth in the Act, is described below.

The following types of licenses are required under the Act:

a. Special nuclear material. License to receive, possess, use and transfer special nuclear material, as provided in Sections 53 and 57a for use under commercial licenses pursuant to Section 103; for the conduct of research and development activity or in medical therapy, under noncommercial licenses pursuant to Section 104; and for other appropriate uses.

Source material. License to transfer, deliver, receive, possess, import, or export source materials after removal from the place of deposit in nature, as provided in Sections 62 and 63 for use in the conduct of research and development activities under Section 31; for use under commercial licenses pursuant to Section 103; for use in research and development activities or in medical therapy under noncommercial licenses pursuant to Section 104; or for "any other use approved by the Commission as an aid to science or industry."

c. Byproduct material. License to transfer, receive, manufacture, produce, acquire, own, possess, import, or export byproduct material, as provided in Sections 81 and 82, for use in research and development, medical therapy, industrial uses, agricultural uses, or "such other useful applications as may be developed."

d. Commercial utilization or production facility. License for commercial utilization or production facility as provided in Sections 101, 102 and 103.

e. Noncommercial utilization or production facility. License for noncommercial utilization or production facility as provided in Sections 101 and 104 for medical therapy, research and development activities for industrial or commercial purposes, and research and development activities for noncommercial purposes.

f. Construction permit. Construction permit for construction prior to licensing, or alteration after licensing, of utilization or production facility licensed under Sections 103 and 104, as provided in Section 185.

g. Operator's license. License to individuals, as provided in Section 107, as operators of various classes of utilization or production facilities under the act.

Appendix B—United States Nuclear Regulatory Commission Functional Statement

The Nuclear Regulatory Commission (NRC) licenses and regulates the uses of nuclear energy to protect the public health and safety and the environment. It does this by licensing persons and companies to build and operate nuclear reactors and to own and use nuclear materials. The NRC makes rules and sets standards for these types of licenses. The NRC also carefully inspects the activities of the persons and companies licensed to ensure that they do not violate the safety rules and safeguards established by the Commission.

The Nuclear Regulatory Commission was established as an independent regulatory agency under the provisions of the Energy Reorganization Act of 1974 (88 Stat. 1242; 42 U.S.C. 5841) and Executive Order 11834. Transferred to the NRC were all licensing and related regulatory functions formerly assigned to the Atomic Energy Commission. The Atomic Energy Act of 1954 (68 Stat. 919; 42 U.S.C. 2011 et seq.), as amended, sets forth these functions.

The major program components of the NRC are the Office of Nuclear Reactor Regulation, the Office of Nuclear Material Safety and Safeguards, and the Office of Nuclear Regulatory Research, which were created by the Energy Reorganization Act of 1974; plus the Commission-created Office of Standards Development and Office of Inspection and Enforcement. Headquarters offices are located in Washington, D.C., Bethesda, Md., and nearby areas, and Regional Offices are located in five domestic areas (King of Prussia, Pennsylvania, Atlanta, Georgia, Glen Ellyn, Illinois; Arlington, Texas; and Walnut Creek, California).

The Division of security is responsible for classification and declassification of national security information within the NRC, NRC contractors and other NRC affilated organizations, i.e., to assure that it takes place in accordance with the provisions of Executive Order 12065 and National Security Council directives, providing classification assistance as required to NRC, NRC contractors and other personnel.

Programs and Activities

NRC fulfills its responsibilities through a system of licensing and regulation. This system includes, among other things: licensing the construction, operation, export and import of nuclear reactors and other nuclear facilities and the possession, use, processing, transport, handling and disposal of nuclear materials; export, import, and regulation of licensed activities including assurance that measures are taken for the physical protection of facilities and materials; development and implementation of rules and regulations governing licensed nuclear activities; conduct of public hearings on radiological safety, environmental, common defense and security and antitrust matters, and the development of effective working relationships with the States regarding the regulation of nuclear materials. This relationship includes the assurance that adequate regulatory programs are maintained by those States which exercise, by agreement with the Commission, regulatory control over certain nuclear materials within their respective borders. Inspection of NRC licensed activities is carried out from the five regional offices.

The Commission also contracts for research deemed necessary for performing licensing and related regulatory functions.

The Nuclear Regulatory Commission's purpose is to assure that the civilian uses of nuclear materials and facilities are conducted in a manner consistent with the public health and safety, environmental quality, common defense and security, national security, and the antitrust laws.

Appendix C—Definitions Used in Guidelines

1. Formerly Restricted Data—classified information related primarily to the military utilization of atomic weapons, removed by the Atomic Energy Commission, the Energy Research and Development Administration or the Department of Energy from the Restricted Data category pursuant to section 142d. of the Atomic Energy Act of 1954, as amended, and safeguarded as National Security Information, subject to the restrictions on transmission to other countries and regional defense organizations that apply to Restricted Data.

2. Fuel Cycle—construction and operation of facilities for uranium milling, uranium hexaflouride conversion, fuel processing and fabrication, "spent" fuel storage and "spent" fuel reprocessing.

3. Inventory Difference (ID)—the algebraic difference between a physical inventory and its concomitant book inventory after determining that all known removals and additions have been reflected in the book inventory. It is calculated by subtracting ending inventory plus removals from beginning inventory plus additions to inventory.

4. National Security Information (NSI)—information or material that is owned by, produced for or by, or under the control of the United States Government, and that has been determined pursuant to Executive Order 12065, or prior Executive Orders, to require protection against unauthorized disclosure, and that is so designated.

5. Nuclear Facility—any facility for originating, producting, using, shipping, receiving or storing formula quantities of SSNM.*

6. Physical Security Plan—a specific site document (or group of documents) that provides a comprehensive description of the measures employed for the physical protection of nuclear facilities and materials against sabotage, theft, or diversion of SNM.

7. Production Facility—means:

1. Any nuclear reactor designed or used primarily for the formation of plutonium or uranium-233; or

2. Any facility designed or used for the separation of the isotopes of uranium or the isotopes of plutonium, except laboratory scale facilities designed or used for experimental or analytical purposes only; or

3. Any facility designed or used for the processing of irradiated materials containing special nuclear material, except:

(i) labortory-scale facilities designed or used for experimental or analytical purposes:

(ii) facilities in which the only special nuclear materials contained in the irradiated material to be processed are uranium enriched in the isotope U–235 and plutonium produced by the irradiation, if the material processed contains not more than 10^{-4} grams of plutonium per gram of U–235 and has fission product activity not in excess of 0.25 millicuries of fission products per gram of U–235; and

(iii) facilities in which processing is conducted pursuant to a license issued under Title 10 Code of Federal Regulations Chapter 1, Parts 30 and 70, or equivalent regulations of an Agreement State, for the receipt, possession, use, and transfer of irradiated special nuclear material, which authorizes the processing of the irradiated material on a batch basis for the separation of selected fission products and limits the process batch to not more than 100 grams or uranium enriched in the isotope 235 and not more than 15 grams of any other special nuclear material.

8. Restricted Data (RD)—defined in the Atomic Energy Act of 1954, as amended, as "all data concerning (1) design, manufacture, or utilization of atomic weapons; (2) the production of special nuclear material; or (3) the use of special nuclear material in production of energy; but shall not include data declassified or removed from the Restricted Data category pursuant to Section 142."

9. Safeguards—A system of physical protection, accountability and material control measures designed to deter, protect against, detect and respond to theft (unauthorized possession and use) of nuclear materials as well as physical protection measures designed to protect against and deter sabotage of activities involving such materials. In practice, it is the development and application of techniques and procedures dealing with the establishment and continued maintenance of a system of activities including physical protection, knowledge of the presence, location and use of nuclear materials and administrative controls and surveillance to assure that procedures and techniques of the system are effective and are being carried out.

10. Special Nuclear Material (SNM)—(1) plutonium, uranium-233, uranium enriched in the isotope-233 or in the isotope-235, and any other material which the Commission, pursuant to the provisions of Section 51 of the Atomic Energy Act, as amended, determines to be special nuclear material, but does not include source material; or (2) any material artificially enriched by any of the foregoing but does not include source material.

11. Strategic Special Nuclear Material (SSNM)—uranium-235 (contained in uranium enriched to 20 percent or more in the U–235 isotope), uranium-233, or plutonium.

12. Utilization Facility—any nuclear reactor other than one designed or used primarily for the formation of plutonium or U–233.

[FR Doc. 79-28211 Filed 9-10-79; 8:45 am]

BILLING CODE 7590-01-M

* Formula quantities = 5,000 grams or more computed by the formula, grams = (grams contained U-235) + 2.5 (grams U-233 + grams plutonium)

NUCLEAR REGULATORY COMMISSION

Study of Nuclear Power Plant Construction During Adjudication; Meetings

The next meeting of the Nuclear Regulatory Commission's advisory committee on nuclear powerplant construction during adjudication previously announced (44 FR 51384) as being scheduled to be held at 9:30 a.m. Friday, September 7, 1979, in Room 415, East West Towers, 4350 East West Highway, Bethesda, Maryland has been rescheduled for Friday, September 14, 1979 at the same time and place. Following that meeting, the next study group meeting will be held on Friday, September 28, 1979 at the same time and place. At those meetings the group will continue drafting its final report to the Commission which is due November 1, 1979.

Members of the public are invited to attend the group's meetings and there will be a limited amount of time available during each meeting for members of the public to make oral statements to the study group. Written comments, addressed to the Secretary of the Commission, United States Nuclear Regulatory Commission, Washington, DC, 20555, Attention: Docketing and Service Branch, will be accepted for one week after each meeting. The Chairman of the study group is empowered to conduct the meeting in a manner that, in his judgment, will facilitate the group's work, including, if necessary, continuing or rescheduling meetings to another day.

A file of documents relevant to the group's work, including a complete transcript of each meeting, memoranda exchanged between group members, public comments and other documents, is available for inspection and copying at the Commission's Public Document Room at 1717 H Street, NW., Washington, DC, 20555. The Secretary of the NRC maintains a mailing list for persons interested in receiving notices of the group's meetings and actions. Anyone wishing to be on that list should write to: Secretary of the Commission, Nuclear Regulatory Commission, Washington, DC, 20555, Attention: Docketing and Service Branch.

The study group will provide its final report to the Commission by November 1, 1979. For further information on the study group's mission, please call Stephen S. Ostrach, Office of the General Counsel, Nuclear Regulatory Commission, 202/634–3224.

Dated at Washington, DC, this 31st day of August, 1979.

Gary Milhollin,

Chairman.

BILLING CODE 7590-01-M

[Docket Nos. 50-400, 50-401, 50-402 and 50-403]

Carolina Power & Light Co. Availability of Supplemental Initial Decision of the Atomic Safety and Licensing Board for Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4 and Issuance of Amendment to Construction Permits

Pursuant to the issuance on July 13, 1979 of a Supplemental Initial Decision (Construction Permit) by the Atomic Safety and Licensing Board the U.S. Nuclear Regulatory Commission (Commission) has issued Amendment No. 1 to Construction Permit Nos. CPPR–158, CPPR–159, CPPR–160 and CPPR–161.

Amendment No. 1 adds an additional condition to the construction permits issued on January 27, 1978 to the Carolina Power & Light Company for construction of the Shearon Harris Nuclear Power Plant, Units 1, 2, 3, and 4

located about 20 miles southwest of Raleigh, North Carolina in Wake and Chatham Counties. The amended permits are effective as of their date of issuance.

The Supplemental Initial Decision is available for inspection by the public in the Commission's Public Document Room at 1717 H Street, NW., Washington, D.C. and in the Wake County Library, 104 Fayetteville Street, Raleigh, North Carolina 27601.

The Commission has made appropriate findings as required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations in 10 CFR Chapter 1, which are set forth in the amended construction permits.

A copy of (1) the Supplemental Initial Decision (Construction Permit); and (2) the amended construction permits may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Project Management, Office of Nuclear Reactor Regulation.

Dated at Bethesda, Maryland this 31st day of August, 1979.

For the Nuclear Regulatory Commission

Olan D. Parr, *Chief,*

Light Water Reactors Branch No. 3, Division of Project Management.

BILLING CODE 7590-01-M

[Docket No. 50-155]

Consumers Power Co.; Establishment of Atomic Safety and Licensing Board To Preside in Proceeding

Pursuant to delegation by the Commission dated December 29, 1972, published in the **Federal Register** (37 F.R. 28710) and Sections 2.105, 2.700, 2.702, 2.714, 2.714a, 2.717 and 2.721 of the Commission's Regulations, all as amended, an Atomic Safety and Licensing Board is being established in the following proceeding to rule on petitions for leave to intervene and/or requests for hearing and to preside over the proceeding in the event that a hearing is ordered.

Consumers Power Company (Big Rock Point Plant) Facility Operating License No. DPR-6.

This action is in reference to an Order published by the Commission on July 23, 1979, in the **Federal Register** (44 F.R. 43126-27) entitled "Consumers Power Co.; Proposed Issuance of Amendment to Facility Operating License".

The Chairman of this Board and his address is as follows: Herbert Grossman, Esq., Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

The other Members of the Board and their address are as follows: Dr. Oscar H. Paris, and Mr. Frederick J. Shon, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

Dated at Bethesda, Maryland, this 31st day of August 1979.

Robert M. Lazo,

Acting Chairman, Atomic Safety and Licensing Board Panel.

BILLING CODE 7590-01-M

[Docket Nos. 50-250-SP and 50-251-SP]

Florida Power and Light Co. (Turkey Point Nuclear Generating Units Nos. 3 and 4) Facility Operating Licenses Nos. DPR-31 and DPR-41; Reconstitution of Board

Dr. David B. Hall was a member of the Atomic Safety and Licensing Board for the above proceeding. Dr. Hall has recused himself from further service on this Board.

Accordingly, Dr. Emmeth A. Luebke, whose address is Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, is appointed a member of this Board. Reconstitution of the Board in this manner is in accordance with Section 2.721 of the Commission's Rules of Practice, as amended.

Dated at Bethesda, Maryland, this 5th day of September 1979.

Robert M. Lazo,

Acting Chairman, Atomic Safety and Licensing Board Panel.

BILLING CODE 7590-01-M

[Docket No. 50-331]

Iowa Electric Light and Power Co., et al., Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 54 to Facility Operating License No. CPR-49 issed to Iowa Electric Light and Power Company, Central Iowa Power Cooperative, and Corn Belt Power Cooperative, which revised the Technical Specifications for operation of the Duane Arnold Energy Center, located in Linn County, Iowa. The amendment is effective as of its date of issuance.

The amendment will: (1) Modify the scram insertion time specifications to provide for a faster scram than currently assumed and to be more restrictive than the current specification, (2) modify the specification on operating limit minimum critical power ratios, based upon the faster scram, to be less restrictive than the current specification.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR Section 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the application for amendment dated December 27, 1978, as supplemented May 23, 1979, August 15, 1979 and August 17, 1979, (2) Amendment No. 54 to License No. DPR-49, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. and at the Cedar Rapids Public Library, 426, Third Avenue, S.E., Cedar Rapids, Iowa 52401. A copy of items (2) and (3) may be obtained upon request addressed to the U. S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Operating Reactors.

Dated at Bethesda, Maryland this 4th day of September 1979.

For the Nuclear Regulatory Commision,

Thomas A. Ippolito,

Chief, Operating Reactors Branch No. 3, Division of Operating Reactors.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Privacy Act of 1974; Proposed Revisions of Several Systems of Records

AGENCY: Department of the Treasury, Internal Revenue Service

ACTION: Proposed Revised Systems of Records

SUMMARY: Pursuant to the requirements of the Privacy Act of 1974 (5 U.S.C. 552a), Department of the Treasury, Internal Revenue Service, gives notice of the proposed revisions to Treasury/IRS systems of records entitled Individual Master File (IMF) #24.030, Taxpayer Delinquent Accounts (TDA) #26.019, Taxpayer Delinquent Investigation (TDI) Files #26.020, Audit Information Management System (AIMS) #42.008, and File of Persons Making Threats of Force or Forcible Assaults §26.005. A new system report was filed with the Office of Management and Budget, the Speaker of the House and the President of the Senate.

DATES: Comments must be received on or before 30 days from the date of this publication.

ADDRESSES: Office of Assistant Commissioner (Inspection), Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224.

FOR FURTHER INFORMATION CONTACT: Mr. William E. Mulroy, Director, Internal Security Division, Office of Assistant Commissioner (Inspection), Internal Revenue Service, Washington, D.C. 20224, (202) 566-4564.

Dated: August 24, 1979.

W. J. McDonald,

Assistant Secretary (Administration).

The following systems, as last published in 43 FR 42661, 42662, 42665, 42666, and 42678 are amended to read as follows:

Treasury/IRS 24.030

SYSTEM NAME:

Individual Master File (IMF); Data Services-Treasurer/IRS

* * * * *

CATEGORIES OF RECORDS IN THE SYSTEM:

Taxpayer entity records (name, address, identification number (SSN) and other indicators pertaining to entity maintenance, including zip code), and tax modular records which contain all records relative to specific tax returns for each applicable tax period or year. Recorded here are tax transactions such as tax amount, additions, abatements of tax payments,interest and like type transactions recorded relative to each tax module and a code identifying taxpayers who threatened or assaulted IRS employees.

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Routine discolures may be made to the extent provided by law or regulation (including 26 U.S.C. 6103 and 26 CFR 404.6103).

* * * * *

RETENTION AND DISPOSAL:

As specified in the Records Retention Handbook published by the Service. The code identifying taxpayers who threatened or assaulted IRS employees will be removed after five years of initial input.

* * * * *

Treasury/IRS 26.005

SYSTEM NAME:

File of Persons Making Threats of Force or Forcible Assaults CP:C—Treasury/IRS

Delete This entire system

Treasury/IRS 26.019

SYSTEM NAME:

UNITED STATES RAILWAY ASSOCIATION

[Docket No. STP-1]

Supplemental Transaction Proposal

On August 16, 1979, copies of the United States Railway Association's *Evaluation of Supplemental Transaction Proposal No. 1* (Docket No. STP-1), were delivered to the Interstate Commerce Commission, attorneys for the Providence and Worcester Company ("P&W"), Conrail, the **Federal Register**, and others. On August 21, 1979, that report was printed in the **Federal Register**, pursuant to Section 305(b) of the Regional Rail Reorganization Act of 1973, as amended. Under Section 305(b), the P&W had 30 days in which to notify USRA of its acceptance or rejection of the proposed supplemental transaction.

By letter dated August 27, 1979, the P&W notified USRA of its acceptance of the transaction as proposed, at a purchase price of $2.75 million. A copy of that letter is appended.

Peter J. Gallagher,

Secretary.

August 27, 1979.

Mr. Donald C. Cole,
President, United States Railway Association, 995 L'Enfant Plaza North, S.W., Washington, D.C. 20595.

Dear Mr. Cole: By document dated April 6, 1979 the Federal Railroad Administrator transmitted to the United States Railway Association a Supplemental Transaction Proposal (STP) pursuant to Section 305 of the Regional Rail Reorganization Act of 1973 as amended (Act). The STP established $2.75 million as the "fair and equitable" purchase price.

Pursuant to Section 305(b) of the Act, Providence and Worcester Company hereby notifies you of its acceptance of the STP.

Sincerely yours,

Robert H. Eder,

President.

cc: Mr. John M. Sullivan,

Administrator, Federal Railroad Administration.

Mr. Arthur B. Powers,

Commissioner, Department of Transportation, State of Connecticut.

INTERSTATE COMMERCE COMMISSION

Agricultural Cooperatives; Notice to the Commission of Intent To Perform Interstate transportation for Certain Nonmemers

Dated: September 6, 1979.

The following Notices were filed in accordance with section 10526(a)(5) of the Interstate Commerce Act. These rules provide that agricultural cooperatives intending to perform nonmember, nonexempt, interstate transportation must file the Notice, Form BOP 102, with the Commission within 30 days of its annual meetings each year. Any subsequent change concerning officers, directors, and location of transportation records shall require the filing of a supplemental Notice within 30 days of such change. The name and address of the agricultural cooperative, the location of the records, and the name and address of the person to whom inquiries and correspondence should be addressed, are published here for interested persons. Submission of information that could have bearing upon the propriety of a filing should be directed to the Commission's Bureau of Investigations and Enforcement, Washington, D.C. 20423. The Notices are in a central file, and can examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C.

[Ex Parte No. 311]

Expedited Procedures for Recovery of Fuel Costs

Decided September 5, 1979.

In our decision of August 28, 1979, a 9-percent surcharge was authorized on all owner-operator traffic, and on all truckload-rated traffic whether or not owner-operators were employed. We ordered that all owner-operators were to receive compensation at this level.

In addition, a 1.6-percent surcharge was authorized on less-than-truckload (LTL) traffic performed by carriers not utilizing owner-operators. This was an adjustment from the previously authorized 2.7-percent surcharge on this traffic that had been applicable since June 19, 1979.

Although the weekly figures set forth in the appendix for transportation performed by owner-operators and for truckload-rated traffic is 9.7 percent, we are authorizing that the surcharge for this traffic will be 9.5 percent. All owner-operators are to receive compensation at the 9.5-percent level. In addition, we are authorizing a 1.7 percent surcharge on LTL traffic performed by carriers not utilizing owner-operators.

Notice of this decision shall be given to the general public by mailing a copy of this decision to the Governor of each State and to the Public Utilities Commissions or Boards of each State having jurisdiction over transportation, by depositing a copy in the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., for public inspection, and by delivering a copy to the Director, Office of the Federal Register, for publication therein.

It is ordered:

This decision shall become effective Friday at 12:01 a.m., September 7, 1979.

By the Commission. Chairman O'Neal, Vice Chairman Stafford, Commissioners Gresham, Clapp, Christian, Trantum, Gaskins and Alexis.

Agatha L. Mergenovich,

Secretary.

September 5, 1979.

Appendix.—*Fuel Surcharge*

Base Date and Price Per Gallon (Including Tax)

January 1, 1979 ..... 63.5¢

Date of Current Price Measurement and Price Per Gallon (Including Tax)

September 4, 1979 ..... 99.4¢

Appendix.—*Fuel Surcharge* —Continued

Average Percent: Fuel Expenses (Including Taxes) of Total Revenue

(1) From Transportation Performed by Owner Operators (Apply to All Truckload Rated Traffic)	(2) Other (Including Less-Truckload Traffic)
16.9%	2.9% [1]
Percent Surcharge Developed	
9.7%	1.7%
Percent Surcharge Allowed	
9.5%	1.7%

1 Additional data for general commodity carriers indicate the following:
(a) Percent Fuel (including tax) of revenue (all traffic) 7.3%
(b) Percent T.L. and LTL Revenue of total revenue:

	Revenue (in millions of dollars)	Percent
T.L.	$3,451,661	32
LTL	7,427,232	68
Total	10,878,893	100

Utilizing the T.L. and LTL weighting factors and retaining the relationship of fuel to revenue for owner operators (also applied to T.L. rated traffic) and in total of 16.9 percent and 7.3 percent respectively, the comparable relationship for LTL is 2.9 percent. This figure should not be construed as an actual relationship but is developed as a method to adjust the LTL surcharge.

BILLING CODE 7035-01-M

[Rule 19, Mandatory Car Service Rules, Ex Parte No. 241; Exemption No. 171]

Chicago, Rock Island, and Pacific Railroad Co.; Car Service Rules

Because of a strike, the Chicago, Rock Island and Pacific Railroad Company (RI) is unable to relocate empty cars to other stations for loading or to return them promptly to car owners in accordance with Car Service Rules 1 and 2. Consequently, RI is unable to furnish cars of suitable ownership to shippers while at the same time similar cars of other ownerships are idle because of the inability of the RI to return them to owners. In addition, RI freight cars on other lines are not needed on the RI because of the strike.

It is ordered, That pursuant to the authority vested in me by Car Service Rule 19:

(a) The Chicago, Rock Island and Pacific Railroad Company (RI) is authorized to accept from shippers general service freight cars described in paragraph (b) owned by other railroads regardless of the provisions of Car Service Rules 1 and 2. This exemption shall not apply to cars of Mexican or Canadian ownership or to cars subject to Interstate Commerce Commission or Association of American Railroads' orders requiring return of cars to owners.

(b) This exemption is applicable to general service freight cars bearing reporting marks assigned to railroads listed in the Official Railway Equipment Register, ICC–RER 6410–B issued by W. J. Trezise, or successive issues thereof as having the following mechanical designations:

Plain Boxcars: "XM", "XMI", "XMIH"
Gondola Cars: "GA", "GB", "GD", "GH", "GS", "GT"
Hopper Cars: "HFA", "HK", "HM", "HMA", "HT", "HTA"
Flat Cars: "FM", less than 200,000 lb. capacity

(c) RI owns numerous general service freight cars and specialized equipment cars that are not needed on RI because of the strike. The RI general service freight cars listed in paragraph (b) and RI freight cars subject to Car Service Directives 150 and 155 shall be exempt from the provisions of Car Service Rules 1 and 2.

(d) This exemption does not authorize use of RI Cars subject to Car Service Directives 145 and 435 by other railroads. Any railroad desiring to use these cars must receive authorization from Henry Metz, General Superintendent, Car Utilization and Service, RI, Chicago, Illinois.

Effective: August 28, 1979.

Expires: September 5, 1979.

Issued at Washington, D.C., August 28, 1979.

BILLING CODE 7035-01-M

[Rule 19, Mandatory Car Service Rules Ex Parte No. 241; Thirty-Eighth Revised Exemption No. 12]

Atlantic and Western Railway, et al.; Car Service Rules

To all railroads: It appearing, That the railroads named herein own numerous plain boxcars; that under present conditions, there is virtually no demand for these cars on the lines of the car owners; that return of these cars to the car owners would result in their being stored idle on these lines; that such cars can be used by other carriers for transporting traffic offered for shipments to points remote from the car owners; and that compliance with Car Service Rules 1 and 2 prevents such use of plain boxcars owned by the railroads listed herein, resulting in unnecessary loss of utilization of such cars.

It is ordered, That, pursuant to the authority vested in me by Car Service Rule 19, plain boxcars described in the Official Railway Equipment Register, ICC–RER 6410–B, issued by W. J. Trezise, or successive issues thereof, as having mechanical designation "XM" or "XMI," and bearing reporting marks assigned to the railroads named below, shall be exempt from provisions of Car Service Rules 1(a), 2(a), and (b).

Permanent Authority Decisions; Decison-Notice

The following applications, filed on or after March 1, 1979, are governed by Special Rule 247 of the Commission's *Rules of Practice* (49 CFR § 1100.247). These rules provide, among other things, that a petition for intervention, either in support of or in opposition to the granting of an application, must be filed with the Commission within 30 days after the date notice of the application is published in the **Federal Register.** Protests (such as were allowed to filings prior to March 1, 1979) *will be rejected.* A petition for invervention without leave must comply with Rule 247(k) which requires petitioner to demonstrate that it (1) holds operating authority permitting performance of any of the service which the applicant seeks authority to perform, and has the necessary equipment and facilities for performing that service, and (2) has either performed service within the scope of the application or has solicited business which is controlled by those supporting the application and which would have involved transportation performed within the scope of the application.

Persons unable to intervene under Rule 247(k) may file a petition for leave to intervene under Rule 247(l) setting forth the specific grounds upon which it is made, including a detailed statement of petitioner's interest, the particular facts, matters, and things relied upon, the extent to which petitioner's interest will be represented by other parties, the extent to which petitioner's participation may reasonably be expected to assist in the development of a sound record, and the extent to which participation by the petitioner would broaden the issues or delay the proceeding.

Petitions not in reasonable compliance with the requirements of the rules may be rejected. An original and one copy of the petition to intervene shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named.

Section 247(f) provides, in part, that an applicant which does not intend timely to prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

If an applicant has introduced rates as an issue it is noted. Upon request, an applicant must provide a copy of the tentative rate schedule to any protestant.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. *Broadening amendments will not be accepted after the date of this publication.*

Any authority granted may reflect administratively acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.gs., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the present and future public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the transportation policy of 49 U.S.C. § 10101. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where specifically noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

regulatory action under the Energy Policy and Conservation Act of 1975.

In those proceedings containing a statement or note that dual operations are or may be involved we find, preliminarily and in the absence of the issue being raised by a petitioner, that the proposed dual operations are consistent with the public interest and the transportation policy of 49 U.S.C. § 10101 subject to the right of the Commission, which is expressly reserved, to impose such terms conditions or limitations as it finds necessary to insure that applicant's operations shall conform to the provisions of 49 U.S.C. § 10930(a) [formerly section 210 of the Interstate Commerce Act.]

In the absence of legally sufficient petitions for intervention, filed on or before October 11, 1979 (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of the decision-notice. To the extent that the authority sought below may duplicate an applicant's other authority, such duplication shall be construed as conferring only a single operating right.

Applicants must comply with all specific conditions set forth in the grant or grants of authority within 90 days after the service of the notification of the effectiveness of this decision-notice, or the application of a non-complying applicant shall stand denied.

Volume No. 142

Decided: August 13, 1979.

By the Commission, Review Board Number 1. Members Carleton, Joyce and Jones. Member Carleton not participating.

MC 4405 (Sub-611F), filed April 6, 1979. Applicant: DEALERS TRANSIT, INC., P.O. Box 236, Tulsa, OK 74101. Representative: Thomas J. Van Osdel, 502 First National Bank Bldg., Fargo, ND 58126. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *trailers and trailer chassis*, (except those designed to be drawn by passenger automobiles) in initial movements, from West Point, PA, to points in the United States (except AK and HI). (Hearing site: Philadelphia, PA, or Washington, DC.)

MC 14215 (Sub-33F), filed April 13, 1979. Applicant: SMITH TRUCK SERVICE, INC., P.O. Box 1329, Steubenville, OH 43952. Representative: John L. Alden, 1396 West Fifth Ave., Columbus, OH 43212. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *iron and steel articles*, from Beaver Falls, PA, to points in CT, GA, IN, IL, KY, NC, NJ, OH, SC, TN, VA, and the Lower Peninsula of MI. (Hearing site: Columbus, OH, or Washington, DC.)

MC 14215 (Sub-34F), filed April 13, 1979. Applicant: SMITH TRUCK SERVICE, INC., P.O. Box 1329, Steubenville, OH 43952. Representative: John L. Alden, 1396 West Fifth Ave., P.O. Box 12241, Columbus, OH 43212. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *steel articles*, from Steubenville, OH, to points in IL, IN, KY, and the Lower Peninsula of MI. (Hearing site: Columbus, OH, or Washington, DC.)

MC 14314 (Sub-31F), filed April 5, 1979. Applicant: DUFF TRUCK LINE, INC., P.O. Box 359, Lima, OH 45802. Representative: Paul F. Berry, 275 East State St., Columbus, OH 43215. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), serving the facilities of Honda of America Manufacturing, Inc., near Marysville, OH, as an off-route point in connection with carrier's otherwise—authorized regular-route operations. (Hearing site: Columbus, OH.)

MC 29904 (Sub-4F), filed April 13, 1979. Applicant: SUDDATH VAN LINES, INC., 525 Stevens St., P.O. Box 6699, Jacksonville, FL 32205. Representative: Robert J. Gallagher, 1000 Connecticut Ave., NW, Suite 1200, Washington, DC 20036. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *household goods* as defined by the Commission, between points in FL, TX, IA, MN, MI, WI, ME, AR, KS, OK, NY, NJ, DE, MD, PA, WV, VA, NC, SC, GA, AL, TN, KY, MS, LA, MO, IL, IN, MA, CT, RI, NH, VT, OH, and DC. Note: The person or persons who appear to be engaged in common control of applicant and any other regulated carrier must either file an application under 49 U.S.C. 11343(a) formerly section 5(2) of the Interstate Commerce Act, or submit an affidavit indicating why such approval is unnecessary. Affidavits are due 20 days from the date of publication. (Hearing site: Jacksonville, FL.)

MC 45764 (Sub-31F), filed April 10, 1979. Applicant: ROBBINS MOTOR TRANSPORTATION, INC., P.O. Box 38, Essington, PA 19029. Representative: Paul F. Sullivan, 711 Washington Bldg., Washington, DC 20005. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, and those requiring special equipment), (1) in containers, or trailers, having an immediately prior or subsequent movement by water, and (2) empty containers, or trailers chassis, (a) between points in NY, NJ, DE, PA, and MD; and (b) between the points named in (1) above, on the one hand, and, on the other, Boston, MA, Norfolk, VA, Cleveland and Toledo, OH, and Charleston, SC. (Hearing site: New York, N.Y.)

MC 52464 (Sub-11F), filed April 10, 1979. Applicant: EVANS TRUCKING CO., a corporation, 2773 Darlington Rd., Beaver Falls, PA 15010. Representative: A. Charles Tell, 100 East Broad St., Columbus, OH 43215. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *iron and steel articles*, from Buffalo, NY, to points in Ashland, Ashtabula, Belmont, Carroll, Columbiana, Coshocton, Cuyahoga, Geauga, Guernsey, Harrison, Holmes, Jefferson, Lake, Lorain, Mahoning, Medina, Muskingum, Portage, Stark, Summit, Trumbull, Tuscarawas, and Wayne Counties, OH, and Allegheny, Armstrong, Beaver, Butler, Cambria, Cameron, Clarion, Clearfield, Crawford, Elk, Erie, Fayette, Forest, Greene, Indiana, Jefferson, Lawrence, McKean, Mercer, Somerset, Venango, Warren, Washington, and Westmoreland Counties, PA. (Hearing site: Washington, DC.)

MC 78687 (Sub-73F*), filed June 14, 1979, previously and erroneously published in the **Federal Register** of August 2, 1979 as Sub 67F*. Applicant: LOTT MOTOR LINES, INC., West Cayuga St., P.O. Box 751, Moravia, NY 13118. Representative: E. Stephen Heisley, 805 McLachlen Bank Bldg., 666 Eleventh St., NW., Washington, DC 20001.

Note.—This partial republication indicates that the correct docket number is MC 78687 Sub 73F*. All other issues remain as previously published.

MC 83835 (Sub-157F), filed April 12, 1979. Applicant: WALES TRANSPORTATION, INC., P.O. Box 6186, Dallas, TX 75222. Representative: James W. Hightower, First Continental

*Dual operations may be involved.

Bank Bldg. #301, 5801 Marvin D. Love Freeway, Dallas, TX 75237. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting (1) *material handling equipment*, and (2) *parts, accessories, and attachments* for material handling equipment, between the facilities of Stewart & Stevenson, at or near Houston, Corpus Christi, Beaumont, San Antonio, and Harlingen, TX, on the one hand, and, on the other, points in the United States (except AK and HI). (Hearing site: Dallas, TX.)

MC 85934 (Sub-100F), filed April 12, 1979. Applicant: MICHIGAN TRANSPORTATION COMPANY, a corporation, 3601 Wyoming, P.O. Box 248, Dearborn, MI 48121. Representative: Edwin M. Snyder, 22375 Haggerty Rd., P.O. Box 400 Northville, MI 48167. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *commodities in bulk*, between points in MI, on the one hand and, on the other, points in OH and IN, restricted to the transportation of traffic having a prior or subsequent movement by rail. (Hearing site: Chicago, IL.)

MC 106674 (Sub-382F), filed April 11, 1979. Applicant: SCHILLI MOTOR LINES, INC., P.O. Box 123, Remington, IN 47977. Representative: Jerry L. Johnson (same address as applicant). To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *salt*, from the facilities of Morton Salt, at or near Manistee and Marysville, MI, to points in IL, IN, IA, and WI. (Hearing site: Chicago, IL, or Indianapolis, IN.)

MC 110325 (Sub-98F), filed March 5, 1979, previously notice in the **Federal Register**, issue of July 6, 1979, and republished this issue. Applicant: TRANSCON LINES, a corporation, P.O. Box 92220, Los Angeles, CA 90009. Representative: Wentworth E. Griffin, Midland Bldg. 1221 Baltimore Ave., Kansas City, MO 64105. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over regular routes, transporting *general commodities (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), between Portland, OR, and Tacoma, WA, over Interstate Hwy 5, as an alternate route for operating convenience only, serving no intermediate points, restricted against the transportation of traffic originating and destined to Portland, OR, and Tacoma and Seattle, WA, and points in their respective commercial zones. (Hearing site: Washington, DC.)*

Note:— This republication is to clarify the restriction.

MC 114045 (Sub-539F), filed April 12, 1979. Applicant: TRANS-COLD EXPRESS, INC., P.O. Box 61228, Dallas, TX 75261. Representative: J. B. Stuart (same address as applicant). To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *citric acid*, in containers, from the facilities of Pfizer, Inc., at or near Southport, NC, to points in IL, IN, IA, KS, MI, MN, MO, and WI. (Hearing site: New York, NY.)

MC 115654 (Sub-138F), filed April 13, 1979. Applicant: TENNESSEE CARTAGE CO., INC., P.O. Box 23193, Nashville, TN 37202. Representative: Henry Seaton, 929 Pennsylvania Bldg., 425 Thirteenth St., NW Washington, DC 20004. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *meats, meat products and meat byproducts, dairy products, and articles distributed by meatpacking houses*, as described in Sections A, B, and C of Appendix I to the report in *Descriptions in Motor Carrier Certificates*, 61 M.C.C. 209 and 766, in vehicles equipped with mechanical refrigeration, from the facilities of Armour Food Company, at or near Louisville, KY, to Bristol, VA, points in AL, GA, MS, and TN, and those in De Soto County, MS, and Crittenden County, AR. (Hearing site: Louisville, KY, or Nashville, TN.)

MC 116254 (Sub-262F), filed April 10, 1979. Applicant: CHEM-HAULERS, INC., 118 East Mobile Plaza, Florence, AL 35630. Representative: Randy C. Luffman (same address as applicant). To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *iron and steel articles*, from Georgetown, SC, to those points in the United States in and east of MN, IA, MO, AR, and LA. (Hearing site: Atlanta, GA, or Charlotte, NC.)

MC 116544 (Sub-172F), filed March 16, 1979, previously noticed in the **Federal Register** issue of August 2, 1979 as Sub 171. Applicant: ALTRUK FREIGHT SYSTEMS, INC., 1703 Embarcadero Road, Palo Alto, CA 94303. Representative: Kirk Wm. Horton, P.O. Box 10061, Palo Alto, CA 94303. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting (1) *bananas*, and (2) *agricultural commodities* which are otherwise exempt from economic regulations under 49 U.S.C. 10526(a)(6) (formerly Section 203(b)(6) of the Interstate Commerce Act) when moving in mixed loads with bananas, from Charleston, SC, to points in IL, IN, WI, MN, IA, MO, and FL. (Hearing site: Washington, DC, or Miami, FL.)

Note.—This republication indicates the correct Sub-No.

[Permanent Authority Decisions Volume No. 148]

Permanent Authority Decisions; Decision-Notice

Decided. August 24, 1979.

The following applications filed on or before February 28, 1979, are governed by Special Rule 247 of the Commission's *Rules of Practice* (49 CFR § 1100.247). For applications filed before March 1, 1979, these rules provide, among other things, that a protest to the granting of an application must be filed with the Commission within 30 days after the date notice of the application is published in the **Federal Register**. Failure to file a protest, within 30 days, will be considered as a waiver of opposition to the application. A protest under these rules should comply with Rule 247(e)(3) of the Rules of Practice which requires that it set forth specifically the grounds upon which it is made, contain a detailed statement of protestant's interest in the proceeding, (as specifically noted below), and shall specify with particularity the facts, matters, and things relied upon, but shall not include issues or allegations phrased generally. A protestant should include a copy of the specific portions of its authority which protestant believes to be in conflict with that sought in the application, and describe in detail the method—whether by joinder, interline, or other means—by which protestant would use such authority to provide all or part of the service proposed.

Protests not in reasonable compliance with the requirements of the rules may be rejected. The original and one copy of the protest shall be filed with the Commission, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named. If the protest includes a request for oral hearing, such request shall meet the requirements of section 247(e)(4) of the special rules and shall include the certification required in that section.

On cases filed on or after March 1, 1979, petitions for intervention either with or without leave are appropriate.

Section 247(f) provides, in part, that an applicant which does not intend timely to prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

If applicant has introduced rates as an issue it is noted. Upon request an applicant must provide a copy of the tentative rate schedule to any protestant.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. *Broadening amendments will not be accepted after the date of this publication.*

Any authority granted may reflect administratively acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exceptions of those applications involving duly noted problems (e.g., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the transportation policy of 49 U.S.C. § 10101. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where specifically noted this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In those proceedings containing a statement or note that dual operations are or may be involved we find, preliminarily and in the absence of the issue being raised by a protestant, that the proposed dual operations are consistent with the public interest and the transportation policy of 49 U.S.C. § 10101 subject to the right of the Commission, which is expressly reserved, to impose such conditions as it finds necessary to insure that applicant's operations shall conform to the provisions of 49 U.S.C. § 10930(a) [formerly section 210 of the Interstate Commerce Act].

In the absence of legally sufficient protests, filed on or before October 11, 1979 (or, if the application later becomes unopposed), appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notification of effectiveness of this decision-notice. To the extent that the authority sought below may duplicate an applicant's existing authority, such duplication shall not be construed as conferring more than a single operating right.

Applicants must comply with all specific conditions set forth in the grant or grants of authority within 90 days after the service of the notification of the effectiveness of this decision-notice, or the application of a non-complying applicant shall stand denied.

By the Commission, Review Board Number 3 Members Parker, Fortier, and Hill.

Agatha L. Mergenovich,
Secretary.

MC 41406 (Sub-121F), filed February 28, 1979. Applicant: ARTIM TRANSPORTATION SYSTEM, INC., 7105 Kennedy Avenue, Hammond, IN 46323. Representative: Wade H. Bourdon (same address as applicant). To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *iron and steel articles*, and *stationary highway products*, between Columbus, OH, on the one hand, and, on the other, points in the United States (except AK and HI). (Hearing site: Columbus, OH, or Chicago, IL.)

MC 86247 (Sub-16F), filed January 10, 1979. Applicant: I.C.L. INTERNATIONAL CARRIERS LIMITED, 1333 College Avenue, Windsor, Ontario, Canada. Representative: Joseph P. Allen, 7701 W. Jefferson, P.O. Box 09259, Detroit, MI 48209. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting, *aluminum scrap and steel scrap*, in bulk, in dump vehicles, from ports of entry on the International Boundary line between the United States and Canada, at Detroit and Port Huron, MI, to Toledo, Sandusky, and Cleveland, OH, Gary, IN and Chicago, IL. The purpose of this application is to substitute a single line service, for which one of the carriers has dropped out of the two line service. (Hearing site: Detroit, MI or Washington, DC.)

Note.—Applicant states tacking is authorized at Detroit and Port Huron, MI with carriers authority in MC 86247, MC 86247 Sub 3, and MC 86247 Sub 4.

MC 95466 (Sub-7F), filed December 20, 1978, and previously noticed in the **Federal Register** issue of April 6, 1979. Applicant: DATTCO, INC., 99 Newington Ave., New Britain, CT 06051. Representative: W. C. Mitchell, 370 Lexington, Ave., New York, NY 10017. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *passengers and their baggage*, in the same vehicle with passengers, in special and charter operations, between Bridgeport, Hartford, Meriden, Middletown, New Haven, and Stamford, CT, Springfield, MA, and New Rochelle, NY, on the one hand, and, on the other, points in the United States, (including AK, but excluding HI), restricted to the transportation of traffic performed for passenger brokers. (Hearing site: Hartford, CT.)

Note.—This republication is to show a radial movement and impose the restriction.

MC 113646 (Sub-18F), filed February 23, 1979, and previouslu noticed in the **Federal Register** issue of June 6, 1979. Applicant: JEFFERSON TRUCKING COMPANY, P.O. Box 17, National City, MI 48748. Representative: William B. Elmer, 21635 East Nine Mile Road, St. Clair Shores, MI 48080. To operate as a *contract carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *building materials*, and *materials and supplies* used in the manufacture, distribution, and installation of the aforenamed commodities (except commodities in bulk), between Newark, OH, on the one hand, and, on the other, points in AL, AR, FL, GA, KS, LA, MA, OK, NE, ND, SC, and SD, under a continuing contract(s) with Tectum, Inc., of Newark, OH. (Hearing site: Charlotte, NC)

Note.—This republication to show contracting shipper.

MC 133937 (Sub-31F), filed January 29, 1979. Applicant: CAROLINA CARTAGE COMPANY, INC., 1638 East Vesta Drive, Atlanta, GA 30337. Representative: Henry P. Willimon, P.O. Box 1075, Greenville, SC 29602. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting (1) *office supplies, office machines, office equipment, paper articles, printed matter*, and (2) *leather goods, shoe polish, shoe laces, and materials* used in the manufacture of wearing apparel, between Los Angeles, Ontario, and San Francisco, CA, Chicago, IL, Dallas, TX, and points in AL, FL, GA, MS, NC, SC, and TN. (Hearing site: Columbia, SC)

MC 135197 (Sub-20F), filed December 12, 1978, and previously published in the **Federal Register** issue of June 6, 1979. Applicant: LEESER TRANSPORTATION, INC., P.O. Box 545, Palmyra, MO 63461. Representative: Leonard A. Jaskiewicz, 1730 M Street, N.W., Suite 501, Washington, DC 20036. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting (1) *animal and poultry feeds, and plant growth regulants, pesticides*, and (2) *materials, equipment*, and *supplies* used in the manufacture and distribution of the commodities named in (1) above, (except liquids in bulk), between points in IL, IN, IA, MN, MO, and NE, restricted to the transportation of traffic originating at or destined to the facilities of American Cyanamid Company. The purpose of the republication is to correctly reflect the commodity description. (Hearing site: St. Louis, MO)

MC 142487 (Sub-4F), filed February 23, 1979. Applicant: JOHN H. KOOY TRUCKING, INC., 3926 Shelby Road, Lynwood, WA 98036. Representative: James T. Johnson, 1610 IBM Building, Seattle, WA 98101. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *synthetic rubber sealants and coatings*, in containers, from Glendale, CA, to points in OR and WA. (Hearing site: Seattle, WA, or Portland, OR)

MC 142977 (Sub-1F), filed December 27, 1978. Applicant: HOOSIER FREIGHT LINES, INC., P.O. Box 16006, Louisville, KY 40216. Representative: James K. Stayton, Suite 216, Atkinson Square, Louisville, KY 40218. To opeate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over regular routes, transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, those requiring special equipment, contractor's equipment, and mining and road building equipment), between Campbellsburg, IN, and Louisville, KY; from Campbellsburg over IN Hwy 60 to junction IN Hwy 56, then over IN Hwy 56 to junction IN Hwy 135, then over IN Hwy 135 to junction IN Hwy 60, then over IN Hwy 60 to junction IN Hwy 111, then over IN Hwy 111 to Louisville, and return over the same route, serving all intermediate points. (Hearing site: Louisville, KY, or Indianapolis, IN.)

V 44 / 177 SEP 11 79

MC 144817 (Sub-1F), filed February 9, 1979. Applicant: J.N.A. CONTRACT SHIPPERS, INC., 11474 Norton Avenue, Chino, CA 91710. Representative: Milton W. Flack, 4311 Wilshire Blvd., Suite 300, Los Angeles, CA 90010. To operate as a *contract carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting (1)(a) *steel shelving and furniture*, and (b) parts for the commodities named in (1) above, (2) *lift trucks*, and (3) *paint* used in the manufacture and distribution of the commodities named in (1) above, from the facilities of SPS Technologies, Inc., Hallowell Division, at Hatfield, PA, to points in AZ, AR, CA, CO, FL, ID, MT, NV, NM, OK, OR, TX, UT, and WA, under continuing contract(s) with SPS Technologies, Inc., of Hatfield, PA. (Hearing site: Los Angeles, CA.)

MC 144927 (Sub-6F), filed November 27, 1978, and previously noticed in the Federal Register issue of March 15, 1979. Applicant: REMINGTON FREIGHT LINES, INC., Box 315, U.S. 24 West, Remington, IN 47977. Representative: Robert B. Hebert, 320 North Meridian St., 777 Chamber of Commerce Bldg., Indianapolis, IN 46204. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *foodstuffs* (except commodities in bulk), from the facilities of Griffith Laboratories, U.S.A., Inc., at (a) Union City and Los Angeles, CA, (b) Alsip and Chicago, IL, (c) Lithonia, GA, (d) Union, NJ, (e) Mayland, TN, and (f) Remington, IN, to points in the United States (except AK and HI), and (2) materials and supplies used in the manufacture of foodstuffs, (except commodities in bulk), in the reverse direction. (Hearing site: Indianapolis, IN, or Washington, DC.)

Note.—(1) This republication is to include Remington, IN, as

MC 145386 (Sub-1F), filed January 12, 1979. Applicant: ROBERT L. McMAHON, d.b.a. ROBERT McMAHON CONSTRUCTION, 1105 South Maple, Staunton, IL 62088. Representative: Robert McMahon (same address as applicant). To operate as a *contract carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *iron and steel articles* between the facilities of Livingston Pipe and Tube Inc. at Staunton, IL, on the one hand, and, on the other, points in AR, AL, FL, GA, IA, IN, KS, KY, LA, MI, MO, MN, MS, NE, NC, OH, OK, PA, SC, TN, TX, VA, WI, and WV, under continuing contract(s) with Livingston Pipe and Tube, Inc. of Staunton, IL. (Hearing site: Springfield, IL, or St. Louis, MO.)

MC 145686F, filed November 13, 1978, and previously noticed in the Federal Register issue of February 20, 1979. Applicant: COOK MOTOR LINES, INC., 2110 Gibbs Drive, Tallahassee, FL 32303. Representative: Sol H. Proctor, 1101 Blackstone Bldg., Jacksonville, FL 32202. To operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), between Jacksonville and Mariana, FL: (a) over U.S. Hwy 90, or (b) over Interstate Hwy 10, serving all intermediate points between Greenville and Marianna, FL. (Hearing site: Jacksonville or Tallahassee, FL.)

Note.—This republication to show correct routes.

[FR Doc. 79-28164 Filed 9-10-79; 8:45 am]

BILLING CODE 7035-01-M

[Volume No. 31]

Petitions, Applications, Finance Matters (Including Temporary Authorities), Alternate Route Deviations, Intrastate Applications, Gateways, and Pack & Crate.

August 30, 1979.

Petitions for Modification, Interpretation or Reinstatement of Motor Carrier Operating Rights Authority; Notice

The following petitions seek modification or interpretation of existing motor carrier operating rights authority, or reinstatement of terminated motor carrier operating rights authority.

All pleadings and documents must clearly specify the suffix numbers (e.g., M1, F, M2 F) where the docket is so identified in this notice.

The following petitions, filed on or after March 1, 1979, are governed by Special Rule 247 of the Commission's General Rules of Practice (49 CFR 1100.247). These rules provide, among other things, that a *petition to intervene either with or without leave* must be filed with the Commission within 30 days after the date of publication in the Federal Register with a copy being furnished the applicant. Protests to these applications will be *rejected*.

A petition for intervention without leave must comply with Rule 247(k) which requires petitioner to demonstrate that if (1) holds operating authority permitting performance of any of the service which the applicant seeks authority to perform, (2) has the necessary equipment and facilities for performing that service, and (3) has performed service within the scope of the application either (a) for those supporting the application, or, (b) where the service is not limited to the facilities of particular shippers, from and to, or between, any of the involved points.

Persons unable to intervene under Rule 247(k) may file a petition for leave to intervene under Rule 247(l). In deciding whether to grant leave to intervene, the Commission considers, among other things, whether petitioner has (a) solicited the traffic or business of those persons supporting the application, or, (b) where the identity of those supporting the application is not included in the published application notice, has solicited traffic or business identical to any part of that sought by applicant within the affected marketplace. Another factor considered is the effects of any decision on petitioner's interests.

Samples of petitions and the text and explanation of the intervention rules can be found at 43 Fed. Reg. 50908, as modified at 43 Fed. Reg. 60277.

Petitions not in reasonable compliance with these rules may be rejected. Note that Rule 247(e), where not inconsistent with the intervention rules, still applies. Especially refer to Rule 247(e) for requirements as to supplying a copy of conflicting authority, serving the petition on applicant's representative, and oral hearing requests.

MC 491 (Sub-3), (M1F) (Notice of filing of petition to modify certificate) filed December 18, 1978. Petitioner: MARSH EXPRESS, INC., P.O. Box 447, Glassboro, NJ 08028. Representative: Michael R. Werner, P.O. Box 1409, 167 Fairfield Road, Fairfield, NJ 07006. Petitioner holds motor *common carrier* certificate in MC-491 Sub 3 issued July 1, 1977. MC-491 Sub 3 authorizes transportation, over regular routes, as pertinent, of *General commodities* (except those of unusual value, classes A and B explosives, commodities in bulk, and those requiring special equipment), between Philadelphia, PA, and Newfield, NJ, serving all intermediate points. By the instant petition, petitioner seeks to modify the authority to authorize service to points in NJ (except those in the New York, NY Commercial Zone) as off-route points.

MC 44735 (Sub-26) M1F, (Notice of filing of petition to modify a certificate), filed April 10, 1979. Petitioner: KISSICK TRUCK LINES, INC., 7101 East 12th Street, Kansas City, MO 64126. Representative: William B. Barker, 641 Harrison Street, Topeka, KS 66603. Petitioner holds a motor *common carrier* certificate in MC 44735, Sub No. 26,

issued October 7, 1976, authorizing transportation over irregular routes of: *Iron and Steel Articles* (except commodities as described in *Mercer Extension—Oil Field Commodities*, 74 M.C.C. 459, 544 and *earth drilling commodities* as described in *Roy L. Jones, Inc., Ext.—Earth Drilling Equipment*, 103 M.C.C. 823, 832), From the facilities of Nucor Steel Division of Nucor Corporation at or near Norfolk, NE, to points in KS, MO, and OK, restricted to the transportation of shipments originating at the facilities of the Nucor Steel Division of Nucor Corporation at or near Norfolk, NE, and destined to the above-named destinations. By the instant petition, petitioner seeks the removal of the plantsite restriction by deleting the phrase "the facilities of Nucor Steel Division of Nucor Corporation at or near" and removal from the restriction the phrase "the facilities of the Nucor Steel Division of Nucor Corporation at or near." Hearing: Kansas City, MO or Omaha, NE.

Caption Summary of Authority Sought

MC 55889 (Sub-46M1F), filed April 16, 1979 (Notice of filing of petition to add alternate gateway). Applicant: AAA COOPER TRANSPORTATION, Post Office Box 6827, Dothan, AL 36302. Representative: Kim D. Mann, Suite 1010, 7101 Wisconsin Avenue, Washington, DC 20014. Authority sought to operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over regular routes, transporting: *general commodities* (except those of unusual value, Classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment): (1) Between Augusta, GA and Albany, GA, serving no intermediate points and serving Augusta and Albany for purposes of joinder only: From Augusta over U.S. Hwy 1 to junction U.S. Hwy 221, then over U.S. Hwy 221 to junction U.S. Hwy 319, then over U.S. Hwy 319 to Dublin, GA, then over GA Hwy 257 to Albany, and return over the same route; (2) Between Augusta, GA and Atlanta, GA, serving all intermediate points between Athens and Atlanta and serving Augusta for purposes of joinder only: From Augusta over U.S. Hwy 78 to Athens, GA, then over U.S. Hwy 29 to Atlanta, and return over the same route; (3) Between Albany, GA and Columbus, GA, serving all intermediate points for purposes of joinder only: From Albany over U.S. Hwy 82 to Dawson, GA, then over GA Hwy 55 to junction U.S. Hwy 280, then over U.S. Hwy 280 to Columbus, and return over the same route; (4) Between Albany, GA and Atlanta, GA, serving all intermediate points for purposes of joinder only: From Albany over U.S. Hwy 19 to Atlanta, and return over the same route; (5) Between Columbus, GA and Atlanta, GA, serving all intermediate points for purposes of joinder only: From Columbus over GA Hwy 85 to Atlanta, and return over the same route; (6) Between Augusta, GA and Greer, SC, serving all intermediate points between Greenville and Greer, including Greenville, and serving Augusta for purposes of joinder only: From August over U.S. Hwy 25 to Greenville, SC, then over U.S. Hwy 29 to Greer, and return over the same route; (7) Between Charlotte, NC and Athens, GA, serving all intermediate points: From Charlotte over U.S. Hwy 29 to Athens, and return over the same route; (8) Between Charlotte, NC and Greensboro, NC, serving all intermediate points: From Charlotte over U.S. Hwy 29 to Greensboro, and return over the same route; (9) Between Charlotte, NC and Raleigh, NC, serving all intermediate points: From Charlotte over NC Hwy 49 to junction U.S. Hwy 64, then over U.S Hwy 64 to Raleigh, and return over the same route; (10) Between Charlotte, NC and Winston-Salem, NC, serving all intermediate points: From Charlotte over U.S. Hwy 21 to Statesville, NC, then over U.S. Hwy 64 to junction U.S. Hwy 158, then over U.S. Hwy 158 to Winston-Salem, and return over the same route; (11) Between Greer, SC and Asheville, NC, serving all intermediate points: From Greer over SC Hwy 14 to junction U.S. Hwy 176, then over U.S. Hwy 176 to junction U.S. Hwy 25, then over U.S. Hwy 25 to Asheville, and return over the same route; (12) Between Raleigh, NC and Durham, NC, serving all intermediate points: From Raleigh over U.S. Hwy 70 to Durham, and return over the same route. Serving as off-route points in connection with carrier's regular-route authority (1) Macon, GA, (2) all points in GA between Albany and Dawson on U.S. Hwy 82, including Albany and Dawson, between Dawson and Columbus on GA Hwy 55 to junction U.S. Hwy 280 and then on U.S. Hwy 280 to Columbus, including Columbus, between Albany and Atlanta on U.S. Hwy 19, including Atlanta and between Columbus and Atlanta on GA Hwy 85, and (3) all points in NC between Greensboro and Durham on U.S. Hwy 70, including Greensboro and Durham. Restriction: The Operations authorized hereinabove are restricted to the transportation of traffic serving (a) between points in NC, on the one hand, and, on the other, those points in that part of SC on and north of a line beginning at Charleston and extending along U.S. Hwy 78 to junction U.S. Hwy 178, then along U.S. Hwy 178 to Anderson, and then along U.S. Hwy 29 to the SC–GA State line, (b) from Charleston, SC to points in that part of SC as specified in (a) above with no transportation on return except as otherwise authorized, (c) between Wilmington, NC, on the one hand, and, on the other, points in NC, (d) between Columbia, SC, on the one hand, and, on the other, points in GA in connection with traffic moving from, to, or through Atlanta, GA, (e) between Charlotte, NC, on the one hand, and on the other, points in GA in connection with traffic moving from, to, or through Atlanta, GA, (f) between Augusta and Savannah, GA, on the one hand, and, on the other, points in GA and SC, or (g) between Augusta and Savannah, GA, Richmond, VA, and points in NC, on the one hand, and, on the other, points in Richland, Lexington, and Calhoun Counties, SC.

By the instant petition, petitioner seeks to modify the above authority by adding Atlanta, GA as an alternate gateway in limitation (f), except on shipments moving between Atlanta and north Alabama, so that (f), will be phrased as follows: ". . . between Atlanta (except on traffic moving between Atlanta and points in Alabama north of AL Hwy 14), Augusta, and Savannah, GA, on the one hand, and, on the other, points in Georgia and South Carolina. . . ."

MC 71593 (Sub-7) (MLF) (Notice of filing of petition to modify certificate), filed July 13, 1979. Petitioner: FORWARDERS TRANSPORT, INC., 1608 E. Second Street, Scotch Plains, NJ 07076. Representative: Charles J. Williams, 1815 Front Street, Scotch Plains, NJ 07076. Petitioner holds a motor *common carrier* Certificate in MC 71593 (Sub-7), issued June 29, 1979, to transport in interstate or foreign commerce, over irregular routes, *general commodities;* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), which are at the time moving on bills of lading of freight forwarders under 49 U.S.C. 10102(8) (formerly section 402(5) of the Interstate Commerce Act), (1) between New Haven, CT, Boston and Springfield, MA, and Philadelphia, PA, on the one hand, and, on the other, Chicago, IL, and Milwaukee, WI, and (2) from St. Louis, MO, to New Haven, CT, Boston, MA, and Philadelphia, PA. By the instant petition, petitioner seeks to

UMI

V 44/177 SEP 11 79

modify the authority as follows: Modify part (1) to read: . . . between points in CT, MA, and PA, on the one hand, and, on the other, points in IL and WI. Modify part (2) to read: . . . between points in MO, on the one hand, and, on the other, points in CT, MA, and PA. The purpose of the proposed modification is to permit petition to serve all points in the states where it now has authority to serve specific points.

MC 88594 M2 F, (Notice of filing of petition to modify certficate), filed April 25, 1979. Petitioner: CARLETON G. WHITAKER, INC., Route 17 Exit 84, Town of Deposit, NY 13754. Representative: Michael R. Werner, 167 Fairfield Rd., P.O. Box 1409, Fairfield, NJ 07006. Petitioner holds *common carrier* authority over irregular route in MC 88594, served June 22, 1976, and corrected on July 30, 1976. MC 88594 authorizes the transportation of *Milk* (except in hermetically sealed containers, and *milk products* (except in hermetically sealed containers), from points in NY, (except those in Cattaraugus, Chautauqua, Erie, Genesee, Livingston, Monroe, Niagara, Orleans, and Wyoming Counties), to New York, NY, and points in Nassau, Suffolk, and Westchester Counties, NY, and points in CT, MA, NJ, and RI; and *empty containers* used in the transportation of the above-described commodities, from the above-specified destination points, to the respective origin points specified above, restricted against the transportation of ice cream mix from Camton, Cochocton, Canisteo, Skaneateles, and Canastota, NY, to any of the destination points describeo above, or ice cream mix, in tank trucks, from any of the origin points described above to any point in CT, *butter and ice cream*, from New York, NY and points in NJ and NY within 50 miles of the City Hall, in New York, NY, to the above-specified origin points, and *liquid sugar* and *invert sugar*, in bulk, in tank loads, from Yonkers, NY, to Waddington, NY.

By order served April 2, 1979, MC 88594 M1F was granted authority to transport "foodstuffs (except commodities in bulk, in tank vehicles), in vehicles equipped with mechanical refrigeration" in lieu of "milk (except in hermetically sealed containers) and milk products (except in hermetically sealed containers."

By the instant petition, petitioner seeks to modify the above certificate to read: "*foodstuffs* (except commodities in bulk, in tank vehicles), in vehicles equipped with mechanical refrigeration, and *materials, equipment, and supplies* used in the manufacture, distribution, and sale of foodstuffs (except commodities in bulk, in tank vehicles), between points in NY (except those in Cattaraugus, Chautauqua, Erie, Genesee, Livingston, Monroe, Niagara, Orleans, and Wyoming Counties, on the one hand, and, on the other, New York, NY, and points in Suffolk and Westchester Counties, NY, and points in CT, MA, NJ, and RI."

MC 104421 (Sub-18) (M1F) (Notice of filing of petition to modify certificate) filed March 1, 1979. Petitioner: ECONOLINES, INC., P.O. Box 623, D.T.S., Omaha, NE 68101. Representative: Roger W. Norris (same as address as applicant). Petitioner holds motor *common carrier* certificate in MC 104421 (Sub-18) issued August 4, 1977. MC 104421 (Sub-18) authorizes transportation, over irregular routes, of *Commodities* (except lumber) used in the manufacture, operation, maintenance, and repair of commercial truck trailers, between Council Bluffs, IA, and Springfield, NE, on the one hand, and, on the other, points in ID, MT, NV, ND, OR, SD, UT, and WA. By the instant petition, petitioner seeks to modify the authority as follows: *Commodities* (except lumber and commodities in bulk) used in the manufacture, operation, maintenance, and repair of commercial truck trailers and motor vehicles, between Council Bluffs, IA, and North Bend and Springfield, NE, on the one hand, and, on the other, points in ID, MT, NV, ND, OR, SD, UT, and WA.

MC 104832 (Sub-12) (M1F) (Notice of filing of petition to modify certificate), filed July 5, 1979. Petitioner: HOLMAN TRANSFER CO., a corportation, Portland, OR 97214. Representative: Lawrence V. Smart, Jr., 419 N.W. 23rd Avenue, Portland, OR 97210. Petitioner holds motor *common carrier* Certificate in MC 104832 (Sub-12) issued May 7, 1979, authorizing the transportation, over irregular routes, of *general commodities* (except articles of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), (1) from the facilities of Holman Transfer Co., at Portland, OR, to points in King, Pierce and Inohomish Counties, WA, and (2) from the facilities of Holman Transfer Co., at Kent, WA, to Portland, OR, restricted in both (1) and (2) above to the transportation of traffic originating at the named origin facilities. By the instant petition, petitioner seeks to motify the authority as follows: Petition seeks (1) to add the facilities of Holman affiliate companies as origin points, and (2) correct the spelling of Snohomish County, WA.

MC 111302 (Sub-124F) (M1F) (Notice of filing of petition to modify certificate), filed June 22, 1979. Petitioner: HIGHWAY TRANSPORT, INC., P.O. Box 10108, Knoxville, TN 37919. Representative: John R. Sims, Jr., 915 Pennsylvania Bldg., 425 13th Street, NW, Washington, D.C. 20004. Petitioner holds motor *common carrier* Certificate in MC 111302 (Sub-124F) issued May 25, 1979, authorizing transportation, over irregular routes, of *liquid chemicals* in bulk, in tank vehicles, from (a) the facilities of Cargill Incorporated, and of Nalco Chemical Company in Clayton County, GA, (b) the facilities of Vinings Chemical Company in Cobb County, GA, and (c) the facilities of Union Carbide Corporation, in DeKalb County, GA, to points in the United States (except AK and HI). By the instant petition, petitioner seeks to modify the authority as follows: delete the references to the facilities of named shippers, and substitute just the names of said counties.

MC 115331 (Sub-334) (M1F) and Sub-394 (M1F) (notice of filing of petition to modify certificate), filed December 6, 1978. Petitioner: TRUCK TRANSPORT, INCORPORATED, 230 St. Clair Ave., East St. Louis, IL 62201. Representative: E. Stephen Heisley, 666 Eleventh St., NW., Washington, DC 20001. Petitioner holds motor *common carrier* certificate in MC–115331 Subs 334 and 394 issued October 31, 1974 and October 19, 1977, respectively. MC–115331 Sub 334 authorizes transportation, over irregular routes, of (1) *Grass seed and chemicals*, in containers, *agricultural implements;* and *gardening supples;* and (2) *commodities*, the transportation of which is exempt from economic regulation under section 203(b)(6) of the Interstate Commerce Act, when transported in mixed loads with the commodities in (1) above, from Marysville, OH, to points in KS and NE. MC–115331 Sub 394 authorizes transportation, over irregular routes, of (1) *Such commodities* as are dealt in by lawn and garden care centers, and materials and equipment and supplies used in the conduct of such business (except commodities in bulk); (2) *commodities*, the transportation of which is exempt from economic regulation under section 203(b)(6) of the Interstate Commerce Act, when transported in mixed loads with the commodities in (1) above, from the facilities utilized by O. M. Scott and Sons Co., Inc., at or near Marysville, Union County, OH, to points in OH, MI, KY, IN, IL, IA, MO, WI, MN, TN, AR, OK, TX, CO, NM, MT, WY, ID, UT, AZ, WA, OR, CA, NV, ND, and SD,

restricted to the transportation of traffic originating at the above-described origin point. By the instant petition, petitioner seeks to add Vermilion and Columbus, OH as additional origin points in the above authority.

MC 124211 (Sub-236) (M1F) (notice of filing of petition to modify certificate), filed October 16, 1978. Petitioner: HILT TRUCK LINES, INC., P.O. Box 988, Downtown Station, Omaha, NE 68101. Representative: Thomas L. Hilt (same address as applicant). Petitioner holds a motor *common carrier* certificate in MC–124211 Sub 236 issued April 30, 1979, authorizing transportation, over irregular routes, of (1) *cellular products, athletic and sporting goods, plastic, plastic products, plastic coated products*, and *fiberglass products*, and (2) *commodities* used in the production, distribution, and sale of the commodities described in (1) above (except hides, skins, and tannery products and supplies, and those commodities which because of their size and weight require the use of special equipment), (a) between points in Maricopa County, AZ, Orange County, CA, Los Angeles Counties, CA, and Essex and Middlesex Counties, MA, on the one hand, and, on the other, points in the United States (except AK and HI), and (b) between points in Coweta County, GA, Grant County, IN, Ionia and Oakland Counties, MI, Lowndes County, MS, Lucas and Tuscarawas Counties, OH, and Westmoreland County, PA, on the one hand, and, on the other, points in AZ, CA, CO, ID, IA, KS, MT, NE, NV, MN, ND, OK, OR, SD, TX, UT, WA, and WY, restricted against the transportation of commodities in bulk, and further restricted to shipments originating at or destined to facilities utilized by The General Tire & Rubber Company. By the instant petition, petitioner seeks to delete the county of Lucas, OH from the territorial description in 2(b) and add it to 2(a).

MC 129902 (M1F) (notice of filing of petition to modify certificate), filed July 16, 1979. Petitioner: LESLIE JOE BURTON AND EDDIE LAWYER, a partnership, d.b.a. B. & L. TRUCKING, P.O. Box 163, Orleans, IN 46452. Representative: Robert W. Loser, 1101 Chamber of Commerce Building, Indianapolis, IN 46204. Petitioner holds a motor *common carrier* Certificate in MC–129902, issued November 4, 1974, to transport in interstate or foreign commerce, over irregular routes, *commercial feed*, from the plant site of Ralston Purina Chow Co., in Louisville, KY, to points in that part of IN on and south of U.S. Hwy 40, extending from the IL–IN State line to Indianapolis, IN, and on and south of U.S. Hwy 52, extending from Indianapolis to the IN–OH State line, with no transportation for compensation on return except as otherwise authorized. *Commercial feed and commercial feed ingredients*, from Vandalia, IL, to points in Daviess, Dubois, Gibson, Knox, Martin, Pike, Posey, and Vanderburgh Counties, IN, with no transportation for compensation on return except as otherwise authorized. By the instant Petition, petitioner seeks to modify the authority as follows: Seeks to eliminate "the plant site of Ralston Purina Chow Co., in Louisville, KY," as set forth in the first portion of said authority.

MC 135732 (Sub-28) (M1F) (notice of filing of petition to modify certificate), filed June 11, 1979. Petitioner: AUBREY FREIGHT LINES, INC., P.O. Box 503, Elizabeth, NJ 07202. Representative: George A. Olsen, 69 Tonnele Avenue, Jersey City, NJ 07306. Petitioner holds a motor *common carrier* Certificate MC–135732 Sub 28 issued January 31, 1979, to transport in interstate or foreign commerce, over irregular routes, (1) *Plastic film and sheeting* (except commodities in bulk), in vehicles equipped with mechanical refrigeration, from the facilities of Edison Plastic Company, located at South Plainfield, NJ, and Washington, GA, to points in CA and points in the United States in and east of MN, IA, MO, OK, and TX. (2) *Materials, equipment and supplies* used in the manufacture or sale of plastic film or sheeting (except commodities in bulk), in vehicles equipped with mechanical refrigeration, from points in CA and points in the United States in and east of MN, IA, MO, OK, and TX, to the facilities of Edison Plastic Company, located at South Plainfield, NJ, and Washington, GA. Restriction: The operations authorized herein are restricted to the transportation of traffic originating at the named origin points and destined to the named destination points. This certificate may not be joined or tacked with the carrier's other irregular-route authority. By the instant petition, petitioner seeks to modify the authority as follows: Add Armin Polyethylene Film, Armin Corporation, located at Elizabeth, NJ as an additional shipper.

Motor Carrier Operating Rights Applications; Notice

The following applications, filed on or after March 1, 1979, are governed by Special Rule 247 of the Commission's General Rules of Practice (49 CFR 1100.247). These rules provide, among other things, that a *petition to intervene either with or without leave* must be filed with the Commission within 30 days after the date of publication in the **Federal Register** with a copy being furnished the applicant. Protests to these applications *will be rejected*.

A petition for intervention without leave must comply with Rule 247(k) which requires petitioner to demonstrate that it (1) holds operating authority permitting performance of any of the service which the applicant seeks authority to perform, (2) has the necessary equipment and facilities for performing that service, and (3) has performed service within the scope of the application either (a) for those supporting the application, or, (b) where the service is not limited to the facilities of particular shippers, from and to, or between, any of the involved points.

Persons unable to intervene under Rule 247(k) may file a petition for leave to intervene under Rule 247(l). In deciding whether to grant leave to intervene, the Commission considers, among other things, whether petitioner has (a) solicited the traffic or business of those persons supporting the application, or, (b) where the identity of those supporting the application is not included in the published application notice, has solicited traffic or business identical to any part of that sought by applicant within the affected marketplace. Another factor considered is the effects of any decision on petitioner's interests.

Samples of petitions and the text and explanation of the intervention rules can be found at 43 Fed. Reg. 50908, as modified at 43 Fed. Reg. 60277. Petitions not in reasonable compliance with these rules may be rejected. Note that Rule 247(e), where not inconsistent with the intervention rules, still applies. Especially refer to Rule 247(e) for requirments as to supplying a copy of conflicting authority, serving the petition on applicant's representative, and oral hearing requests.

MC–110988 (Sub-396f), filed August 16, 1979. Applicant: SCHNEIDER TANK LINES, INC., 4322 W. College Avenue, Appleton, WI 54911. Representative: Charles W. Singer, 2480 E. Commercial Blvd., Fort Lauderdale, FL 33308. Authority sought to operate as a *common carrier*, by motor vehicle, in interstate or foreign commerce, over irregular routes, transporting: *Commodities in bulk* (except in dump vehicles) (1) from points in CT, DE, ME, MD, MA, NH, NJ, NY, PA, RI, TN, VT, VA, and WV to points in IL, IN, LA, KY, MI, MN, MO, OH, WI, and those points in PA on and west of US Hwy. 219, and (2) from points in KY and OH to points in IL, IN, IA, MI, MN, MO, and WI.

NOTE: Applicant intends to rely in part on the rate issue in the proceeding. The application is assigned for hearing on October 23, 1979 at the offices of the Interstate Commerce Commission, Washington, DC, in conjunction with the application of applicant in No. MC–110988 (Sub-No. 375F). Certain underlying documents will be available for examination on October 22, 1979, at 1:00 PM at Offices of the Interstate Commerce Commission, Washington, DC.

Motor Carrier Alternate Route Deviations; Notice

The following letter-notices to operate over deviation routes for operating convenience only have been filed with the Commission under the Deviation Rules—Motor Carrier of Property (49 CFR 1042.4(c)(11)).

Protests against the use of any proposed deviation route herein described may be filed with the Commission in the manner and form provided in such rules at any time, but will not operate to stay commencement of the proposed operations unless filed within 30 days from the date of this Federal Register notice.

Each applicant states that there will be no significant effect on either the quality of the human environment or energy policy and conservation.

Motor Carriers of Property

No. MC 11220 (Deviation No. 50), GORDONS TRANSPORTS, INC., 185 West McLemore Ave., Memphis, TN 38101, filed August 14, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: from Richmond, IN, over US Hwy 35 to Muncie, IN, and return over the same route for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities, over a pertinent service route as follows: from Richmond, IN, over US Hwy 40 to Dunrieth, IN, then over IN Hwy 3 to Muncie, IN, and return over the same route.

No. MC 11220 (Deviation No. 50), GORDONS TRANSPORTS, INC., 185 West McLemore Ave., Memphis, TN 38101, filed August 14, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: from Fort Wayne, IN, over US Hwy 33 to Decatur, IN, and return over the same route for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities, over a pertinent service route as follows: from Decatur, IN, over US Hwy 224 to junction US Hwy 30, then over US Hwy 30 to Fort Wayne, IN, and return over the same route.

No. MC 56640 (Deviation No. 4), DELTA LINES, INC., 333 Hegenberger Rd., Oakland, CA 94621, filed August 14, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle of *general commodities*, with certain exceptions, over a deviation route as follows: from Las Vegas, NV, over Interstate Hwy 15 to junction Interstate 10 at San Bernardino, CA, then over Interstate Hwy 10 to the Los Angeles Basin Territory, and return over the same route for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over a pertinent service route as follows: from Las Vegas, NV, over U.S. Hwy 91 to junction Nevada Hwy 16, then over Nevada Hwy 16 to Pahrump, NV, then over Nevada Hwy 52 to the Nevada-California State line, then over California Hwy 178 (formerly California Highway 52) to Shoshone, CA. NOTE: A portion of this deviation is premised on a grant of temporary authority under section 210(a)(b). If applicant's right to operate all or part of the authority expires, this deviation, if authorized, will likewise expire.

No. MC 108835 (Deviation No. 13), HYMAN FREIGHTWAYS, INC., 1745 University Ave., St. Paul, MN 55104, filed August 14, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *general commodities*, with certain exceptions, over a deviation route as follows: from Chicago, IL, over Interstate Hwy 55 to St. Louis, MO, and return over the same route for operating convenience only. The notice indicates that the carrier is presently authorized to transport the same commodities over a pertinent service route as follows: from Chicago, IL, over Interstate Hwy 55, to junction Interstate Hwy 80, then over Interstate Hwy 80 to junction Interstate Hwy 280, then over Interstate Hwy 280 to junction US Hwy 92, then over US Hwy 92 to junction IA Hwy 163, then over IA Hwy 163 to junction US Hwy 69, then over US Hwy 69 to junction US Hwy 34, then over US Hwy 34 to junction US Hwy 169, then over US Hwy 169 to junction IA Hwy 2, then over IA Hwy 2 to junction IA Hwy 148, then over IA Hwy 148 to junction US Hwy 71, then over US Hwy 71 to junction US Hwy 59, then over US Hwy 59 to junction US Hwy 73, then over US Hwy 73 to Kansas City, MO, and return over the same route.

Motor Carrier Alternate Route Deviations; Notice

The following letter-notices to operate over deviation routes for operating convenience only have been filed with the Commission under the Deviation Rules—Motor Carrier of Passengers (49 CFR 1042.2(c)(9)).

Protests against the use of any proposed deviation route herein described may be filed with the Commission in the manner and form provided in such rules at any time, but will not operate to stay commencement of the proposed operations unless filed within 30 days from the date of this Federal Register notice.

Each applicant states that there will be no significant effect on either the quality of the human environment or energy policy and conservation.

Motor Carriers of Passengers

MC 1515 (Deviation 745) (cancels Deviation No. 641), GREYHOUND LINES, INC., Greyhound Tower, Phoenix, AZ 85077, filed August 1, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *passengers and their baggage, and express* and *newspapers*, in the same vehicle with passengers, over deviation routes as follows: from New Orleans, LA, over Interstate Hwy 10 to junction Interstate Hwy 59 near Slidell, LA, then over Interstate Hwy 59 to Birmingham, AL, with the following excess routes: (1) from junction Interstate Hwy 59 over city streets to Bessemer, AL, (2) from junction Interstate Hwy 59 over city streets to Tuscaloosa, AL, (3) from junction Interstate Hwy 59 and County Road 19, over County Road 19 to Boligee, AL, (4) from junction Interstate Hwy 59 and Alabama Hwy 28, over Alabama Hwy 28 to junction U.S. Hwy 11, approximately 2 miles north of Livingston, AL, (5) from Enterprise, MS, over Mississippi Hwy 513 to junction Interstate Hwy 59, (6) from Heidelberg, MS, over Mississippi Hwy 528 to junction Interstate Hwy 59, (7) from Hattiesburg, MS, over U.S. Hwy 49 to junction Interstate Hwy 59, (8) from Hattiesburg, MS, over U.S. Hwy 98 to Junction Interstate Hwy 59, (9) from Purvis, MS, over unnumbered Hwy to junction Interstate Hwy 59, (10) from Lumberton, MS, over Mississippi Hwy 13, to junction Interstate Hwy 59, (11) from Poplarville, MS, over Mississippi Hwy 26 to junction Interstate Hwy 59, (12) from Poplarville, MS over Mississippi Hwy 53 to junction Interstate Hwy 59, (13) from Picayune, MS, over Mississippi Hwy 43 to junction Interstate Hwy 59, (14) from Slidell, LA, over U.S. Hwy 190 to junction Interstate

Hwy 10, and (15) from Slidell, LA, over Louisiana Hwy 433 to junction Interstate Hwy 10, and return over the same routes for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and the same property over a pertinent service route as follows: from New Orleans, LA, over U.S. Hwy 11 to Birmingham, AL, and return over the same route.

No. MC 1515 (Deviation No. 746) (Cancels Deviation No. 648), GREYHOUND LINES, INC., Greyhound Tower, Phoenix, AZ 85077, filed August 7, 1979. Carrier proposes to operate as a *common carrier*, by motor vehicle, of *passengers and their baggage*, and *express* and *newspapers* in the same vehicle with passengers, over deviation routes as follows: from junction Interstate Hwy 270 and U.S. Hwy 61, approximately 1 mile southwest of Mehlville, MO, over Interstate Hwy 270 to junction U.S. Hwy 66 then over U.S. Hwy 66 to junction Illinois Hwy 143, then over Illinois Hwy 143 to Edwardsville, IL, with the following access routes: (1) from junction Interstate Hwy 270 and Interstate Hwy 44 over Interstate Hwy 44 and/or city streets to Sunset Hills, MO, (2) from junction Interstate Hwy 270 and Interstate Hwy 70 over Interstate Hwy 70 and/or city streets to Champ, MO, and (3) from junction Interstate Hwy 270 and Interstate 70 over Interstate Hwy 70 and/or city streets to Bridgeton, MO, and return over the same routes, for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and the same property over pertinent service routes as follows: (1) from Hamel, IL, over Illinois Hwy 157 to Edwardsville, IL, then over Illinois Hwy 159 to Collinsville, IL, then over Business Route U.S. Hwy 40 to East St. Louis, IL, then over Eads Toll Bridge to St. Louis, MO, (2) from St. Louis, MO, over Veteran Memorial Bridge to East St. Louis, IL, and (3) from St. Louis, MO, over U.S. Hwy 67 to Mehlville, MO, then over U.S. Hwy 61 to junction old U.S. Hwy 61 near Turrell, AR, and return over the same routes.

No. MC 1515 (Deviation No. 747), GREYHOUND LINES, INC., Greyhound Tower, Phoenix, AZ 85077, filed August 13, 1979. Carrier proposes to operate as a *common carrier* by motor vehicle of *passengers and their baggage*, and *express* and *newspapers* in the same vehicle with passengers, over deviation routes as follows: from Atlanta, GA, over Interstate Hwy 85 to junction Interstate Hwy 185, then over Interstate Hwy 185 to Columbus, GA, with the following access routes: (1) from Newnan, GA, over Georgia Hwy 34 to junction Interstate Hwy 85, (2) from Hogansville, GA, over Georgia Hwy 100 to junction Interstate Hwy 85, and (3) from LaGrange, GA, over Georgia Hwy 109 to junction Interstate Hwy 85 and Interstate Hwy 185, and return over the same routes, for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and the same property over a pertinent service route as follows: from Atlanta, GA, over U.S. Hwy 29 via Moreland to LaGrange, GA, then over U.S. Hwy 27 to Columbus, GA, and return over the same route.

No. MC 1515 (Deviation No. 748), GREYHOUND LINES, INC., Greyhound Tower, Phoenix, AZ 85077, filed August 14, 1979. Carrier proposes to operate as a *common carrier* by motor vehicle of *passengers and their baggage*, and *express* and *newspaper* in the same vehicle with passengers, over deviation routes as follows: from junction Interstate Hwy 96, Interstate Hwy 275 and Michigan Hwy 14, over Michigan Hwy 14 to junction Business Route U.S. Hwy 23, then over Business Route U.S. Hwy 23 to Ann Arbor, MI, with the following excess route: (1) from junction Michigan Hwy 14 and U.S. Hwy 23, over U.S. Hwy 23 to Ann Arbor, MI, and return over the same routes for operating convenience only. The notice indicates that the carrier is presently authorized to transport passengers and the same property over pertinent service routes as follows: (1) from Ann Arbor, MI, over Michigan Hwy 17 to Ypsilanti, MI, then over U.S. Hwy 12 to Detroit, MI, and (2) from junction Interstate Hwy 275 and new Interstate Hwy 96 over Interstate Hwy 275 to junction Interstate Hwy 75, and return over the same routes.

Motor Carrier Intrastate Applications; Notice

The following applications for motor common carrier authority to operate in intrastate commerce seek concurrent motor carrier authorization in interstate or foreign commerce within the limits of the intrastate authority sought, pursuant to Section 10931 (formerly Section 206(a)(6)) of the Interstate Commerce Act. These applications are governed by Special Rule 245 of the Commission's *General Rules of Practice* (49 CFR 1100.245), which provides, among other things, that protests and requests for information concerning the time and place of State Commission hearings or other proceedings, any subsequent changes therein, and any other related matters shall be directed to the State Commission with which the application is filed and shall *not* be addressed to or filed with the Interstate Commerce Commission.

New York Docket No. T–1856, filed August 6, 1979. Applicant: NASON'S DELIVERY, INC., 70 Nason Blvd., Springville, NY 14141. Representative: WILLIAM J. HIRSCH, ESQ., 43 Court Street, Buffalo, NY 14202. interstate and foreign commerce authority sought. HEARING: Date, time, and place not yet fixed. Requests for procedural information should be addressed to Department of Transportation, 1220 Washington Ave., State Campus, Albany, NY 12232, and should not be directed to the Interstate Commerce Commission.

Irregular-Route Motor Common Carriers of Property—Elimination of Gateway Letter Notices; Date

The following letter-notices of proposals to eliminate gateways for the purpose of reducing highway congestion, alleviating air and noise pollution, minimizing safety hazards, and conserving fuel have been filed with the Interstate Commerce Commission under the Commission's *Gateway Elimination Rules* (49 CFR 1065), and notice thereof to all interested persons is hereby given as provided in such rules.

An original and two copies of protests against the proposed elimination of any gateway herein described may be filed with the Interstate Commerce Commission *within 10 days* from the date of this publication. A copy must also be served upon applicant or its representative. Protests against the elimination of a gateway will *not* operate to stay commencement of the proposed operation.

Successively filed letter-notices of the same carrier under these rules will be numbered consecutively for convenience in identification. Protests, if any, must refer to such letter-notices by number.

The following applicants seek to operate as a *common carrier*, by motor vehicles, over irregular routes.

MC 107403 (Sub-E 767), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Petroleum products*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID, ND, and MT to points in CT, MD, MA, NJ, NH, NY, RI, VT and ME. (Gateway eliminated: Lawrenceville, IL.)

MC 107403 (Sub-E768), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr., (same as above). *Petroleum products*, as described in Appendix XIII of the *Descriptions* case, in bulk, in tank vehicles, from ports of entry on the US–CD Boundary line in ND, MT and ID to points in VA. (Gateway eliminated: Lawrenceville, IL.)

MC 107403 (Sub-E769), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr., (same as above). *Whiskey*, in bulk, in tank vehicles, in foreign commerce, between ports of entry on the US–CD Boundary line in ID, MT, and ND, and on the one hand, and, on the other, points in IN (Decatur, IL*) and OH (Lawrenceville, KY*). (Gateway eliminated: asterisked.)

MC 107403 (Sub-E770), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr., (same as above). *Liquid sugar and blends thereof*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID, MT and ND to points in IN, OH and WV. (Gateway eliminated: Louisville, KY.)

MC 107403 (Sub-E771), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr., (same as above). *Acids and chemicals*, (except liquefied petroleum gases), in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID and MT to points in AL, GA and FL. (Gateway eliminated: Lake Charles, LA.)

MC 107403 (Sub-E772), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals and washing compounds*, in bulk, in tack vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND, MT and ID to points in MI, CT, NY, OH, IN, NJ, MA and RI. (Gateway eliminated: facilities of Stephen Chemical Company at Millsdale, IL.)

MC 107403 (Sub-E773), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Vegetable oil*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND, ID and MT to points in GA. (Gateway eliminated: points in LA.)

MC 107403 (Sub-E774), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Vegetable oil*, in bulk, in tank vehicles, in foreign commerce, and *edible flour*, in bulk, in foreign commerce, from ports of entry on the US–CD Boundary line in ID, MT and ND to points in AL and FL. (Gateway eliminated: points in LA.)

MC 107403 (Sub-E775), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Petroleum and petroleum products* (except anhydrous ammonia), in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND, ID and MT to points in FL, GA and AL. (Gateway eliminated: Pascagoula, MS.)

MC 107403 (Sub-E776), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND, ID, and MT to points in VA. (Gateway eliminated: Calvert City, KY.)

MC 107403 (Sub-E777), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, as defined in *The Maxwell Co., Extension-Addyston*, 61 M.C.C. 677, and *acids*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID and MT to points in SC. (Gateway eliminated: facilities of Dow Chemcial Company, at Plaquemine, CA.)

MC 107403 (Sub-E778), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Petroleum products*, as described in Appendix XII to the report in the *Descriptions Case*, 61 M.C.C. 209, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND, MT, and ID to points in WV. (Gateway eliminated: Lawrenceville, IL.)

MC 107403 (Sub-E779), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals and washing compounds*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND to points in PA and MD. (Gateway eliminated: facilities of Stephen Chemical Company at Millsdale, IL.)

MC 107403 (Sub-E780), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID to points in WV, PA and MD all within 150 miles of Monongahela, PA. (Gateway eliminated: Robertson County, TN.)

MC 107403 (Sub-E781), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Liquid chemicals*, in bulk, in foreign commerce, from ports of entry on the US–CD Boundary line in ID to points in NC. (Gateway eliminated: facilities of Georgia-Pacific Corporation at Plaquemine, LA.)

MC 107403 (Sub-E782), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in MT to points in MD. (Gateway elimination: Clavert City, KY.)

MC 107403 (Sub-E783), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in MT to points in PA. (Gateway elimination: Robertson County, TN.)

MC 107403 (Sub-E784), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Petroleum products*, in bulk, in tank vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ID and MT to points in MI in and south of Oceana, Midland, Newaygo Bay, Meconla, Tuscola, Isabella and Huron Counties. (Gateway eliminated: Lawrenceville, IL.)

MC 107403 (Sub-E785), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND and MT to points in WV. (Gateway eliminated: Robertson County, TN.)

MC 107403 (Sub-E786), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Chemicals*, (except anhydrous ammonia, aqua ammonia and liquid fertilizer), in bulk, in tank or hopper vehicles, in foreign commerce, from ports of entry on the US–CD Boundary line in ND to AL, GA and FL. (Gateway eliminated: facilities of Monsanto Company at Muscatine, IA.)

MC 107403 (Sub-E787), filed March 22, 1979. Applicant: MATLACK, INC., 10 W. Baltimore Avenue, Lansdowne, PA 19050. Representative: Martin C. Hynes, Jr. (same as above). *Benzaldehyde*, in bulk, in tank vehicles, from Kalma, WA to points in CT and RI (Huron, OH, and New York, NY*), SC, GA, FL (Delaware County, OH, and Calvert City, KY*), KY (Delaware County, OH*), MA, VT, ME, NH (Newark, NJ*), NY (Huron, OH*), PA, IN and WV (Painesville, OH*). (Gateways eliminated: asterisked.)

MC 118831 (Sub-E 87) filed April 19, 1976. Applicant: CENTRAL TRANSPORT, INC., P.O. Box 5388, Uwharrie Road, High Point, NC 27263. Representative: E. Stephen Heisley, Suite 805, 666 Eleventh St., NW., Washington, D.C. 20001. *Liquid petrochemicals* (except anhydrous ammonia, fertilizer and fertilizer materials), in bulk, in tank vehicles, from points in NC (Except Charlotte) in and east of Rutherford, McDowell and Yancy Counties, and points west and north of Robeson, Bladen, Onslow, and Carteret Counties, to points in FL. (Gateway eliminated: NC and points in SC.)

(A) *Liquid petrochemicals* (except dimethyl terephthalate, anhydrous ammonia, fertilizer, and fertilizer materials), in bulk, from points in NC (except Conway, Rocky Mount, Plymouth, Raleigh, Sanford, Kinston and Goldsboro), on and east of a line beginning at the NC–SC State line extending along unnumbered highway through Forest City to junction NC Hwy 226, then along NC Hwy 226 to junction NC Hwy 10, then along NC Hwy 10 to junction NC Hwy 18, then along NC Hwy 18 to Icard, then along unnumbered highway through Rhodhiss to Granite Falls, then along unnumbered highway to junction NC Hwy 90, then along NC Hwy 90 to junc-unnumbered highway, then along unnumbered highway to Newhope, then along NC Hwy 901 to junction US Hwy 21, then along US Hwy 21 to junction US Hwy 421, then along US Hwy 421 to junction US Hwy 311, then along US Hwy 311 to junction US Hwy 220, then along US Hwy 220 to the NC–VA State line, to points in IL (except points in the East St. Louis, IL, Commercial zone). (Gateways eliminated: points in SC and Charlotte, NC.) (B) *Dimethyl terephthalate*, in bulk, from points in NC (except Conway, Rocky Mount, Plymouth, Raleigh, Sanford, Kinston and Goldsboro), on and east of a line beginning at the NC–SC State line extending along unnumbered highway through Forest City to junction NC Hwy 226, then along NC Hwy 226 to junction NC Hwy 10, then along NC Hwy 10 to junction NC Hwy 18, then along NC Hwy 18 to junction unnumbered highway, then along unnumbered highway to Icard, then along unnumbered highway through Rhodhiss to Granite Falls, then along NC Hwy 90 to Hiddenite, then along unnumbered highway to Newhope, then along NC Hwy 901 to junction US Hwy 21, then along US Hwy 21 to junction US Hwy 421, then along US Hwy 421 to junction US Hwy 311, then along US Hwy 311 to junction US Hwy 220, then along US Hwy 220 to the NC–VA State line, to points in IL on and east of a line beginning at Cairo extending along I Hwy 57 to Champagne, then along US Hwy 150 to Bloomington, then along US Hwy 51 to Mindota, then along US Hwy 52 to the IL–IA State line. (Gateway eliminated: Spartanburg County, SC, and Robertson County, TN.)

Transportation of "Waste" Products for Reuse or Recycling

Special Certificate Letter Notice(s)

The following letter notices request participation in a Special Certificate of Public Convenience and Necessity for the transportation of "waste" products for reuse or recycling in furtherance of a recognized pollution control program under the Commission's regulations (49 CFR 1062) promulgated in "*Waste" Products*, Ex Parte No. MC–85, 124 M.C.C. 583 (1976). Requests are processed as seeking authority between all points in the United States.

An original and one copy of protests (including protestant's complete argument and evidence) against applicant's participation may be filed withe the Interstate Commerce Commission *within 20 days* from the date of this publication. A copy must also be served upon applicant or its representative. Protests against the applicant's participation will not operate to stay commencement of the proposed operation.

If the applicant is not otherwise informed by the Commission, operations may commence *within 30 days* of the date of its notice in the **Federal Register**, subject to its tariff publication effective date.

P–9–79 (Special certificate—waste products), filed August 13, 1979. Applicant: Robert Brown, 3715 Richmond Rd, NE., Cedar Rapids, IA 52402. Representative: Robert Brown (same address as applicant). Sponsor: Consolidated Recycling, Inc., of Cedar Rapids, IA. Commodities: Waste products.

P–10–79 (Special certificate—waste products), filed August 13, 1979. Applicant: James Anderson, 2009 Wilson Ave., SW., Cedar Rapids, IA 52404. Representative: James Anderson (same as applicant). Sponsor: Consolidated Recycling, Inc., of Cedar Rapids, IA. Commodities: Waste products.

By the Commission.

Agatha L. Mergenovich,

Secretary.

Sunshine Act Meetings

Federal Register

Vol. 44, No. 177

Tuesday, September 11, 1979

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

CONTENTS

	Item
Federal Election Commission	1
Federal Reserve System (Board of Governors)	2
Federal Trade Commission	3
National Neighborhood Reinvestment Corporation	4
Nuclear Regulatory Commission	5

1

FEDERAL ELECTION COMMISSION.

DATE AND TIME: Tuesday, September 11, 1979, at 11 a.m.

PLACE: 1325 K Street, NW., Washington, D.C.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Compliance, Personnel.

DATE AND TIME: Thursday, September 13, 1979, at 10 a.m.

STATUS: Portions of this meeting will be open to the public and portions will be closed.

MATTERS TO BE CONSIDERED:

Portions Open to the Public

Setting of dates for future meetings.
Correction and approval of minutes.
Advisory Opinion 1979–42, Walter Ray Vernon, Jr. (South Carolina National Bank PAC).
1980 elections and related matters: Revision of Proposed Regulations on the Funding and Sponsorship of Candidate Debates.
Consultants report on audit process—staff director's proposal to implement.
Audit request of Baker committee.
Thresholds for referring matters from the reports analysis division to the Office of General Counsel.
Appropriations and budget—Budget Execution Report.
Pending legislation.
Classification actions.
Routine administrative matters.

Portions Closed to the Public

Any matters not concluded on September 11, 1979.

PERSONS TO CONTACT FOR INFORMATION: Mr. Fred S. Eiland, Public Information Officer, telephone 202–523–4065.

Lena L. Stafford,

Acting Secretary to the Commission.

[S–1752–79 Filed 9–7–79; 11:45 am]

BILLING CODE 6715-01-M

2

FEDERAL RESERVE SYSTEM: Board of Governors.

TIME AND DATE: 10 a.m., Friday, September 14, 1979.

PLACE: 20th Street and Constitution Avenue, NW., Washington, D.C. 20561.

STATUS: Closed.

MATTERS TO BE CONSIDERED: 1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees. 2. Any agenda items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board, (202) 452–3204.

Dated: September 6, 1979.

Griffith L. Garwood,

Deputy Secretary of the Board.

[S–1750–79 Filed 9–6–79; 4:41 pm]

BILLING CODE 6210-01-M

3

FEDERAL TRADE COMMISSION.

TIME AND DATE: 1 p.m., Wednesday, September 12, 1979.

PLACE: Room 432, Federal Trade Commission Building, 6th Street and Pennsylvania Avenue NW., Washington, D.C. 20580.

STATUS: Open.

MATTERS TO BE CONSIDERED: Oral Presentation in Amendment to Trade Regulation Rule on Preservation of Consumers' Claims and Defenses.

CONTACT PERSON FOR MORE INFORMATION: Ira J. Furman, Office of Public Information (202) 523–3830; Recorded Message (202) 523–3806.

[S–1751–79 filed 9–7–79; 9:47 am]

BILLING CODE 6750-01-M

4

NATIONAL NEIGHBORHOOD REINVESTMENT CORPORATION.

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUNCEMENT: Vol. 44, No. 172, September 4, 1979.

"PREVIOUSLY ANNOUNCED TIME AND DATE: Wednesday, September 5, 1979, 3:30 p.m.

PLACE: 1700 G Street NW., Sixth Floor, Washington, D.C.

CHANGES IN THE MEETING: The Status of the Meeting has been changed from "Open" to "Open and Closed". The following item has been changed from the open to the closed portion of the meeting:

Consideration of proposed 1981 budget of the National Neighborhood Reinvestment Corporation.

No. 7, September 7, 1979.

Donnie L. Bryant,

Secretary.

[S–1754–79 Filed 9–7–79; 3:44 pm]

5

NUCLEAR REGULATORY COMMISSION.

TIME AND DATE: Week of September 10, 1979.

PLACE: Commissioners' Conference Room, 1717 H St., N.W., Washington, D.C.

STATUS: Open.

MATTERS TO BE CONSIDERED:

Thursday, September 13, 1:30 p.m.

1. Briefing on Report of Task Force on Emergency Planning (Approximately 1 hour, public meeting).
2. Briefing on Report on Current NRC Requirements and Guidance to Licensees for Qualifications of Reactor Operators (approximately 1 hour, public meeting).
3. Affirmation Session (approximately 10 minutes, public meeting, tentative): a. Order in Offshore Power Systems. b. Order in UCS Petition.

Friday, September 14, 2 p.m.

1. Continuation of Briefing by H. Denton on Conclusions of TMI Lessons Learned Recommendations (continued from September 6, approximately 1 hour, public meeting).
2. Discussion of Hearing Board Report on Clearance Rule Proceeding (approximately 1 hour, public meeting).

CONTACT PERSON FOR MORE INFORMATION: Walter Magee, (202) 634–1410.

Walter Magee,

Office of the Secretary.

September 6, 1979.

[21 CFR Part 864]

[Docket No. 78N-1833]

Classification of Hematology and Pathology Devices; Development of General Provisions

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The agency is proposing general rules applicable to the classification of all hematology and pathology devices. The Medical Device Amendments of 1976 require the Food and Drug Administration (FDA) to classify all medical devices intended for human use into three categories: class I, general controls; class II, performance standards; and class III, premarket approval. In the preamble to this proposal, FDA describes the development of the proposed regulations classifying individual hematology and pathology devices, which are being published elsewhere in this issue of the **Federal Register**. The preamble also describes the activities of the Hematology Device Classification Panel and the Pathology Device Classification Panel, FDA advisory committees that make recommendations to FDA concerning the classification of hematology and pathology devices.

DATES: Comments by November 13, 1979. FDA proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-430), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Device Classification System

The Medical Device Amendments of 1976 (the amendments) (Pub. L. 94-295) establish a comprehensive system for the regulation of medical devices intended for human use. One provision of the amendments, section 513 of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360c), establishes three categories (classes) of devices, depending on the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories are as follows: class I, general controls; class II, performance standards; class III, premarket approval.

Most devices are not classified under section 513 of the act until after FDA has (1) received a recommendation from a device classification panel (an FDA advisory committee); (2) published the Panel's recommendation for comment, along with a proposed regulation classifying the device; and (3) published a final regulation classifying the device. These steps must precede the classification of any device that was in commercial distribution before May 28, 1976 (the date of enactment of the amendments) and that was not previously regarded by FDA as a new drug under section 505 of the act (21 U.S.C. 355). A device that is first offered for commercial distribution after May 28, 1976, and that is substantially equivalent to a device classified under this scheme, is classified in the same class as the device to which it is substantially equivalent.

A device that FDA previously regarded as a new drug, or a newly offered device that is not substantially equivalent to a device that was in commercial distribution before the amendments, is classified by statute into class III. These two types of devices are classified into class III without any FDA rulemaking proceedings. The agency determines whether new devices are substantially equivalent to previously offered devices by means of the premarket notification procedure in section 510(k) of the act (21 U.S.C. 360(k)) and Part 807 of the regulations (21 CFR Part 807).

Related Regulations

In the **Federal Register** of July 28, 1978 (43 FR 32988), the agency issued final regulations describing the procedures for classifying devices intended for human use. These regulations, which were proposed in the **Federal Register** of September 13, 1977 (42 FR 46028), supplement the agency's regulations in Part 14 (21 CFR Part 14) governing the use of advisory committees. The agency also issued interim device classification procedures in a notice published in the **Federal Register** of May 19, 1975 (40 FR 21848).

Hematology and pathology devices are subject to labeling requirements in § 809.10 (21 CFR 809.10) for in vitro diagnostic products. As defined in § 809.3(a) (21 CFR 809.3(a)), in vitro diagnostic products are those reagents, instruments, and systems intended for use in the diagnosis of disease or in the determination of the state of health in order to cure, mitigate, treat, or prevent disease or its sequelae. These products are intended for use in collecting, preparing, and examining specimens taken from the human body. Before the Medical Device Amendments of 1976, FDA regarded in vitro diagnostic products as drugs or devices, or as combinations of drugs and devices. Since the enactment of the amendments, with their expanded definition of "device" in section 201(h) of the act (21 U.S.C. 321(h)), FDA regards in vitro diagnostic products as devices.

Certain in vitro diagnostic products are also biological products subject to section 351 of the Public Health Service Act (42 U.S.C. 262). Hematology devices that are also biological products include blood grouping sera, antihuman globulin sera, leukocyte typing sera, hepatitis B antigen, antibody to hepatitis B antigen, blood group specific substances, and reagent red blood cells. Establishments manufacturing these products are subject to licensure by the Bureau of Biologics, FDA, under section 351 of the Public Health Service Act. The Hematology Device Classification Panel has not yet made classification recommendations concerning these products. However, certain of these products have in vitro diagnostic uses for which licensing is not required. The Hematology Panel made recommendations concerning those uses, which FDA is publishing elsewhere in this issue of the **Federal Register** in the proposal for classification of blood group substances of nonhuman origin for in vitro diagnostic use (Docket No. 78N-1922). This proposal excludes licensable blood group specific substances. Similarly, the proposal for classification of systems for the identification of hepatitis B antigen (Docket No. 78N-1934) excludes licensable hepatitis B antigen and antisera to hepatitis B antigen. The proposal for classification of quality control kits for blood reagents (Docket No. 78N-1938) covers antisera to various blood group antigens, antihuman globulin sera, and red blood cells, none of which are licensable.

Among the hematology devices that are subject to classification proposals in this issue of the **Federal Register** are a number of devices that are used in establishments that manufacture human blood and blood products. The classifications of devices used in these establishments are being codified in Subpart J of proposed Part 864 (21 CFR Part 864, Subpart J). Establishments that manufacture human blood and blood products include human blood and

plasma donor centers, blood banks, transfusion services, other blood product manufacturers, and independent laboratories that engage in quality control and testing for blood product establisments. These establishments are already regulated by the Bureau of Biologics under regulations in Parts 606, 607, and 640 (21 CFR Parts 606, 607, and 640). FDA has decided that it is appropriate for devices used only in these establishments to be regulated under the provisions of the Federal Food, Drug, and Cosmetic Act that apply to devices, as well as under section 351 of the Public Health Service Act, where applicable, and the regulations in Parts 606, 607, and 640.

Activities of Panels

Anticipating enactment of the amendments, FDA established several advisory committees to make preliminary recommendations on device classification. The Hematology Device Classification Panel and the Pathology Device Classification Panel were originally chartered on October 15, 1974, as the Hematology/Pathology Subcommittee of the Diagnostics Products Advisory Committee.

On August 9, 1976, the Subcommittee was divided and rechartered as the Hematology Device Classification Panel and the Pathology Device Classification Panel to reflect new responsibilities under the amendments. The agency directed each Panel to reconsider its preamendments classification recommendations in light of the new requirements. In 1976 and 1977, each Panel reviewed all devices that FDA had referred to it to make certain that its recommendations were in accord with the amendments.

Throughout the Panels' deliberations, interested persons were given an opportunity to present their views, data, and other information concerning the classification of hematology and pathology devices. The Panels also invited experts to testify and sought information on many devices from the published literature.

In October 1977, the Panels submitted to FDA preliminary reports of their recommendations. The reports included rosters of current and former Panel members and consultants and listed all meeting dates. The agency placed copies of the report in the office of the Hearing Clerk (HFA-305), Food and Drug Administration, and announced their availability to the public by notice published in the **Federal Register** of November 29, 1977 (42 FR 60782). Also available in the office of the Hearing Clerk are summary minutes from all Panel meetings, verbatim transcripts of meetings held after May 28, 1976 (the date of enactment of the amendments), and all references cited in individual hematology and pathology device proposed classification regulations. Interested persons may review these documents in the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, between 9 a.m. and 4 p.m., Monday through Friday.

List of Hematology and Pathology Devices

In 1972 FDA surveyed device manufacturers to identify the devices for which classification regulations would be needed. Following this survey, FDA developed a list of hematology and pathology devices. The Panels supplemented the list using their members' knowledge of hematology and pathology devices in use. Devices that were solely for experimental or investigational use or that were not generally available were not included.

FDA is proposing to establish a new Part 864 in Title 21 of the Code of Federal Regulations. Part 864 will consist of sections identifying each hematology or pathology device with a brief narrative description and stating the classification of that device. A list of the hematology and pathology devices appears elsewhere in this preamble.

Individual Hematology and Pathology Device Classification Regulations

Elsewhere in this issue of the **Federal Register**, the agency is issuing 108 individual proposed regulations to classify each hematology and pathology device. The agency is proposing to classify 46 hematology and pathology devices into class I (general controls), 55 devices into class II (performance standards), 6 devices into class III (premarket approval), and one document proposes to classify the electromagnetic type of a device into class III and the nonelectromagnetic type of the device into class II. FDA also is publishing the recommendations of the Panels regarding these devices, as required by section 513(c)(2) and (d)(1) of the act.

Published Panel Recommendations

Each published Panel recommendation concerning a hematology or pathology device includes the information described below.

1. *Identification.* Both the Panel recommendation and proposed FDA classification regulation include a brief narrative identification of the device. The identification statement is necessarily broad because it applies to a category or type of device rather than to a specific device. As explained in proposed § 864.1 (21 CFR 864.1), any manufacturer of a newly offered device who files a premarket notification submission under section 510(k) of the act (21 U.S.C. 360(k)) and Part 807 of the regulations (21 CFR Part 807) cannot show merely that the device is accurately described by the section title and identification provisions of a classification regulation. Although a new device may be described accurately by the title and identification in a classification regulation, it is nevertheless in class III under section 513(f) of the act if it is not substantially equivalent to a preamendments device (or to a postamendments device that has already been reclassified from class III into class I or class II). It is not practical for FDA to publish an identification of each type of device that is so detailed as to anticipate every product feature that may be relevant in determining whether a new device is substantially equivalent to previous devices classified by the regulation. The agency believes that this problem was recognized in, and addressed by, the premarket notification procedures in section 510(k) of the act. Accordingly, any manufacturer who submits a premarket notification submission should state why the manufacturer believes that the device is substantially equivalent to other devices in commercial distribution, as required by § 807.87 (21 CFR 807.87) and whether the device is described in a classification regulation.

2. *Recommended classification.* Each Panel's recommendation describes whether the device is recommended for classification into class I (general controls), class II (performance standards), or class III (premarket approval).

For each device recommended for classification into class I, the Panel considered whether the device should be exempt from any requirements under certain sections of the act: section 510 (21 U.S.C. 360, registration), section 519 (21 U.S.C. 360i, records and reports), and section 520(f) (21 U.S.C. 360j(f), good manufacturing practice requirements). Although the Panels did not recommend that any device be exempted at this time from section 519 of the act, the Pathology Device Classification Panel did recommend that the manufacturers of several class I devices be exempted from good manufacturing practice regulations (and thus from the records and reports requirements in these regulations) in the manufacture of these devices. The Hematology Device Classification Panel recommended that manufacturers of one class I device be

V 4 4 / 1 7 7 SE 1 1 7 9 UMI

exempted from the premarket notification requirements of section 510(k). The agency's policy concerning these exemption recommendations is discussed below in the section of this proposal concerning "Exemptions for Class I Devices."

A Panel recommendation that a device be classified into class II includes the Panel's recommended priority ("high," "medium," or "low") for establishing a performance standard for the device. Similarly, each Panel recommendation that a device be classified into class III includes the Panel's recommended priority ("high," "medium," or "low") for application of premarket approval requirements to that device. As explained below in the section of this notice concerning "Priorities for Class II and III Devices," the agency is not proposing the establishment of FDA priorities at this time.

3. *Summary of reasons for recommendation.* The summary of reasons for the Panel's recommendation explains why the Panel believes that a particular device meets the statutory criteria for classification into class I, II, or III.

Except in those instances in which FDA's classification proposal differs from the Panel's recommendation, the agency is adopting the Panel's summary of reasons as the agency's statement of the reasons for issuing the regulations, as required by section 517(f) of the act (21 U.S.C. 360g(f)).

The summary of reasons for a recommendation identifies any device that is an implant of a life-supporting or life-sustaining device. The summary of reasons for any implant or life-supporting or life-sustaining device that is not recommended for classification into class III also explains why the Panel determined that classification of the device into class III is not necessary to provide reasonable assurance of its safety and effectiveness. The agency provides a similar explanation in the "Proposed Classification" section of the preamble to any proposal to classify an implant or a life-supporing or life-sustaining device into a class other than class III.

4. *Summary of data on which the recommendation is based.* In many cases, the Panels based their recommendation on the Panel members' personal knowledge of, and clinical experience with, the devices under review. The Panel particularly relied on clinical experience and judgment when considering a simple device that had been used extensively and was accepted widely before the amendments were enacted. The legislative history of the amendments makes clear that the term "data" has a special meaning in section 513(c)(2)(A) of the act, which requires that a Panel recommendation summarize the data upon which a recommendation is based. As used in that section, "data" refers not only to the results of scientific experiments, but also to less formal evidence, other scientific information, or judgments of experts (House Committee on Interstate and Foreign Commerce, Medical Device Amendments of 1976, H. Rept. No. 94–853, 94th Congress, 2d Session 40 (1967)). The agency has determined that clinical experience and judgment is valid scientific evidence for classifying certain devices.

In many cases, FDA sought more data and information concerning the classification of a device than were cited by the Panel. References to these data and information are found in the "Proposed Classification" section of the preambles to individual hematology and pathology device proposed regulations. The FDA is adopting, as the agency's statement of the basis for issuing the regulation under section 517(f) of the act, the Panel's summary of the data on which a recommendation to classify a device is based, together with any additional data and information cited in the preamble to the proposed classification regulation.

5. *Risks to health.* In identifying the risks to health presented by hematology or pathology devices, the Panels recognized that few devices are completely free of risk. The Panels listed the risks they considered most significant, especially those that are unique to the individual device. In some cases, FDA has identified additional risks to health presented by a device. These additional risks are set out in the section of the preamble concerning the "Proposed Classification" of a particular device.

Because the classification recommendations and FDA regulations do not identify all risks to health presented by hematology and pathology devices, future regulations establishing performance standards under section 514 of the act (21 U.S.C. 360d) or requiring premarket approval under section 515(b) of the act (21 U.S.C. 360e(b)) may identify additional risks to health to be addressed by FDA requirements.

Proposed Classification

Each proposed regulation to classify a hematology or pathology device states whether FDA agrees with the Panel's recommendation, describes the agency's proposed classification of the device, and proposes a new section in Part 864 in which the device classification will be codified.

The FDA cautions that the final classification of a device may differ from the proposal. Factors that may cause such a change include comments, the agency's reconsideration of existing data and information, and the agency's consideration of new data and information.

Priorities for Class II and Class III Devices

For a device that a Panel recommends be classified into class II or class III, section 513(c)(2)(A) of the act requires that the Panel recommendation include, to the extent practicable, a recommendation for the assignement of a priority for application to the device of performance standards or premarket approval requirements. In developing its advice concerning priorities ("high," "medium," or "low") of devices recommended for classification into class II or class III, the Panels compared the devices with other hematology or pathology devices on the basis of information available to the Panel members concerning the relative importance of use of the device and the relative risks presented by the device. The Panels recommended assignment of a "high priority" only to those class II or class III devices that the Panels believed should receive the agency's immediate attention.

The FDA is not proposing at this time to establish priorities for development of performance standards for class II devices or application of premarket approval requirements to class III devices. Section 513(d)(3) of the act authorizes, but does not require, establishment of these priorities. At a later date, however, the agency will establish priorities for the development of standards for class II devices and the application of premarket approval requirements to class III devices. These priorities will be based on classification panels' recommendations, available resources, and other relevant factors. The agency's priorities will be reflected in the agency's annual budget request and other publicly available documents and may be published in the **Federal Register**.

The agency intends to proceed as quickly as the statute and classification panel resources permit to require premarket approval of devices classified into class III. There are two factors affecting the length of time necessary before FDA requires submission of premarket approval applications for any particular device that is classified by an FDA regulation into class III: the number of devices reviewed by a panel and the priority of a particular device in relation to other class III devices considered by a classification panel. For example, where FDA classifies into class III only a few devices within a Panel's specialty area, FDA may at the same time also publish regulations under section 515(b) of the act requiring premarket approval for many of the class III devices considered by the Panel, regardless of whether they are considered to be of a high or a low priority. Where practical, FDA will publish these section 515(b) regulations during the grace period (at least 30 months) following classification, during which a device classified into class III by FDA regulation may lawfully remain on the market without a premarket approval application. The grace period is provided for in section 501(f) of the act (21 U.S.C. 351(f)).

Exemptions for Class I Devices

Section 513 of the Federal Food, Drug, and Cosmetic Act provides that FDA may exempt a device recommended for classification into class I from a requirement under the following sections of the act: section 510, registration; section 519, records and reports; and section 520(f), good manufacturing practices:

Under section 510 of the act, a person "engaged in the manufacture, preparation, propagation, compounding or processing of * * * a device or devices" must register with FDA (section 510(b) through (i)), file a list of devices (section 510(j)), and notify FDA at least 90 days before beginning commercial distribution of a device (section 510(k)). (See 21 CFR Part 807.) Section 510(g)(4) authorizes the agency to exempt a device from section 510 if it finds that compliance with that section is not necessary for the protection of the public health. In § 807.65 (21 CFR 807.65), FDA has exempted certain classes of persons from section 510 of the act. Several device classification panels have recommended that manufacturers of certain class I devices also be exempted from all or some of the requirements of section 510. The agency has determined that protection of the public health requires that manufacturers of medical devices, other than those already exempt under § 807.65, register and list their products with FDA to ensure that the agency can identify these manufacturers and their products and conduct necessary inspections.

The agency has determined, however, for certain devices, that it is not necessary for the protection of the public health that FDA receive premarket notification submissions. Thus, the agency has proposed to exempt certain devices from Subpart E of Part 807 of the regulations, which implements section 510(k) of the act. The agency does not, at this time, anticipate that premarket approval will be required for these devices. The agency believes that the semiannual updating of device listing under section 510(j)(2) will provide FDA with adequate notice of new products within this exempt generic type of device.

Section 519 of the act authorizes FDA to issue regulations requiring device manufacturers, importers, and distributors to establish and maintain such records, make such reports, and provide such information as the agency may reasonably require to assure that devices are not adulterated or misbranded and to otherwise assure their safety and effectiveness. The records and reports requirements in several of FDA's present device regulations are authorized, wholly or in part, by section 519. The most extensive of these requirements are found in the device good manufacturing practice (GMP) regulation (21 CFR Part 820), published in the **Federal Register** of July 21, 1978 (43 FR 31508). In the future, FDA will publish other regulations in accordance with section 519 of the act, including regulations requiring reports to FDA of experience with medical devices. Until these regulations are issued, FDA believes that it cannot properly issue exemptions from them. In the future, whenever the agency proposes device regulations that include records and reports requirements, interested persons may submit comments requesting that certain classes of manufacturers or other persons be exempted from the requirements, and FDA will issue exemptions that are appropriate.

The only type of exemption from records and reports requirements that FDA is proposing now, in device classification regulations, is an exemption of certain manufacturers from most requirements of the device GMP regulation. As explained below, the exemption will not extend to two device GMP records requirements.

The device GMP regulation was published in final form in the **Federal Register** of July 21, 1978. At the time of the Panel's recommendations, the GMP regulation had not yet been promulgated, and the agency had not yet developed criteria for exempting a class I device from GMP requirements. The agency has now decided that, if any one of the following criteria is met, FDA will consider exempting from the GMP regulation a class I device that is not labeled or otherwise represented as sterile. The agency will not, however, exempt a device from § 820.180 (21 CFR 820.180), with respect to general requirements concerning records, or § 820.198 (21 CFR 820.198), with respect to complaint files. The criteria are:

1. FDA has determined, based on adequate information about current practices in the manufacture of the device and about user experience with the device, that application of the GMP regulation is unlikely to improve the safety and effectiveness of the device.

2. FDA has determined that all possible defects relating to the safety and effectiveness of the device are readily detectable before use, either through visual examination by the user or routine testing before use, e.g., testing a clinical laboratory reagent with positive and negative controls.

3. FDA has determined that any defect in the device that is not readily detectable will not result in a device failure that could have an adverse effect on the patient or other user.

FDA has determined that no device that is labeled or otherwise represented as sterile will be exempted from the device GMP regulation. Such a device must be subject to the entire GMP regulation to ensure that manufacturers adequately reduce the bioburden (number of microorganisms) on the device and its components during the manufacturing process. This reduction is accomplished through adherence to a comprehensive quality assurance program, as is required by the GMP regulation, with adequate environmental controls, trained personnel, appropriate maintenance and calibration of sterilization equipment, recordkeeping concerning lot sterility, strict packaging and labeling controls, and other quality assurance measures.

The agency also has determined that no exemption from the device GMP regulation will extend to § 820.180, with respect to general requirements concerning records, or § 820.198, with respect to complaint files. The agency believes that granting exemptions from these sections would not be in the public interest, and that compliance with these sections is not unduly burdensome for device manufacturers. To ensure that

device manufacturers have adequate systems for complaint investigation and followup, all such manufacturers are required to comply with the complaint file requirements of § 820.198. All device manufacturers also are required to comply with the general requirements concerning records in § 820.180 to ensure that FDA has access to complaint files, can investigate device-related injury reports and complaints about product defects, may determine whether the manufacturer's corrective actions are adequate, and may determine whether the exemption from other sections of the GMP regulation is still appropriate.

In general, FDA has not initiated proposals to exempt manufacturers of class I devices from requirements under section 510, 519, or 520(f), but has acted on the basis of exemption recommendations of the device classification panels. Manufacturers and other interested persons may submit comments on the appropriateness of exemptions of manufacturers of class I devices that are not the subject of panel exemption recommendations. FDA will consider granting exemptions from the requirement of premarket notification and from the GMP regulation (other than §§ 820.180 and 820.198) according to the policies and criteria discussed above. Comments requesting additional exemptions should be supported by information showing that the exemption of manufacturers of a device from the premarket notification requirement or the GMP regulation (other than § 820.180 and 820.198), or both, is consistent with the policies and criteria discussed above.

List of Hematology and Pathology Devices

The following is a list of the hematology and pathology devices that FDA is proposing to classify, the section and subpart of Part 864 in the Code of Federal Regulations under which the regulation classifying the device will be codified, the docket number of the proposed classification regulation, and the proposed classification of each device.

Subpart B—Biological Stains

Section	Device	Docket No.	Class
864.1850	Dye or chemical solution stains	78N-1834	I
864.1875	Dye powder stains	78N-1835	I

Subpart C—Cell and Tissue Culture Products

864.2220	Synthetic cell and tissue culture media and components	78N-1836	I
864.2240	Cell and tissue culture supplies and equipment	78N-1373	I
864.2260	Chromosome culture kit	78N-1837	I
864.2280	Cultured animal and human cells	78N-1838	I
864.2360	Mycoplasma detection media and components	78N-1839	I
864.2600	Animal and human sera	78N-1840	I
864.2875	Balanced salt solutions or formulations	78N-1841	I

Subpart D—Pathology—Instrumentation and Accessories

864.3010	Tissue processing equipment	78N-1842	I
864.3250	Specimen transport and storage container	78N-1843	I
864.3300	Cytocentrifuge	78N-1844	I
864.3400	Device for sealing micro-sections	78N-1845	I
864.3600	Microscopes and accessories	78N-1846	I
864.3800	Automated slide stainer	78N-1847	I
864.3875	Automated tissue processor	78N-1848	I

Subpart E—Specimen Preparation Reagents

864.4010	General purpose reagent	78N-1849	I
864.4400	Enzyme preparations	78N-1850	I

Subpart F—Automated and Semi-Automated Hematology Devices

864.5200	Automated cell counter	78N-1851	II
864.5220	Automated differential cell counter	78N-1852	III
864.5240	Automated blood cell diluting apparatus	78N-1853	I
864.5260	Automated cell locating device	78N-1854	II
864.5300	Red cell indices device	78N-1855	II
864.5350	Microsedimentation centrifuge	78N-1856	I
864.5400	Coagulation instrument	78N-1857	II
864.5425	Multipurpose system for in vitro coagulation studies	78N-1858	III
864.5600	Automated hematocrit instrument	78N-1859	II
864.5620	Automated hemoglobin system	78N-1860	II
864.5680	Automated heparin analyzer	78N-1861	III
864.5700	Automated platelet aggregation system	78N-1862	II
864.5800	Automated sedimentation rate device	78N-1863	I
864.5850	Automated slide spinner	78N-1864	I
864.5950	Blood volume measuring device	78N-1865	II

Subpart G—Manual Hematology Devices

864.6100	Bleeding time device	78N-1866	II
864.6150	Capillary blood collection tube	78N-1867	I
864.6160	Manual blood cell counting device	78N-1868	I
864.6400	Hematocrit measuring device	78N-1869	II
864.6475	Iron kinetics test	78N-1870	II
864.6550	Occult blood test	78N-1871	II
864.6600	Osmotic fragility test	78N-1872	I
864.6650	Platelet adhesion test	78N-1873	I
864.6675	Platelet aggregometer	78N-1874	II
864.6750	Red cell survival test	78N-1875	II
864.6800	Erythrocyte sedimentation rate test	78N-1876	I

Subpart H—Hematology Kits and Packages

864.7040	Adenine nucleotide assay	78N-1877	I
864.7060	Antithrombin III assay	78N-1878	II
864.7100	Cell enzyme assay	78N-1879	II
864.7140	Activated whole blood clotting time test	78N-1880	II
864.7250	Erythropoietin assay	78N-1881	III
864.7275	Euglobulin lysis time test	78N-1882	II
864.7290	Qualitative and quantitative factor deficiency test	78N-1883	II
864.7300	Fibrin monomer paracoagulation test	78N-1884	II
864.7320	Fibrin split products assay	78N-1885	II
864.7340	Fibrinogen determination system	78N-1886	II
864.7360	Erythrocytic glucose-6-phosphate dehydrogenase assay	78N-1887	II
864.7375	Glutathione reductase assay	78N-1888	II
864.7400	Hemoglobin A_2 assay	78N-1889	II
864.7415	Abnormal hemoglobin assay	78N-1890	II
864.7425	Carboxyhemoglobin assay	78N-1891	II
864.7440	Electrophoretic hemoglobin analysis system	78N-1892	II
864.7455	Fetal hemoglobin assay	78N-1893	II
864.7490	Sulfhemoglobin assay	78N-1895	II
864.7500	Whole blood hemoglobin assay	78N-1896	II
864.7525	Heparin assay	78N-1897	II
864.7660	Leukocyte alkaline phosphatase test	78N-1898	I
864.7675	Leukocyte peroxidase test	78N-1899	I
864.7720	Prothrombin consumption test	78N-1900	II
864.7735	Prothrombin-proconvertin test and thrombotest	78N-1901	II
864.7750	Prothrombin time test	78N-1902	II
864.7825	Sickle cell test	78N-1903	II
864.7875	Thrombin time test	78N-1904	II
864.7900	Thromboplastin generation test	78N-1905	I
864.7925	Partial thromboplastin time test	78N-1906	II

Subpart I—Hematology Reagents and Stains

864.8030	Hematology stains	78N-1907	I
864.8100	Bothrops atrox reagent	78N-1908	II
864.8150	Calibrator for cell indices	78N-1909	III
864.8165	Calibrator for hemoglobin and hematocrit measurement	78N-1910	II
864.8175	Calibrator for platelet counting	78N-1911	II
864.8185	Calibrator for red cell and white cell counting	78N-1912	II
864.8200	Blood cell diluent	78N-1913	I
864.8500	Lymphocyte separation medium	78N-1914	I
864.8540	Red cell lysing reagent	78N-1915	I
864.8625	Hematology quality control mixture	78N-1916	II
864.8950	Russell viper venom reagent	78N-1917	I

Subpart J—Products Used in Establishments That Manufacture Blood and Blood Products

864.9050	Blood bank supplies	78N-1918	I
864.9100	Container for collection and processing of blood and blood components.	78N-1919	II
864.9125	Vacuum-assisted blood collection system	78N-1920	I
864.9145	Processing system for frozen blood	78N-1921	III
864.9160	Blood group substances of nonhuman origin for in vitro diagnostic use.	78N-1922	II
864.9175	Automated blood grouping and antibody test system	78N-1923	II
864.9185	Blood grouping view box	78N-1924	I
864.9195	Blood mixing and weighing device	78N-1925	I
864.9205	Blood and plasma warming device	78N-1926	II, III
864.9225	Cell-freezing apparatus and reagents for in vitro diagnostic use.	78N-1927	I
864.9245	Automated blood cell separator	78N-1928	III
864.9275	Blood bank centrifuge for in vitro diagnostic use	78N-1929	I
864.9285	Automated cell-washing centrifuge for immuno-hematology	78N-1930	II
864.9300	Automated Coombs test system	78N-1931	II
864.9320	Copper sulfate solution for specific gravity determinations	78N-1932	I
864.9400	Stabilized enzyme solution	78N-1933	II
864.9500	System for the identification of hepatitis B antigen	78N-1934	I
864.9550	Lectins and protectins	78N-1935	II
864.9575	Environmental chamber for storage of platelet concentrate	78N-1936	II
864.9600	Potentiating media for in vitro diagnostic use	78N-1937	II
864.9650	Quality control kit for blood banking reagents	78N-1938	II
864.9700	Blood storage refrigerator and blood storage freezer	78N-1939	II
864.9750	Heat-sealing device	78N-1940	I
864.9675	Transfer set	78N-1942	I

Devices Considered By Two or More Panels

Many devices were reviewed by two or more device classification panels. For these devices, FDA will publish each panel's recommendations and a single proposed classification regulation. The following devices were considered by Panels other than the Hematology Device Classification Panel or the Pathology Device Classification Panel:

1. The Clinical Chemistry Device Classification Panel recommended that colorimetric methods for the detection of occult blood in urine and enzymatic methods for the detection of occult blood in urine be classified into class II. The Hematology Device Classification Panel recommended that occult blood reagents be classified into class I. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying occult blood tests into class II and is publishing the two Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

2. The Clinical Chemistry Device Classification Panel recommended that NADP reduction (ultraviolet) and visual semi-quantitative (colorimetric) methods to measure glucose-6-phosphate dehydrogenase activity and electrophoretic methods to measure glucose-6-phosphate dehydrogenase isoenzyme activity be classified into class II. The Hematology Device Classification Panel recommended that catalase inhibition, methemoglobin reduction, and quantitative methods to measure glucose-6-phosphate dehydrogenase activity be classified into class II. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying methods for the measurement of erythrocytic glucose-6-phosphate dehydrogenase activity into class II and is publishing the two Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

3. The Clinical Chemistry Device Classification Panel recommended that fluorescence (visual observation, qualitative ultraviolet) methods for the measurement of glutathione reductase activity be classified into class II. The Hematology Device Classification Panel recommended that red cell glutathione be classified into class II. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying methods for the measurement of glutathione reductase activity into class II and is publishing the two Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

4. The Immunology Device Classification panel recommended that antithrombin III immunoassays be classified into class II. The Hematology Device Classification Panel recommended that antithrombin III quantitation be classified into class II. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying methods for antithrombin III quantitation into class II and is publishing the two Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

5. The Immunology Device Classification Panel recommended that immunoassays to detect fibrinogen and split products, including those employing FITC, peroxidase, and rhodamine, be classified into class II. The Hematology Device Classification Panel recommends that fibrinogen tests and fibrinogen determination standards and controls be classified into class II. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying fibrinogen determination systems into class II and is publishing the two Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

6. The Anesthesiology Device Classification Panel recommended that electromagnetic blood warmers be classified into class III and that nonelectromagnetic blood warmers be classified into class II. The Hematology Device Classification Panel recommended that blood and plasma warming devices be classified into class II. The agency has determined that these devices should be classified in a single regulation. FDA is proposing that nonelectromagnetic blood and plasma warming devices be classified into class II and that electromagnetic blood and plasma warming devices be classified into class III. FDA is publishing the two Panels' recommendations elsewhere in this issue of the **Federal Register.**

7. The Hematology Device Classification Panel and the Clinical Chemistry Panel made classification recommendations concerning the following devices:

Blood collection tray
Vacuum sample tube with anticoagulant
Blood tube mixer
General laboratory timer

The Hematology Device Classification Panel's recommendations and proposed classification regulations for the devices listed above will be published when FDA publishes the recommendations of the Clinical Chemistry Panel.

8. The Hematology Device Classification Panel recommended that crystal violet, giemsa stain, new methylene blue stain, and toluidine blue be classified into class I. The Pathology Device Classification Panel recommended that dye powder stains be classified into class I. The Microbiology Device Classification Panel recommended that microbiology stains be classified into class I. The agency has determined that these devices are essentially the same. Therefore, the agency is proposing a single regulation classifying dye powder stains into class I and is publishing the three Panels' recommendations in a proposal appearing elsewhere in this issue of the **Federal Register.**

9. The Pathology Device Classification Panel and the other panels listed below made classification recommendations concerning the following devices:

Device	Other panel(s)
Centrifuge, general	Clinical chemistry.
Resin, ion exchange	Clinical toxicology.

The Pathology Device Classification Panel's recommendations and proposed classification regulations for the devices listed above will be published when the agency publishes the recommendations of the other panels that reviewed the devices.

Skin Preparation Materials

The Hematology Device Classification Panel recommended that skin preparation materials be classified into class I. A skin preparation material is a prepacked product containing sterilizing solution (e.g., alcohol swabs) used to prepare the skin of a blood donor before blood is drawn or of a patient before a blood transfusion. Because these materials are, for now, being regulated as drugs rather than as devices, FDA is not publishing a proposal to classify these materials.

Immersion Oil

The Hematology Device Classification Panel recommended that immersion oil be classified into class I. Immersion oil is a fluid that is placed between an oil immersion microscope objective and a microscope slide to improve the resolution of the objective. Because FDA has determined that immersion oil is not a "device" under section 201(h) of the act (21 U.S.C. 321(h)), FDA is not publishing a proposal to calssify this product.

Vitamin B_{12}

Absorption Test (Schilling's Test)

The Hematology Device Classification Panel recommended that the vitamin B_{12} absorption test (Schilling's test) be classified into class II. The test consists of the oral administration of radioisotope-labeled (usually ^{57}Co or ^{60}Co) vitamin B_{12} (cyanocobalamin) followed by administration of a flushing dose of unlabeled B_{12}. The radioactivity of the patient's urinary output is then measured over a 24-hour period to determine the status of B_{12} absorption by the patient's gastrointestinal tract. Because the test is an in vivo diagnostic test and therefore a "drug" under section 201(g)(1) of the act, FDA is not publishing a proposal to classify this test as a device.

Environmental Impact

The FDA has carefully considered the environmental effects of proposed § 864.1 and of the proposed hematology and pathology device classification regulations, and because the proposed actions will not significantly affect the quality of the human environment has concluded that an environmental impact statement is not required. A copy of the environmental impact assessment is on file with the Hearing Clerk, Food and Drug Administration (address above).

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513 and 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a)), and under authority delegated to the Commissioner of Food and Drugs (21 U.S.C. 5.1), it is proposed that Chapter I of Title 21 of the Code of Federal Regulations be amended by adding new Part 864, Subpart A, to read as follows:

PART 864—HEMATOLOGY AND PATHOLOGY DEVICES

Subpart A—General Provisions

Sec.
864.1 Scope.

Authority.— Secs. 513 and 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c and 701(a)).

Subpart A—General Provisions

§ 864.1 Scope.

(a) This part sets forth the classification of hematology and pathology devices intended for human use.

(b) The identification of a device in a regulation in this part is not a precise description of every device that is, or will be, subject to the regulation. A manufacturer who submits a premarket notification submission for a device under Part 807 of this chapter cannot show merely that the device is accurately described by the section title and identification provision of a regulation in this part, but shall state why the device is substantially equivalent to other devices, as required by § 807.87 of this chapter.

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md 20857, written comments regarding proposed § 864.1. Four copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

In accordance with Executive Order 12044, the economic effects of this proposal have been carefully analyzed, and it has been determined that the proposed rulemaking does not involve major economic consequences as defined by that order. A copy of the regulatory analysis assessment supporting this determination is on file with the Hearing Clerk, Food and Drug Administration.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79-27612 Filed 9-10-79; 8:45 am]

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1834]

Medical Devices; Classification of Dye and Chemical Solution Stains

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying dye and chemical solution stains into class I (general controls). The FDA is also publishing the recommendations of the Pathology Device Classification Panel and the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel and the Hematology Device

V 4 4 / 1 7 7 SEP 11 79 UMI

Classification Panel, FDA advisory committees, made the following recommendations regarding the classification of dye and chemical solution stains:

1. Identification: Dye and chemical solution stains are either solutions of one or more synthetic and/or natural dyes or solutions of one or more nondye chemicals used to stain cells and tissues for diagnostic histopathology and hematology. The Pathology Device Classification Panel reviewed these products under the names "chemical and chemical solution stains" and "dye solution stains." The Hematology Device Classification Panel reviewed these products under the name "periodic acid Schiff stain."

2. Recommended classification: The Pathology Device Classification Panel recommends that the devices reviewed under the name "chemical and chemical solution stains" be classified into class I (general controls) with exemptions from records and reports and good manufacturing practices requirements. The Pathology Device Classification Panel recommends that the devices reviewed under the name "dye solution stains" be classified into class I (general controls) with no exemptions. The Hematology Device Classification Panel recommends that the product reviewed under the name "periodic acid schiff stain" be classified into class I (general controls) with no exemptions.

3. Summary of reasons for recommendation: The Panels recommend that dye and chemical solution stains be classified into class I because the hazards of these products are minimal when used by persons trained in their use. Both Panels believe that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. The Pathology Device Classification Panel recommends that the products reviewed under the name "chemical and chemical solutions" be exempt from the good manufacturing practice regulation under section 520(f) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360j(f)) and from records and reports requirements under section 519 of the act (21 U.S.C. 360i) because current manufacturing practices in the manufacture of the device and user experience with the device indicate that the application of the GMP regulation will not improve the safety and effectiveness of the device. The Panel also recommends that dye and chemical solution stains be exempt from the records and reports requirements of section 519 of the act (21 U.S.C. 360i).

4. Summary of data on which the recommendation is based: The Panels based their recommendations on the Panel members' familiarity and clinical experience with these devices, and on the devices' history of satisfactory performance.

5. Risks to health: The Pathology Device Classification Panel has not identified any risks to health. The Hematology Device Classification Panel has identified the following risk to health: Inappropriate diagnosis or therapy: Poor staining characteristics may contribute to failure to detect abnormal cell types, inability to differentiate reactive from malignant cells, improper classification of a leukemic process, or inability to classify an anemic process.

Proposed Classification

FDA agrees with the recommendations of the Pathology Device Classification Panel and the Hematology Device Classification Panel and is proposing that dye and chemical solution stains be classified into class I (general controls). The agency believes that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these products.

FDA disagrees with the Panels' recommendation that manufacturers of dye and chemical solution stains be exempt from the records and reports regulations under section 519 of the act. The records and reports requirements in several of FDA's present device regulations are authorized, wholly or in part, by section 519. The most extensive of these requirements are found in the device good manufacturing practice (GMP) regulation, published in the **Federal Register** of July 21, 1978 (43 FR 31508). In the future, FDA will publish other regulations under section 519, including regulations requiring reports to FDA of experience with medical devices. Until these regulations are issued, FDA believes that it cannot properly issue exemptions from them. In the future, whenever the agency proposes device regulations that include records and reports requirement, interested persons may submit comments requesting that certain classes of manufacturers or other persons be exempt from the requirements, and FDA will issue exemptions that are appropriate. The only type of exemption from records and reports requirements that FDA is proposing now, in device classification regulations, is an exemption of certain manufacturers from requirements of the device GMP regulation. The exemption will not extend to two device GMP requirements, § 820.180 (21 CFR 820.180), with respect to general requirements concerning records, and § 820.198 (21 CFR 820.198), with respect to complaint files.

In response to the Panels' recommendation that manufacturers of dye and chemical solution stains be exempt from the device good manufacturing practice (GMP) regulation under section 520(f) of the act, FDA is proposing that a manufacturer of these devices be exempt, in the manufacture of the devices, from all requirments in the GMP regulation except § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files. Based on available information about current practices used in the manufacture of the devices and user experience with the devices, the agency has determined that application of the GMP regulation, other than §§ 820.180 and 820.198, is unlikely to improve the safety and effectiveness of the devices. The agency believes, however, that manufacturers of dye and chemical solution stains must still be required to comply with the complaint file requirements of § 820.198 to ensure that these manufacturers have adequate systems for complaint investigation and followup. The agency also believes that manufacturers of dye and chemical solution stains must still be required to comply with the general requirements concerning records in § 820.180 to ensure that FDA has access to complaint files, can investigate device-related injury reports and complaints about product defects, may determine whether the manufacturer's corrective actions are adequate, and may determine whether the exemption from other sections of the GMP regulation is still appropriate.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart B and new § 864.1850, to read as follows:

Subpart B—Biological Stains.

§ 864.1850 Dye and chemical solution stains.

(a) *Identification:* Dye and chemical solution stains are either solutions of one or more synthetic and/or natural dyes or solutions of one or more nondye chemicals used to stain cells and tissues for diagnostic histopathology and hematoloty.

(b) *Classification:* Class I (general controls). The devices are exempt from the good manufacturing practice regulation in Part 820 of this chapter, with the exception of § 820.180, with respect to general requirments concerning records, and § 820.198, with respect to complaint files.

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all coments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1835]

Medical Devices; Classification of Dye Powder Stains

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying dye powder stains into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel, the Microbiology Device Classification Panel, and the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, the Microbiology Device Classification Panel, and the Hematology Device Classification Panel, FDA advisory committees, made the following recommendations with respect to the classification of dye powder stains:

1. Identification: Dye powder stains are synthetic or natural dyes that are used in the staining of cells and tissues for diagnostic histopathology and hematology. The Pathology Device Classification Panel reviewed these products under the names "certified dye powder stains" and "noncertified dye powder stains." Certified dye powder stains have been tested and certified by the Biological Stain Commission by satisfying specific physiochemical standards and in-use tests. Noncertified dye powder stains have either not been tested or have been tested but not certified by the Biological Stain Commission. The Hematology Device Classification Panel reviewed these products under the names "crystal violet for hematology," "giemsa stain," "new methylene blue stain," and "toluidine blue." The Microbiology Device Classification Panel reviewed these products under the name "all microbiological stains."

2. Recommended classification: The Pathology Device Classification Panel recommends that the products reviewed under the name "certified dye powder stains" be classified into class I (general controls) with exemptions from good manufacturing practice requirements under section 520(f) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360j(f)) and from records and reports regulations under section 519 of the act (21 U.S.C. 360i). The Pathology Device Classification Panel recommends that the products reviewed under the name "non-certified dye powder stains" be classified into class I (general controls) with exemption from the good manufacturing practice regulations under section 520(f) of the Federal Food, Drug and Cosmetic Act (21 U.S.C. 360j(f)). The Hematology Device Classification Panel recommends that "crystal violet for hematology," "giemsa stain," "new methylene blue stain," and "toluidine blue" be classified into class I with no exemptions. The Microbiology Device Classification Panel recommends that "all microbiological stains" be classified into class I with no exemptions.

3. Summary of reasons for recommendation: The Panels recommend that dye powder stains be classified into class I (general controls) because these products present no risks to health when used by persons trained in their use. All three Panels believe that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. The Pathology Device Classification Panel recommends that the devices reviewed under the name "certified dye powder stains" be exempt from records and reports regulations because certification by the Biological Stain Commission is satisfied by meeting specific physiochemical standards and in-use tests, and controls are used to help detect reagent failure in the more critical diagnostic tests. The Pathology Device Classification Panel also recommends that dye powder stains, whether or not certified, by exempt from good manufacturing practice requirements because current manufacturing practices in the manufacture of the devices and user experience with the devices indicate that the application of the GMP regulation will not improve the safety and effectiveness of the devices.

4. Summary of data on which the recommendation is based: The Pathology Device Classification Panel, the Hematology Device Classification Panel, and the Microbiology Device Classification Panel based their recommendations upon their Panel members' familiarity and clinical experience with the devices, and on the devices' history of satisfactory performance.

5. Risks to health: The Pathology Device Classification Panel and the Microbiology Device Classification Panel did not identify any risks to health. The Hematology Device Classification Panel identified the following risks to health: Inappropriate diagnosis or therapy: Poor staining characteristics may contribute to failure to detect abnormal cell types, inability to differentiate reactive from malignant cells, improper classification of a leukemic process, or inability to classify an anemic process.

Proposed Classification

FDA agrees with the recommendations of the Pathology Devices Classification Panel, the Microbiology Device Classification

V 4 4 / 1 7 7 SEP 11 79 UMI

Panel, and the Hematology Device Classification Panel and is proposing that dye powder stains be classified into class I (general controls). The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

FDA disagrees with the Panels' recommendation that manufacturers of dye powder stains be exempt from records and reports regulations under section 519 of the act. The records and reports requirements in several of FDA's present device regulations are authorized, wholly or in part, by section 519. The most extensive of these requirements are found in the device good manufacturing practice (GMP) regulation, published in the **Federal Register** of July 21, 1978 (43 FR 31508). In the future, FDA will publish other regulations under section 519, including regulations requiring reports to FDA of experience with medical devices. Until these regulations are issued, FDA believes that it cannot properly issue exemptions from them. In the future, whenever the agency proposes device regulations that include records and reports requirements, interested persons may submit comments requesting that certain classes of manufacturers or other persons be exempt from the requirements, and FDA will issue exemptions that are appropriate. The only type of exemption from records and reports requirements that FDA is proposing now, in device classification regulations, is an exemption of certain manufacturers from requirements of the device GMP regulation. The exemption will not extend to two device GMP requirements, § 820.180 (21 CFR 820.180), with respect to general requirements concerning records and § 820.198 (21 CFR 820.198), with respect to complaint files.

In response to the Panels' recommendation that manufacturers of dye powder stains be exempt from the device good manufacturing practive (GMP) regulation under section 520(f) of the act, FDA is proposing that a manufacturer of these devices be exempt, in the manufacture of the devices, from all requirements in the GMP regulation except § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files. Based on available information about current practices used in the manufacture of the devices and user experience with the devices, the agency has determined that application of the GMP regulation, other than §§ 820.180 and 820.198, is unlikely to improve the safety and effectiveness of the devices. The agency believes, however, that manufacturers of dye powder stains must still be required to comply with the complaint file requirements of § 820.198 to ensure that these manufacturers have adequate systems for complaint investigation and followup. The agency also believes that manufacturers of dye powder stains must still be required to comply with the general requirements concerning records in § 820.180 to ensure that FDA has access to complaint files, can investigate device-related injury reports and complaints about product defects, may determine whether the manufacturer's corrective actions are adequate, and may determine whether the exemption from other sections of the GMP regulation is still appropriate.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart B by adding new § 864.1875 as follows:

§ 864.1875 Dye powder stains.

(a) *Identification.* Dye powder stains are synthetic or natural dyes that are used in the staining of cells and tissues for diagnostic histopathology and hematology.

(b) *Classification.* Class I (general controls). The devices are exempt from the good manufacturing practice regulation in Part 820 of this chapter, with the exception of § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files.

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79-27614 Filed 9-10-79; 8:45 am]

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1836]

Medical Devices; Classification of Synthetic Cell and Tissue Culture Media and Components

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying synthetic cell and tissue culture media and components into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of synthetic cell and tissue culture media and components:

1. Identification: Synthetic cell and tissue culture media and components are substances that are composed entirely of defined components (e.g., amino acids, vitamins, inorganic salts, etc.) that are essential for the survival and development of cell lines of humans and other animals.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that synthetic cell and tissue culture media and components be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. Although these reagents are susceptible to batch-to-batch variations in their manufacturing process due to the biological nature of the components, the Panel believes that conformity by manufacturers with FDA's device good manufacturing practice regulation should control these variations.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with these products and upon the products' history of satisfactory performance.

5. Risks to health: Delayed diagnosis: The failure of these devices to provide sufficient nutritional factors in a cell and tissue culture system may require that a given diagnostic procedure be repeated, causing a delay in diagnosis.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that synthetic cell and tissue culture media and components be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these products.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart C including new § 864.2220 as follows:

Subpart C—Cell and Tissue Culture Products

§ 864.2220 Synthetic cell and tissue culture media and components.

(a) *Identification.* Synthetic cell and tissue culture media and components are substances that are composed entirely of defined components (e.g. amino acids, vitamins, inorganic salts, etc.) that are essential for the survival and development of cell lines of humans and other animals.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79-27615 Filed 9-10-79; 8:45 am]

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1373]

Medical Devices; Classification of Cell and Tissue Culture Supplies and Equipment

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying cell and tissue culture supplies and equipment into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that these devices be classified into class I. The effect of classifying a device into class I is to require that the devices meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the devices. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, and FDA advisory committee, made the following recommendation regarding the classification of cell and tissue culture supplies and equipment:

1. Identification: Cell and tissue culture supplies and equipment are devices that are used to examine, propogate, nourish, or grow cells and tissue cultures. These include such articles as slide culture chambers, perfusion and roller apparatus, cell culture suspension systems, and tissue culture flasks, disks, tubes, and roller bottles.

2. Recommended classification: Class I (general controls). The Panel recommends that these products be exempted from good manufacturing practice regulations.

3. Summary of reasons for recommendation: The Panel recommends that cell and tissue culture supplies and equipment be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device. The Panel recommends that these devices be exempt from the good manufacturing practice regulation because current manufacturing practices in the manufacture of the devices and user experience with the devices indicate that the application of the GMP regulation will not improve the safety and effectiveness of the devices.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with these devices, and upon the devices' history of satisfactory performance.

5. Risks to health: None specified.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that cell and tissue culture supplies and equipment be classified into class I (general controls). The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices.

In response to the Panel's recommendation that manufacturers of cell and tissue culture supplies and equipment be exempt from the device good manufacturing practice (GMP) regulation under section 520(f) of the act (21 U.S.C. 360j(f)), FDA is proposing that

a manufacturer of these devices who does not label or otherwise represent them as sterile be exempt, in the manufacture of the devices, from all requirements in the GMP regulation except § 820.180 (21 CFR 820.180), with respect to general requirements concerning records, and § 820.198 (21 CFR 820.198), with respect to complaint files. Based on available information about current practices used in the manufacture of the devices and user experience with the devices, the agency has determined that application of the GMP regulation, other than §§ 820.180 and 820.198, is unlikely to improve the safety and effectiveness of the devices. The agency believes, however, that manufacturers of cell and tissue culture supplies and equipment, even when they are not labeled or otherwise represented as sterile, must still be required to comply with the complaint file requirements of § 820.198 to ensure that these manufacturers have adequate systems for complaint investigation and followup. The agency also believes that manufacturers of cell and tissue culture supplies and equipment must still be required to comply with the general requirements concerning records in § 820.180 to ensure that FDA has access to complaint files, can investigate device-related injury reports and complaints about product defects, may determine whether the manufacturer's corrective actions are adequate, and may determine whether the exemption from other sections of the GMP regulation is still appropriate. A manufacturer of cell and tissue culture supplies and equipment that are labeled or otherwise represented as sterile is in the manufacture of these devices, subject to the GMP regulation in its entirety.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart C by adding new § 864.2240 as follows:

§ 864.2240 Cell and tissue culture supplies and equipment.

(a) *Identification.* Cell and tissue culture supplies and equipment are devices that are used to examine, propagate, nourish, or grow cells and tissue cultures. These include such articles as slide culture chambers, perfusion and roller apparatus, cell culture suspension systems, and tissue culture flasks, disks, tubes, and roller bottles.

(b) *Classification.* Class I (general controls). If the devices are not labeled or otherwise represented as sterile, they are exempt from the good manufacturing practice regulation in Part 820 of this chapter, with the exception of § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files.

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27616 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1837]

Medical Devices; Classification of Chromosome Culture Kits

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying chromosome culture kits into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classfying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of chromosome culture kits:

1. Identification: A chromosome culture kit is a device containing the necessary ingredients (e.g., Minimum Essential Media (MEM) or McCoy's 5A culture media, phytohemagglutinin, fetal calf serum, antibiotics, and heparin) used to culture tissues for diagnosis of congenital chromosome abnormalities.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that chromosome culture kits be classified into class I (general controls) because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. Although the performance of these products is susceptible to batch-to-batch variations in their production, the Panel believes that conformity by manufacturers with FDA's device good manufacturing practice regulation should control these variations.

4. Summary of data on which the recommendation is based: The Panel based its recommendations upon the Panel members' familiarity and clinical experience with the product and upon the product's history of satisfactory performance.

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of these products to perform satisfactorily may result in a misdiagnosis of chromosomal abnormality. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk, unnecessarily.

Proposed Classification

The Commissioner agrees with the Panel recommendations and is proposing that chromosome culture kits be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the product.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart C by adding new § 864.2260 as follows:

§ 864.2260 Chromosome culture kit.

(a) *Identification.* A chromosome culture kit is a device containing the necessary ingredients (e.g., Minimum Essential Media (MEM) of McCoy's 5A culture media, phytohemagglutinin, fetal calf serum, antibiotics, and heparin) used to culture tissues for diagnosis of congenital chromosome abnormalities.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27617 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1838]

Medical Devices; Classification of Cultured Animal and Human Cells

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying cultured animal and human cells into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this porposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of cultured animal and human cells:

1. Identification: Cultured animal and human cells are in vitro cultivated cell lines from the tissue of humans or other animals which are used in various diagnostic procedures, particularly diagnostic virology and cytogenetic studies.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that cultured animal and human cells be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device. Although cultured animal and human cells are susceptible to batch-to-batch variations in their production, the Panel believes that conformity by manufacturers with FDA's device good manufacturing practice regulation should control these variations.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with this device and the product's history of satisfactory performance.

5. Risks to health: Misdiagnosis: Failure of the cell line to support the growth of suspected viral pathogens could result in a misdiagnosis because the viral agent(s) suspected of causing a disease would not be detected.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that cultured animal and human cells be classifed into class I (general controls) with no exemption. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart C by adding new § 864.2280 as follows:

§ 864.2280 Cultured animal and human cells.

(a) *Identification.* Cultured animal and human cells are in vitro cultivated cell lines from the tissue of humans or other animals which are used in various diagnostic procedures, particularly diagnostic virology and cytogenetic studies.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27618 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1839]

Medical Devices; Classification of Mycoplasma Detection Media and Components

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

V 4 4 / 1 7 7 S E 1 1 7 9

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying mycoplasma detection media and components into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Helath, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of mycoplasma detection media and components:

1. Identification: Mycoplasma detection media and components are products that are used to detect and isolate mycoplasma pleuropneumonia-like organisms (PPLO), a common microbial contaminant in cell cultures. The Pathology Device Classification Panel reviewed these products under the names "mycoplasma detection kit" and "mycoplasma detection media."

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the products reviewed under the names "mycoplasma detection media" and "mycoplasma detection kit" be classified into class I (general controls) because these devices present no risks to health. The devices are used as a quality control component of a cell culture system and are not used directly for the diagnosis of disease. The Panel believes that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness for these products.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with this device, and the products' history of satisfactory performance.

5. Risks to health: None identified.

Proposed Classification

The Commissioner agrees with the Panel recommendations and is proposing that mycoplasma detection media and components be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide a reasonable assurance of safety and effectiveness for these products.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 865 be amended in Subpart C by adding new § 864.2360 as follows:

§ 864.2360 Mycoplasma detection media and components.

(a) *Identification.* Mycoplasma detection media and components are used to detect and isolate mycoplasma pleuropneumonia-like organisms (PPLO), a common microbial contaminant in cell cultures.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all coments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27619 Filed 9-10-79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1840]

Medical Devices; Classification of Animal and Human Sera

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying animal and human sera into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of animal and human sera:

1. Identification: Animal and human sera are biological products, obtained from the blood of humans or other animals, that provide the necessary growth-promoting nutrients in a cell culture system.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that animal and human sera be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device. Although these products are susceptible to batch-to-batch variations in nutritional properties and contamination by indigenous agents during their manufacture, the Panel believes that the manufacturer's conformity with good manufacturing practices and labeling requirements under class I (general controls) should control these problems.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with these products, and upon the products' history of satisfactory performance.

5. Risks to health: Delay in diagnosis. The failure of sera to provide sufficient growth-promoting factors in a cell culture system may require that a given diagnostic procedure be repeated, causing a delay in diagnosis.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that animal and human sera be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart C by adding new § 864.2800 as follows:

§ 864.2800 Animal and human sera.

(a) *Identification.* Animal and human sera are biological products, obtained from the blood of humans or other animals, that provide the necessary growth-promoting nutrients in a cell culture system.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above ofice between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 27, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27620 Filed 9-10-79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1841]

Medical Devices; Classification of Balanced Salt Solutions or Formulations

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying balanced salt solutions or formulations into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of balanced salt solutions or formulations:

1. Identification: A balanced salt solution or formulation is a defined mixture of salts and glucose in a simple medium. This device is included as a necessary component of most cell culture systems.

This media component controls for pH, osmotic pressure, energy source, and inorganic ions.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that balanced salt solutions or formulations be classified into Class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these products. These products present minimal risks to health because they are used as a component of a cell culture system and are not used directly for the diagnosis of disease.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' familiarity and clinical experience with this demand upon the products' history of satisfactory performance.

5. Risks to health: Delayed diagnosis: The failure of balanced salt solutions to provide sufficient growth promoting factors in a cell culture system may require that a given diagnostic procedure be repeated, causing a delay in diagnosis.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that balanced salt solutions or formulations be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart C by adding new § 864.2875 as follows:

V 4 4 / 1 7 7

§ 864.2875 Balanced salt solutions or formulations.

(a) *Identification.* A balanced salt solution or formulation is a devined mixture of salts and glucose in a simple medium. This device is included as a necessary component of most cell culture systems. This media component controls for pH, osmotic pressure, energy source, and inorganic ions.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27621 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1842]

Medical Devices; Classification of Tissue Processing Equipment

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying tissue processing equipment into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel and the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel and the Hematology Device Classification Panel, FDA advisory committees, made the following recommendations with respect to the classification of tissue processing equipment:

1. Identification: Tissue processing equipment consists of devices used to prepare human tissue specimens for diagnostic histological examination by processing the specimens through the various stages of decalcifying, infiltrating, sectioning, and mounting on microscope slides. The Pathology Device Classification Panel considered this type of product under the names "decalcifying devices," "paraffin dispensers," "flotation baths," "infiltrators," "imbedding containers," "microtomes and accessories," "microscope slides and coverslips, " and "slide-warming lamps and tables." The Hematology Device Classification Panel considered the classification of "microscope slides and coverslips."

2. Recommended classification: The Pathology Device Classification Panel recommends that tissue processing equipment be classified into class I (general controls) with exemption from good manufacturing practice regulations under section 520(f) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360j(f)). The Hematology Device Classification Panel recommends that the product reviewed under the name "microscope slides and coverslips" be classified into class I (general controls) with no exemptions.

3. Summary of reasons for recommendation: The Pathology Device Classification Panel recommends that tissue processing equipment be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. The Pathology Device Classification Panel also recommends that these devices be exempt from FDA's device good manufacturing practice regulation under section 520(f) of the act because current manufacturing practices in the manufacture of the device and user experience with the device indicate that the application of the GMP regulation will not improve the safety and effectiveness of the device. The Hematology Device Classification Panel recommends that the devices reviewed under the name "microscope slides and coverslips" be classified into class I because they present no risks to health when used by trained personnel. The Hematology Device Classification Panel also believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices.

4. Summary of data on which the recommendation is based: The Pathology Device Classification Panel and the Hematology Device Classification Panel based their recommendations on the Panel members' familiarity and clinical experience with these devices, and on the device's history of satisfactory performance.

5. Risks to health: None identified.

Proposed Classification

The Commissioner agrees with the recommendation of the Panels and is proposing that tissue processing equipment be classified into class I (general controls) with no exemptions. The Commissioner believes that these controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Commissioner disagrees with the Panel's recommendation that manufacturers of tissue processing equipment be exempt from the good manufacturing practice regulation under section 520(f) of the act. The Commissioner believes that compliance with this regulation is necessary to assure the quality of this device and thus its safety, effectiveness, and compliance with the adulteration and misbranding provisions of the act. Compliance with the GMP regulation will prevent production of tissue processing equipment having defects that could cause failure and harm to users.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart D, including new § 864.3010 as follows:

Subpart D—Pathology—Instrumentation and Accessories

§ 864.3010 Tissue processing equipment.

(a) *Identification.* Tissue processing equipment consists of devices used to prepare human tissue specimens for diagnostic histological examination by processing the specimens through the various stages of decalcifying, infiltrating, sectioning, and mounting on microscope slides.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1843]

Medical Devices Classification of Specimen Transport and Storage Containers

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying specimen transport and storage containers into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of specimen transport and storage containers:

1. Identification: A specimen transport and storage container is a device used to contain biological specimens during storage and transport within and between clinics and laboratories in such an environment that the specimen can effectively be used for histological or cytological examination. The Panel reviewed these products under the names "specimen transport and storage containers" and "temperature controlled specimen transport and storage containers".

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Reasons for recommendation: The Panel recommends that specimen transport and storage containers be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness for these devices.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' familiarity and clinical experience with these products, and on a history of satisfactory product performance.

5. Risks to health: (a) Contamination: Any leakage or breakage of the container may cause contamination of laboratory, clinic, or personnel by any infectious organism in the specimen. (b) Misdiagnosis: Biological specimens, e.g., amniotic fluid or fetal tissue, may have a toxic reaction with the material of which the container is made, causing aberrations of the specimen. Contamination of the container may also cause specimen aberrations with the production of artifacts (tissues that have been altered from their natural state), which make the specimen unusable for diagnosis. (c) Delay in diagnosis: Damage to the specimen by failure to maintain it at a specified temperature can cause physiological changes in the specimen and require the health professional to obtain a new specimen, with a consequent delay in diagnosis.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that specimen transport and storage containers be classified into class I with no exemptions. The Commissioner believes that general controls are sufficient to provide a reasonable assurance of safety and effectiveness for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3250 as follows:

§ 864.3250 Specimen transport and storage container.

(a) *Identification.* A specimen transport and storage container is a device used to contain biological specimens during storage and transport within and between clinics and laboratories in such an environment that the specimen can effectively be used for histological or cytological examination.

(b) *Recommended classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[21 CFR Part 864]

[Docket No. 78N-1844]

Medical Devices; Classification of Cytocentrifuges

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying cytocentrifuges into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. the effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the Federal Register provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of cytocentrifuges:

1. Identification: A cytocentrifuge is a centrifuge used to concentrate cells from biological cell suspensions (e.g., cerebrospinal fluid) and to deposit these cells on a glass microscope slide for cytological examination.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the cytocentrifuge be classified into class I because the device presents no hazards to health. The Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel member's familiarity and clinical experience with the product, and on the product's history of satisfactory performance.

5. Risks to health: None specified.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that cytrocentrifuges be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540-546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3300 as follows:

§ 864.3300 Cytocentrifuge.

(a) *Identification.* A cytocentrifuge is a centrifuge used to concentrate cells from biological cell suspensions (e.g., cerebrospinal fluid) and to deposit these cells on a glass microscope slide for cytological examination.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79-27624 Filed 9-10-79; 8:45 am]

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1845]

Medical Devices; Classification of Devices for Sealing Microsections

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying devices for sealing microsections into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the Federal Register provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of devices for sealing microsections:

1. Identification: A device for sealing microsections is an automated instrument used to seal stained cells and microsections for histological and cytological examination.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that devices for sealing microsections be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices. This device presents minimal risks to health because the examiner can easily determine whether it is effective by simple inspection of the end product.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' familiarity and clinical experience with these devices, and on the product's history of satisfactory performance.

5. Risks to health: (a) Delay in diagnosis: An instrument malfunction can result in an incomplete sealing of the microscope slide and possibly render a tissue specimen unusable for examination. (b) Unnecessary surgical procedures: Specimen damage or loss can result from an instrument malfunction causing the need to obtain an additional biopsy specimen. This additional biopsy would require additional surgical procedures and delay the diagnosis.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that devices for sealing microsections be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540-546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3400 as follows:

§ 864.3400 Device for sealing microsections.

(a) *Identification.* A device for sealing microsections is an automated instrument used to seal stained cells and microsections for histological and cytological examination.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, Md 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1846]

Medical Devices; Classification of Microscopes and Accessories

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying microscopes and accessories into class I (general controls). The FDA is also publishing the recommendations of the Pathology Device Classification Panel and the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the Federal Register provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel and the Hematology Device Classification Panel, FDA advisory committees, made the following recommendations regarding the classification of microscopes and accessories:

1. Identification: Microscopes and accessories are optical instruments used to enlarge images of specimens, preparations, and cultures for examination. Variations of microscopes and accessories (through a change in light source) used in clinical laboratories include the following: (a) Phase contrast microscopes, which permit visualization of unstained preparations by altering the phase relationship of light that passes around the object and through the object. (b) Fluorescence microscopes, which permit examination of specimens stained with fluorochromes that fluoresce under ultraviolet light. (c) Inverted stage microscopes, which permit examination of tissue cultures or other biological specimens in bottles or tubes with the light source mounted above the specimens. The Pathology Device Classification Panel reviewed these products under the names "microscope condensers," "microscope lamps," "fluorescent UV microscope," "tissue culture inverted stage microscope," "light microscope," "phase contrast microscope," and "microscope stages." The Hematology Device Classification Panel reviewed these products under the name "microscope."

2. Recommended classification: Class I (general controls). The Pathology Device Classification Panel recommends that there be no exemptions. The Hematology Device Classification Panel recommends that microscopes be exempted from section 510 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360).

3. Summary of reasons for recommendation: The Pathology Device Classification Panel and the Hematology Device Classification Panel recommend that microscopes and accessories be classified into class I because these devices present no hazards to health. The Panels believe that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these devices. The Hematology Device Classification Panel recommends that microscopes be exempt from registration, device listing, and premarket notification under section 510 of the act because the Panel believes that compliance by the manufacturers with the requirements of section 510 of the act is not necessary for the protection of the public health.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the panel members' familiarity and clinical experience with these devices, and on a history of satisfactory performance.

5. Risks to health: None identified.

V 4 4 / 1 7 7

S E 1 1 7 9

UMI

Proposed Classification

The Commissioner agrees with both Panel recommendations and is proposing that microscopes and accessories be classified into class I (general controls). The Commissioner believes that general controls are sufficient to provide a reasonable assurance of safety and effectiveness for the device.

The Commissioner disagrees, however, with the Hematology Device Classification Panel's recommendation that manufacturers of microscopes be exempt from registration, device listing, and premarket notification under section 510 of the act. Under section 510(g)(4) of the act, the Commissioner may exempt a manufacturer from compliance with section 510 of the act only upon a finding that compliance is not necessary for the protection of the public health. In the case of microscopes, the Commissioner cannot make the required finding. To protect the public health, the agency needs to require manufacturers of this device to register and to list their products with FDA, so that the agency can identify the firms and products that it regulates and can conduct necessary inspections and investigations concerning safety, effectiveness, adulteration, or misbranding. Premarket notification by these manufacturers assures that FDA learns of new products, and of significant modification of existing products, for which premarket approval is required.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3600 as follows:

§ 864.3600 Microscopes and accessories.

(a) *Identification.* Microscopes and accessories are optical instruments used to enlarge images of specimens, preparations, and cultures for examination. Variations of microscopes and accessories (through a change in the light source) used in clinical laboratories include the following:

(1) Phase contrast microscopes, which permit visualization of unstained preparations by altering the phase relationship of light that passes around the object and through the object.

(2) Fluorescence microscopes, which permit examination of specimens stained with fluorochromes that fluoresce under ultraviolet light.

(3) Inverted stage microscopes, which permit examination of tissue cultures or other biological specimens contained in bottles or tubes with the light source mounted above the specimen.

(b) *Recommended classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1847]

Medical Devices; Classification of Automated Slide Stainers

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated slide stainers into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel and the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (FHA–305), Food and Drug Administation, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel and the Hematology Device Classification Panel, FDA advisory committees, made the following recommendations with respect to the classification of automated slide stainers:

1. Identification: An automated slide stainer is a device used to stain histology, cytology, and hematology slides for diagnosis. The Pathology Device Classification Panel considered this device under the names "immersion type slide stainer" and "contact type slide stainer." The Hematology Device Classification Panel considered this device under the name "automated slide stainer."

2. Recommended classification: The Pathology Device Classification Panel and the Hematology Device Classification Panel recommended that the automated slide stainer be classified into class I (general controls). The Panels recommend that there be no exemptions.

3. Summary of reasons for recommendation: The Pathology Device Classification Panel and the Hematology Device Classification Panel recommend that the automated slide stainer be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. This product presents minimal risks to health because the examiner can easily determine whether the device is effective by a simple inspection of the end product.

4. Summary of data on which the recommendation is based: The Pathology Device Classification Panel and the Hematology Device Classification Panel based their recommendation on the Panel members' familiarity and clinical experience with these devices and on the product's history of satisfactory performance.

5. Risks to health: Both Panels identified the following risks to health: (a) Delayed diagnosis: A malfunction in the staining qualities of the product can result in artifacts (tissues that have been altered from their natural state), which make the slide difficult to read or unusable for diagnosis. Diagnosis could be delayed, expecially if an additional specimen is needed for examination. (b) Unnecessary surgical procedures: A device malfunction may cause damage to the specimen making it unusable for diagnosis and resulting in additional surgical procedures to obtain a new specimen for examination.

Proposed Classification

The Commissioner agrees with the recommendations of the Pathology Device Classification Panel and the Hematology Device Classification Panel and is proposing that automated slide stainers be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3800 as follows:

§ 864.3800 Automated slide stainer.

(a) *Identification.* An automated slide stainer is a device used to stain histology, cytology, and hematology slides for diagnosis.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1848]

Medical Devices; Classification of Automated Tissue Processors

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated tissue processors into class I (general controls). The FDA is also publishing the recommendation of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel an FDA advisory committee, made the following recommendation with respect to the classification of automated tissue processors:

1. Identification: An automated tissue processor is an automated system used to process tissue specimens for examination through fixation, dehydration, and infiltration.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the automated tissue processor be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' familiarity and clinical experience with these devices, and on the devices' history of satisfactory performance.

5. Risks to health: (a) Delay in diagnosis: A product malfunction can result in an improperly fixed tissue specimen, which may be unusable for staining and examination. If an additional specimen is needed, the diagnosis may be delayed. (b) Unnecessary surgical procedures: Specimen damage or loss can result from a product malfunction requiring an additional biopsy specimen to be obtained. Additional surgical procedures and a delay in diagnosis may result.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that the automated tissue processor be classified into class I (general controls). The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart D by adding new § 864.3875 as follows:

§ 864.3875 Automated tissue processor.

(a) *Identification.* An automated tissue processor is an automated system used to process tissue specimens for examination through fixation, dehydration, and infiltration.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N-1849]

Medical Devices; Classification of General Purpose Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying general purpose reagents into class I (general controls). The proposed regulation would apply to cytological preservatives, decalcifying reagents, fixatives and adhesives, tissue processing reagents, isotonic solutions, and pH buffers. The FDA is also publishing the recommendation of the Pathology Device Classification Panel and the Hematology Device Classification Panel that these devices be calssified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel and the Hematology Device Classification Panel, FDA advisory committee, made the following recommendation with respect to the classification of general purpose reagents:

1. Identification: A general purpose reagent is a chemical reagent that has general laboratory application, that is used to collect, prepare and examine specimens from the human body for diagnostic histopathology and hematology, and that is not labeled or promoted for medical use or for a specific diagnostic application. General purpose reagents include cytological preservatives, decalcifying reagents, fixatives and adhesives, tissue processing reagents isotonic solutions, and pH buffers. The Pathology Device Classification Panel reviewed these products under the names "cytological preservatives," "decalcifying reagents," "fixatives," and "reagents for dehydrating, clearing, imbedding, and mounting." The Hematology Device Classification Panel considered the classification of isotonic solutions and pH buffers.

2. Recommended classification: The Pathology Device Classification Panel recommends that products reviewed under the names cytological preservatives, decalcifying reagents, and fixatives be classified into class I (general controls) with no exemptions. The Pathology Device Classification Panel recommends that reagents for dehydrating, clearing, imbedding, and mounting be classified into class I (general controls) with exemption from records and reports and good manufacturing practice requirements under sections 519 and 520(f), respectively, of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360i and 360j(f)). The Hematology Device Classification Panel recommends that isotonic solutions and pH buffers be classified into class I (general controls) with no exemptions.

3. Summary of reasons for recommendation: The Pathology Device Classification Panel recommends that the products included in the category of general purpose reagents be classified into class I because the hazards associated with the use of these products are minimal when they are used by persons trained in their use. The Panel believes that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these products. The Panel recommends that "reagents for dehydrating, clearing, imbedding and mounting" be exempt from the good manufacturing practice regulation (GMP) under section 520(f) of the act and the records and reports requirements under section 519 of the act because current manufacturing practices in the manufacture of the device and user experience with the device indicate that the application of the GMP regulation will not improve the safety and effectiveness of the device. The Hematology Device Classification Panel recommends that isotonic solutions and pH buffers be clasified into class I because these products present no hazard to life, health, or well-being and because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these products.

4. Summary of data on which the recommendation is based: The Pathology Device Classification Panel and the Hematology Device Classification Panel based their recommendations on the Panel members' familiarity and clinical experience with these products, and the products' history of satisfactory performance.

5. Risks to health: Delay in diagnosis: If reagents fail to perform as intended, specimen deterioration, damage, or improper fixation will make the tissue specimen unusable for examination. Additional time will be needed to obtain and prepare a new specimen, thus causing a delay in diagnosis.

Proposed Classification

FDA agrees with the recommendation of the Panels and is proposing that general purpose reagents be classified into class I (general controls). The agency believes that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these products.

FDA disagrees with the Panels' recommendation that manufacturers of general purpose reagents be exempt from records and reports regulations under section 519 of the act. The records and reports requirements in several of FDA's present device regulations are authorized, wholly or in part, by section 519. The most extensive of these requirements are found in the device food manufacturing practice (GMP) regulation, published in the **Federal Register** of July 21, 1978 (43 FR 31508). In the future, FDA will publish other regulations under section 519, including regulations requiring reports to FDA of experience with medical devices. Until these regulations are issued, FDA believes that it cannot properly issue exemptions from them. In the future, whenever the agency proposes device regulations that include records and reports requirements, interested persons may submit comments requesting that certain classes of manufacturers or other persons be exempt from the requirements, and FDA will issue exemptions that are appropriate. The only type of exemption from records and reports requirements that FDA is proposing now, in device classification regulations, is an exemption of certain manufacturers from requirements of the device GMP regulation. The exemption will not extend to two device GMP requirements, § 820.180 (21 CFR 820.180), with respect to general requirements concerning records, and § 820.198 (21 CFR 820.198), with respect to complaint files.

In response to the Panels' recommendation that manufacturers of general purpose reagents be exempt from the device good manufacturing practice (GMP) regulation under section 520(f) of the act, FDA is proposing that a manufacturer of these devices who does not label or otherwise represent them as sterile be exempt, in the manufacture of the devices, from all requirements in the GMP regulation except § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files. Based on available information about current practices used in the manufacture of the devices and user experience with the devices, the agency has determined that application of the GMP regulation, other than §§ 820.180 and 820.198, is unlikely to improve the safety and effectiveness of the devices. The agency believes, however, that manufacturers of general purpose reagents, even when they are not labeled or otherwise represented as sterile, must still be required to comply with the complaint file requirements of § 820.198 to ensure that these manufacturers have adequate systems for complaint investigation and followup. The agency also believes that manufacturers of general purpose reagents must still be required to comply with the general requirements concerning records in § 820.180 to ensure that FDA has access to complaint files, can investigate device-related injury reports and complaints about product defects, may determine whether the manufacturer's corrective actions are adequate, and may determine whether the exemption from other sections of the GMP regulation is still appropriate. A manufacturer of general purpose reagents that are labeled or otherwise represented as sterile is, in the manufacture of these devices, subject to the GMP regulation in its entirety.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540-546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended by adding new Subpart E including § 864.4010 to read as follows:

Subpart E—Specimen Preparation Reagents

§ 864.4010 General purpose reagent.

(a) *Identification.* A general purpose reagent is a chemical reagent that has general laboratory application, that is used to collect, prepare, and examine specimens from the human body for diagnostic histopathology and hematology, and that is not labeled or promoted for medical use or for a specific diagnostic application. General purpose reagents include cytological preservatives, decalcifying reagents, fixatives and adhesives, tissue processing reagents, isotonic solutions, and pH buffers.

(b) *Classification.* Class I (general controls). If the devices are not labeled or otherwise represented as sterile, they are exempt from the good manufacturing practice regulation in Part 820 of this chapter, with the exception of § 820.180, with respect to general requirements concerning records, and § 820.198, with respect to complaint files.

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA-30-5), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[21 CFR PART 864]

[Docket No. 78N-1850]

Medical Devices; Classification of Enzyme Preparations

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying enzyme preparations into class I (general controls). The FDA is also publishing the recommendations of the Pathology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Pathology Device Classification Panel an FDA advisory committee, made the following recommendation with respect to the classification of enzyme preparations:

1. Identification: Enzyme preparations are products that are used in the histopathology laboratory for the following purposes: (a) to disaggregate tissues and cells already in established cultures for preparation into subsequent cultures (e.g., trypsin); (b) to disaggregate fluid specimens for cytological examination (e.g., papain for gastric lavage or trypsin for sputum liquefaction); (c) to aid in the selective staining of tissue specimens (e.g., diastase for glycogen determination). The Panel reviewed these products under the name "enzymes."

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that enzyme preparations be classified into class I because general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these devices.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' familiarity and clinical experience with these products, and on

V 4 4 / 1 7 7

the products' history of satisfactory performance.

5. Risks to health: None specified.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that enzyme preparations be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide a reasonable assurance of the safety and effectiveness of these products.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart E by adding new § 864.4400 as follows:

§ 864.4400 Enzyme preparations.

(a) *Identification.* Enzyme preparations are products that are used in the histopathology laboratory for the following purposes:

(1) To disaggregate tissues and cells already in established cultures for preparation into subsequent cultures (e.g., trypsin);

(2) To disaggregate fluid specimens for cytological examination (e.g., papain for gastric lavage or trypsin for sputum liquefaction);

(3) To aid in the selective staining of tissue specimens (e.g., diastase for glycogen determination).

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27630 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1851]

Medical Devices; Classification of Automated Cell Counters

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated cell counters into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of automated cell counters:

1. Identification: An automated cell counter is a device used to count red blood cells, white blood cells, or blood platelets, to measure hemoglobin and hematocrit, and to measure or calculate the red cell indices (the erythrocyte mean corpuscular volume, the mean corpuscular hemoglobin, and the mean corpuscular hemoglobin concentration) using an sample of the patient's peripheral blood (blood circulating in one of the body's extremities, such as the arm).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that automated cell counters be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the information presented by Dr. O. W. Van Assendelft, a consultant to the Panel and the chairman of the Quantitative Cellular Hematology Subcommittee of the National Committee for Clinical Laboratory Standards, who stated that the Subcommittee could develop a standard for automated cell counters in approximately 2 years, and upon the Panel members' own clinical experience with automated cell counters.

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of potentially serious disorders such as anemia, leukopenia (a decreased number of leukocytes in the circulating blood), or leukocytosis (an increased number of leukocyes in the circulating blood). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Erroneous cell counts can be potentially life-threatening when those counts are used to monitor patients undergoing chemotherapy.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the automated cell counter be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

The Commissioner has reviewed additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by performance standards. Wintrobe et al. (Ref. *1*) indicate that the results of electronic counters are not necessarily more accurate or more reliable than those of semi-automated or manual cell-counting methods. The authors list 12 sources of error in electronic counters. Williams and Schneider (Ref. *2*) state that errors occur in electronic counting when the white blood cell count is very high. False low white blood cell counts result when significant lymphocytosis (an excess number of lymphocytes in the blood, as in chronic lymphocytic leukemia) is present (Ref. *2*). The Commissioner believes that the matter of error in automated cell counts should be addressed in the device labeling. If the labeling specifies the possible sources of error the operator would be alerted to the possibility of erroneous cell counts under certain operating conditions. A performance standard containing such a labeling requirement would provide a reasonable assurance of the safety and effectiveness of the device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

[Docket No. 78N–1852]

Medical Devices; Classification of Automated Differential Cell Counters

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated differential cell counters into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of automated differential cell counters:

1. Identification: An automated differential cell counter is a device used to identify and classify one or more of the formed elements of the blood.

2. Recommended classification: Class III (premarket approval). The Panel recommends that premarket approval for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated differential cell counters be classified into class III (premarket approval) because of the possibility of misclassification of cells, which could result in the failure to diagnose a serious disorder. The device therefore presents a potential unreasonable risk of illness or injury. Misclassification by the device could result from a failure to differentiate between cell types or a failure to detect a certain cell type. The Panel was concerned about the fully automated mode of certain differential cell counters. With this type of device, the task of classifying suspect cells, once that of the technician, now is left entirely to the machine. The Panel believes that the ability of this device to accurately identify abnormal cells remains to be established. Therefore, operator verification of the device's abnormal cell identifications is essential. The Panel believes that general controls would not provide

SEP 11 1979 UMI

V 4 4 / 1 7 7

S E 1 1

7 9

UMI

sufficient control over these characteristics. The Panel believes that a performance standard would not provide reasonable assurance of the safety and effectiveness of the device and that there is not sufficient information to establish a standard to provide such assurance. The device, therefore, should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with automated differential cell counters and on information presented at a symposium entitled "Differential Counters in Hematology" held at the Panel meeting. Among the speakers at the symposium was Dr. Robert Miller of the Johns Hopkins University Medical Center. Dr. Miller discussed difficulties concerning data interpretation, precision and accuracy, correlation to reference methods and error in terms of coincidence, nonreproducible results, nonlinearity, and specific interferences.

5. Risks to health: (a) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a blood cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the automated differential cell counter be classified into class III (premarket approval). The Commissioner believes that the device is purported or represented for use in the classification of blood cells, a use which is of substantial importance in preventing impairment of human health. The Commissioner believes that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance. FDA has reviewed medical literature concerning automated differential cell counters (Refs. *1* through *6*). The medical literature reports two basic methodologies for automated differential cell counting—pattern recognition and flow-through techniques. Pattern recognition systems microscopically scan a fixed, stained blood film. Flow-through systems count and identify cells suspended in a liquid medium.

Pattern recognition systems are handicapped by their lack of accuracy (Ref. *1*). In one study, 68.8 percent of the abnormal cells that the system examined were classified as normal (Ref. *2*). An error of this sort could result in the failure to detect a pathological blood sample (Ref. *1*). Several studies (Refs. *3* through *6*) show a discrepancy between pattern recognition counts and manual counts of monocytes (mononuclear leukocytes). It is suggested that the criteria for identifying monocytes need to be better defined (Refs. *4* and *5*). There also have been reports of discrepancies between pattern recognition counts and manual counts of plasma cells and atypical lymphocytes (Refs. *4* and *6*). The tendency of pattern recognition systems to underestimate the number of atypical lymphocytes is ascribed to flaws in the recognition criteria. Pattern recognition systems also cause difficulty in blood film preparation. Overlapping cells must be avoided, and a uniform distribution of cell types must be achieved (Ref. *1*).

Flow-through systems allow a hundred-fold increase in the rate at which cells are counted. There is imperfect correlation between the classification logic systems of the flow-through machines and the morphological features of the blood cell classes as defined by fixed, Romanowsky-stained preparations (Ref. *1*). Therefore, these machines will fail to classify up to 10 percent of normal cells.

[21 CFR Part 864]

[Docket No. 78N–1853]

Medical Devices; Classification of Automated Blood Cell Diluting Apparatus

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated blood cell diluting apparatus into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated blood cell diluting apparatus:

1. Identification: An automated blood cell diluting apparatus is a device used to make, automatically, appropriate dilutions of a blood sample for further quantitative testing.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the automated blood cell diluting apparatus be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Panel recommends that labeling of the product be required to include explicit directions for calibration.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with these devices.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a blood cell disorder. In appropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (c) Electrical shock: A malfunction could result in an electric shock.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that automated blood cell diluting apparatus be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Commissioner believes that if the operator of this device is properly trained to use this device and employs good laboratory procedures, the risks of hepatitis infection and electrical shock are minimal. Furthermore, if good laboratory practices and quality control procedures are followed, the possibility of improper dilution is minimal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5240 as follows:

§ 864.5240 Automated blood cell diluting apparatus.

(a) *Identification.* An automated blood cell diluting apparatus is a device used to make, automatically, appropriate dilutions of a blood sample for further quantitative testing.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 20, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27633 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1854]

Medical Devices; Classification of Automated Cell-Locating Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated cell-locating devices into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated cell-locating devices:

1. Identification: An automated cell-locating device is a device used to locate blood cells on a peripheral blood smear, allowing the operator to identify and classify each cell according to type. (Peripheral blood is blood circulating in one of the body's extremities, such as the arm.)

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a

V 4 4 / 1 7 7

performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that automated cell-locating devices be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel expressed concern over the potential for bias in the results obtained from the use of these devices due to failure to identify a particular cell type. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with automated cell locating devices.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a blood cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated cell-locating devices be classified into class II (performance standards). The differential cell count is used to identify abnormalities that require followup and diagnosis. Leukocytosis (an increase in the number of circulating leukocytes) may be caused by bacterial infection, leukemia, infectious hepatitis and a number of other disorders (Refs. *1* and *2*). Leukopenia (a decreased number of leukocytes in the circulation) may be caused by malaria, viral pneumonia, viral hepatitis, radiation, or drug therapy (Refs. *1* and *2*). Certain disorders cause increased numbers of cells other than leukocytes. The number of platelets in the blood is increased in conditions such as polycythemia vera (a disease state in which the total red cell mass and the total blood volume are increased) and chronic myelogenous leukemia (a leukemia originating in the bone marrow). The Commissioner concurs with the Panel's view that an inaccurate total or differential white cell count resulting from a failure to locate or recognize leukocytes is potentially hazardous to the patient.

The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of this device. The Commissioner also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), at the address above, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Simmons, A., "Technical Hematology," 2d Ed., J. B. Lippincott Co., Philadelphia, pp. 88 and 109, 1976.

2. Brown, B. A., "Hematology: Principles and Procedures," 2d Ed., Lea and Febiger, Philadelphia, pp. 75–76, 88–89, 100–101, 247, 1976.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5260 as follows:

§ 864.5260 Automated cell-locating device.

(a) *Identification.* An automated cell-locating device is a device used to locate blood cells on a peripheral blood smear, allowing the operator to identify and classify each cell according to type. (Peripheral blood is blood circulating in one of the body's extremities, such as the arm.)

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

Medical Devices; Classification of Red Cell Indices Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying red cell indices devices into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of red cell indices devices:

1. Identification: A red cell indices device, usually part of a larger system, calculates or directly measures the erythrocyte mean corpuscular volume (MCV), the mean corpuscular hemoglobin (MCH), and the mean corpuscular hemoglobin concentration (MCHC). The red cell indices are used for the differential diagnosis of anemias. The Panel considered this generic type of device under the names "red cell indices, calculated" and "red cell indices, measured."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that red cell indices devices be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familiarity with these devices. In making its recommendation, the Panel indicated that because this device is usually a component of a larger system and because the parameters used are often calculated from measurements made by that larger system, the accuracy of the device is dependent upon the accuracy of the larger system. Therefore, performance standards for red cell indices must be developed in conjunction with the performance standards for systems for red cell counting and measurement of the hematocrit and hemoglobin.

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of anemia. A miscalculation of the MCV, MCH, and MCHC may lead to an incorrect differential diagnosis between thalassemia minor (a hereditary hemolytic anemia that is the result of decreased synthesis of the beta chains of hemoglobin) and other anemias. In appropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that red cell indices devices be classified into class II (performance standards). The Commissioner believes that a performance standard is necesary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5300 as follows:

§ 864.5300 Red cell indices device.

(a) *Indentification.* A red cell indices device, usually part of a larger system, calculates or directly measures the erythrocyte mean corpuscular volume (MCV), the mean corpuscular hemoglobin (MCH), and the mean corpuscular hemoglobin concentration (MCHC). The red cell indices are used for the differential diagnosis of anemias.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 2, 1979.

[21 CFR Part 864]

[Docket No. 78N–1856]

Medical Devices; Classification of Microsedimentation Centrifuges

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying microsedimentation centrifuges into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of microsedimentation centrifuges:

1. Identification: A microsedimentation centrifuge is a device used to sediment red blood cells for the microsedimentation rate test.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the microsedimentation centrifuge be classified into class I because general

controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' belief that the reference methods for erythrocyte sedimentation rate of the International Committee for Standardization in Hematology (Refs. *1* and *2*) and the National Committee for Clinical Laboratory Standards (Ref. *3*) sufficiently assure the safety and effectiveness of this test. The Panel also considered medical literature concerning the effects of low and high levels of asymmetric macromolecules (Ref. *4*), tube length and diameter (Ref. *5*), disadvantages of the present methodology because of the length of time required to perform the test (Ref. *7*), and the controversy over correction for anemia (Refs. *4* through *7*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of various illnesses, including infections, plasma cell abnormalities, and inflammatory diseases. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the microsedimentation centrifuge be classified into class I (general controls). The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device.

[Docket No. 78N–1857]

Medical Devices; Classification of Coagulation Instruments

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying coagulation instruments into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of coagulation instruments:

1. Identification: A coagulation instrument is an automated or semiautomated device used to determine the onset of clot formation for in vitro coagulation studies. The Panel considered this generic type of device under the names "automated clot timer" and "automated and semiautomated coagulation instrument."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that coagulation instruments be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls will not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide reasonable assurance of the safety and effectiveness of the device and that sufficient information exists to establish a performance standard that will provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familiarity with coagulation instruments. The Panel noted that the Center for Disease Control has proposed studies of automated coagulation instruments and that such studies could aid in the development of a performance standard.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a clotting disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Electrical shock: A malfunction could result in an electric shock.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that coagulation instruments be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that sufficient information exists to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5400 as follows:

§ 864.5400 Coagulation instrument.

(a) *Identification.* A coagulation instrument is an automated or semiautomated device used to determine the onset of clot formation for in vitro coagulation studies.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1858]

Medical Devices; Classification of Multipurpose Systems for In Vitro Coagulation Studies

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying multipurpose systems for in vitro coagulation studies into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectivness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of multipurpose systems for in vitro coagulation studies:

1. Identification: A multipurpose system for in vitro coagulation studies is a device consisting of one automated or semiautomated instrument and its associated reagents and controls. This system is used to perform a series of coagulation studies and coagulation factor assays.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this system be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that multipurpose systems for in vitro coagulation studies be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel also expressed concern over the accuracy and precision of the automated systems. Specifically, this concern centered on the ability of the instruments to determine an endpoint in instances of markedly abnormal coagulation. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable asurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familiarity with these systems. The Panel noted that the Center for Disease Control is currently involved in the development of a standardized methodology.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a coagulation disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Electrical shock: A malfunction could result in an electric shock.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that multipurpose systems for in vitro coagulation studies be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Medical Devices; Classification of Automated Hematocrit Instruments

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated hematocrit instruments into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated hematocrit instruments:

1. Identification: An automated hematocrit instrument is a device used to determine the hematocrit by means of a calculation involving a measurement of the average red cell volume and the number of red cells per unit volume of whole blood.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated hematocrit instruments be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon

performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

[21 CFR Part 864]

[Docket No. 78N–1860]

Medical Devices; Classification of Automated Hemoglobin Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated hemoglobin systems into class II (performance

3. Summary of reasons for recommendation: The Panel recommends that automated hemoglobin systems be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that multipurpose systems for in vitro coagulation studies be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5425 as follows:

§ 864.5425 Multipurpose system for in vitro coagulation studies.

(a) *Identification.* A multipurpose system for in vitro coagulation studies is a device consisting of one automated or semiautomated instrument and its associated reagents and controls. The system is used to perform a series of coagulation studies and coagulation factor assays.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1859]

Medical Devices; Classification of Automated Hematocrit Instruments

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated hematocrit instruments into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated hematocrit instruments:

1. Identification: An automated hematocrit instrument is a device that measures automatically the packed red cell volume of a blood sample to distinguish normal from abnormal states, such as anemia and erythrocytosis (an increase in the number of red cells).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated hematocrit instruments be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel stated that the hematocrit is one of the most important determinations in hematology. The Panel stressed the need to standardize the methodology because certain devices claim to measure the packed red cell volume, but in fact measure something else. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the existence of a protocol for the determination of packed red cell volume developed by the World Health Organization and the International Committee for Standardization in Hematology (Ref. *1*). The Panel also considered proficiency testing surveys conducted by the College of American Pathologists and the Center for Disease Control.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hematological abnormality such as anemia, erythrocytosis, or thalassemia (a hereditary hemolytic anemia characterized by a decreased rate of synthesis of one or more of the hemoglobin polypeptide chains). (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the automated hematocrit instrument be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Reference

The following information has been placed in the office of the Hearing Clerk (HFA–305), Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Van Assendelft, O. W., J. F. Coster, and P. J. Crossland-Taylor, "Methods for the Determination of Packed Cell Volume," World Health Organization Document Lab/76.3.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5600 as follows:

§ 864.5600 Automated hematocrit instrument.

(a) *Identification.* An automated hematocrit instrument is a device that measures automatically the packed red cell volume of a blood sample to distinguish normal from abnormal states, such as anemia and erythrocytosis (an increase in the number of red cells).

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1860]

Medical Devices; Classification of Automated Hemoglobin Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated hemoglobin systems into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated hemoglobin systems:

1. Identification: An automated hemoglobin system is a device consisting of the reagents, calibrators, controls, and instrumentation used to determine the hemoglobin content of human blood.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this product be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated hemoglobin systems be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls will not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide reasonable assurance of the safety and effectiveness of the device and that sufficient information exists to establish a performance standard that will provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the fact that a method and reference solution for hemoglobin determination have been addressed in standards developed by the International Committee for Standardization in Hematology (Ref. *1*). This method and reference solution have been accepted by the College of American Pathologists, the American Society of Hematology, and the National Committee for Clinical Laboratory Standards. In addition, a preliminary standard has been devloped by the Center for Disease Control. The Panel also relied upon the medical literature concerning hemoglobinometry. Van Assendelft's discussion (Ref. *2*) of the subject considers the standardization of hemoglobinometry and photometric errors. Van Assendelft, Zijlstra, and van Kampen (Ref. *3*) discuss the sources of error in the cyanmethemoglobin method. They state that errors occur due to improper technique in obtaining and diluting the blood sample. Reagents may have been stored in improper containers, accidentally frozen, or improperly prepared. The hemoglobin determination also may be in error if the measuring instrument was not calibrated and checked with a cyanmethemaglobin reference solution.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The measurement of the patient's hemoglobin is the basis for a decision to intitiate or terminate treatment.

V 4 4 / 1 7 7

including blood transfusion. (b) Potassium cyanide hazard: The potassium cyanide present in some hemoglobin reagents constitutes a hazard to the laboratory user. (c) Electrical shock: A malfunction could result in an electric shock.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated hemoglobin systems be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the divice. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard to provide reasonable assurance of the safety and effectiveness of the device.

References

The following information has been placed in the office of the Hearing Clerk (HFA-305), Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

[Docket No. 78N-1861]

Medical Devices; Classification of Automated Heparin Analyzers

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated heparin analyzers into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated heparin analyzers:

1. Identification: An automated heparin analyzer is a device used to determine the heparin level in a blood sample by mixing the sample with protamine (a heparin-neutralizing substance) and determining photometrically the onset of air-activated clotting. The analyzer also determines the amount of protamine necessary to neutralize the heparin in the patient's circulation.

2. Recommended classification: Class III (premarket approval). The Panel recommends that premarket approval of this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that the automated heparin analyzer be classified into class III (premarket approval) because reliance upon the information derived from the use of this device, if inaccurate, could be hazardous to the patient's health. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that there is not sufficient information available regarding the operating principles of this device or the processes involved in its manufacture. The Panel believes that this lack of information would prevent the establishment of a performance standard that would provide reasonable assurance of the safety and effectiveness of the device. The device, therefore, should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness.

4. Summary of data on which the recommendation is based: The Panel based its recommendation, in part, upon the conclusion by the Center for Disease Control that there are insufficient data to determine that the safety and effectiveness of this device could be assured by general controls or a performance standard (Ref. *1*). The Panel also considered Biggs' discussion of heparin neutralization (Ref. *2*), Williams' discussion of heparin and anticoagulant therapy (Ref. *3*), and the Panel members' clinical experience with heparin neutralization.

5. Risks to health: (a) Hemorrhage or thrombosis: If this device incorrectly reports the level of heparin in the patient's circulation, hemorrhage or thrombosis may result due to the administration of an inappropriate amount of protamine. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated heparin analyzers be classified into class III (premarket approval). This device is intended for use during hemodialysis, to direct heparin therapy, or to monitor heparin levels during surgical procedures such as cardiovascular surgery. If this device fails to report the patient's heparin level accurately during such a procedure, potentially life-threatening thrombosis or hemorrhage could result. Therefore the Commissioner believes that the device presents a potential unreasonable risk of illness or injury (including death) to the patient if the physician directs heparin therapy in reliance upon the information derived from the device. The Commissioner agrees that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

[Docket No. 78N-1862]

Medical Devices; Classification of Automated Platelet Aggregation Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated platelet aggregation systems into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated platelet aggregation systems:

1. Identification: An automated platelet aggregation system is a device used to determine changes in platelet shape and platelet aggregation following the addition of an aggregating reagent to a platelet-rich plasma.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that automated platelet aggregation systems be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel expressed concern over the variation in results obtained with these systems. The Panel ascribed this variation to the nonuniform stability and reactivity of the reagents. The Panel recommends that the labeling be required to describe the stability of the reagents and their active constituents, and directions for storage. The Panel believes that general controls will not provide sufficient control over these characteristics. The Panel believes that a performance

S E 1 1 7 9

UMI

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

standard will provide reasonable assurance of the safety and effectiveness of the device and that sufficient information exists to establish a performance standard that will provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and knowledge of the medical literature concerning platelet aggregation. The Panel considered a review article by Arkel (Ref. *1*) describing platelet aggregation and its clinical applications. Arkel states that although inherited platelet function disorders are rare, they are dangerous because they can cause excessive bleeding during surgery. Han and Ardlie (Ref. *2*) describes the effects of pH, temperature, and calcium concentration on platelet aggregation.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a platelet disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Failure to diagnose a platelet disorder could result in bleeding during surgery.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated platelet aggregation systems be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

[Docket No. 78N–1863]

Medical Devices; Classification of Automated Sedimentation Rate Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated sedimentation rate devices into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classfication of automated sedimentation rate devices:

1. Identification: An automated sedimentation rate device is an instrument that measures automatically the erythrocyte sedimentation rate in whole blood. Because an increased sedimentation rate indicates tissue damage or inflammation, the erythrocyte sedimentation rate device is useful in monitoring treatment of a disease.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that the automated sedimentation rate device be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' belief that the reference method for erythrocyte sedimentation rate (Refs. *1* and *2*) of the International Committee for Standardization in Hematology and the reference method of the National Committee for Clinical Laboratory Standards sufficiently control the safety and effectiveness of this test. The Panel also considered medical literature concerning the effect of low and high levels of asymmetric macromolecules (Ref. *4*), tube length and diameter (Ref. *5*), disadvantages of the present methodology because of the length of time required to perform the test (Ref. *7*), and the controversy over correction for anemia (Refs. *4* through *7*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of various illnesses, including infections, plasma cell abnormalities, and inflammatory diseases. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated sedimentation rate devices be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

[Docket No. 78N–1864]

Medical Devices; Classification of Automated Slide Spinners

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated slide spinners into class I (general controls). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated slide spinners:

1. Identification: An automated slide spinner is a device that prepares automatically a blood film on a microscope slide using a small amount of peripheral blood (blood circulating in one of the body's extremities, such as the arm).

2. Recommended classification: Class II (general controls). The Panel recommends that there be no exemptions.

3. Summary the reasons for recommendation: The Panel recommends that the automated slide spinner be classified into class I because general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with this device.

5. Risks to health: (a) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (b) Electrical shock: A malfunction could result in electric shock. (c) Cuts and abrasions: There is a risk of injury to the operator from borken glass microscope slides if the device fails to function properly. (d) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a serious disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. There is a risk of misdiagnosis due to mislabeling of slides and poor quality of spun slide preparations.

V 4 4 / 1 7 7 SEP 11 79 UMI

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that automated slide spinners be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. The Commissioner believes that if the operator is properly trained to use this device and follows the manufacturer's instructions carefully, the risks of hepatitis, injury from broken glass, mislabeling of slides, and poor slide quality are minimal. If good laboratory practices and quality control procedures are followed, the possibility of hepatitis infection or mislabeling of slides is minimal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under the authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart F by adding new § 864.5850 as follows:

§ 864.5850 Automated slide spinner.

(a) *Identification.* An automated slide spinner is a device that prepares automatically a blood film on a microscope slide using a small amount of peripheral blood (blood circulating in one of the body's extremities, such as the arm).

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, (*insert date 60 days after date of publication in the* **Federal Register**) submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1865]

Medical Devices; Classification of Blood Volume Measuring Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood volume measuring devices into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305). Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of blood volume measuring devices:

1. Identification: A blood volume measuring device is a manual semiautomated, or automated system that is used to calculate the red cell mass, plasma volume, and total blood volume.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that the blood volume measuring device be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls will not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide reasonable assurance of the safety and effectiveness of the device and that sufficient information exists to establish a performance standard that will provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with these systems.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of polycythemia vera (a disease characterized by an absolute increase in the red cell mass and the total blood volume). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendations and is proposing that blood volume measuring devices be classified into class II (performance standards).

An FDA review of the medical literature shows that certain aspects of blood volume measuring devices could be addressed in a performance standard. The use of labeled red cells is the method of choice for measuring the total circulating red cell volume. Use of either stable or radioactive carbon monoxide as a label results in a tendency to overestimate the total red cell volume (Ref. *1*). There also are inherent difficulties in measurement of plasma volume. Allowance must be made for the time required for the label to mix with the plasma and the continual elimination of the label from the plasma. The plasma volume does not remain constant and therefore is hard to define (Ref. *1*). If the Evans blue dye method is employed, it is difficult to obtain an accurate measurement. The deep blue dye hampers any measurement made in a syringe. The patient also must be fasting to control the opacity of the plasma (Ref. *2*). There are also instances in which the peripheral blood volume does not correlate closely with the red cell volume (Ref. *2*).

In addition to the uses cited by the Panel, the blood volume measurement is used in the following situations: to evaluate blood and fluid losses during major surgical procedures and following trauma (e.g., burns), to serve as a guide in preoperative and postoperative transfusion therapy, to evaluate gastrointestinal and uterine bleeding, and to aid in the diagnosis of hypovolemic shock (i.e., shock characterized by abnormally low levels of fluid in the body's circulatory system). An inaccurate blood volume measurement in these circumstances poses great potential for harm. The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that sufficient information exists to establish a performance standard for the device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

Medical Devices; Classification of Bleeding Time Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying bleeding time devices into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of bleeding time devices:

1. Identification: A bleeding time device is a device, usually employing two spring-loaded blades, that produces two small incisions in the patient's skin. The length of time required for the bleeding to stop is a measure of the effectiveness of the coagulation system, primarily the platelets.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that bleeding time devices be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that it is vitally important that the template used to make the incision be sterilizable or disposable. If the template is sterilizable, the label should specify the method of sterilization to be used. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' knowledge of, and clinical experience with, this device. In making its recommendation, the Panel indicated that a standard should not be difficult to develop because the current template, with its well-standardized design, works well and is widely accepted.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a potentially serious bleeding disorder.

Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The result could be severe bleeding during surgery. (b) Scarring: If the device is used improperly the patient may receive a permanent scar. (c) Cuts and abrasions: The spring-loaded blades may injure the technician if the device is not handled properly. (d) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that bleeding time devices be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commission also believes that there is sufficient information to establish a performance standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart G including new § 864.6100 as follows:

Subpart G—Manual Hematology Devices

§ 864.6100 Bleeding time device.

(a) *Identification.* A bleeding time device is a device, usually employing two spring-loaded blades, that produces two small incisions in the patients's skin. The length of time required for the bleeding to stop is a measure of the effectiveness of the coagulation system, primarily the platelets.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

Medical Devices; Classification of Capillary Blood Collection Tubes

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying capillary blood collection tubes into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT:

William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of capillary blood collection tubes:

1. Identification: A capillary blood collection tube is a plain or heparinized glass tube of very small diameter used to collect blood by capillary action.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that capillary blood collection tubes be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with the device.

5. Risks to health: None identified.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that capillary blood collection tubes be classified into class I (general controls), with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart G by adding new § 864.6150 as follows:

§ 864.6150 Capillary blood collection tube.

(a) *Identification.* A capillary blood collection tube is a plain or heparinized glass tube of very small diameter used to collect blood by capillary action.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1868]

Medical Devices; Classification of Manual Blood Cell Counting Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying manual blood cell counting devices into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT:

William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of manual blood cell counting devices:

1. Identification: A manual blood cell counting device is a device used to count red blood cells, white blood cells, and blood platelets. The Panel considered this generic type of device under the names "hemocytometer," "differential hand tally," "quantitative hematology pipettes," and "manual platelet counting."

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that manual blood cell counting devices be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with these devices.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a blood cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that manual blood cell counting devices be classified into class I (general controls), with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Commissioner believes that if the blood cells are counted according to an established procedure, the chance of an inaccurate cell count is greatly reduced.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner, it is proposed that Part 864 be amended in Subpart G by adding new § 864.6160, to read as follows:

§ 864.6160 Manual blood cell counting device.

(a) *Identification.* A manual blood cell counting device is a device used to count red blood cells, white blood cells, and blood platelets.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1869]

Medical Devices; Classification of Hematocrit Measuring Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying hematocrit measuring devices into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT:

William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

Panel, an FDA advisory committee, made the following recommendation with respect to the classification of hematocrit measuring devices:

1. Identification: A hematocrit measuring device is a system consisting of instruments, tubes, racks, and a sealer and a holder. The device is used to measure the packed red cell volume in blood to determine whether the patient's total red cell volume is normal or abnormal. Abnormal states include anemia (an abnormally low total red cell volume) and erythrocytosis (an abnormally high total red cell mass). The packed red cell volume is produced by centrifuging a given volume of blood. The Panel considered this generic type of device under the names "hematocrit, centrifugal force packed, cell volume" and "hematocrit tubes, racks, sealer, and holder."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that hematocrit measuring devices be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel indicated that measurement of the hematocrit is one of the most important measurements in hematology. The Panel stressed the need to standardize the methodology because of the use of this measurement to distinguish various hematogical abnormalities and because certain devices claim to measure the packed red cell volume, but in fact measure something else. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the existence of a protocol for the determination of packed red cell volume developed by the World Health Organization and the International Committee for Standardization in Hematology (Ref. *1*). The Panel also considered proficiency testing surveys conducted by the College of American Pathologists and the Center for Disease Control.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hematological abnormality such as anemia, erythrocytosis, or thalassemia (a hereditary hemolytic anemia characterized by a decreased rate of synthesis of one or more of the hemoglobin chains). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Hepatitis infection. Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the hematocrit measuring devices be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Reference

The following information has been placed in the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Van Assendelft, O. W., J. F. Coster, and P. J. Crossland-Taylor, "Methods for the Determination of Packed Cell Volume," World Health Organization Document LAB/76.3.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart G by adding new § 864.6400 as follows:

§ 864.6400 Hematocrit measuring device.

(a) *Identification.* A hematocrit measuring device is a system consisting of instruments, tubes, racks, and a sealer and a holder. The device is used to measure the packed red cell volume in blood to determine whether the patient's total red cell volume is normal or abnormal. Abnormal states include anemia (an abnormally low total red cell volume) and erythrocytosis (an abnormally high total red cell mass). The packed red cell volume is produced by centrifuging a given volume of blood.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Medical Devices; Classification of Iron Kinetics Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying iron kinetics tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierkscheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of iron kinetics tests:

1. Identification: An iron kinetics test is a device used to determine the plasma iron clearance and red cell iron incorporation. The information obtained from this system is used to diagnose iron metabolism disorders.

2. Recommended Classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that iron kinetics tests be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with this device.

5. Risks to health: (a) Radiation hazard: The user may be exposed to radiation from radioisotopes that are a part of this device. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of an iron metabolism disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that iron kinetics tests be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart G by adding new § 864.6475 as follows:

§ 864.6475 Iron kinetics test.

(a) *Identification.* An iron kinetics test is a device used to determine the plasma iron clearance and red cell iron incorporation. The information obtained from this system is used to diagnose iron metabolism disorders.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1871]

Medical Devices; Classification of Occult Blood Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying occult blood tests into class II (performance standards). The FDA is also publishing the recommendations of two FDA advisory committees concerning this device. The Hematology Device Classification Panel recommends that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. The Clinical Chemistry Device Classification Panel recommends that this device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel and the Clinical Chemistry Device Classification Panel, two FDA advisory committees, made the following recommendations with respect to the classification of occult blood tests:

1. Identification: An occult blood test is a device used to detect occult blood in urine or feces. (Occult blood is blood present in such small quantities that it can be detected only by chemical tests of suspected material, or by microscopic or spectroscopic examination.) The Panels considered this generic type of device under the names "occult blood reagent," "colorimetric, occult blood in

urine," and "enzymatic method, occult blood in urine."

2. Recommended classification: The Hematology Device Classification Panel recommends that the occult blood reagent be classified into class I (general controls) with no exemptions. The Clinical Chemistry Device Classification Panel recommends that colorimetric and enzymatic methods for the detection of occult blood in urine be classified into class II (performance standards) and that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that occult blood tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

The Clinical Chemistry Device Classification Panel recommends that the occult blood test be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data upon which the recommendation is based: The Panels based their recommendations upon the Panel members' clinical experience with occult blood tests, the results of interlaboratory proficiency studies, and Derman and Pauker's article on the various methodologies for detecting occult blood (Ref. *1*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of gastro-intestinal bleeding, renal disease, urinary tract disease, or hemoglobinuria (hemoglobin in the urine). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner has reviewed the Panels' recommendations and is proposing that occult blood tests be classified into class II (performance standards). The Commissioner has reviewed additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by performance standards. Adlercreutz, Liewendahl, and Virkola have compared the various tests for the detection of occult blood in the feces (Ref. *2*). They note features of the test that need to be improved or standardized: sensitivity, identification of the amount of feces to be used, and measures to prevent contamination of the surrounding area.

The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. The Commissioner believes that a performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

Medical Devices; Classification of the Osmotic Fragility Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying osmotic fragility tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of the osmotic fragility tests:

1. Identification: An osmotic fragility test is a device used to determine the resistance of red blood cells to hemolysis (destruction) in varying concentrations of hypotonic saline solutions.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that osmotic fragility tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Panel stated that it is customary to run samples of normal blood as controls; and if this is done, there is little chance of an erroneous result.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familiarity with these tests: In certain hemolytic anemias, e.g., hereditary spherocytosis (a congenital, familial form of hemolytic anemia) and acquired hemolytic anemia (anemia caused by nonhereditary factors such as infectious agents, poisons, and physical agents), the resistance of the red cells to hemolysis by hypotonic solutions is reduced. Conversely, resistance is increased in thalassemia (another type of hereditary hemolytic anemia), sickle cell anemia, and ordinary hypochromic (iron deficiency) anemia.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of hereditary spherocytosis. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The patient could be subjected to a splenectomy unnecessarily.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that osmotic fragility tests be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Commissioner believes that if the volumes of blood and saline are measured precisely, if the dilutions are performed carefully, if the proper pH and temperature are maintained, and if samples of normal blood are run as controls, this test can be carried out accurately.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart G by adding new § 864.6600 as follows:

§ 864.6600 Osmotic fragility test.

(a) *Identification.* An osmotic fragility test is a device used to determine the resistance of red blood cells to hemolysis (destruction) in varying concentrations of hypotonic saline solutions.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docke number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1873]

Medical Devices; Classification of Platelet Adhesion Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying platelet adhesion tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of platelet adhesion tests:

1. Identification: A platelet adhesion test is a device used to determine in vitro platelet function.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendations: The Panel recommends that platelet adhesion tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Panel believes that reliance upon diagnostic information derived from the use of this device, if inaccurate, could be hazardous to the patient's health. The Panel recommended that this device not be used to predict thrombotic tendency.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience which indicates that the required rate of blood flow through a glass bead column has been established. The Panel also based its recommendation upon the medical literature concerning this device. Bowie and Owen (Ref. *1*) have found this test to be especially useful in evaluating and confirming a diagnosis of von Willebrand's disease (a bleeding

disorder characterized by a prolonged bleeding time and decreased levels of factor VIII, an antihemophilic factor). A platelet adhesion test, when used in combination with the bleeding time, can detect the presence of platelet defects, but a platelet aggregation study must be done to determine the nature of the defect (Ref. *2*). Other studies (Refs. *3* and *4*) have investigated the effects of glass surfaces, platelet aggregation, adenine diphosphate, fibrinogen, and calcium on platelet adhesion.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of von Willebrand's disease, a thrombopathy (a blood coagulation disorder due to platelet dysfunction), a platelet defect, or deficiencies of blood coagulation factor VIII or factor IX (plasma thromboplastin component). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that platelet adhesion tests be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Medical Devices; Classification of Platelet Aggregometers

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying platelet aggregometers into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health , Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A notice elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of platelet aggregometers:

1. Identification: A platelet aggregometer is a device used to determine changes in platelet shape and platelet aggregation following the addition of an aggregating reagent to a platelet rich plasma.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that platelet aggregometers be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient countrol over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and knowledge of the medical literature concerning platelet aggregation. The Panel considered a review article by Arkel (Ref. *1*) describing platelet aggregation and the evaluation of platelet function in hemostasis and thrombosis. Arkel indicates that although inherited platelet function disorders occur infrequently, they can cause bleeding problems during surgery. Han Ardlie (Ref. *2*) described the effects of pH, temperature, and calcium concentration on platelet aggregation.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a platelet disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Bleeding from an undetected platelet disorder could result in complications during surgery.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the platelet aggregometer be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Arkel, Y. S., "Evaluation of Platelet Aggregation in Disorders of Hemostasis," *Medical Clinics of North America*, 60(5):881–911, 1976.

2. Han, P. and Ardlie, N. G., "The Influence of pH, Temperature, and Calcuim on Platelet Aggregation: Maintenance of Environmental pH and Platelet Function for in Vitro Studies in Plasma," *British Journal of Haematology*, 26:373–389, 1974.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to him (21 CFR 5.1), the Commissioner proposes to amend Part 864 in Subpart G by adding new § 864.6675 as follows:

§ 864.6675 Platelet aggregometer.

(a) *Identification.* A platelet aggregometer is a device used to determine changes in platelet shape and platelet aggregation following the addition of an aggregating reagent to a platelet rich plasma.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk document found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1875]

Medical Devices; Classification of the Red Cell Survival Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying the red cell survival tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of the red cell survival tests:

1. Identification: A red cell survival test is a device system used to measure the mean red cell survival or loss in either a patient or a suitable recipient.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that red cell survival tests be classified into class II (performance standards) because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnositic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the existence of a red cell survival methodology recommended by the International Committee for Standardization in Hematology (Ref. *1*) and upon the Panel member's clinical experience and familiarity with these tests.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a red blood cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products or blood aerosols presents a risk of hepatitis infection. (c) Radiation hazard: The user may be exposed to radiation from radioisotopes that are a part of this device.

Proposed Classification

The Commissioner agrees with the Panel's recommendation and is proposing that the red cell survival test be classified into class II (performance standards). The Commissioner believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The Commissioner also believes that there is sufficient information to establish a standard for this device.

[Docket No. 78N–1876]

Medical Devices; Classification of Erythrocyte Sedimentation Rate Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying erythrocyte sedimentation rate tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of erythrocyte sedimentation rate tests:

1. Identification: An erythrocyte sedimentation rate test is a device that measures the length of time required for the red cells in a blood sample to fall a specified distance. An increased rate indicates tissue damage or inflammation. The Panel considered this generic type of device under the names "erythrocyte sedimentation rate" and "sedimentation rate tubes."

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that erythrocyte sedimentation rate tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the belief that the erythrocyte sedimentation rate reference methods of the International Committee for Standardization in Hematology (Refs. *1* and *2*) and the National Committee for Clinical Laboratory Standards (Ref. *3*) sufficiently control the safety and effectiveness of this test. The Panel also considered medical literature concerning the effects of low and high levels of asymmetric macromolecules (Ref. *4*), tube length and diameter (Ref. *5*), disadvantages of present methodology because of the length of time required to perform the test (Ref. *7*), and the controversy over correction for anemia (Refs. *4* through *7*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of various illnesses, including infections, plasma cell abnormalities, and inflammatory diseases. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

The Commissioner agrees with the Panel recommendation and is proposing that erythrocyte sedimentation rate tests be classified into class I (general controls) with no exemptions. The Commissioner believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The medical literature concerning the erythrocyte sedimentation rate test describes it as a nonspecific test that can indicate tissue damage or inflammation (Refs. *5, 6, 8,* and *9*). Therefore, the erythrocyte sedimentation rate is of value in screening for infection and in following the progress of a disease. Because this test is used to confirm a diagnosis based on another test, the risk of misdiagnosis due solely to the erythrocyte sedimentation rate is small (Ref. *6*).

Medical Devices; Classification of Adenine Nucleotide Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying adenine nucleotide assays into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of adenine nucleotide assays:

1. Identification: An adenine nucleotide assay is a device that measures the levels in the body tissues and fluids of adenine nucleotide (a compound consisting of the base adenine, a sugar, and a phosphate group). This measurement is often made with a photometer (a device that measures light intensity). Adenosine diphosphate (ADP) is the nucleotide responsible for platelet aggregation in the arrest of bleeding.

2. Recommended classification: Class I (general controls): The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that adenine nucleotide assays be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with adenine nucleotide assays.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a serious disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (c) Electrical shock: A malfunction in the electrical system of the photometer could result in an electrical shock.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that adenine nucleotide assays be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that, if users heed warnings in the labeling against use of contaminated or deteriorating reagents, the enzyme preparation will be pure and stable. If the user employs good laboratory procedures for handling blood, the risk of hepatitis should be minimal. If the operating instructions for the photometer are followed carefully, the risk of electrical shock will also be minimal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended by adding

Subpart H including new § 864.7040, as follows:

Subpart H—Hematology Kits and Packages

§ 864.7040 Adenine nucleotide assay.

(a) *Identification.* An adenine nucleotide assay is a device that measures the levels in the body tissues and fluids of adenine nucleotide (a compound consisting of the base adenine, a sugar, and a phosphate group). This measurement is often made with a photometer (a device that measures light intensity). Adenosine diphosphate (ADP) is the nucleotide responsible for platelet aggregation in the arrest of bleeding.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N-1878]

Medical Devices; Classification of Antithrombin III Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying antithrombin III asssays into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel and the Immunology Device Classification Panel that this device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel and the Immunology Device Classification Panel, FDA advisory committees, made the following recommendation with respect to the classification of antithrombin III assays:

1. Identification: An antithrombin III assay is a device that is used to determine the plasma level of antithrombin III (a substance that acts with the anticoagulant heparin to prevent coagulation). This determination is used to monitor the administration of heparin in the treatment of thrombosis. The determination may also be used in the diagnosis of thrombophilia (a congenital deficiency of antithrombin III).

2. Recommended classification: The Hematology Device Classification Panel recommends that antithrombin III assays be classified into class II (performance standards) and that establishing a performance standard for this device be a low priority. The Immunology Device Classification Panel recommends that antithrombin III assays be classified into class II and that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that antithrombin III assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel also expressed concern about the substances and conditions that can cause a falsely elevated antithrombin III determination. The Immunology Device Classification Panel recommends that the device be classified into class II to assure the product's reliability by means of adequate controls over the sensitivity, specificity, and stability of the reagents used in the device. Lack of sensitivity, specificity, or stability may cause a product malfunction, resulting in an erroneous diagnosis of a hypercoagulation state (a state characterized by increased susceptibility to coagulation) and in subsequent patient mismanagement. Information concerning the concentration of antithrombin III is of great clinical significance in determining the likelihood of clot formation, particularly when the concentration falls to 50 percent of normal or lower. Patients who have developed thrombosis, emboli, or disseminated intravascular coagulation have abnormally low levels of antithrombin III. The level of this substance is also low in patients with congenital antithrombin III deficiency, liver diseases such as cirrhosis and hepatitis, or diabetes mellitus, and in patients who are taking oral contraceptives. Increased antithrombin III levels are associated with the use of anticoagulants, congenital heart diseases, hemophilia, and other blood disorders. Both Panels believe that general controls would not provide sufficient control over these characteristics. The Panels believe that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Hematology Device Classification Panel based its recommendation on the Panel members' clinical experience with this device, which indicates that this is a relatively simple assay. The Immunology Device Classification Panel based its recommendation upon the Panel members' clinical experience with this device and upon a review of the medical literature (Refs. *1* through *4*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hypercoagulation state resulting from an antithrombin III deficiency. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Inappropriate heparin therapy, such as the administration of anticoagulants or factor IX concentrates to hemophiliacs, could result.

Proposed Classification

FDA agrees with the Panels' recommendations and is proposing that antithrombin III assays be classified into class II (performance standards). An FDA review of medical literature concerning antithrombin III revealed a considerable body of evidence to support the recommendations of both Panels (Refs. *5* through *10*).

Assays of antithrombin III may be divided into three types: Clotting assays based upon the neutralization of thrombin or factor Xa in the absence of heparin, clotting assays in the presence of added heparin, and immunoassays (Ref. *5*). Clotting assays of both types tend to be nonspecific, time consuming, unwieldy, and characterized by poor reproducibility (Refs. *6*, *7*, and *8*). The addition of heparin increases the assay's specificity by shortening its incubation period, but may require the use of a heparin-neutralizing agent (Refs. *5*, *6*, and *9*). Regardless of whether heparin is added, clotting assays are affected to a minor degree by the presence of alpha 2 macroglobulin. (A high molecular weight protein found in the blood in many diseases, alpha 2 macroglobulin inhibits clotting by binding irreversibly to the enzyme thrombin (Ref. *5*).) Because antithrombin III inhibits serine proteases (enzymes that break down protein) by forming an irreversible one-to-one complex via the active center serine of the enzyme, it is important to choose the proper serine protease to incubate with the antithrombin III. Although the usual choice is either thrombin or coagulation factor Xa (activated Stuart factor), other enzymes such as plasmin or trypsin are sometimes employed (Ref. *9*). If thrombin is used, the amount of antithrombin III that is measured depends upon the concentration of purified thrombin (Refs. *8* and *9*) and upon the complete, rapid, and irreversible inactivation of the thrombin by antithrombin III. The amount of antithrombin III that is measured also depends upon the method of defibrination used (Ref. *8*), although at least one assay requires no defibrination (Ref. *6*). The selection of the correct substrate is also important (Ref. *9*). Some methods recommend a chromogenic substrate (Ref. *6*). Immunoassays are generally lengthy (Ref. *5*). With these assays, an inactive protein often produces a positive result (Ref. *10*). Although immunoassays seem to be the method of choice for screening large numbers of patients, it has not been proven that immunoassays accurately measure antithrombin III in all disease states (Ref. *3*).

Oral contraceptives increase the production of thrombin while inhibiting antithrombin III activity. This situation can lead to thrombotic complications (Ref. *8*).

FDA believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A Performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7060 as follows:

§ 864.7060 Antithrombin III assay.

(a) *Identification.* An antithrombin III assay is a device that is used to determine the plasma level of antithrombin III (a substance which acts with the anticoagulant heparin to prevent coagulation). This determination is used to monitor the administration of heparin in the treatment of thrombosis. The determination may also be used in the diagnosis of thrombophilia (a congenital deficiency of antithrombin III).

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N-1879]

Medical Devices; Classification of Cell Enzyme Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying cell enzyme assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the

V 4 4 / 1 7 7 SEP 11 '79

safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of cell enzyme assays:

1. Identification: A cell enzyme assay is a device used to measure the activity in red cells, white cells, or both, of various clinically important enzymes and metabolites, such as pyruvate kinase and 2,3-diphosphoglycerate. A red cell enzyme assay is used to determine the enzyme defects responsible for a patient's hereditary hemolytic anemia.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that cell enzyme assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel noted that the kits currently being marketed are not sufficiently reliable to accurately diagnose a heterozygous enzyme deficiency state, and the Panel recommended that these products be so labeled.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familiarity with the commercially available products and upon the existence of a standard for red cell enzymes developed by the International Committee for Standardization in Hematology (Ref. *1*). Two Panel members, T. F. Necheles, M.D., Ph.D., and H. Frischer, M.D., described numerous instances in which patients were to have had their spleen removed because the device failed to detect a pyruvate kinase deficiency. These device failures resulted in misdiagnoses of hereditary spherocytosis (a congenital hemolytic anemia).

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a serious disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Such therapy may include inappropriate drug therapy, contraindicated splenectomy, or unnecessary transfusions.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that cell enzyme assays be classified into class II (performance standards). An FDA review of the medical literature concerning the determination of various red and white cell enzymes found evidence to support the Panel recommendation (Refs. *2* and *3*). One article stated that the crucial factor in the diagnosis of an enzyme deficiency is the demonstration of that deficiency by enzyme assay (Ref. *2*).

FDA believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

[Docket No. 78N–1880]

Medical Devices; Classification of Activated Whole Blood Clotting Time Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying activated whole blood clotting time tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of activated whole blood clotting time tests:

1. Identification: An activated whole blood clotting time test is a device used to monitor heparin therapy for the treatment of venous thrombosis or pulmonary embolism, and therapy for deficiencies of coagulation factors VIII (antihemophilic factor), IX (plasma thromboplastin component), and XI (plasma thromboplastin antecedent), by measuring the coagulation time of whole blood.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that activated whole blood clotting time tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel recommends that the product labeling be required to warn the user that this product should not be used as a screening test for coagulation defects.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with the device and upon an article by Hattersley (Ref. *1*) that stated that the activated whole blood clotting time test is a well-established means of monitoring heparin therapy and therapy for deficiencies of coagulation factors VIII, IX, and XI.

5. Risks to health: Hemorrhage or thrombosis: If the device does not accurately report the level of heparin in the patient's blood and the physician prescribes an inappropriate dosage of protamine (a heparin neutralizing drug), hemorrhage or thrombosis may result.

Proposed Classification

The FDA agrees with the Panel's recommendation and is proposing that activated whole blood clotting time tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Reference

Medical Devices; Classification of Erythropoietin Assays

AGENCY: Food and Drug Adminstration.

UMI

V 4 4 / 1 7 7 S E 1 1 7 9

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying erythropoietin assays into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of erythropoietin assays:

1. Identification: An erythropoietin assay is a device that measures the concentration of erythropoietin (an enzyme that regulates the production of red blood cells) in serum or urine. This assay provides diagnostic information for the evaluation of erythrocytosis (increased total red cell mass) and anemia.

2. Recommended classification: Class III (premarket approval). The Panel recommends that establishing premarket approval for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that erythropoietin assays be classified into class III because the device is purported or represented to be for use in the diagnosis of polycythemia vera, a potentially fatal disease characterized by erythrocytosis (increased total blood volume) and often accompanied by increased leukocyte and platelet counts. This use presents a potential unreasonable risk of illness or injury if the diagnosis is missed due to inaccurate diagnostic information derived from the use of this assay. The Panel believes that this assay is suitable only for research purposes because it lacks sufficient accuracy, precision, sensitivity, and specificity for clinical use. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that insufficient information exists to establish a performance standard that would provide reasonable assurance of the safety and effectiveness of the device. The device therefore should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance and thus assure its safety and effectiveness. On two separate occasions the Panel discussed the possibility of banning this device. One Panel meeting included discussion of a draft of a National Committee for Clinial Laboratory Standards recommendation that the commercially available hemagglutination inhibition assays for erythropoietin not be used for clinical purposes.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with erythropoietin assays.

5. Risk to health: (a) Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the differential diagnosis between secondary polycythemia, and polycythemia vera. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. A misdiagnosis of polycythemia vera could unecessarily subject the patient to potentially harmful chemotherapy.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that erythropoietin assays be classified into class III (premarket approval). An FDA review of medical literature concerning erythropoietin assays has found evidence that a sufficiently sensitive and specific in vitro erythropoietin assay has yet to be developed (Refs. *1* and *2*). The difficulty with immunological assays lies in obtaining an antigen of the required concentration and purity (Refs. *2, 3,* and *4*). Unless the erythropoietin is very pure, the immunological reactions observed are likely to be due to contamination (Ref. *2*). Available in vivo animal assays are not suitable for measuring very low levels of erythropoietin (Refs. *2* and *5*).

The effectiveness of erythropoietin assay methods is limited by the lack of an acceptable erythropoietin reference. Although erythropoietin Standard B is the International Reference Preparation for Erythropoietin (Ref. *2*), a study conducted by Dukes, Hammond and Shore (Ref. *6*) shows that this reference preparation is not sufficiently pure or sufficiently concentrated. These devices are purported or represented for use in the diagnosis of polycythemia vera, a potentially fatal disease. The FDA believes that the use of the assay for this purpose presents a potential unreasonable risk of illness or injury to the patient if inaccurate diagnostic information results in a failure to diagnose polycythemia vera. The agency believes that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance.

[Docket No. 78N–1882]

Medical Devices; Classification of Euglobulin Lysis Time Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying euglobulin lysis time tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of euglobulin lysis time Tests:

1. Identification: A euglobulin lysis time test is a device that measures the length ot time required for the lysis (dissolution) of a clot formed from fibrinogen in the euglobulin fraction (that fraction of the plasma responsible for the formation of plasmin, a clot lysing enzyme). This test evaluates natural fibrinolysis (destruction of a blood clot after bleeding has been arrested). The test also will detect accelerated fibrinolysis.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that euglobulin lysis time tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience and familarity with this test and upon an article by Chakrabarti et al. (Ref. *1*) stating that this test is widely used, but that its reproducibility is dependent upon the pH and temperature of the euglobulin fraction and suspending buffer and the anticoagulant used to collect the blood.

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a disease process such as disseminated intravascular coagulation (a potentially life-threatening condition which may be characterized by shock, bleeding, and vessel blockage) or primary fibrinolysis. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The patient may be subjected unnecessarily to potentially hazardous therapy.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that euglobulin lysis time tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A standard addressing the pH, temperature, and anticoagulant used in the assay will provide reasonable assurance of the safety and effectiveness of the assay. The agency also believes that there is sufficient information to establish a standard to provide such assurance.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305) (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Chakrabarti, R. et al., "Methodological Study and a Recommended Technology for Determining Euglobulin Lysis Time," *Journal of Clinical Pathology*, 21:698–701, 1968.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Foods and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7275 as follows:

§ 864.7275 Euglobulin lysis time test.

(a) *Identification.* A euglobulin lysis time test is a device that measures the length of time required for the lysis (dissolution) of a clot formed from

fibrinogen in the euglobulin fraction (that fraction of the plasma responsible for the formation of plasmin, a clot lysing enzyme). This test evaluates natural fibrinolysis (destruction of a blood clot after bleeding has been arrested). The test also will detect accelerated fibrinolysis.

(b) *Classification.* Class II (performance standards). Medical Devices; Classification of Factor Deficiency Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying factor deficiency tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of factor deficiency tests:

1. Identification: A factor deficiency test is a device used to diagnose specific coagulation defects, to monitor certain types of therapy, to detect coagulation inhibitors, and to detect a carrier state (a person carrying both a recessive gene for a coagulation factor deficiency such as hemophilia and the corresponding normal gene).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel Recommends that factor deficiency tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. Because the plasmas used as substrates are obtained from multitransfused patients, there is a very high hepatitis B risk. The Panel recommends that the device be required to bear labeling which indicates the level of factor substrate that is present and to warn the user of the high risk of hepatitis B infection from contact with the substrate.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with factor deficiency tests.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a bleeding disorder or the failure to detect coagulation inhibitors. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. In addition, there is a risk of postoperative hemorrhage from an undetected bleeding disorder. (b) Hepatitis infection: Exposure of the user to the substrate presents a risk of hepatitis B infection.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that the factor deficiency tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by this device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7290 as follows:

§ 864.7290 Factor deficiency test.

(a) *Identification.* A factor deficiency test is a device used to diagnose specific coagulation defects, to monitor certain types of therapy, to detect coagulation inhibitors, and to detect a carrier state (a person carrying both a recessive gene for a coagulation factor deficiency such as hemophilia and the corresponding normal gene).

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27663 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[Docket No. 78N–1884]

Medical Devices; Classification of Fibrin Monomer Paracoagulation Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying fibrin monomer paracoagulation tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of fibrin monomer paracoagulation tests:

1. Identification: A fibrin monomer paracoagulation test is a device used to detect fibrin monomer in the diagnosis of disseminated intravascular coagulation (nonlocalized clotting within a blood vessel) or in the differential diagnosis between disseminated intravascular coagulation and primary fibrinolysis (dissolution of the fibrin in a blood clot).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that fibrin monomer paracoagulation tests be classified into Class II to assure control over the purity of the protamine sulfate used in the test. Impure protamine sulfate causes the user to detect varying concentrations of fibrin monomer. This variability affects the test's accuracy and sensitivity and the interpretation of the test results. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel recommends that the device be required to bear labeling which indicates the lowest level of fibrin monomer that the device can detect.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with this test and upon an article by Kidder et al. (Ref. 1) which evaluated the sensitivity of the test and the effects of fibrinogen concentration, fibrin degradation products, anticoagulants, temperature, and plasma storage conditions. Kidder and his coworkers concluded that this test should be included in any screening procedures in cases of suspected intravascular coagulation.

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of disseminated intravascular coagulation, a potentially life-threatening condition which may be characterized by shock, bleeding, and vessel blockage. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that fibrin monomer paracoagulation tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Medical Devices; Classification of Fibrin Split Products Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying fibrin split products assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that this device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with regard to the classification of fibrin split products assays:

1. Identification: A fibrin split products assay is a device used to detect and quantitate fibrin split products (protein fragments produced by the enzymatic action of plasmin on fibrin) as an aid in detecting the presence and degree of intravascular coagulation and fibrinolysis (the dissolution of the fibrin in a blood clot) and in monitoring therapy for disseminated intravascular coagulation (nonlocalized clotting in the blood vessels).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that fibrin split products assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel recommends that the labeling for those kits employing the staphylococcal clumping methodology be required to include precautions regarding the potential for staphylococcal infection from the use of this device.

4. Summary of data on which the recommendations are based: The Panel based its recommendations upon the Panel members' clinical experience and upon medical literature concerning fibrin split products (Refs. *1* and *2*). The literature shows that current methods are usually too complex and time consuming for clinical use and that they lack the required sensitivity. Recent improvements in the fibrin plate and latex agglutination methods have overcome some of these limitations (Refs. *1* and *2*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of disseminated intravascular coagulation, a potentially life-threatening condition which may be characterized by shock bleeding, and vessel blockage. Inappropriate therapy, e.g., unnecessary administration of heparin in the treatment of venous thrombosis, based on inaccurate diagnostic data may place the patient at risk. (b) Staphylococcal infection: The user faces a risk of staphylococcal infection from the kit materials.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that fibrin split product assays be classified into Class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (HFA-305), Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 5 p.m., Monday through Friday.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540-546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7320 as follows:

§ 864.7320 Fibrin split products assay.

(a) *Identification.* A fibrin split products assay is a device used to detect and quantitate fibrin split products (protein fragments produced by the enzymatic action of plasmin on fibrin) as an aid in detecting the presence and degree of intravascular coagulation and fibrinolysis (the dissolution of the fibrin in a blood clot) and in monitoring therapy for disseminated intravascular coagulation (nonlocalized clotting in the blood vessels).

(b) *Classification.* Class II (performance standards).

Medical Devices; Classification of Fibrinogen Determination Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying fibrinogen determination systems into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel and the Immunology Device Classification Panel that this device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel and the Immunology Device Classification Panel, two FDA advisory committees, made the following recommendations with respect to the classification of fibrinogen determination systems:

1. Identification: A fibrinogen determination system is a device that consists of the instruments, reagents, standards, and controls used to determine the fibrinogen levels in disseminated intravascular coagulation (nonlocalized clotting within the blood vessels) and primary fibrinolysis (the dissolution of fibrin in a blood clot). The Panels identified this generic device under the names "fibrinogen test," "fibrinogen determination standards and controls," "fibrinogen and split products, antigen, antiserum, control," "fibrinogen and fibrin split products, antigen, antiserum, control," "fibrinogen and split products, FITC, antigen, antiserum, control," "fibrinogen and split products, peroxidase, antigen, antiserum, control," and "fibrinogen and split products, rhodamine, antigen, antiserum, control."

2. Recommended classification: The Hematology Device Classification Panel recommends that the "fibrinogen test" and "fibrinogen determination standards and controls" be classified into class II (performance standards) and that establishing a performance standard for this device be a medium priority. The Immunology Device Classification Panel recommends that "fibrinogen and split products antigen, antiserum, control," "fibrinogen and fibrin split products, antigen, antiserum, control," "fibrinogen and split products, FITC, antigen, antiserum, control," "fibrinogen and split products, peroxidase, antigen, antiserum, control," and "fibrinogen and split products, rhodamine, antigen, antiserum, control" be classified into class II and that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that fibrinogen determination systems be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Immunology Device Classification Panel recommends that fibrinogen determination systems be classified into class II because their reliability will be better assured by controls over the sensitivity, specificity, and stability of the reagents used in them. Lack of adequate sensitivity, specificity, or stability may cause a malfunction that results in an erroneous diagnosis and patient mismanagement. Both Panels believe that general controls would not provide sufficient control over these characteristics. The Panels believe that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panels based their recommendations upon the Panel members' clinical experience with this product and the medical literature concerning fibrinogen determination (Refs. *1* through *5*). Fibrinogen is essential for blood clot formation because it is the protein that is converted to fibrin, the basic substance from which the clot is formed. Fibrinogen disorders include: afibrinogenemia (an absence of fibrinogen), hypofibrinogenemia (low levels of fibrinogen), and dysfibrinogenemia (normal levels of fibrinogen but with defective fibrinogen). An acquired deficiency is associated with some liver disorders. The Panels considered evaluations of various methods for determining plasma fibrinogen (Refs. *1* through *5*). Evaluations of nonimmunologic methods showed that the clottable protein methodology is superior in terms of accuracy, reproducibility, specificity, and preventing effects from interfering substances. This method does, however, have limitations. It is complex, presents a potential for error if not performed carefully, and is too time consuming for use in emergency situations. The precipitable protein method is considered unreliable, nonquantitative, nonspecific, and subject to large errors. Antigen-antibody systems for estimating plasma fibrinogen are specific, offer the advantage of requiring only small amounts of plasma, and provide good recovery for fibrinogen values in the low range. Immunologic methods allow the user to distinguish dysfibrinogenemia from hypofibrinogenemia. In general, fibrinogen tests are not standardized because of the lack of a quick, simple

V 44/177 SEP 11 79

reference method. The Hematology Device Classification Panel indicated that the Center for Disease Control is working in conjunction with the International Committee for Standardization in Hematology (ICSH) and the International Committee on Thrombosis and Hemostasis to standardize fibrinogen determination on an international basis.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a bleeding disorder or disseminated intravascular coagulation (nonlocalized clotting within the blood vessels), a potentially life-threatening condition which may be characterized by shock, bleeding, and vessel blockage. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The risks include bleeding, kidney failure, and unnecessary therapy. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panels' recommendation and is proposing that fibrinogen determination systems be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1887]

Medical Devices; Classification of Erythrocytic Glucose-6-Phosphate Dehydrogenase Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying erythrocytic glucose-6-phosphate dehydrogenase assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel and the Clinical Chemistry Device Classification Panel that this device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFC–20), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning development of the proposed regulation. The Hematology Device Classification Panel and the Clinical Chemistry Device Classification Panel, two FDA advisory committees, made the following recommendation with respect to the classification of erythrocytic glucose-6-phosphate dehydrogenase assays:

1. Identification: An erythrocytic glucose-6-phosphate dehydrogenase assay is a device used to measure the activity of the enzyme glucose-6-phosphate dehydrogenase or of glucose-6-phosphate dehydrogenase isoenzymes. The results of this assay are used in the diagnosis and treatment of nonspherocytic congenital hemolytic anemia or drug-induced hemolytic anemia associated with a glucose-6-phosphate dehydrogenase deficiency. This generic device includes assays based on fluorescence, electrophoresis, methemoglobin reduction, catalase inhibition, and ultraviolet kinetics. The Hematology Device Classification Panel identified this generic device under the names "glucose-6-phosphate dehydrogenase (erythrocytic), catalase inhibition," "glucose-6-phosphate dehydrogenase (erythrocytic), methemoglobin reduction," and "glucose-6-phosphate dehydrogenase (erythrocytic), quantitative." The Clinical Chemistry Device Classification Panel identified this generic type device under the names "NADP reduction (ultraviolet) glucose-6-phosphate dehydrogenase," visual semi-quantitative (colorimetric) glucose-6-phosphate dehydrogenase," and "electrophoretic, glucose-6-phosphate dehydrogenase isoenzymes."

2. Recommended classification: The Hematology Device Classification Panel recommends that "glucose-6-phosphate dehydrogenase (erythrocytic), catalase inhibition," "glucose-6-phosphate dehydrogenase (erythrocytic), methemoglobin reduction," and "glucose-6-phosphate dehydrogenase (erythrocytic), quantitative," be classified into class II and that establishing a performance standard for these devices be a medium priority. The Clinical Chemistry Device Classification Panel recommends that "NADP reduction (ultraviolet) glucose-6-phosphate dehydrogenase" and "visual semi-quantitative (colorimetric) glucose-6-phosphate dehydrogenase" be classified into class II and that establishing a performance standard for these devices be a low priority. The Clinical Chemistry Device Classification Panel recommends that "electrophoretic, glucose-6-phosphate dehydrogenase isoenzymes" be classified into class II and that establishing a performance standard be a high priority.

3. Summary of reasons for recommendation: The Panels recommend that erythrocytic glucose-6-phosphate dehydrogenase assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panels believe that general controls would not provide sufficient control over these characteristics. The Panels believe that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The diagnostic information derived from the use of these devices is the basis for diagnosis and treatment of hemolytic anemias and of hemolytic disease of the newborn, which are potentially life-threatening conditions. The Hematology Device Classification Panel recommends that the product's labeling be required to state that this test is not specific for glucose-6-phosphate dehydrogenase deficiency, and that it may not be reliable in the diagnosis of a heterozygous glucose-6-phosphate dehydrogenase deficiency state.

4. Summary of data on which the recommendation is based: The Panels based their recommendation on the Panel members' clinical experience with this assay, which indicates that it is most useful in the evaluation of certain genetic hemolytic anemias. The Panels noted that standardized procedures for the study of glucose-6-phosphate dehydrogenase have been developed by the World Health Organization (Ref. *1*) and the International Committee for Standardization in Hematology (Ref. *2*).

5. Risks to health: Misdiagnosis and inappropriate therapy. Failure of the device to perform satisfactorily may lead to an error in the diagnosis of hemolytic anemia caused by drugs or by a genetic defect. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. The risks include inappropriate drug therapy, contraindicated splenectomy, and unnecessary transfusions.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that erythrocytic glucose-6-phosphate dehydrogenase assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by this device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (HFA–305), Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Betke, K. et al., "Standardization of Procedures for the Study of Glucose-6-Phosphate Dehydrogenase. Report of a WHO Scientific Group," WHO Technical Report Series, 366, 1967.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7360 as follows:

§ 864.7360 Erythrocytic glucose-6-phosphate dehydrogenase assay.

(a) *Identification.* An erythrocytic glucose-6-phosphate dehydrogenase assay is a device used to measure the activity of the enzyme glucose-6-phosphate dehydrogenase or of glucose-6-phosphate dehydrogenase isoenzymes. The results of this assay are used in the diagnosis and treatment of nonspherocytic congenital hemolytic anemia or drug-induced hemolytic anemia associated with a glucose-6-phosphate dehydrogenase deficiency. This generic device includes assays based on fluorescence, electrophoresis, methemoglobin reduction, catalase inhibition, and ultravioloet kinetics.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1888]

Medical Devices; Classification of Glutathion Reductase Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying glutathion reductase assays

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel and the Clinical Chemistry Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel and the Clinical Chemistry Device Classification Panel, two FDA Advisory committees, made the following recommendations with respect to the classification of glutathione reductase assays:

1. Identification: A glutathione reductase assay is a device used to determine the activity of the enzyme glutathione reductase in serum, plasma, or erythrocytes by such techniques as fluorescence and photometry. The results of this test are used in the diagnosis of liver disease, glutathione reductase deficiency, or riboflavin deficiency. The Hematology Device Classification Panel identified that device as the "glutathione, red cell." The Clinical Chemistry Device Classificiation Panel identified this device as "fluorescence, visual observation (qualitative ultraviolet) glutathione reductase."

2. Recommended classification: The Hematology Device Classification Panel recommends that "glutathione, red cell," be classified into Class II (performance standards) and that establishing a performance standard for this device be a medium priority. The Clinical Chemistry Device Classification Panel recommends that "fluorescence visual observation (qualitative ultraviolet) glutathione reductase" be classified into Class II and that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panels recommend that glutathione reductase assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panels believe that general controls would not provide sufficient control over this characteristic. The Panels believe that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panels based their recommendations on the Panel members' clinical experience, which indicates that this assay is most useful in a differential diagnosis between riboflavin deficiency and congenital glutathione reductase deficiency. The Panel noted that a standard for red cell glutathione has been developed by the International Committee for Standardization in Hematology (Ref. *1*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of liver disease, congenital glutathione reductase deficiency, or riboflavin deficiency. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panels' recommendation and is proposing that glutathione reductase assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1689]

Medical Devices; Classification of Hemoglobin A_2 Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying the hemoglobin A_2 assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of hemoglobin A_2 assays:

1. Identification: A hemoglobin A_2 assay is a device used to determine the hemoglobin A_2 content of human blood. The measurement of hemoglobin A_2 is used in the diagnosis of the thalassemias (hereditary hemolytic anemias characterized by decreased synthesis of one or more types of hemoglobin polypeptide chain). Electrophoresis or column chromatography is used to make this measurement.

2. Recommended Classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that hemoglobin A_2 assays be classified into class II because there is a need for a performance standards that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unncessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with this assay and the medical literature. The Panel stated that the International Committee for Standardization in Haematology (ICSH) has recommended methods for hemoglobin A_2 quantitation and a hemoglobin A_2 reference preparation (Ref. *1*). The ICSH recommendation concerns the pH and type of buffer, support media, electrical voltage applied, and duration of electrophoresis. The Panel also cited a 1973 study which showed excessive interlaboratory variability in the quantitation of hemoglobin A_2 (Ref. *2*). To solve this problem, the study recommended the adoption of a standard method for hemoglobin A_2 quantitation. The Panel also considered evaluations of the available methodology for the estimation of hemoglobin A_2 and (Ref. *3*) for large scale screening for hemoglobin A_2 (Ref. *4*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin abnormality. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk (b) Electrical shock: The user faces the risk of electrical shock from the electrophoretic chamber and power supply of the device.

Proposed Classification

FDA agress with the Panel's recommendation and is proposing that hemoglobin A_2 assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Medical Devices; Classification of Abnormal Hemoglobin Assays

AGENCY: Food and Drug Adminstration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying abnormal hemoglobin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Adminstration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of abnormal hemoglobin assays:

1. Identification: An abnormal hemoglobin assay is a device consisting of the reagents, apparatus, instrumentation, and controls necessary to isolate and identify abnormal genetically determined hemoglobin types. The Panel identified this generic type of device as "hemoglobin, abnormal, quantitation" and "abnormal hemoglobin control."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that abnormal hemoglobin assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel noted that a quality control material is one of the most critical products in the hematology laboratory. The laboratory relies upon this material to determine whether its instrumentation is functioning properly. The development of a performance standard for the abnormal hemoglobin control is essential to the improvement of quality control in hemoglobinometry (the measurement of the hemoglobin in the blood). The allowed variation in the control's stated value must not be so wide as to make that value meaningless. The control's labeling should be required to list those instruments for which the product will give valid results. The abnormal hemoglobin control should never be used for calibration purposes. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with this device and upon evaluations of current screening methods, including electrophoresis, heat stability, isopropanol, and staining (Refs. *1* and *2*). The Panel stated that recommended methods for the identification of abnormal hemoglobins and an abnormal hemoglobin reference preparation have been developed by the International Committee for Standardization in Haematology (ICSH) (Refs. *3* and *4*). The ICSH recommendation addresses pH, electrolyte, support media, electrical voltage applied, and duration of electrophoresis.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin abnormality. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Electrical shock: The user faces the risk of electrical shock from the elctrophoretic chamber and power supply of the device.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that abnormal hemoglobin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performnce standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Medical Devices; Classification of Carboxyhemoglobin Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying carboxyhemoglobin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of carboxyhemoglobin assays:

1. Identification: A carboxyhemoglobin assay is a device used to determine the carboxyhemoglobin (the compound formed when hemoglobin is exposed to carbon monoxide) content of human blood as an aid in the diagnosis of carbon monoxide poisoning. This measurement may be made using methods such as spectroscopy, colorimetry, spectrophotometry, and gasometry.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that Carboxyhemoglobin assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with carboxyhemoglobin and the medical literature. Van Assendelft discusses the absorption spectrum of carboxyhemoglobin and spectrophotometric methods for the determination of carbon monoxide saturation in suspected carbon monoxide poisoning (Ref. *1*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of carbon monoxide poisoning. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Electrical shock: If the spectrophotometer malfunctions, the user faces the risk of electrical shock.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that carboxyhemoglobin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Reference

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Van Assendelft, O. W., "Spectrophotometry of Hemoglobin Derivatives," Charles C. Thomas Co., Springfield, Ill., pp. 59–61, 125–128, 1970.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority

V 4 4 / 1 7 7

delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7425 as follows:

§ 864.7425 Carboxyhemoglobin assay.

(a) *Identification:* A carboxyhemoglobin assay is a device used to determine the carboxyhemoglobin (the compound formed when hemoglobin is exposed to carbon monoxide) content of human blood as an aid in the diagnosis of carbon monoxide poisoning. This measurement may be made using methods such as spectroscopy, colorimetry, spectrophotometry, and gasometry.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Medical Devices; Classification of Electrophoretic Hemoglobin Analysis Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying electrophoretic hemoglobin analysis systems into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel and the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of electrophoretic hemoglobin analysis systems:

1. Identification: An electrophoretic hemoglobin analysis system is a device that electrophoretically separates and identifies normal and abormal hemoglobin types as an aid in the diagnosis of anemia or erythrocytosis (increased total red cell mass) due to a hemoglobin abnormality.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that electrophoretic hemoglobin analysis systems be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes that possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with electrophoretic methods for hemoglobin analysis and the medical literature. The Panel stated that voluntary standards currently exist. The International Committee for Standardization in Hematology (ICSH) has recommended a system for the identification of abnormal hemoglobins by electrophoretic procedures (Ref. *1*). The ICSH system specifies pH, electrolyte, support media, voltage applied, and the duration of electrophoresis. The ICSH has also developed a reference preparation of abnormal hemoglobins suitable for the standardization of electrophoresis (Ref. *2*). The Center for Disease Control (CDC) has published methods for hemoglobin electrophoresis (Ref. *3*). The National Committee for Clinical Laboratory Standards (NCCLS) has drafted a proposed standard for hemoglobin electrophoresis (Ref. *4*). The Panel also relied upon evaluations of electrophoretic methods for abnormal hemoglobin screening (Refs. *5* and *6*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin abnormality. Inappropriate therapy based on inaccurate diagnositc data may place the patient at risk. (b) Electrical shock: The user faces the risk of electrical shock from the electrophoretic chamber and power supply of the device.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that electrophoretic hemoglobin analysis systems be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N-1893]

Medical Devices; Classification of Fetal Hemoglobin Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying fetal hemoglobin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of fetal hemoglobin assays:

1. Identification: A fetal hemoglobin assay is a device that is used to determine the presence and distribution of fetal hemoglobin (hemoglobin F) in red cells or to measure the amount of fetal hemoglobin present. The assay may be used to detect fetal red cells in the maternal circulation or to detect elevated levels of fetal hemoglobin in hemoglobin abnormalities such as thalassemia (a hereditary hemolytic anemia characterized by decreased synthesis of one or more types of hemoglobin polypeptide chain). The hemoglobin determination may be made by means of such methodologies as electrophoresis, alkali denaturation, column chromatography, and radial immunodiffusion. The Panel identified this generic device as "fetal hemoglobin stains" and "hemoglobin F quantitation."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that fetal hemoglobin assays be classified into class II because there is a need for a performance standard that prescribed for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places that patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel recommends that the labeling include specific directions for the use of positive and negative controls and for the calculation of the percent of the fetal cells in the mother's blood.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with fetal hemoglobin determinations and on the medical literature. The Panel stated that voluntary standards for fetal hemoglobin currently exist. The International Committee for Standardization in Hematology (ICSH) has recommended a system for the identification of abnormal hemoglobins, including fetal hemoglobin (Ref. *1*). A reference preparation of abnormal hemoglobins prepared by the ICSH includes fetal hemoglobin (Ref. *2*). The Center for Disease Control (CDC) has

SEP 11 79

UMI

V 44 / 177 SEP 11 79 UMI

published methods for the detection of fetal hemoglobin (Ref. *3*). The National Committee for Clinical Laboratory Standards (NCCLS) has drafted a proposed standard for fetal hemoglobin (Ref. *4*). In making its recommendation the Panel considered evaluations of the present technology for large scale screening for hemoglobin (Refs. *5* and *6*). These evaluations concerned both manual and automated techniques, including those of Betke, (Ref. *7*), the alkali denaturation test, and column chromatography.

5. Risks to health: (a) Failure to detect fetal Rh prositive cells in the mother's blood: An erroneous result may cause the failure to detect fetomaternal transfusions of Rh positive cells that have have sensitized or that will sensitize the mother. This could result in failure to protect an unborn fetus. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin abnormality such as thalassemia. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (c) Electrical shock: The user faces the risk of electrical shock from the electrophoretic chamber and power supply of the electrophoresis device.

Proposed Classification

FDA agrees wtih the Panel's recommendation and is proposing that fetal hemoglobin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Medical Devices; Classification of Sulfhemoglobin Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying sulfhemoglobin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of sulfhemoglobin assays:

1. Identification: A sulfhemoglobin assay is a device consisting of the reagents, calibrators, controls, and instrumentation used to determine the sulfhemoglobin (a compound of sulfur and hemoglobin) content of human blood as an aid in the diagnosis of sulfhemoglobinemia (presence of sulfhemoglobin in the blood due to drug administration or exposure to a poison). This measurement may be made using methods such as spectroscopy, colorimetry, spectrophotometry, and gasometry.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that sulfhemoglobin assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with sulfhemoglobin and the medical literature. Van Assendelft discussed the spectral properties of sulfhemoglobin and methods for the determination and estimation of sulfhemoglobin saturation in detecting sulfhemoglobinemia (Ref. 1).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of sulfhemoglobinemia. Inappropriate therepy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that sulfhemoglobin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by this device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Medical Devices; Classification of Whole Blood Hemoglobin Assays

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying whole blood hemoglobin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. The actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of whole blood hemoglobin assays:

1. Identification: A whole blood hemoglobin assay is a device consisting of reagents, calibrators, controls, and photometric or spectrophotometric instrumentation used to measure the hemoglobin content of whole blood for the detection of anemia.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

V 4 4 1 7 7 S E 1 1 7 9 UMI

3. Summary of reasons for recommendation: The Panel recommends that whole blood hemoglobin assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with hemoglobin assays. The Panel stated that the International Committee for Standardization in Hemotology (ICSH) has recommended a cyanmethemoglobin method and a cyanmethemoglobin reference standard (Ref. *1*). The method and reference standard have been accepted by the College of American Pathologists, the American Society of Hematology, and the National Committee for Clinical Laboratory Standards. In making its recommendation, the Panel also relied upon the medical literature concerning hemoglobinometry. Van Assendelft discusses the standardization of hemoglobinometry and photometric errors (Ref. *2*). Van Assendelft, Zijlstra, and van Kampen discuss the sources of error in the cyanmethemoglobin method, including improper technique in obtaining and diluting the blood sample, storage of reagents in improper containers, accidental freezing of reagents and improper preparation of reagents (Ref. *3*). In addition, the hemoglobin determination may be in error if the measuring instrument is not calibrated and checked with a cyanmethemoglobin reference solution (Ref. *3*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a hemoglobin disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. These data may be the basis for a decision to initiate or stop treatment, including blood transfusion. (b) Potassium cyanide hazard: The potassium cyanide present in some hemoglobin reagents constitutes a hazard to the user. (c) Electrical shock: The user faces the risk of electrical shock from a malfunction of the photometer or spectrophotometer employed to measure the hemoglobin content of the blood.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that whole blood hemoglobin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Medical Devices; Classification of Heparin Assays

AGENCY: Food and Drug Administration.

ACTION: Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying heparin assays into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of heparin assays:

1. Identification: A heparin assay is a device used to determine the level of the anticoagulant heparin in the patient's circulation. These assays are quantitative clotting time procedures utilizing the effect of heparin on activated coagulation factor X (Stuart factor) or procedures based on the neutralization of heparin by protamine sulfate (a protein that neutralizes heparin). The Panel identified this generic type of device as "heparin assays, clotting time," "the heparin neutralization test," and "protamine sulfate."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that heparin assays be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with heparin assays and upon a description of the use of a heparin assay to determine the dosage of protamine sulfate required to neutralize the heparin in the patient's circulation (Ref. *1*).

5. Risks to health: Hemorrhage or thromboembolism: If this device incorrectly reports the level of heparin in the patient's blood, hemorrhage or thrombosis may result because of administration of an inappropriate amount of protamine.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that heparin assays be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Reference

The following information has been placed in the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Hardisty, R. M., and G. I. C. Ingram, "Bleeding Disorders," R. A. Davis Co., Philadelphia, PA, pp. 152–158, 320–322, 1965.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7525 as follows:

§ 864.7525 Heparin assay.

(a) *Identification.* A heparin assay is a device used to determine the level of the anticoagulant heparin in the patient's circulation. These assays are quantitative clotting time procedures utilizing the effect of heparin on activated coagulation factor X (Stuart factor) or procedures based on the neutralization of heparin by protamine sulfate (a protein that neutralizes heparin).

(b) *Classification.* Class II (performance standards). Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1898]

Medical Devices; Classification of Leukocyte Alkaline Phosphatase Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying leukocyte alkaline phosphatase tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of leukocyte alkaline phosphatase tests:

1. Identification: A leukocyte alkaline phosphatase test is a device used to identify the enzyme leukocyte alkaline phosphatase in neutrophilic

V 4 4 / 1 7 7 SE 1 1 7 9 UMI

granulocytes (granular leukocytes stainable by neutral dyes). The cytochemical identification of alkaline phosphatase depends on the formation of blue granules in cells containing alkaline phosphatase. The results of this test are used to differentiate chronic granulocytic leukemia (a malignant disease characterized by excessive overgrowth of granulocytes in the bone marrow) and reactions that resemble true leukemia, such as those occurring in severe infections and polycythemia (increased total red cell mass).

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that leukocyte alkaline phosphatase tests be classified into class I (general controls) because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with these tests. The Panel believes that is is an accepted fact that stains are mixtures of compounds which are hard to standardize and often vary greatly from one lot to the next. It has been the Panel members' experience that 10 to 25 percent of stain lots are unusable.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in diagnosis. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk unnecessarily. Poor staining characteristics may lead to any of the following: (a) Failure to detect leukocyte alkaline phosphatase in various leukemoid states (conditions resembling true leukemia); (b) Inability to differentiate leukemoid-reactive cells; (c) Improper classification of a leukemia process; and (d) Inability to classify an anemia, polycythemia, or infection.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that leukocyte alkaline phosphatase tests be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that users can avoid poor staining characteristics by paying close attention to fixing, staining, rinsing, and drying the slides, and by staining control slides to assure that the stain is working properly.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7660 as follows:

§ 864.7660 Leukocyte alkaline phosphatase test.

(a) *Identification:* A leukocyte alkaline phosphatase test is a device used to identify the enzyme leukocyte alkaline phosphatase in neutrophilic granulocytes (granular leukocytes stainable by neutral dyes). The cytochemical identification of alkaline phosphatase depends on the formation of blue granules in cells containing alkaline phosphatase. The results of this test are used to differentiate chronic granulocytic leukemia (a malignant disease characterized by excessive overgrowth of granuloctyes in the bone marrow) and reactions that resemble true leukemia, such as those occurring in severe infections and polycythemia (increased total red cell mass).

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1899]

Medical Devices; Classification of Leukocyte Peroxidase Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying leukocyte peroxidase tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of leukocyte peroxidase tests:

1. Identification: A leukocyte peroxidase test is a device used to distinguish certain myeloid cells (cells derived from the bone marrow i.e., neutrophils, eosinophils, and monocytes) from lymphoid cells (cells of the lymphatic system) and erythroid cells (cells in the red blood cell series) on the basis of their peroxidase activity as evidenced by staining. The results of this test are used in the differential diagnosis of the leukemias.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that leukocyte peroxidase tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with this test. The Panel believes that it is an accepted fact that stains are mixtures of compounds which are hard to standardize and often vary greatly from one lot to the next. It has been the Panel members' experience that 10 to 25 percent of stain lots are unusable.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of this device to perform satisfactorily may lead to an error in diagnosis. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Poor staining characteristics may lead to any of the following: (a) Failure to detect peroxidase-positive cells of the granulocytic series; (b) Failure to detect peroxidase-negative cell types; and (c) Improper classification of a leukemic process.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that leukocyte peroxidase tests be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that users can avoid poor staining characteristics by paying close attention to staining, rinsing, and drying the slides and by staining control slides to assure that the stain is working properly.

Therefore under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7675 as follows:

§ 864.7675 Leukocyte peroxidase test.

(a) *Identification.* A leukocyte peroxidase test is a device used to distinguish certain myeloid cells (cells derived from the bone marrow, i.e., neutrophils, eosinophils, and monocytes) from lymphoid cells (cells of the lymphatic system) and erythroid cells (cells in the red blood cell series) on the basis of their peroxidase activity as evidenced by staining. The results of this test are used in the differential diagnosis of the leukemias.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

[Docket No. 78N–1900]

Medical Devices; Classification of Prothrombin Consumption Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying prothrombin consumption tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of prothrombin consumption tests:

1. Identification: A prothrombin consumption test is a device that measures the patient's capacity to generate thromboplastin in the coagulation process. The test also is an indirect indicator of qualitative or quantitative platelet abnormalities. It is a screening test for thrombocytopenia (decreased number of blood platelets) and hemophilia A and B.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that prothrombin consumption tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. An abnormal result for the prothrombin consumption test indicates a platelet dysfunction, a lack of plasma thromboplastin precursor activity, which causes reduced plasma thromboplastin activity, or both. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Risks to Health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a coagulation defect or platelet abnormality. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that prothrombin consumption tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7720 as follows:

§ 864.7720 Prothrombin consumption test.

(a) *Identification.* A prothrombin consumption test is a device that measures the patient's capacity to generate thromboplastin in the coagulation process. The test also is an indirect indicator of qualitative or quantitative platelet abnormalities. It is a screening test for thrombocytopenia (decreased number of blood platelets) and hemophilia A and B.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1901]

Medical Devices; Classification of Prothrombin-Proconvertin Tests and the Thrombotests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying prothrombin-proconvertin tests and the thrombotests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of prothrombin-proconvertin tests and thrombotests:

1. Identification: The prothrombin-proconvertin test and thrombotest are devices used in the regulation of coumarin therapy (administration of a coumarin anti-coagulant such as sodium warfarin in the treatment of venous thrombosis and pulmonary embolism) and as a diagnostic test in conjunction with, or in place of, the Quick prothrombin time test to detect coagulation disorders.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that prothrombin-proconvertin tests and the thrombotests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unncessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with these tests and the medical literature. An evaluation of the thrombotest indicates that it was developed to be sensitive to a deficiency in a patient's blood of the coagulation factor X (Stuart factor) and that, in this respect, the thrombotest is superior to the prothrombin-proconvertin test (Ref. *1*). Although the thrombotest is not intended to diagnose hemophilia, it can indicate depressed levels of the coagulation factor IX (plasma thromboplastin component). A study by Rapaport and Ames (Ref. *2*) revealed significant differences in the prothrombin time as measured by the prothrombin-proconvertin method and a modified Quick prothrombin method.

5. Risks to health: (a) Hemorrhage or thrombosis in patients undergoing sodium warfarin therapy: If this device fails to perform satisfactorily, hemorrhage or thrombosis could result due to the administration of an inappropriate amount of the anticoagulant sodium warfarin. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of deficiencies of coagulation factors II (prothrombin), VII (proconvertin), or IX (plasma thromboplastin compenent). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. An undiagnosed coagulation factor deficiency may cause bleeding during surgery.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that prothrombin-proconvertin tests and thrombotests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

[Docket No. 78N–1902]

Medical Devices; Classification of Prothrombin Time Tests

AGENCY: Food and Drug Administration.

ACTION: Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying prothrombin time tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of prothrombin time tests:

1. Identification: A prothrombin time test is a device used as a general screening procedure for the detection of possible clotting factor deficiencies in the extrinsic coagulation pathway, which involves the reaction between coagulation factors III and VII, and to monitor patients receiving coumarin therapy (the administration of one of the coumarin anticoagulants in the treatment of venous thrombosis or pulmonary embolism).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that prothrombin time tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The prothrombin time test is often used for the presurgical screening of patients for potential bleeding problems. The panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with the prothrombin time test and the medical literature. The Center for Disease Control is working with the International Committee for Standardization in Hematology and the International Committee on Thrombosis and Haemostasis (ICTH) to standardize this test (Ref. *1*). The ICTH has made recommendations on the standardization of methods and materials used for control of oral anticoagulants to encourage a similarity in the intensity of anticoagulant treatment that is generally used so that optimal therapeutic anticoagulant levels are attained in individual patients. In addition, other organizations have developed methods for the standardization of the prothrombin time test (Refs. *2* and *3*).

5. Risks to health: (a) Hemorrhage or thrombosis: If this device incorrectly reports the prothrombin time, hemorrhage or thrombosis could result due to the administration of an inappropriate amount of an anticoagulant drug. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of bleeding defects. Inappropriate therapy based on inaccurate diagnostic data

V 4 4 / 1 7 7 SE 1 1 7 9 UMI

may place the patient at risk. Hemorrhage during surgery could result.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that prothrombin time tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1903]

Medical Devices; Classification of Sickle Cell Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying sickle cell tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of sickle cell tests:

1. Identification: A sickle cell test is a device used to determine the sickle cell hemoglobin content of human blood to detect sickle cell anemia (a hereditary hemolytic anemia characterized by joint and abdominal pain, leg ulcers, and sickle shaped erythrocytes). The Panel identified this generic device as the "solubility hemoglobin, abnormal" and "sickle cell test."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that sickle cell tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with sickle cell tests. The Panel stated that the International Committee for standardization in Haematology (ICSH) has recommended a system for the identification of abnormal hemoglobins, including hemoglobin S (Ref. *1*) and has developed a reference preparation for the standardization of electrophoresis (Ref. *2*). The National Sickle Cell Disease Program of the National Heart and Lung Institute and the National Hemoglobinopathy Standardization Laboratory of the Center for Disease Control (CDC) recommend that cellulose acetate electrophoresis be used for sickle cell screening (Ref. *3*). The Panel also relied upon evaluations of current methodology for sickle cell testing that include electrophoretic, cytological, and chemical methods (Refs. *4* and *5*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a sickle cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that sickle cell tests be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine if reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. The CDC has published sickling and solubility tests for abnormal hemoglobins, including a discussion of conditions contributing to false positives and false negatives, the accuracy of one- and two-step tests, tests for whole blood, hemolysates, and filter paper specimens (Ref. *6*).

FDA believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1904]

Medical Devices; Classification of Thrombin Time Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying thrombin time tests into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of thrombin time tests:

1. Identification: A thrombin time test is a device used to measure fibrinogen concentration and detect fibrin or fibrinogen split products for the evaluation of bleeding disorders. The Panel considered this generic device under the names "thrombin time test" and "thrombin."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that thrombin time tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a

V 4 4 / 1 7 7

reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel recommends that the product labeling be required to warn users that the reagents are unstable after reconstitution and should be used immediately.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with this test and upon a study of the thrombin time test that addresses the effects of fibrogen concentration, antithrombin activity, plasma viscosity, plasma dilution, and heat stability (ref. *1*).

5. Risks to health: (a) Hemorrhage during surgery: If this test fails to detect a bleeding defect, bleeding during surgery could result. (b) Postoperative bleeding: If this test fails to detect residual levels of heparin (an anticoagulant) in the patient's blood following surgery, hemorrhage could result. (c) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of disseminated intravascular coagulation (nonlocalized clotting within the blood vessels). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that thrombin time tests be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Reference

[Docket No. 78N–1905]

Medical Devices; Classification of Thromboplastin Generation Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying thromboplastin generation tests into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of thromboplastin generation tests:

1. Identification: A thromboplastin generation test is a device used to detect and identify coagulation factor deficiencies and coagulation inhibitors.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exceptions.

3. Summary of reasons for recommendation: The Panel recommends that thromboplastin generation tests be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with this test.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a bleeding disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that thromboplastin generation tests be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart H by adding new § 864.7900 as follows:

§ 864.7900 Thromboplastin generation test.

(a) *Identification.* A thromboplastin generation test is a device used to detect and identify coagulation factor deficiencies and coagulation inhibitors.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27684 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1906]

Medical Devices; Classification of Partial Thromboplastin Time Tests

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying partial thromboplastin time tests into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. The Commissioner of Food and Drugs proposes that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of partial thromboplastin time tests:

1. Identification: A partial thromboplastin time test is a device used for primary screening for coagulation abnormalities, for evaluation of the effect of therapy on procoagulant disorders, and as an assay for coagulation factor deficiencies of the intrinsic coagulation pathway. The Panel identified this generic type device as "partial thromboplastin time" and "partial thromboplastin time reagents, controls."

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device by a high priority.

3. Summary of reasons for recommendation: The Panel recommends that partial thromboplastin time tests be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The partial thromboplastin time test is used for presurgical and post surgical coagulation screening, to assay for coagulation factor deficiencies, and to regulate heparin therapy (administration of the anticoagulant heparin in the treatment of venous thrombosis and pulmonary embolism). The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance. The Panel believes that the labeling for this device should be required to describe the effect of various heparin concentrations on the linearity of this assay, the sensitivity of this test for the detection of factor deficiencies, and the lot-to-lot variability of this test.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with this device and on the medical literature. The Panel members noted that because the partial thromboplastin time test is a primary coagulation screening test, its accuracy is essential. The medical literature reports considerable variation in the sensitivity and performance of the partial thromboplastin time test. The College of American Pathologists' surveys of proficiency in the partial thromboplastin time test revealed an unacceptable level of variability (Ref. *1*). Because the greatest variation and imprecision occurred with the nonactivated partial thromboplastin time test, the College recommended that the use of this test be discontinued. A 1971 survey of the partial thromboplastin time test, conducted by the Center for Disease Control, reached the conclusion that no currently available reagent can give reproducible results and be equally sensitive to all intrinsic clotting factors (Ref. *2*). A 1972 study by Poller and Thomson reached the same conclusion (Ref. *3*). A 1974 report by Babson and Babson (Ref. *4*) stated that reagents using colloidal silica as an activator gave the test increased heparin sensitivity and precision. However, a 1976 study shows that a simple, accurate method for monitoring heparin therapy has yet to be developed (Ref. *5*). The Center for Disease Control is working with the International Committee for Standardization in Hematology and the International Committee on Thrombosis and Hemostasis to standardize this test.

5. Risks to health: (a) Hemorrhage or thrombosis: If this device incorrectly reports the partial thromboplastin time, hemorrhage or thrombosis may result due to the administration of an inappropriate amount of heparin. (b) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a bleeding disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. There is a risk of hemorrhage from an undiagnosed bleeding defect during surgery.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that partial thromboplastin time tests be

S E 1 1 7 9

UMI

V 4 4 / 1 7 7

classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1907]

Medical Devices; Classification of Hematology Stains

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying hematology stains into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of hematology stains:

1. Identification: Hematology stains are mixtures of synthetic or natural dyes, in solution, used in staining cells of peripheral blood and bone marrow on microscope slides for diagnostic hematology. The Panel reviewed these products under the names "brilliant cresyl blue," "esterase," "Heinze body stains," "iron stains," "Ponceau stain," "reticulocyte stain," "Romanowsky stain," and "cytochemical acid phosphatase."

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that hematology stains be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. However, the Panel recommends that control slides be used with every stain to assure that the stain is working properly.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, the device. In making this recommendation, the Panel stated that it did not know of any applicable standards for stains. The Panel believes that it is an accepted fact that stains are hard to standardize and often vary from one lot to the next. It has been the Panel members' experience that 10 to 25 percent of stain lots are unusable.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in diagnosis. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. Poor staining characteristics may lead to any of the following: (a) failure to detect abnormal cell types; (b) inability to differentiate reactive from malignant cells; (c) improper classification of a leukemic process; and (d) inability to classify an anemic process.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that hematology stains be classified into class I (general controls) with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that poor staining characteristics will rarely occur if users pay close attention to staining, rinsing, and drying slides and if they stain control slides to assure that the stains are working properly.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart I including new § 864.8030 as follows:

Subpart I—Hematology Reagents and Stains

§ 864.8030 Hematology stains.

(a) *Identification.* Hematology stains are mixtures of synthetic or natural dyes, in solution, used in staining cells of peripheral blood and bone marrow on microscope slides for diagnostic hematology.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1908]

Medical Devices; Classification of Bothrops Atrox Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying Bothrops atrox reagents into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. the Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of Bothrops atrox reagents:

1. Identification: A Bothrops atrox regent is a device made from snake venom and used to determine blood fibrinogen levels to aid in the evaluation of disseminated intravascular coagulation (nonlocalized clotting in the blood vessels) in patients receiving heparin therapy (the administration of the anticoagulant heparin in the treatment of thrombosis) or as an aid in the classification of dysfibrinogenemia (presence in the plasma of functionally defective fibrinogen).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this product be a low priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends Bothrops atrox reagents be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device.

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of disseminated intravascular coagulation. Inappropriate heparin therapy based on inaccurate diagnostic data may place the patient at risk. (b) Failure to detect fibrin split products (protein fragments produced by the ensymatic action of plasmin on fibrin): An erroneously short Bothrops atrox time may result in the failure to detect fibrin split products.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that Bothrops atrox reagents be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart I by adding new § 864.8100 as follows:

§ 864.8100 Bothrops atrox reagent.

(a) *Identification.* A Bothrops atrox reagent is a device made from snake venom and used to determine blood fibrinogen levels to aid in the evaluation of disseminated intravascular coagulation (nonlocalized clotting in the blood vessels) in patients receiving heparin therapy (the administration of the anticoagulant heparin in the treatment of thrombosis) or as an aid in the classification of dysfibrinogenemia (presence in the plasma of functionally defective fibrinogen).

[Docket No. 78N-1909]

Medical Devices; Classification of Calibrators for Cell Indices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying calibrators for cell indices into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of calibrators for cell indices:

1. Identification: A calibrator for cell indices is a device that approximates whole blood or certain blood cells and that is used to set an instrument intended to measure mean cell volume (MCV), mean cell diameter (MCD), mean corpuscular hemoglobin (MCH), mean corpuscular hemoglobin concentration (MCHC), or other cell indices. It is a suspension of particles or fixed cells whose size, shape, concentration, and other characteristics have been carefully determined.

2. Recommended classification: Class III (premarket approval). The Panel recommends that premarket approval these devices be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that calibrators for cell indices be classified into class III because this device is purported or represented to be for use in the calibration of instruments for the measurement of cell indices. This use is of substantial importance in preventing impairment of human health because the cell indices are essential to the diagnosis of certain serious blood disorders. In addition, calibrators for cell indices present a potential unreasonable risk of illness or injury if the physician relies upon inaccurate diagnostic information produced by an improperly calibrated instrument. The Panel stated that there are unanswered theoretical questions concerning the MCV and the manual and electronic methods used to obtain it. These unanswered questions preclude the possibility of assigning a true numerical value to a calibrator for the MCV or establishing a performance standard for such a calibrator. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that insufficient information exists to establish a performance standard that would provide reasonable assurance of the safety and effectiveness of the device. The device therefore should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device. Additionally, O. W. van Assendelft, M.D., Chief of the General Hematology Laboratory at the Center for Disease Control and a consultant to the Panel, stated that the technology for the determination of cell indices has not advanced to the stage that true values can be assigned to calibration materials for cell indices (Ref. *1*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a serious blood disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that calibrators for cell indices be classified into class III (premarket approval). The medical literature describes the source of error in the determination of the mean cell volume (MCV) (Ref. *2* and *3*). One study reported that an instrument calibrated with the reference material provided by the instrument manufacturer overestimated the MCV (Ref. *2*). A second study found that the calibration of this instrument is affected by the temperature and purity of the cell diluent employed with the instrument (Ref. *3*).

The agency believes that the device is purported or represented to be for use in the calibration of instruments for the measurement of cell indices, a use which is of substantial importance in preventing impairment of human health. The cell indices are an important diagnostic tool in the evaluation of various serious blood disorders. An elevation of the MCV is the first indication of a megaloblastic process such as megaloblastic anemia (a bone marrow disorder due to defective DNA synthesis). The MCV is also elevated in chronic alcohol abuse, bone marrow failure, sideroblastic anemia, drug-induced abnormalities in red cell production, and chronic hemolytic anemias.The MCV is reduced in iron deficiency anemia and α and β thalassemia (hereditary hemolytic anemias characterized by decreased production of the α and β hemoglobin polypeptide chains). The MCV is used to determine the cause of a decreased

demoglobin level in pregnancy. The MCH is reduced in severe iron deficiency anemia (Ref. *4*).

The agency agrees that this device presents a potential unreasonable risk of illness or injury if the physician relies upon diagnostic information produced by an improperly calibrated instrument. The agency believes that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. Transcript of the Hematology Device Classification Panel Meeting, March 29, 1978, pp. 17–19.

[Docket No. 78N-1910]

Medical Devices; Classification of Calibrators for Hemoglobin and Hematocrit Measurement

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying calibrators for hemoglobin and hematocrit measurement into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health , Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of calibrators for hemoglobin and hematocrit measurement:

1. Identification: A calibrator for hemoglobin and hematocrit measurement is a device that approximates whole blood, red blood cells or a hemoglobin derivative and that is used to set instruments intended to measure hemoglobin, the hematocrit, or both. It is a material whose characteristics have been carefully determined.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for these products be a high priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that calibrators for hemoglobin and hematocrit measurement be classified into class II because there is a need for a performance standard that prescribes for this device accceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device. Additionally, O. W. van Assendelft, M.D., Chief of the General Hematology Laboratory at the Center for Disease Control and a consultant to the Panel, believes that technology has advanced to the stage where a true value can be assigned to calibration materials for hemoglobin and hematocrit measurement (Ref. *1*). The International Committee for Standardization in Hematology (ICSH) prepares and distributes a reference preparation for

V 4 4 / 1 7 7 SE 11 79 UMI

hemoglobin measurement (Ref. *2*). Other reference preparations have been developed according to the ICSH protocol (Refs. *2* and *3*). The National Committee for Clinical Laboratory Standards is developing standards for hemoglobin and the hematocrit, and the World Health Organization has recommended methods for hematocrit determination (Ref. *4*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of anemia or polycythemia (a condition characterized by an increased total red cell mass). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that calibrators for hemoglobin and hematocrit measurement be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

[Docket No. 78N–1911]

Medical Devices; Classification of Calibrators for Platelet Counting

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Admnistration (FDA) is issuing for public comment a proposed regulation classifying calibrators for platelet counting into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Admnistration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of calibrators for platelet counting:

1. Identification: A calibrator for platelet counting is a device that approximates platelets in plasma and that is used to set a platelet counting instrument. It is a suspension of particles or fixed cells whose size, shape, concentration, and other characteristics have been carefully determined.

2. Recommended classification: Class III (premarket approval). The Panel recommends that premarket approval for these products be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that calibrators for platelet counting be classified into class III because this device is purported or represented to be for use in the calibration of automated platelet counting instruments, a use that is of substantial importance in preventing impairment of human health due to the essential nature of a platelet count in the diagnosis of bleeding disorders. In addition, calibrators for platelet counting present a potential unreasonable risk of illness or injury due to the lack of a suitable technology to assign a true numerical value to a material to be used as a platelet calibrator. This technology has been hindered by the difficulties inherent in platelet counting. Platelets are small, fragile cells that clump together and readily attach themselves to surfaces. In addition, platelets are difficult to distinguish from dirt particles. The patient may be placed at risk if the physician relies upon inaccurate diagnostic information produced by an improperly calibrated platelet counter. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that insufficient information exists to establish a performance standard that would provide reasonable assurance of the safety and effectiveness of the device. The device therefore should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device and on the expert opinion of Lewis (Ref. *1*). The Panel stated that no calibration material has sufficient stability or reporducibility to serve as a calibrator for platelet counting. Lewis coucurs with this statement. The Panel stated that technology has not advanced to the stage that a true numerical value can be assigned to a calibration material for platelet counting.

5. Risks to health: Misdiagnosis and inapropriate therapy: Failure of the deivce to perform satisfactorily may lead to an error in the diagnosis of a platelet disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that calibrators for platelet counting be classified into class III (premarket approval). The medical literature includes reports of difficulties encountered in calibrating automated platelet-counting instruments (Refs. *2* and *3*). An instrument calibrated with reference materials provided by the instrument's manufacturer consistently produced results that were 30 percent high. Such an error would cause the instrument to give a false normal value for a thrombocytopenic blood sample (Ref. *2*). (Thrombocytopenic blood contains a reduced number of blood platelets.) The agency believes that the device is purported or represented to be for use in the calibration of automated platelet-counting instruments, a use which is of substantial importance in preventing impairment of human health. The platelet count is essential to the diagnosis of bleeding disorders. Thrombocytosis (increased platelet count) occurs in polycythemia vera (a potentially fatal disease characterized by increased total red cell mass and blood volume often accompanied by increased number of leukocytes and platelets) and chronic myelogenous leukemia (leukemia originating in the bone marrow). The platelet count is decreased in certain anemias and acute leukemia (Ref. *4*).

The agency agrees that this device presents a potential unreasonable risk of illness or injury if the physician relies upon diagnostic information produced by an improperly calibrated platelet counter. The agency believes that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance.

Medical Devices; Classification of Calibrators for Red Cell and White Cell Counting

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying calibrators for red cell and white cell counting into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of calibrators for red cell and white cell counting:

1. Identification: A calibrator for red cell and white cell counting is a device that approximates whole blood or red or white blood cells and that is used to set instruments intended to count red cells, white cells, or both. It is a suspension of particles or fixed cells whose size, shape, concentration, and other characteristics have been carefully determined.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for these products be a high priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that calibrators for red cell and white cell counting be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommedation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device. Additionally, O. W. van Assendelft, M.D., Chief of the General Hematology Laboratory at the Center for Disease Control and a consultant to the Panel, states that technology has advanced to the stage where a true value can be assigned to calibration materials for red cell and white cell counting (Re. *1*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a red cell or white cell disorder. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that calibrators for red cell and white cell counting be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because genral controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Reference

1. Transcript of the Hematology Device Classification Panel Meeting, March 29, 1976, pp. 17–19.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart I by adding new § 864.8185 as follows:

§ 864.8185 Calibrator for red cell and white cell counting.

(a) *Identification.* A calibrator for red cell and white cell counting is a device that approximates whole blood or red or white blood cells and that is used to set instruments intended to count red cells, white cells, or both. It is a suspension of particles or fixed cells whose size, shape, concentration, and other characteristics have been carefully determined.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

Medical Devices; Classification of Blood Cell Diluents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood cell diluents into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of blood cell diluents:

1. Identification: A blood cell diluent is a device used to dilute blood for further testing, such as blood cell counting.

2. Recommended classification: Class I (general controls.) The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that blood cell diluents be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device.

5. Risks to health: None identified.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that blood cell diluents be classified into class I (general controls) with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart I by adding new § 864.8200 as follows:

§ 864.8200 Blood cell diluent.

(a) *Identification.* A blood cell diluent is a device used to dilute blood for further testing, such as blood cell counting.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

Medical Devices; Classification of Lymphocyte Separation Media

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying lymphocyte separation media into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierkshiede, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of lymphocyte separation media:

1. Identification: A lymphocyte separation medium is a device used to isolate lymphocytes from whole blood.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that lymphocyte separation media be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device.

5. Risks to health: None identified.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that lymphocyte separation media be classified into class I (general controls) with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a)) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that part 864 be amended in Subpart I by adding new § 864.8500 as follows:

§ 864.8500 Lymphocyte separation medium.

(a) *Identification.* A lymphocyte separation medium is a device used to isolate lymphocytes from whole blood.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1915]

Medical Devices; Classification of Red Cell Lysing Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying red cell lysing reagents into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of red cell lysing reagents:

1. Identification: A red cell lysing reagent is a device used to lyse (destroy) red blood cells for hemoglobin determinations or to remove red blood cells to facilitate the counting of white blood cells.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that red cell lysing reagents be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation of the Panel members' personal knowledge of, and clinical experience with, this device.

5. Risks to health: None identified.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that red cell lysing reagents be classified into class I (general controls) with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under the authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart I by adding new § 864.8540 as follows:

§ 864.8540 Red cell lysing reagent.

(a) *Identification.* A red cell lysing reagent is a device used to lyse (destroy) red blood cells for hemoglobin determinations of to remove red blood cells to facilitate the counting of white blood cells.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1916]

Medical Devices; Classification of Hematology Quality Control Mixtures

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying hematology quality control mixtures into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation with respect to the classification of hematology quality control mixtures:

1. Identification: A hematology quality control mixture is a device used to ascertain the accuracy and precision of manual, semiautomated, and automated determinations of cell parameters such as white cell count, (WBC), red cell count (RBC), platelet count (PLT), hemoglobin, hematocrit (HCT), mean corpuscular volume (MCV), mean corpuscular hemoglobin (MCH), and mean corpuscular hemoglobin concentration (MCHC).

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this product be a high priority.

3. Summary of reasons for recommendation: The Hematology Device Classification Panel recommends that hematology quality control mixtures be classified into class II because there is a need for a performance standard that prescribes for this device acceptable ranges of accuracy, precision, sensitivity, and specificity, and thereby minimizes the possibility that the device may generate inaccurate diagnostic information. Reliance upon inaccurate diagnostic information could result in inappropriate therapy that places the patient at risk unnecessarily. The Panel believes that quality control mixtures are among the most critical products used in the hematology laboratory. The laboratory relies upon these products to determine that its reagents have not deteriorated and that its instruments are functioning properly. If a quality control mixture is defective, the laboratory could not know that its reagents had deteriorated or that its instruments were not functioning properly and could provide practitioners with erroneous clinical data. Use of erroneous data as the basis for a diagnosis could be hazardous to a patient's health. The development of performance standards for hematology quality control mixtures is essential to ensure consistency in the product as a quality control measure. the allowed variation in the product's stated value must not be so wide as to make that value meaningless. The Panel believes the labeling should be required to state the instruments for which its product will give valid results. Quality control materials should never be used for the calibration of an instrument. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, this device.

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a disease process. Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. For example, in the case of platelet disorders, a patient could suffer hemorrhage because of failure to detect severe thrombocytopenia (a decrease in the number of platelets), or spontaneous thrombosis because of failure to recognize thrombocytosis (an increase in the number of platelets in the blood).

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that hematology quality control mixtures be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart I by adding new § 864.8625 as follows:

§ 864.8625 Hematology quality control mixture.

(a) *Identification.* A hematology quality control mixture is a device used to ascertain the accuracy and precision of manual, semiautomated, and automated determinations of cell parameters such as white cell count (WBC), red cell count (RBC), platelet count (PLT), hemoglobin, hematocrit (HCT), mean corpuscular volume (MCV), mean corpuscular hemoglobin (MCH), and mean corpuscular hemoglobin concentration (MCHC).

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

[Docket No. 78N–1917]

Medical Devices; Classification of Russell Viper Venom Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying Russell viper venom reagents into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of Russell viper venom reagents:

1. Identification: Russell viper venom reagent is a device used to determine the cause of an increase in the prothrombin time.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that Russell viper venom reagents be classified into class I (general controls) because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of these devices. The Panel recommended that the product labeling be required to state that the user should, when changing from one lot of reagent to another, check the calibration of this test for proper venom concentration.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, clinical experience with, this device. Additionally, the Panel members considered a study that suggested that this reagent be used to investigate prolonged prothrombin times (Ref. *1*) and a study of the coagulant activity of the venom (Ref. *2*).

5. Risks to health: Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of a deficiency in factor VII (the coagulation factor proconvertin). Inappropriate therapy based on inaccurate diagnostic data may place the patient at risk. There is a risk of bleeding during surgery or other procedure.

Proposed Classification

The FDA agrees with the Panel's recommendation and is proposing that Russell viper venom reagents be classified into class I (general controls) with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

Medical Devices; Classification of Blood Bank Supplies

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood bank supplies into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding to the classification of blood bank supplies:

1. Identification: Blood bank supplies are general purpose devices for in vitro use in blood banking. This generic type of device includes products such as blood bank pipettes, blood grouping slides, blood typing tubes, blood typing racks, and cold packs for antisera reagents. The device does not include articles that are licensed by FDA's Bureau of Biologics.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that blood bank supplies be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' personal knowledge of, and clinical experience with, blood bank supplies which indicates that these devices are routinely used in blood banking and do not present any significant risk to health.

5. Risks to health: None identified.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood bank supplies be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))] and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended by adding Subpart J including new § 864.9050 as follows:

Subpart J—Products Used in Establishments That Manufacture Blood and Blood Products

§ 864.9050 Blood bank supplies.

(a) *Identification.* Blood bank supplies are general purpose devices for in vitro use in blood banking. This generic type of device includes products such as blood bank pipettes, blood grouping slides, blood typing tubes, blood typing racks, and cold packs for antisera reagents. The device does not include articles that are licensed by the Bureau of Biologics of the Food and Drug Administration.

(b) *Classification.* Class I (general controls.).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[21 CFR Part 864]

[Docket No. 78N–1919]

Medical Devices; Classification of Containers for the Collection and Processing of Blood and Blood Components

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying containers for the collection and processing of blood and blood components into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of containers for the collection and processing of blood and blood components:

1. Identification: A container for the collection and processing of blood and blood components is an empty plastic bag or plastic or glass bottle used to collect, store, or transfer blood and blood components for further processing.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that empty containers for the collection and processing of blood and blood components be classified into class II to provide for control of the risk of contamination of the blood or blood components placed in these containers. Contamination may be bacterial or may be due to toxic substances leached from the plastic used to construct the container. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with blood collection and processing containers.

5. Risks to health: (a) Bacterial contamination: Improper sterilization may result in bacterial contamination of the blood or blood component. (b) Emboli: The container may contain particulate matter that could cause emboli if infused into the patient's circulation. (c) Toxicity: The plastic container may leach carcinogenic or toxic materials such as plasticizers into the blood or blood component stored in it.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that containers for the collection and processing of blood and blood components be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device. The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. Blood or blood components must be administered to a patient through administration sets which contain filters to remove particulate matter, thereby minimizing the risk of emboli. The viability of blood cells stored in plastic bags is influenced by the characteristics of the plastic from which the bag is manufactured (Refs. *1, 2,* and *3*). Significant characteristics include the surface, thickness, and any substances that blood or blood components may leach from the plastic (Ref. *1*). It is known that human or animal blood will extract plasticizers such as di-2-ethylhexyl phthalate (DEHP) from polyvinyl chloride (PVC) blood bags, tubing, and medical devices (Refs. *4* and *5*). Significant amounts of DEHP have been detected in plasma prepared from whole blood stored in PVC bags at 4° C (Ref. *6*). Transfusion of blood stored in plastic bags has resulted in detectable amounts of DEHP in patients' lungs, livers, and spleens (Ref. *7*). Contact with PVC plastics or the resins, plasticizers, and stabililizers constituting these plastics has been shown to have a destructive effect on animals (Refs. *7, 8,* and *9*), biological systems (Refs. *10* and *11*), and antisera (Ref. *10*). It has not been demonstrated that the infusion of blood or blood products containing DEHP has any adverse effects on humans (Refs. *6* through *12*). However, the effects of long-term or repeated

exposure to DEHP, especially in the case of transfusion recipients who are already in a weakened state, merits continued investigation (Refs. *13* and *14*). New plastics that are developed as alternatives to PVC must be carefully evaluated for their potential for leaching toxic or carcinogenic substances (Ref. *7*). The International Organization for Standardization has developed a standard for plastics and collapsible containers for blood and blood components (Ref. *15*).

[Docket No. 78N–1920]

Medical Devices; Classification of Vacuum-Assisted Blood Collection Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying vacuum-assisted blood collection systems into class I (general controls). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health , Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of vacuum-assisted blood collection systems:

1. Identification: A vacuum-assisted blood collection system is a device that uses a vacuum to draw blood for subsequent reinfusion.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemption.

3. Summary of reasons for recommendation: The Panel recommends that vacuum-assisted blood collection systems be Classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The panel based its recommendation upon the Panel members' knowledge of, and clinical experience with, blood collection.

5. Risks to health: (a) Collection of an incorrect amount of blood: An improperly calibrated or malfunctioning blood collection system could result in the collection of too much or too little blood. (b) Poor cell or component recovery: Drawing blood through a small opening using a vacuum may result in cell damage, such as red cell hemolysis (disruption of the cell membrane accompanied by the release of hemoglobin), during collection or processing.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that vacuum-assisted blood collection systems be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that if the operating instructions in the product labeling are followed carefully, the device will present minimal risks to health.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9125, to read as follows:

§ 864.9125 Vacuum-assisted blood collection system.

(a) *Identification.* A vacuum-assisted blood collection system is a device that uses a vacuum to draw blood for subsequent reinfusion.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1921]

Medical Devices; Classification of Processing Systems for Frozen Blood

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying processing systems for frozen blood into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, and FDA advisory committee, made the following recommendation regarding the classification of processing systems for frozen blood:

1. Identification: A processing system for frozen blood is a device used to glycerolize red blood cells prior to freezing to minimize hemolysis (disruption of the red cell membrane accompanied by the release of hemoglobin) due to freezing and thawing of red blood cells and to deglycerolize and wash thawed cells for subsequent reinfusion.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that processing systems for frozen blood be classified into class II because a performance standard is necessary to control the risk of damage to blood cells from improper freezing. A performance standard also is needed to control the risk of a hemolytic transfusion reaction in the recipient because of improper removal of glycerol from blood to be transfused. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with processing systems for frozen blood. The Panel believes that the American Association of Blood Banks' guidelines provide an excellent basis for a performance standard (Ref. *1*).

5. Risks to health: (a) Hemolytic transfusion reaction: Incomplete removal of glycerol could result in a hemolytic transfusion reaction in the recipient of the transfused blood. (b) Infusion of damaged blood or blood components: If this device fails to perform satisfactorily, the blood or blood components recovered may not be suitable for use because of damage during collection or processing. One form of damage is red cell hemolysis. Infusion of damaged blood or blood components may harm the recipient. (c) Bacterial contamination: Improper freezing may result in bacterial contamination of the blood or blood components. (d) Toxicity: The plastics in this system may leach toxic substances into the blood or blood components exposed to them.

Proposed Classification

The FDA agrees with the Panel's recommendation and is proposing that processing equipment for frozen blood be classified into class II (performance standards). The agency believes that performance standard is necessary for

V 4 4 / 1 7 7 S E 1 1 7 9 UMI

this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device. The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. Glycerol has been used as a cryopreservative to protect red cells against freeze-thaw hemolysis for over 25 years (Ref. *1*). However, the addition of glycerol may result in hemolysis unless great care is taken. After thawing, the cryopreserved cells must be washed and deglycerolized. The washing process should maximize the red cell recovery and remove certain unwanted substances from the red cells. These substances include glycerol, the storage anticoagulant, plasma, white cells, platelets, certain additives, and infectious agents (Ref. *2*). Deglycerolization presents the greatest difficulty in terms of time, cost, and red cell loss (Refs. *1, 3,* and *4*). The glycerol level should be less than 1 percent in blood to be used for transfusion. (Ref. *4*).

[Docket No. 78N–1922]

Medical Devices; Classification of Blood Group Substances of Nonhuman Origin for In Vitro Diagnostic Use

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood group substances of nonhuman origin for in vitro diagnostic use into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of blood group substances of nonhuman origin for in vitro diagnostic use:

1. Identification: Blood group substances of nonhuman origin for in vitro diagnostic use are materials, such as blood group specific substances prepared from nonhuman sources (e.g., pigs, cattle, and horses), used to detect, identify, or neutralize antibodies to various human blood group antigens. This generic type of device does not include materials that are licensed by FDA's Bureau of Biologics.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that blood group substances of nonhuman origin for in vitro diagnostic use be classified into class II to control the risk of transfusion reactions due to undetected antibodies in the recipient's serum. A standard prescribing acceptable ranges of sensitivity and specificity would minimize the possibility that an antibody would go undetected. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with blood group substances.

5. Risks to health: Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified, and this could result in a transfusion reaction.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood group substances of nonhuman origin for in vitro diagnostic use be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9160, to read as follows:

§ 864.9160 Blood group substances of nonhuman origin for in vitro diagnostic use

(a) *Identification.* Blood group substances of nonhuman origin for in vitro diagnostic use are materials, such as blood group specific substances prepared from nonhuman sources (e.g., pigs, cows, and horses) used to detect, identify, or neutralize antibodies to various human blood group antigens. This generic type of device does not include materials that are licensed by the Bureau of Biologics of the Food and Drug Administration.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

Medical Devices; Classification of Automated Blood Grouping and Antibody Test Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated blood grouping and antibody test systems into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of automated blood grouping and antibody test systems:

1. Identification: An automated blood grouping and antibody test system is a device used to group erythrocytes (red blood cells) and to detect antibodies to blood group antigens.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated blood grouping and antibody test systems be classified into class II to control the incubation period, frequency of cell mixing, and temperature and concentration of reagents used so that inaccurate blood grouping will be minimized. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendaton is based: The Panel based its recommendation upon the Panel members' clinical experience with blood grouping and antibody detection. The Panel believes that the American Association of Blood Banks' standards for blood grouping provide an excellent basis for the development of a performance standard.

5. Risks to health: (a) Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified. This failure could result in a transfusion reaction. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (c) Blood grouping errors: Failure of this device to perform satisfactorily may cause errors in blood grouping. This failure could result in the selection of an inappropriate blood group for transfusion and a subsequent transfusion reaction.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that automated blood grouping and antibody test systems be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard

would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under the authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9175 to read as follows:

§ 864.9175 Automated blood grouping and antibody test system.

(a) *Identification.* An automated blood grouping and antibody test system is a device used to group erythrocytes (red blood cells) and to detect antibodies to blood group antigens.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1924]

Medical Devices; Classification of Blood Grouping View Boxes

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood grouping view boxes into class I (general controls). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health , Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of blood grouping view boxes:

1. Identification: A blood grouping view box is a device with a glass or plastic viewing surface, which may be illuminated and heated, that is used to view cell reactions in antigen-antibody testing.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that blood grouping view boxes be Classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience in antigen-antibody testing.

5. Risks to health: Inaccurate blood grouping: If the temperature of this device exceeds a certain level, antigen-antibody reactions will be affected, and inaccurate blood grouping may result.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood grouping view boxes be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9185, to read as follows:

§ 864.9185 Blood grouping view box.

(a) *Identification.* A blood grouping view box is a device with a glass or plastic viewing surface, which may be illuminated and heated, that is used to view cell reactions in antigen-antibody testing.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27703 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[Docket No. 78N–1925]

Medical Devices; Classification of Blood Mixing and Weighing Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood mixing and weighing devices into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of blood mixing and weighing devices:

1. Identification: A blood mixing and weighing device is a device used to mix blood or blood components by agitation or to weigh blood or blood components as they are collected.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary the reasons for recommendation: The Panel recommends that blood mixing and weighing devices be classified into class I because these are simple devices in common use that do not present any risks to health. The Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' knowledge of, and clinical experience with, blood mixing and weighing devices.

5. Risks to health: None identified.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood mixing and weighing devices be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9195, to read as follows:

§ 864.9195 Blood mixing and weighing device.

(a) *Identification.* A blood mixing and weighing device is a device used to mix blood or blood components by agitation or to weigh blood or blood components as they are collected.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27704 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[Docket No. 78N–1926]

Medical Devices; Classification of Blood and Plasma Warming Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying non-electromagnetic blood and plasma warming devices into class II (performance standards) and electromagnetic blood and plasma warming devices into class III (premarket approval). The FDA is also publishing the recommendation of the Anesthesiology Device Classification Panel that nonelectromagnetic blood warmers be classified into class II and the electromagnetic blood warmers be classified into class III, and the recommendation of the Hematology Device Classification Panel that all blood and plasma warming devices be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel and the Anesthesiology Device Classification Panel, two FDA advisory committees, made the following recommendations regarding the classification of blood and plasma warming devices:

1. Identification: A nonelectromagnetic blood and plasma warming device is a device that warms blood or plasma, by means other than electromagnetic radiation, prior to administration. An electromagnetic blood and plasma warming device is a device that employs electromagnetic radiation (radiowaves or microwaves) to warm a bag or bottle of blood or plasma prior to administration.

2. Recommended classification: The Anesthesiology Device Classification Panel recommends that nonelectromagnetic blood warmers be classified into class II (performance

standards) and that establishing a performance standard for this device be a high priority. The Anesthesiology Device Classification Panel recommends that electromagnetic blood warmers be classified into class III (premarket approval) and that premarket approval for this device be a low priority. The Hematology Device Classification Panel recommends that all blood and plasma warming devices be classified into class II and that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Anesthesiology Device Classification Panel recommends that nonelectromagnetic blood warmers be classified into class II (performance standards) because the Panel believes that the characteristics of these devices need to be controlled to assure that proper blood temperature is attained and that the system is leak-free to prevent air emboli from entering the patient. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a standard would provide a reasonable assurance of the safety and effectiveness of the nonelectromagnetic blood warmer and that there is sufficient information to establish a standard to provide such assurance. The Anesthesiology Device Classification Panel recommends that the electromagnetic blood warmer be classified into class III (premarket approval) because the device presents a potential unreasonable risk of illness or injury to the recipient if hemolyzed blood is infused. Because of the manner in which the radiation is emitted and reflected within the microwave warmer, the device heats blood unevenly. Uneven heating results in hot spots that can cause hemolysis (disruption of the red blood cells accompanied by release of hemoglobin). A means of eliminating this uneven heating has not been developed. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that insufficient information exists to establish a performance standard that would prevent uneven heating and thus provide reasonable assurance of the safety and effectiveness of the device. The device, therefore, should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness. The Hematology Device Classification Panel recommends that blood and plasma warming devices be classified into class II to assure that a standard controls the temperature of the warmer and thus prevents damage to the blood or plasma. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard will provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panels based their recommendations on the Panel members' personal knowledge of, and clinical experience with, the warming of blood and plasma.

5. Risks to health: The Anesthesiology Device Classification Panel identified the following risks to health: (a) Infusion of chilled, hemolyzed, or coagulated blood: If a blood and plasma warming device fails to heat blood properly, the blood may be damaged. Uneven heating, a potential problem with the electromagnetic warmer, or excessive heating, a potential problem with both the electromagnetic and the nonelectromagnetic warmers, may cause hemolysis or coagulation of the blood. If hemolyzed or coagulated blood is infused into a patient, the patient could suffer pulmonary or cerebral complications or death. If chilled blood is infused into a patient, hypothermia (abnormally reduced body temperature) or cardiac arrest may occur. (b) Air emboli: With respect to the type of nonelectromagnetic warmer that consists of a coil of plastic tubing that is placed in a water bath or electric warmer, leaks in the tubing or inadequate trapping of flushed gas may allow air emboli to enter the patient. (c) Electromagnetic interference: The radiation emitted by the electromagnetic blood and plasma warmer could produce electromagnetic interference in other medical devices, and may thus result in erroneous data and inappropriate therapy.

The Hematology Device Classification Panel identified the following risk to health: (d) Bleeding: Failure of a blood and plasma warming device to perform satisfactorily may result in overheating and damage to blood cells, components, or blood products. Overheating damages blood or denatures plasma protein by inactivating various coagulation factors. Bleeding can result in patients who receive damaged blood or plasma.

Proposed Classification

FDA agrees with both Panels' recommendations with respect to nonelectromagnetic blood and plasma warming devices and is proposing that these devices be classified into class II (performance standards). The agency has reviewed additional data and information concerning the device to determine whether a performance standard will provide reasonable assurance of the safety and effectiveness of the device. One type of nonelectromagnetic blood and plasma warmer consists of a coil of plastic tubing that is inserted into the transfusion line. The coil is either immersed in an electrically heated water bath or placed between two electrically heated warming plates. This type requires use of a long piece of tubing to warm the blood sufficiently. Pressure must be exerted to force the cold, highly viscous blood through the tubing, and the greater the length of the tubing, the more pressure is required. This pressure may hemolyze the blood. The infusion rate that can be achieved with this type of device is necessarily slow, due to the length of time required to warm the blood. Therefore, this type of device is not suitable for rapid, massive transfusions in emergency situations (Refs. *1* through *4*). Another type of nonelectromagnetic warmer heats a plastic bag of blood or plasma between two electrically heated warming plates. The agency believes that a performance standard is necessary for both types of this device because general controls alone are insufficient to contorl the risks to health presented by this device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

FDA is proposing that electromagnetic blood and plasma warming devices be classified into class III (premarket approval). With respect to these devices, the agency agrees with the recommendation of the Anesthesiology Device Classification Panel that the devices be classified into class III and disagrees with the recommendation of the Hematology Device Classification Panel that the devices be classified into class II. Before deciding which Panel's recommendation to accept, the agency reviewed additional data and information concerning the device to determine whether general controls alone would provide reasonable assurance of the safety and effectiveness of the device or whether sufficient information exists to establish a performance standard to provide such assurance. Microwave blood and plasma warmers were in widespread use in the United States by the late 1960's. This type of warmer consists of a microwave oven containing apparatus that rotates the unit of blood, a temperature sensor that shuts off the device when the temperature of the unit of blood reaches a certain range, a timer that shuts off the device after a preset time regardless of the temperature of the unit of blood, and special shielding intended to eliminate uneven heating of the unit of blood (Refs. *2* through *6*). Despite improvements designed to provide more uniform distribution of radiant energy, reports of hemolysis of units of blood began to appear by 1971 (Refs. *2, 5,* and *7*). There have been two reports of overheating due to improper placement ot the temperature sensor (Ref. *5*) and improper positioning of the unit of blood (Ref. *7*). However, hemolysis has resulted even when the manufacturer's instructions were followed precisely (Refs. *2* and *5*). In one report the temperature sensing and control apparatus were inadequate, and small units of blood, i.e., 250 to 300 milliliters, exhibited substantial hemolysis (Ref. *2*). There are two types of overheating, gross and focal, that may damage blood. Gross overheating refers to a siutation in which the average temperature of the unit of blood is excessive. The agency believes that a standard assuring proper performance of the temperature sensing and control apparatus could control this risk. Focal overheating, the occurrence of hot spots within a unit of blood due to uneven power distribution, presents a more difficult problem. Hot spots are caused by the emission of radiation from a single point in the warmer and numerous subsequent internal reflections. At certain points within the warmer, the reflected radiations interact in an additive fashion and produce hot spots that are not detected by the temperature sensor. An effective means of eleminating hot spots has yet to be developed. Because radiowave warmers are similar in design to microwave warmers, the agency believes that radiowave warmers present a similar risk of undetected hot spots, and resulting hemolysis, in units of heated blood. Furthermore, there have been few studies of the effects of microwave or radiowave heating upon blood cells. It is possible that a microwave warmer produces a population of damaged but intact erythrocytes with a shortened in vivo survival (Ref. *7*). An additional hazard related to the use of microwave blood warmers is that the personnel operating the device may be exposed to microwave radiation. Microwaves have been implicated in cataract formation (Refs. *8* and *9*) and cardiovascular disease (Ref. *10*). Like the Anesthesiology Device Classification Panel, the agency believes that the electromagnetic blood and plasma warmer presents a potential unreasonable risk of illness or injury (including death) if hemolyzed blood is transfused into a patient. The agency also believes that the device is for a use (heating blood for use in massive, emergency transfusions) that is of substantial importance in preventing impairment of human health. The agency believes that premarket approval is necessary for the device because general controls are insufficient to control this risk and thus to provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is insufficient information to establish a performance standard to control this risk and thus to provide reasonable assurance of the safety and effectiveness of the device. When the electromagnetic blood and plasma warmer undergoes premarket approval, manufacturers will be required to demonstrate that their devices meet any performance standards for nonelectromagnetic blood and plasma warmers with respect to maintenance of blood temperatures and adequacy of the temperature control apparatus. If no such standard exists, these manufacturers will be required to demonstrate satisfactory performance in these respects.

[21 CFR Part 864]

[Docket No. 78N-1927]

Medical Devices; Classification of Cell-Freezing Apparatus and Reagents for In Vitro Diagnostic Use

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying cell-freezing apparatus and reagents for in vitro diagnostic use into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of cell-freezing apparatus and reagents for in vitro diagnostic use:

1. Identification: Cell-freezing apparatus and reagents for in vitro diagnostic use are devices used to freeze human red blood cells for in vitro diagnostic use.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that cell-freezing apparatus and reagents for in vitro diagnostic use be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of this device. The Panel noted that freezing red cells does not alter the antigens and any hemolysis (disruption of red cell membrane accompanied by the release of hemoglobin) that occurs is easily detectable.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with cell freezing apparatus and reagents for in vitro diagnostic use.

5. Risks to health: Blood cell damage: The red blood cells that are recovered may not be suitable for use because of damage, e.g., hemolysis, during collection or processing. Use of damaged red cells may result in inaccurate test results.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that cell-freezing apparatus and reagents for in vitro diagnostic use be classified into Class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540-546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed to amend Part 864 in Subpart J by adding new § 864.9225, to read as follows:

§ 864.9225 Cell-freezing apparatus and reagents for in vitro diagnostic use.

(a) *Identification.* Cell-freezing apparatus and reagents for in vitro diagnostic use are devices used to freeze human red blood cells for in vitro diagnostic use.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N-1926]

Medical Devices; Classification of Automated Blood Cell Separators

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated blood cell separators into class III (premarket approval). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class III. The effect of classifying a device into class III is to provide for each manufacturer of the device to submit to FDA a premarket approval application at a date to be set in a future regulation. Each application includes information concerning safety and effectiveness tests of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK-440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee,

made the following recommendation regarding the classification of automated blood cell separators:

1. Identification: An automated blood cell separator is a device that automatically removes whole blood from a donor, separates the blood into components (red blood cells, white blood cells, plasma, and platelets), retains one or more of the components, and returns the remainder of the blood to the donor. The components obtained are transfused or used to prepare blood products for administration.

2. Recommended classification: Class III (premarket approval). The Panel recommends that premarket approval of this device be a high priority.

3. Summary of reasons for recommendation: The Panel recommends that automated blood cell separators be classified into class III because the device is purported or represented to be for use in the preparation of blood components for transfusion, a use that is of substantial importance in preventing impairment of human health. In addition, the device presents a potential unreasonable risk of illness or injury to the donor or the recipient. The major risk to the donor's health is that removing blood, handling the blood outside the patient's body, and returning the blood to the patient's circulation could injure the cellular components and could activate the complement system (a series of enzymatic proteins that interact to combine with the antigen-antibody complex, destroying antigen in the form of an intact cell). The Panel indicated its concern about leaks in the separator that can result in blood or pressure loss, the risk of hepatitis due to improper decontamination of the separator system between procedures, and the blood compatibility of the various segments of the separator. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that insufficient information exists to establish a performance standard that would provide reasonable assurance of the safety and effectiveness of the device. Therefore, the device should be subject to premarket approval to assure that manufacturers demonstrate satisfactory performance of the device and thus assure its safety and effectiveness.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the information provided by Dr. Thomas F. Necheles, the Panel's Chairman, and Dr. Dennis Goldfinger, a Panel member, and on the Panel members' clinical experience with this device. Dr. Necheles routinely uses automated blood cell separators to obtain white blood cells for infusion into patients. He has observed several instances in which recipient patients developed severe fevers because of the breakdown of granulocytes (leukocytes containing granules) during the pump cycle of the separator. Dr. Necheles also described several other patients' experiences with severe bleeding after infusion of white cells obtained with a blood cell separator. Dr. Goldginer, who has extensive blood-banking experience, stated that there is very little information available regarding the hazards associated with the device. He attributed this lack of information to the absence of a suitable forum for the exchange of information concerning problems with the use of automated blood cell separators.

5. Risks to health: (a) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (b) Poor cell or component recovery: If this device fails to perform satisfactorily, the blood or blood components recovered may not be suitable for use because of cell damage during collection or processing. One form of damage is red cell hemolysis (disruption of the cell membrane accompanied by the release of hemoglobin). (c) Electrical shock: The user faces the risk of electrical shock from the electrical system of the device. (d) Adverse donor reactions: If the device fails to perform satisfactorily, the following donor reactions may occur: (1) shock resulting from blood loss; (2) abdominal pain due to infection or the sequestering of damaged cells by organs such as the liver or spleen; (3) toxic reaction to high levels of anti-coagulants such as citrate or heparin that the instrument adds to the blood before it is returned to the donor; (4) a stress reaction due to the removal or loss of blood; (5) thrombosis due to activation of clotting factors by air or surfaces within the device; (6) fever or local infection due to bacterial contamination of the blood returned to the donor; and (7) a susceptibility to hemorrhage due to the loss of platelets.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that automated blood cell separators be classified into class III (premarket approval). The agency has obtained additional data and information concerning automated blood cell separators. Moriau, De Bruyere, and Bellenot (Ref. *1*) recommend that the donor's blood pressure and electrocardioscopic and fluid balance changes be monitored and that the plasma replacement fluids contain an appropriate amount of calcium and be free of hepatitis antigen. Sterilization of the cell separator bowl is also a concern (Ref. *2*). There have been instances of thromboembolism in white cell donors due to platelet-white cell aggregates (Ref. *3*). The automated blood cell separator must also meet the requirements of 21 CFR Part 606, relating to good manufacturing practices for blood and blood components, specifically § 606.65, which requires that all surfaces which contact the blood or blood component be sterile, pyrogen-free, and not have an adverse effect upon the blood or blood component (Ref. *4*). The agency believes that the device is purported or represented to be for use in the preparation of blood components for transfusion, a use that is of substantial importance in preventing impairment of human health. The agency believes that the device presents a potential unreasonable risk of illness or injury because of the possible adverse donor reactions and the possibility of delivering altered, damaged, or contaminated blood or blood components to the recipient. The agency believes that insufficient information exists to determine that general controls will provide reasonable assurance of the safety and effectiveness of the device and that insufficient information exists to establish a performance standard to provide this assurance.

4. Code of Federal Regulations, 21 CFR Part 606—Current Good Manufacturing Practices for Blood and Blood Components, Subpart D—Equipment § 606.65.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9245, to read as follows:

§ 864.9245 Automated blood cell separator.

(a) *Identification.* An automated blood cell separator is a device that automatically removes whole blood from a donor, separates the blood into components (red blood cells, white blood cells, plasma, and platelets), retains one or more of the components, and returns the remainder of the blood to the donor. The components obtained are transfused or used to prepare blood products for administration.

(b) *Classification.* Class III (premarket approval).

Interested persons may, on or before November 13, 1979 submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1929]

Medical Devices; Classification of Blood Bank Centrifuges for In Vitro Diagnostic Use

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood bank centrifuges for in vitro diagnostic use into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It it proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT:

William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of blood bank centrifuges for in vitro diagnostic use:

1. Identification: A blood bank centrifuge for in vitro diagnostic use is a device used only to separate blood cells for further diagnostic testing.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that blood bank centrifuges for in vitro diagnostic use be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with blood bank centrifuges.

5. Risks to health: (a) Transfusion reaction: Failure of this device to perform satisfactorily may cause errors in blood grouping. This failure could result in the selection of an inappropriate blood group for transfusion and a subsequent transfusion reaction. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood bank centrifuges for in vitro diagnostic use be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that if this centrifuge is operated according to the instructions in the labeling, and if blood samples are handled properly, the risks to health presented by the device are minimal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9275, to read as follows:

§ 864.9275 Blood bank centrifuge for in vitro diagnostic use.

(a) *Identification.* A blood bank centrifuge for in vitro diagnostic use is a device used only to separate blood cells for further diagnostic testing.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[Docket No. 78N–1930]

Medical Devices; Classification of Automated Cell-Washing Centrifuges for Immuno-Hematology

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated cell-washing centrifuges for immuno-hematology into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT:

William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of automated cell-washing centrifuges for immuno-hematology:

1. Identification: An automated cell-washing centrifuge for immuno-hematology is a device used to separate and prepare cells and sera for further in vitro diagnostic testing.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that automated cell-washing centrifuges for immuno-hematology be classified into class II to assure, by controlling the amount of saline used to wash the cells and the length of the spin, wash, and decant cycles, that the cells and sera prepared are free of interfering substances that may invalidate test results. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficent information to establish a standard to provide such assurance.

4. Summary of data upon which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with the cell-washing centrifuge for immuno-hematology.

5. Risks to health: (a) Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified. This failure could result in a transfusion reaction. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that automated cell-washing centrifuges for immuno-hematology be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. The American Association of Blood Banks (AABB) has made recommendations concerning automated cell washers (Ref. *1*). The AABB notes that the stream of saline used to resuspend the pellet of cells must be directed so that the cells are fully resuspended without creating a large amount of foam that may cause cross contamination. The fluid must be decanted from the cell pellet so that there are no residual amounts of serum that might interfere with further testing. The agency believes that the AABB recommendations will provide a basis for the establishment of a performance standard. The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

Reference

Medical Devices; Classification of Automated Coombs Test Systems

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying automated Coombs test systems into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the

V 4 4 / 1 7 7 SEP 11 79 UMI

device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register**.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel **Recommendation**

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of automated Coombs test systems:

1. Identification: An automated Coombs test system is a device used to detect and identify antibodies in patient sera or antibodies bound to red cells. The Coombs test is uesd for the diagnosis of hemolytic disease of the newborn and autoimmune hemolytic anemia. The test is also used in crossmatching and investigating transfusion reations and drug-induced red cell sensitization.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that automated Coombs test systems be classified into class II, to assure by controlling the incubation period, the incubation temperature, the suspending medium, and the concentration of the cell suspension, that the device detects and accurately identifies antibodies. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with automated Coombs testing systems. The Panel believes that the American Association of Blood Banks' guidelines for Coombs testing provide an excellent basis for the development of a performance standard (Ref. *1*).

5. Risks to health: (a) Misdiagnosis and inappropriate therapy: Failure of the device to perform satisfactorily may lead to an error in the diagnosis of hemolytic disease of the newborn or autoimmune hemolytic anemia. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that automated Coombs test systems be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1932]

Medical Devices; Classification of Copper Sulfate Solutions for Specific Gravity Determinations

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying copper sulfate solutions for specific gravity determinations into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. Its is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of copper sulfate solutions for specific gravity determinations:

1. Identification: A copper sulfate solution for specific gravity determinations is a device used to determine whether the hemoglobin content of a potential donor's blood meets the required level (12.5 grams per 100 milliliters of blood for women and 13.5 grams per 100 milliliters of blood for men).

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: the Panel recommends that copper sulfate solution for specific gravity determinations be classified into class I because the Panel believes the general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The Panel stated that this is a very simple test requiring only that a drop of blood be placed in a copper sulfate solution of known specific gravity. If the drop sinks within 15 seconds, the specific gravity of the blood exceeds that of the solution. If the drop raises to the surface within 15 seconds, the specific gravity of the blood is less then that of the solution.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' knowledge of, and clinical experience with, the device.

5. Risks to health: Improper donor selection: An inaccurate specific gravity determination could result in the selection of a potential blood donor with an unsuitable hemoglobin level.

Proposed Classification

FDA agrees with the Panel's recommendation and is proposing that copper sulfate solution for specific gravity determinations be classified into class I (general controls), with no exemptions. The agency believes that gerneral controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9320 to read as follows:

§ 864.9320 Copper sulfate solution for specific gravity determinations.

(a) *Identification.* A copper sulfate solution for specific gravity determinations is a device used to determine whether the hemoglobin content of a potential donor's blood meets the required level (12.5 grams per 100 milliliters of blood for women and 13.5 grams per 100 milliliters of blood for men).

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27711 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1933]

Medical Devices; Classification of Stabilized Enzyme Solutions

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying stabilized enzyme solutions into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of stabilized enzyme solutions:

1. Identification: A stabilized enzyme solution is a reagent used to enhance the reactivity of red blood cells with certain antibodies, including antibodies that are not detectable by other techniques. These enzyme solutions include papain, bromelin, ficin, and trypsin.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that stabilized enzyme solutions be classified into class II (performance standards) because a performance standard can assure that enzyme solutions are reactive. Nonreactive enzyme solutions present the risk of inaccurate results. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that

there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' personal knowledge of and clinical experience with, these solutions.

5. Risks to health: Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified resulting in a transfusion reaction.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that stabilized enzyme solutions be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. The American Association of Blood Banks (AABB) has made recommendations regarding stabilized enzyme solutions (Ref. *1*). The AABB notes that the potency of enzyme solutions varies. Enzyme solutions lose their activity with age and mask antigenic determinants such as those of the Lutheran, MNS, and Duffy blood group systems. Other important factors in the potency of enzyme solutions include the pH of the solution, the length the red cell-enzyme incubation period, and the enzyme concentration. The agency believes that a performance standard is necessary for the device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (address above), and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. "Technical Manual of the American Association of Blood Banks," 7th Ed., Miller, W. V., et al., eds., J. B. Lippincott Co., Philadelphia, pp. 168, 325–328, 1977.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9400, to read as follows:

§ 864.9400 Stabilized enzyme solution.

(a) *Identification.* A stabilized enzyme solution is a reagent used to enhance the reactivity of red blood cells with certain antibodies, including antibodies that are not detectable by other techniques. These enzyme solutions include papain, bromelin, ficin, and trypsin.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N–1934]

Medical Devices; Classification of Systems for the Identification of Hepatitis B Antigen

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying systems for the identification of hepatitis B antigen into class I (general controls). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of systems for the identification of hepatitis B antigen:

1. Identification: A system for the identification of hepatitis B antigen is a device that consists of the equipment and reagents necessary for the detection of hepatitis B antigen. Hepatitis B antigen is usually detected by radioimmunoassay, reversed passive hemagglutination, counterelectrophoresis, or latex agglutination. The device does not include articles that are licensed by the Bureau of Biologic of the Food and Drug Administration.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that systems for the identification of hepatitis B antigen be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' clinical experience with hepatitis B antigen detection.

5. Risks to health: (a) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection. (b) Radiation hazard: The user may be exposed to radiation from radioisotopes that are a part of this device. (c) Electrical shock: If the device malfunctions, the user faces the risk of electrical shock from the electrical system of the electrophoresis equipment used to detect hepatitis B antigen.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that systems for the identification of hepatitis B antigen be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that if users carefully follow the instructions in the labeling for the use of these systems, and if the blood samples are handled properly, the risks described above will be minimized.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9500 to read as follows:

§ 864.9500 System for the identification hepatitis B antigen.

(a) *Identification.* A system for the identification of hepatitis B Antigen is a device that consists of the equipment and reagents necessary for the detection of hepatitis B antigen. Hepatitis B antigen is usally detected by radioimmunoassay, reversed passive hemagglutination, counterelectrophoresis, or latex agglutination. The device does not include articles that are licensed by the Bureau of Biologics of the Food and Drug Administration.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA—305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79-27713 Filed 9-10-79; 8:45 am]

BILLING CODE 4110-03-M

[21 CFR Part 864]

[Docket No. 78N–1935]

Medical Devices; Classification of Lectins and Protectins

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying lectins and protectins into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of lectins and protectins:

1. Identification: Lectins and protectins are proteins from plants and lower animals that cause cell agglutination in the presence of certain antigens. These substances are used to detect blood group antigens for in vitro diagnostic purposes.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that lectins and protectins be classified into class II because a performance standard is necessary to assure the reactivity and specificity of these substances. Nonspecific or nonreactive substances present the risk of incorrect blood grouping. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of the data on which the recommendation is based: The Panel based its recommendation upon the Panel members' clinical experience with lectins and protectins.

5. Risks to health: Transfusion reaction: Failure of this device to perform satisfactorily may cause errors in blood grouping, resulting in the selection of an inappropriate blood group for transfusion and in a subsequent transfusion reaction.

Proposed Classification

FEA agrees with the Panel recommendation and is proposing that lectins and protectins be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. The medical literature concerning lectins and protectins indicates that these substances lose their stability and specificity with age (Ref. 1). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a standard for this device.

[Docket No. 78N–1936]

Medical Devices; Classification of Environmental Chambers for Storage of Platelet Concentrate

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying environmental chambers for storage of platelet concentrate into class II (performance standards). The FDA is also publishing the recommendations of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the Federal Register provides background information concerning the development of the proposed regulation. Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of environmental chambers for storage of platelet concentrate:

1. Identification: An environmental chamber for storage of platelet concentrate is a device used to hold platelet-rich plasma within a preselected temperature range.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that environmental chambers for storage of platelet concentrate be classified into class II because a performance standard is necessary to assure that the platelets are held within a certain temperature range, thus avoiding damage to the platelets. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' knowledge of, and clinical experience with, platelets and platelet storage.

5. Risks to health: Infusion of damaged blood or blood components: Failure of the device to perform satisfactorily may result in damage to platelets because of overheating. Platelets deteriorate rapidly when the storage temperature rises to an excessively high temperature. Infusion of damaged platelets may cause serious harm to a patient.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that environmental chambers for storage of platelet concentrate be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. Proper storage temperature to maximize platelet viability is the subject of considerable controversy (Ref. *1*). Certain groups advocate storage at 22° C with gentle agitation, while other groups recommend 4° C with no agitation (Refs. *2* through *4*). Federal regulations allow either method of storage (Ref. *5*). Regardless of the method of storage, platelet concentrates may be stored for only 72 hours (Refs. *1* and *6*). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

[Docket No. 78N–1937]

Medical Devices; Classification of Potentiating Media for In Vitro Diagnostic Use

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying potentiating media for in vitro diagnostic use into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the Federal Register.

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the Federal Register provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of potentiating media for in vitro diagnostic use:

1. Identification: Potentiating media for in vitro diagnostic use are media, such as bovine albumin, that are used to suspend red cells and to enhance cell reactions for antigen-antibody testing.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that potentiating media for in vitro diagnostic use be classified into class II (performance standards) because of the need to control such characteristics as the incubation time, concentration, and pH of these media. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' knowledge of, and clinical experience with, potentiating media for in vitro diagnostic use.

5. Risks to health: Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified, or a blood grouping error may result. This failure could result in the selection of an inappropriate blood for transfusion and in a subsequent transfusion reaction.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that potentiating media for in vitro diagnostic use be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. Antigen-antibody reactions are influenced by factors such as temperature, incubation time, the pH and ionic strength of the reaction medium, and the antigen-antibody ratio (Ref. *1*). Reducing the ionic strength of the reaction medium enhances the binding of antibody to red cell antigens (Ref. *1*). One form of potentiating medium, a low ionic strength solution (LISS), reduces the required incubation time and is superior to albumin in its ability to suspend red cells. The LISS and serum must be present in equal proportions. A large excess of LISS lowers the ionic strength and causes false positives, while an excess of serum increases the ionic strength and decreases the sensitivity of the agglutination test. To be effective, LISS should be stored at 4° C and kept free of microorganisms (Ref. *2*). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

Medical Devices; Classification of Quality Control Kits for Blood-Banking Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying quality control kits for blood-banking reagents into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation regarding the classification of quality control kits for blood-banking reagents:

1. Identification: A quality control kit for blood-banking reagents is a device that consists of sera, cells, buffers, and antibodies used to determine the specificity, potency, and reactivity of the cells and reagents used for blood banking.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that quality control kits for blood-banking reagents be classified into class II because a performance standard is necessary to control the risk of inaccurate test results due to lack of specificity, potency, or reactivity of the cells and reagents. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel based its recommendation on the Panel members' knowledge of, and experience in, blood banking.

5. Risks to health: (a) Transfusion reaction: If this device fails to perform satisfactorily, clinically significant antibodies may not be detected and identified, resulting in a transfusion reaction. (b) Hepatitis infection: Exposure of the user, donor, or patient to blood, blood products, or blood aerosols presents a risk of hepatitis infection.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that quality control kits for blood-banking reagents be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be assured by a performance standard. The American Association of Blood Banks' standards require that reagents be tested at regular intervals (Ref. *1*). Antisera being tested should react with red cells possessing weak antigenic determinants (Ref. *2*). Similarly, reagent red cells should detect weak antibodies. Testing should employ both negative and positive controls. Detailed procedures, including avidity and dilution methodologies, have been developed for quality control testing (Refs. *1* and *3*). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1939]

Medical Devices; Classification of Blood Storage Refrigerators and Blood Storage Freezers

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying blood storage refrigerators and blood storage freezers into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class II. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation for the classification of blood storage refrigerators and blood storage freezers:

1. Identification: A blood storage refrigerator and a blood storage freezer are devices used to preserve blood and blood products by storing them at cold or freezing temperatures.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a medium priority.

3. Summary of reasons for recommendation: The Panel recommends that blood storage refrigerators and freezers be classified into class II because a performance standard is necessary to control the risk of damage to blood or blood products by assuring that the device maintains the proper temperature. The Panel believes that general controls would not provide sufficient control over this characteristic. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a standard to provide such assurance.

4. Summary of data on which the recommendation is based: The Panel believes that the American Association of Blood Banks standards on blood storage refrigerators and freezers (Ref. *1*) provide an excellent basis for the establishment of a performance standard.

5. Risks to health: Heat damage: Failure of the device to perform satisfactorily may result in damage to blood cells, components, or blood products because of overheating.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that blood storage refrigerators and blood storage freezers be classified into class II (performance standards). The agency has obtained additional data and information on the device to determine whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. The American Association of Blood Banks' standards specify the allowable temperature range for refrigerators and require circulating fans, interior lighting, recording thermometers, and an audible and/or visible alarm with its own electrical system (Ref. *1*). The storage temperature for frozen blood is important in assuring its stability. Blood frozen in a high glycerol procedure is stable over a relatively wide temperature range, but low glycerol cryo-preservation requires that blood be maintained at temperatures below minus 100° C, or complete hemolysis (disruption of the red cell membrane accompanied by the release of hemoglobin) will result (Ref. *2*). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risks to health presented by the device. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device.

References

The following information has been placed in the office of the Hearing Clerk (address above) and may be seen by interested persons, from 9 a.m. to 4 p.m., Monday through Friday.

1. "Technical Manual of the American Association of Blood Banks," 7th Ed., Miller, W. V., et al., eds., J. B. Lippincott Co., Philadelphia, pp. 57–59, 1977.

2. Abelson, N. M., "Topics in Blood Banking," Lea and Febiger, Philadelphia, p. 35, 1974.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9700, to read as follows:

SEP 11 1979

UMI

§ 864.9700 Blood storage refrigerator and blood storage freezer.

(a) *Identification.* A blood storage refrigerator and a blood storage freezer are devices used to preserve blood and blood products by storing them at cold or freezing temperatures.

(b) *Classification.* Class II (performance standards).

Interested persons may, on or before November 13, 1979, submit to the hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

Medical Devices; Classification of Quality Control Kits for Blood-Banking Reagents

AGENCY: Food and Drug Administration.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying quality control kits for blood-banking reagents into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of heat-sealing devices:

1. Identification: A heat-sealing device is a device that uses heat to seal plactic bags containing blood or blood components.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The panel recommends that heat-sealing devices be classified into class I because the Panel believes that general controls are [illegible] used for blood banking.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that quality control kits for blood-banking reagents be classified into class II because a performance standard is necessary to control the risk of inaccurate test results due to lack of specificity, potency, or reactivity of the cells and reagents. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a performance standard for this device.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of heat-sealing devices:

1. Identification: A heat-sealing device is a device that uses heat to seal plactic bags containing blood or blood components.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The panel recommends that heat-sealing devices be classified into class I because the Panel believes that general controls are [illegible] used for blood banking.

2. Recommended classification: Class II (performance standards). The Panel recommends that establishing a performance standard for this device be a low priority.

3. Summary of reasons for recommendation: The Panel recommends that quality control kits for blood-banking reagents be classified into class II because a performance standard is necessary to control the risk of inaccurate test results due to lack of specificity, potency, or reactivity of the cells and reagents. The Panel believes that general controls would not provide sufficient control over these characteristics. The Panel believes that a performance standard would provide a reasonable assurance of the safety and effectiveness of the device and that there is sufficient information to establish a performance standard for this device.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9750, to read as follows:

§ 864.9750 Heat-sealing device.

(a) *Identification.* A heat-sealing device is a device that uses heat to seal plastic bags containing blood or blood components.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

[Docket No. 78N–1940]

Medical Devices; Classification of Heat-Sealing Devices

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying heat-sealing devices into class I (general controls) The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. After considering public comments, FDA will issue a final regulation classifying the device. These actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation The Hematology Device Classification Panel, an FDA advisory committee, made the following recommendation with respect to the classification of heat-sealing devices:

1. Identification: A heat-sealing device is a device that uses heat to seal plactic bags containing blood or blood components.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The panel recommends that heat-sealing devices be classified into class I because the Panel believes that general controls are sufficient to provide reasonable assurance of the safety and efffectiveness of the device.

4. Summary of data on which the recommendation is based: The Panel based its recommendation upon the Panel members' knowledge of, and clinical experience with, heat-sealing devices.

5. Risks to health: (a) Heat damage: Failure of the device to perform satisfactorily may result in damage to blood cells, components, or blood products because of overheating. (b) Bacterial contamination: Improper sealing may result in bacterial contamination of the blood cells, components, or blood products stored in the bag.

Proposed Classification

FDA agrees with the Panel recommendation and is proposing that heat-sealing devices be classified into class I (general controls), with no exemptions. The agency believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device. The agency believes that if the manufacturer's directions for use specify the proper temperature range and the proper technique for sealing a blood bag, and if the user follows these directions, the risk of the bag contents being damaged or contaminated will be minimal.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 513, 701(a), 52 Stat. 1055, 90 Stat. 540–546 (21 U.S.C. 360c, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), it is proposed that Part 864 be amended in Subpart J by adding new § 864.9750, to read as follows:

§ 864.9750 Heat-sealing device.

(a) *Identification.* A heat-sealing device is a device that uses heat to seal plastic bags containing blood or blood components.

(b) *Classification.* Class I (general controls).

Interested persons may, on or before November 13, 1979, submit to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

Dated: August 17, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 79–27719 Filed 9–10–79; 8:45 am]

BILLING CODE 4110–03–M

[21 CFR Part 864]

[Docket No. 78N–1942]

Medical Devices; Classification of Transfer Sets

AGENCY: Food and Drug Administration.

ACTION: Proposed Rule.

SUMMARY: The Food and Drug Administration (FDA) is issuing for public comment a proposed regulation classifying transfer sets into class II (performance standards). The FDA is also publishing the recommendation of the Hematology Device Classification Panel that the device be classified into class I. The effect of classifying a device into class I is to require that the device meet only the general controls applicable to all devices. The effect of classifying a device into class II is to provide for the future development of one or more performance standards to assure the safety and effectiveness of the device. After considering public comments, FDA will issue a final regulation classifying the device. These

actions are being taken under the Medical Device Amendments of 1976.

DATES: Comments by November 13, 1979. It is proposed that the final regulation based on this proposal become effective 30 days after the date of its publication in the **Federal Register.**

ADDRESS: Written comments to the office of the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: William C. Dierksheide, Bureau of Medical Devices (HFK–440), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7234.

SUPPLEMENTARY INFORMATION:

Panel Recommendation

A proposal elsewhere in this issue of the **Federal Register** provides background information concerning the development of the proposed regulation. The Hematology Device Certification Panel, an FDA advisory committee, made the following recommendation regarding the classification of transfer sets:

1. Identification: A transfer set is a piece of tubing with suitable adaptors used to transfer blood or plasma from one container to another.

2. Recommended classification: Class I (general controls). The Panel recommends that there be no exemptions.

3. Summary of reasons for recommendation: The Panel recommends that transfer sets be classified into class I because this is a simple device in common use and does not present any unreasonable risks to health. The Panel believes that general controls are sufficient to provide reasonable assurance of the safety and effectiveness of the device.

4. Summary of data upon which recommendation is based: The Panel based its recommendation on the Panel members' knowledge of, and clinical experience with, transfer sets.

5. Risks to health: None identified.

Proposed Classification

FDA disagrees with the Panel recommendation and is proposing that transfer sets be classified into class II (performance standards). The agency believes that a performance standard is necessary for this device because general controls alone are insufficient to control the risk of bacterial contamination or the risk that toxic or carcinogenic substances will leach into the blood or blood components that contact these devices. A performance standard would provide reasonable assurance of the safety and effectiveness of the device. The agency also believes that there is sufficient information to establish a performance standard for this device. The agency has obtained additional data and information to determine whether general controls or performance standards are appropraite for the device and whether reasonable assurance of the safety and effectiveness of the device can be provided by a performance standard. Human blood is capable of extracting plasticizers such as di-2-ethylhexyl phthalate (DEHP) from medical-grade plastic tubing, and these plasticizers are subsequently transfused into the patient (Refs. *1* and *2*). Contact with polyvinyl chloride (PVC) plastics or the resins, plasticizers, and stabilizer constituting these plastics has been shown to have a destructive effect on animals (Refs. *3*, *4*, and *5*), biological systems (Refs. *6*, and *7*), and antisera (Ref. *6*). It has not been demonstrated that infusion of blood or blood products containing DEHP has had any adverse effects on humans (Refs. *8*, *9*). However, the effects of long term or repeated exposure to DEHP, especially in the case of transfusion recipients, who are already in a weakened state, merits continued investigation (Refs. *10*, and *11*). New plastics that are developed as alternatives to PVC must be carefully evaluated with respect to their potential for leaching toxic or carcinogenic substances (Ref. *3*). The International Organization for Standardization's standards for plastics and collapsible containers for blood and blood components (Ref. *12*) also addresses transfer sets.

31 CFR Part 202

Depositaries and Financial Agents of the Government

AGENCY: Bureau of Government Financial Operations, Department of the Treasury.

ACTION: Final Rule.

SUMMARY: The Treasury Department is making three revisions to Title 31 of the Code of Federal Regulations, Part 202. Part 202.2 is being rewritten, in accordance with Pub. L. 95–147 of October 28, 1977, to broaden the classes of financial institutions that may be designated as Depositaries and Financial Agents of the Government.

31 CFR Part 202.4 is being changed to conform with Section 503 of the Veterans Employment and Readjustment Act of 1972, which exempts contractors that receive gross annual earnings of less than $10,000 on Government contracts from those provisions of the Act that promote the employment of disabled and Vietnam-era veterans. Also, Part 202.4 is being amended to implement Section 503 of the Rehabilitation Act of 1973, which requires Government contractors to take affirmative action to hire qualified handicapped individuals.

A new paragraph (paragraph e) is being added to Part 202.6 to impose requirements upon depositaries regarding actions to be taken with respect to collateral pledged by depositaries in the event that they become insolvent.

EFFECTIVE DATE: September 14, 1979.

FOR FURTHER INFORMATION CONTACT: Mr. Charles F. Schwan III, Director, Banking Staff, Bureau of Government Financial Operations, Department of the Treasury, Washington, D.C. 20226 (202/566–8488).

SUPPLEMENTARY INFORMATION: The highlights of these revisions and amendments are as follows:

Designation of Depositaries and Financial Agents of the Government

Among other provisions, Pub. L. 95–147 authorizes the Secretary of the Treasury to deposits public moneys in any federal- or state-insured financial institution. The designation as a Depositary and Financial Agent of the Government, which heretofore applied only to banks insured by the Federal Deposit Insurance Corporation, will include federally-insured savings and loan associations and credit unions, and savings banks, savings and loans, building and loans, homestead associations (including cooperative banks), and credit unions insured by a state or an agency thereof.

The law makes it possible for these institutions to maintain official accounts of Government officers who are authorized, for specified purposes, to have funds outside of the Treasury. In addition, the institutions may also be authorized to maintain accounts of the United States Treasury for the purpose of collecting receipts from Government agencies for credit in our account and for purposes of providing other services specifically authorized by the Secretary of the Treasury.

31 CFR Part 202.4 is being changed to conform with Section 503 of the Veterans Employment and Readjustment Act of 1972, which exempts contractors that receive gross annual earnings of less than $10,000 on Government contracts from those provisions of the Act that promote the employment of disabled and Vietnam-era veterans. Previously, only contractors that had gross annual earnings of less than $2,500 were exempt from these provisions. In addition, Part 202.4 is being amended to effect implementation of Section 503 of the Rehabilitation Act of 1973 requiring Government contractors to take affirmative action to employ qualified handicapped individuals, except that those depositaries which receive gross annual earnings of less than $2,500 are exempt from compliance with these regulations.

A new paragraph (paragraph e) is being added to Part 202.6 to eliminate certain problems pertaining to the perfection of the Treasury's security interest in the proceeds of pledged collateral in the event of the insolvency of the depositary. This is a revision of a technical nature which is intended to preserve, subsequent to the insolvency of a depositary, the Treasury's interest in the proceeds of the collateral which a Depositary and Financial Agent of the Government has pledged for the purpose of securing public monies on deposit or invested with it.

Since these revisions involve a matter relating to public contracts, the relevant provisions of the Administrative Procedure Act (5 U.S.C. 553) requiring notice of proposed rule-making, opportunity for public participation, and delay in the effective date are inapplicable.

Accordingly, Part 202, Chapter II, of Title 31 of the Code of Federal Regulations is amended as follows:

(Sec. 10, 56 Stat. 356, as amended, 12 U.S.C. 265; sec. 2, Pub. L. 95–147 (12 U.S.C. 266, 1464(k), 1725, 1789a, and 31 U.S.C. 1038); sec. 503 of the Rehabilitation Act of 1973 (29 U.S.C. 793); and sec. 503 of the Veterans Employment and Readjustment Act of 1972, Executive Order 11701 (38 U.S.C. 2012))

PART 202—DEPOSITARIES AND FINANCIAL AGENTS OF THE GOVERNMENT

§ 202.1 [Amended]

1. Section 202.1 is amended as follows:

(a) By adding "and Sec. 2, Pub. L. 95–147, 91 Stat. 1227 (12 U.S.C. 1464(k); 12 U.S.C. 1725(d); 12 U.S.C. 1789a; 12 U.S.C. 266)." to the end of the first sentence.

(b) By substituting "Treasury Tax and Loan Depositaries" for "Special Depositaries of Public Money" in the last sentence.

2. Section 202.2 is revised to read as follows:

§ 202.2 Designations.

(a) Financial institutions of the following classes are designated as Depositaries and Financial Agents of the Government if they meet the eligibility requirements stated in paragraph (b) of this section:

(1) Every bank insured by the Federal Deposit Insurance Corporation.

(2) Every institution insured by the Federal Savings and Loan Insurance Corporation.

(3) Every credit union insured by the Administrator of the National Credit Union Administration.

(4) Savings banks, savings and loan, building and loan, and homestead associations, and credit unions created under the laws of any State, the deposits or accounts of which are insured by a State or agency thereof or by a corporation chartered by a State for the sole purpose of insuring deposits or accounts of such financial institutions.

(b) In order to be eligible for designation, a financial institution is required to possess, under its charter and the regulations issued by its chartering authority, either general or specific authority to perform the services outlined in § 202.3(b). A financial institution is required also to possess the authority to pledge collateral to secure public funds.

3. Paragraphs (a) and (b)(1)(i) of § 202.3 are revised to read as follows:

§ 202.3 Authorization.

(a) *To accept deposits covered by the appropriate federal or State insurer.* Every depositary is authorized to accept a deposit of public money in an official account, other than an account in the name of the United States Treasury, in which the maximum balance does not

exceed the "Recognized Insurance Coverage". "Recognized Insurance Coverage" means the insurance provided by the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, the National Credit Union Share Insurance Fund, and by insurance organizations specifically qualified by the Secretary of the Treasury pursuant to 31 CFR Part 226.

(b) *To perform other services.* (1)

* * *

(i) The maintenance of official accounts in which balances will be in excess of the applicable federal or state insurance coverage;

* * * * * * *

4. Section 202.4 is being revised to read as follows:

§ 202.4 Contract of deposit.

A depositary which accepts a deposit under this part enters into a contract of deposit with the Treasury Department. The terms of this contract include:

(a) All of the provisions of this part.

(b) Any instructions issued pursuant to this part by the Treasury or by Federal Reserve Banks as Fiscal Agents of the United States or by any other Government agency.

(c) The provisions prescribed in section 202 of Executive Order 11246, entitled "Equal Employment Opportunity" (30 FR 12319) as amended by Executive Order 11375, entitled "Equal Employment Opportunity Clause".

(d) The requirements of section 503 of the Rehabilitation Act of 1973, 29 U.S.C. 793, and the regulations issued thereunder at 41 CFR Part 60–741, which are incorporated herein by reference, requiring Government contractors to take affirmative action to employ qualified handicapped individuals, except that depositaries which under this part receive gross annual earnings of less than $2,500 are exempt from compliance with these regulations.

(e) The requirements of section 503 of the Veterans Employment and Readjustment Act of 1972, 38 U.S.C. 2012, Executive Order 11701, and the regulations issued thereunder at 41 CFR Subpart 1–12.11, which are incorporated herein by reference, for the promotion of employment of disabled and Vietnam-era veterans, except that depositaries which under this part receive gross annual earnings of less than $10,000 are exempt from compliance with these regulations.

5. Section 202.6(e)(1) is revised to read as follows:

§ 202.6 Collateral security.

* * * * *

(e) *Disposition of principal and interest payments of the pledged securities after a depositary is declared insolvent.*—(1) *General.* In the event of the depositary's insolvency or closure, or in the event of the appointment of a receiver, conservator, liquidator, or other similar officer to terminate its business, the depositary agrees that all principal and interest payments on any security pledged to protect public monies due as of the date of the insolvency or closure, or thereafter becoming due, shall be held separate and apart from any other assets and shall constitute a part of the pledged security available to satisfy any claim of the United States.

(2) *Payment procedures.* (i) Subject to the waiver in subparagraph (iii) of this paragraph, each depositary (including, with respect to such depositary, an assignee for the benefit of creditors, a trustee in bankruptcy, or a receiver in equity) shall immediately remit each payment of principal and/or interest received by it with respect to collateral pledged pursuant to this section to the Federal Reserve Bank of the district, as fiscal agent of the United States, and in any event shall so remit no later than ten days after receipt of such a payment.

(ii) Subject to the waiver in paragraph (e)(2)(iii) of this section, each obligor on a security pledged by a depositary pursuant to this section shall make each payment of principal and/or interest with respect to such security directly to the Federal Reserve Bank of the district, as fiscal agent of the United States.

(iii) The requirements of paragraphs (e)(2) (i) and (ii) of this section are hereby waived for only so long as a pledging depositary remains solvent. The foregoing waiver is terminated without further action immediately upon the involvency of a pledging depositary or, if earlier, upon notice by the Treasury of such termination. For purposes of this paragraph, a depositary is insolvent when, voluntarily or by action of competent authority, it is closed because of present or prospective inability to meet the demands of its depositors or shareholders.

6. Section 202.7 is revised to read as follows:

§ 202.7 Maintenance of balances within authorizations.

(a) Government agencies must contact this Department before making deposits with a financial institution insured by a State or agency thereof or by a corporation chartered by a State for the sole purpose of insuring deposits or accounts. The contact should be directed to the Banking Staff, Bureau of Government Financial Operations, Department of the Treasury, Washington, D.C. 20226.

(b) Government agencies having control or jurisdiction over public money on deposit in accounts with depositaries are responsible for the maintenance of balances in such accounts within the limits of the authorizations specified by the Secretary of the Treasury.

Dated: September 5, 1979.

Paul H. Taylor,

Fiscal Assistant Secretary.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR NOTICE FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY*	USDA/ASCS		DOT/SECRETARY*	USDA/ASCS
DOT/COAST GUARD	USDA/APHIS		DOT/COAST GUARD	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/FHWA	USDA/FSQS		DOT/FHWA	USDA/FSQS
DOT/FRA	USDA/REA		DOT/FRA	USDA/REA
DOT/NHTSA	MSPB/OPM		DOT/NHTSA	MSPB/OPM
DOT/RSPA	LABOR		DOT/RSPA	LABOR
DOT/SLSDC	HEW/FDA		DOT/SLSDC	HEW/FDA
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

***NOTE: As of July 2, 1979, all agencies in the Department of Transportation, will publish on the Monday/Thursday schedule.**

REMINDERS

The items in this list were editorially compiled as an aid to **Federal Register** users. Inclusion or exclusion from this list has no legal significance. Since this list is intended as a reminder, it does not include effective dates that occur within 14 days of publication.

Rules Going Into Effect Today

Note: There were no items eligible for inclusion in the list of **Rules Going Into Effect Today.**

List of Public Laws

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

The authentic text behind the news . . .

The Weekly Compilation of PRESIDENTIAL DOCUMENTS

Administration of Jimmy Carter

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published quarterly, semiannually, and annually. Other features include lists of acts approved by the President and of nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by Office of the Federal Register, National Archives and Records Service, General Services Administration
